**WRITE UP ON HYDRAULIC POWER SUPPLY UNIT FOR 660/800 MW STEAM TURBINE SETS****HYDRAULIC POWER SUPPLY UNIT**

The main function of Hydraulic power supply unit (HPSU, MAX01) is to supply Control Fluid at 160 bar pressure with a predetermined flow rate to operate respective Electro-Hydraulic Actuators (EHAs), coupled with main turbine valves (HP, IP & Overload Valve).

HPSU (MAX01) comprises of major components i.e. control fluid pumps (Axial Piston Pump, MAX01 AP001/AP002), filters (MAX01 AT011/AT012/AT013/AT014/AT016), control fluid regeneration unit (MAX01 AT015), control fluid cooler (MAX01 AC010/AC020), control fluid heater (MAX01 AH001), Hydraulic pressure Accumulators (MAX01 BB011/BB012/BB013/BB014), Temperature regulator (MAX01 AA151 AA152) etc. These components are mounted on the control fluid tank of HPSU. All the piping/component coming in contact with FRF are made of stainless steel.

For the redundancy and to prolong the service life of the unit, 2X100% control fluid pumps (MAX01 AP001/AP002) are provided for control fluid supply. In case of an on-line pump failure, operation is automatically switched over to the stand by pump. The pump function in pressure controlled mode i.e. they charge the accumulator system to 160 bar and then limit the displacement volume so that the system pressure of 160 bar is maintained constant. The electric motors and pressure relief valves (MAX01 AA061/AA062) for system pressure adjustment are mounted on the control fluid tank cover. Simplex filter (MAX01 AT011/AT012) at downstream of each control fluid pump (MAX01 AP001/AP002) have been provided having mesh size 10 $\mu$ . The filters (MAX01 AT011/AT012) are equipped with clogging indicator (MAX01 CP011/CP012) for alarm, in case of choke.

The accumulators system (MAX01 BB011/BB012/BB013/BB014), which is to supply the fluid quantity required for control movements of power piston, comprises a group of bladder-type accumulators with isolating valves and safety valves. The bladder accumulators (40 MAX01 BBO11/BB012/BB013/BB014) are fixed at the rear side.

The supply unit is of compact design. It comprises a tank made of stainless steel with fluid level monitoring devices (MAX01 CL501) as well as breather filter (MAX01 AT001). Moreover, a drip tray is provided at the bottom, which is at the lowest point. All electric devices are wired to a terminal strip in the terminal box (MAX01 GF001). There are total 5 nos. pressure connections (X1, X2, X3, X4 & X5) and 5 nos. return connections (T1, T2, T3, T4 & T5) have been provided in the HPSU for further connecting the control fluid pipe to various actuators.

Separate cooling-cum-filtration circuit is provided in order to maintain the cleanliness of the system and to ensure proper cooling. Separate 2X100% capacity AC driven circulation pumps (MAX01 AP011/AP012) supply fluid to this circuit. On the tank cover a console is mounted which contains the local pressure gauges, pressure switches and

nipples for commissioning measurements. The recirculation pumps (MAX01 AP011/AP012) supply the control fluid to the cooler (MAX01 AC010/AC020) through temperature regulator (MAX01 AA151/AA152). The temperature regulator (MAX01 AA151/ AA152) is set on 45 deg C. Only in case the control fluid temperature is greater than 45 deg C, the temperature regulator allows the control fluid to be passed through the cooler (MAX01 AC010/AC020), else it supplies the control fluid directly to the tank via fine filter (MAX01 AT013/AT014).

A separate regeneration circuit is provided in the HPSU with 2X100% capacity AC driven regeneration pump (MAX01 AP011/AP012). The regeneration unit pumps (MAX01 AP011/AP012) supply the control fluid from tank to control fluid regeneration unit (MAX01 AT015). In control fluid regeneration unit (MAX01 AT015), control fluid gets reconditioned and return back to tank via a filter (MAX01 AT016). The regeneration circuit is designed to purify at least 2% of the total fluid charge in the system per hour on continuous basis.
