		<div>1.0 APPLICATION:</div> <p>This signal conditioning current transformer is required for conduction monitoring of thyristor converters. It senses the flow of current through individual thyristors in the 3 phase full wave Thyristor Bridge by measuring the current flowing during conduction. The current waveform is a square wave in one direction for one third of a cycle. The CT's are mounted on the busbar of the positive and negative branch of the Thyristor Bridge (one no. each arm) and can be mounted directly on the busbar with a mounting plate.</p>
