# SPECIFICATION FOR HEXAGON FIT BOLTS

## (First Revision)

- 1. Scope Covers the requirements for hexagon fit bolts in the diameter range 8 to 52 mm.
- 2. Dimensions and Tolerances The dimensions and tolerances for hexagon fit bolts shall be as given in Table 1.
- 2.1 The preferred length-size combinations and shank lengths are given in Table 2.
- 2.2 Dimensions for application of hexagon fit bolts are given in Table 3.
- **3.** Grade The hexagon fit bolts shall be of product Grade B as specified in IS: 1367 (Part 2)-1979 'Technical supply conditions for threaded steel fasteners, Part 2 Product grades and tolerances ( second revision )'.
- **4. Mechanical Properties** Hexagon fit bolt shall conform to property clause 5.6 of IS: 1367 (Part 3)-1979 'Technical supply conditions for threaded steel fasteners, Part 3 Mechanical properties and test methods for bolts, screws and studs with full loadability ( second revision )'.
- **5. Designation** Two different shank diameters have been specified in Table 1 to enable the purchaser to order hexagon fit bolts with shank diameters in finished or unfinished conditions. These hexagon fit bolts shall be designated as given in following clauses.
- **5.1** Hexagon fit bolts shall be designated by name, nominal size, length, number of the standard and property class when shank diameter is required in the finished condition by the purchaser.

### Example:

Sectional Committee,

**30lts Nuts and Fastener Accessories** 

A hexagon fit bolt of size M20, Length 90 mm and of property class 5.6 shall be designated as:

Hexagon Fit Bolt M20 × 90 IS: 3640-5.6

**5.2** Hexagon fit bolts shall be designated by name, nominal size, shank diameter with allowance, length, number of the standard and property class when shank diameter is required to be finished by the purchaser.

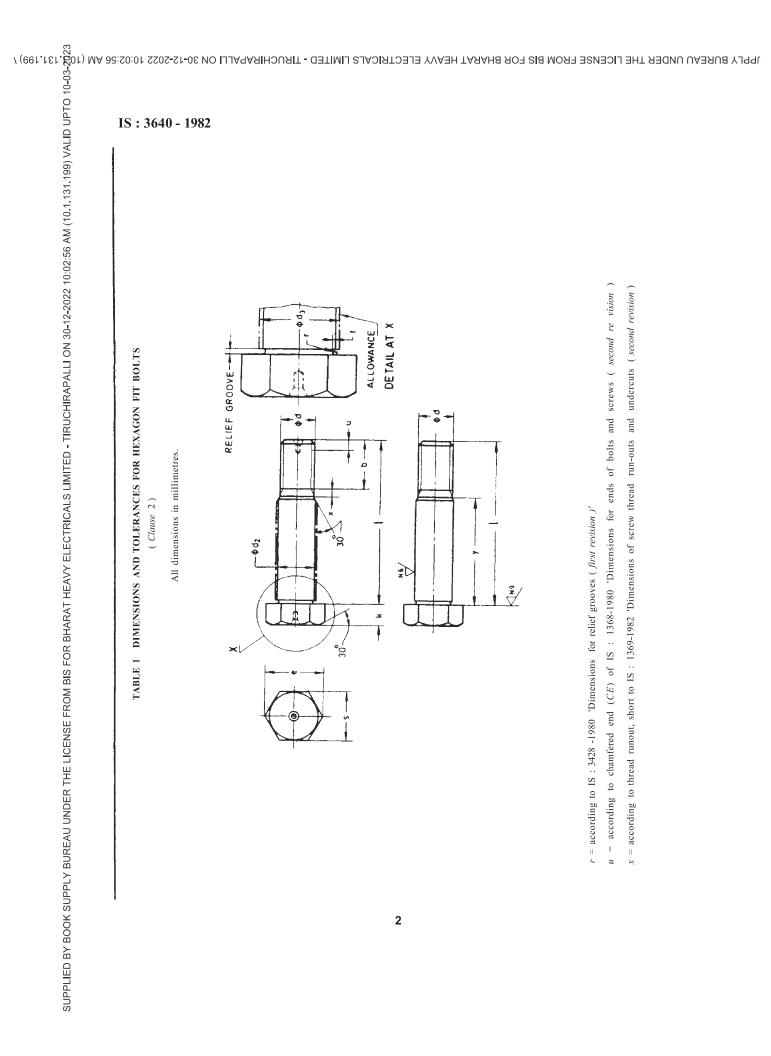

### Example :

A hexagon fit bolt of size M16, shank diameter d3 17.2 mm, length 70 mm and property class 5.6 shall be designated as:

Hexagon Fit Bolt M16  $\times$  17.2  $\times$  70 IS : 3640-5.6.

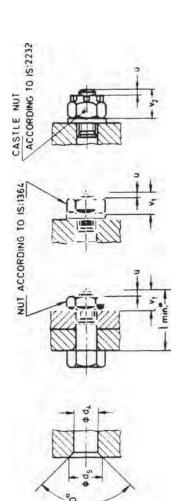

- **6.** Sampling Sampling and criteria of acceptance shall be in accordance with IS: 2614 1969 'Method for sampling of fasteners ( *first revision* )'.
- 7. General Requirements
- **7.1** Centre holes are mandatory for hexagon fit bolts supplied with allowance on the shank diameter (diameter,  $d_s$ ). For bolts supply finish to the size  $d_2$ , the provision of centre holes is left to the choice of the manufacturer.
- **7.2** The limits of surface discontinuities shall be as specified in IS: 1367 (Part 9)-1979 'Technical supply conditions for threaded steel fasteners, Part 9 Surface discontinuities on bolts, screws and studs ( second revision )'.
- 7.3 Hexagon fit bolts shall be marked and delivered as specified in IS: 1367 (Part 18)-1979 'Technical supply conditions for threaded steel fasteners, Part 18 Marking and mode of delivery (second revision)'.

EXPLANATORY NOTE

The agen fit boths also known as heagen bolts with overvice shark or hearing, boths are extend sively used for couplings, planner blocks atc.

This standard was first published in 1967. It has been observed in the use of the standard, the thread length was been too long and shark lengths short recalling in difficulty of assembly. For assembly, there involved and application details added in the present evidence.

Considerable assistance has been derived, in the preparation of this standard, from DIN 609-1971 Heavigen it boths with long thread pertion issued by Densiches facility for Normong.
