Specifications for the Remote Controller with Excitation system

Purchase Reqn No. : 230 Date:21/05/2011

The remote controller with Excitation system should consist of two transreceiver units for data exchange between rotating thyristor bridge controller on rotor of the permanent magnet exciter and stationary control unit which includes AVR functions.

(A) Remote control system

1. Input Voltage & current for rotating thyristor bridge: 3ph, 220V, $\pm 10\%$ & 500 Amps.
2. Input frequency for rotating thyristor bridge: 200 Hz $\pm 2\%$.
3. Output voltage of rotating Thyristor Bridge: 0 V to 300V, ± 2 V DC (controlled voltage).
4. DC output will be connected to load, $R = 0.3$ to 0.6Ω .
5. Output voltage of rotating Thyristor Bridge should be variable from 0 to 300 V with a resolution of 1V.
6. The control card along with thyristors will be rotating at 1800 rpm. The signal from stationary control unit to be received by rotating control card for output control of the rotating thyristor bridges.
7. If reference voltage becomes zero the current has to be pushed to $1\frac{1}{2}$ times for a short period i.e., 10 msec and current to be reduced to normal value after reference voltage recovery.
8. The output voltage of rotating Thyristor Bridge should be remotely controlled from at least 50 meters distance from the power supply via RF medium.
9. Remote controlled power supply should consist of transmitter and receiver system (Bi-directional) with facility for transmitting the output voltage and current magnitude in each leg, to receiver for rechecking and confirmation for its remote control.
10. The controller on stationary side should display Output Voltages and Currents, currents in each leg etc. in a suitable LCD display on stationary side. The thyristors switches conducting/non conducting status should be indicated separately with alarms on stationary side of remote control unit.
11. The signal transmission should be within Industry Band (ISM band) with built in security and the data should be in encrypted format.
12. Suitable magnetically shielded box with fixing arrangements containing the thyristor driver circuit and transreceiver circuit on rotating side is in supplier's scope. The available space for fixing the box is 200x140x140 mm (LxWxH).
13. There should be two identical channels available to take input from the excitation system. These inputs will be the reference input coming out from excitation system to generate firing pulses for thyristors. Integration of the excitation system with stationary remote control module will be in supplier's scope.
14. The circuit should consists of signal and circuit redundancy for all thyristor bridge driver and control circuit on rotating side and stationary side for taking care of the failure of one set of total control cards.
15. The mounting arrangement of the control cards, containing thyristors bridge driving circuit & transreceiver circuit in single PCB, should be independent and easily replaceable for redundant operation.

16. All the connecting wires/cables between the control cards and thyristor switches should be Teflon/magnetically shielded.
17. The controller should have data logging facility for important parameters and portability of data through USB for transferring to PC.
18. All the power supplies for rotating control cards should be derived from the same power going to thyristor bridges (3 phase, $220V \pm 10\%$, $200 \text{ Hz} \pm 2\%$) with transformer with suitable mounting arrangement. The power supply required for the stationary unit can be drawn from the main generator set.
19. The controller should operate on fail safe mode (goes back to zero during any malfunction).
20. Protections for Over Voltage, Under Voltage, over current, Input single phasing, unbalance load sharing of thyristor legs should be displayed and indicated.
21. Mounting of heat sinks on the machine will be implemented by BHEL.
22. Thyristors will be provided by BHEL.

(B) Excitation Control System

1. Preferably DECS-300 digital excitation control system of Baselar Electric (or equivalent) is to be considered wherever the I/O configuration of the remote control system is to be integrated.
2. The whole excitation control system should comply with IEEE 421.4 standards.
3. The necessary changes required (e.g. in place of excitation field I/Os, generator field I/Os will be used) to integrate the excitation system with remote control module will be in supplier's scope.
4. Analog output of the excitation control system will be the input control signal for the Stationary remote control unit.
5. Feedback Signals/data from generator field will be transmitted back by remote control module on rotating side to the stationary side and will be given to excitation control system.

(C) General Terms and Conditions

1. Supply consists of two sets (4 nos. with redundancy) of rotating control cards and two sets of stationary control cards with one set of Excitation control system.
2. Supplier should provide the soft copy and hard copy of all the software codes, all the control card circuit details, component details, setting and limits of parameters, bill of materials and functioning details of all the circuit/equipment in the form of operating manual.
3. Supplier should provide necessary spares required for 24x7 operation of the equipment and the set of control cards as given below:
 - a) One set of populated control cards of rotating side of remote controller.
 - b) One set of populated control cards of stationary side of remote controller.
4. Warranty- Supplier should give warrantee for a period of 1 year (12 months) for whole excitation system (Remote controller + excitation control system) from the date of successful commissioning at site.
5. The system will be tested in laboratory at BHEL R&D, Hyderabad and further testing of the equipment and erection & commissioning to be carried out at site.
6. Block diagram of the system is enclosed in Annex-1.
