The substrate carrier plate entry and exit in the chamber has to be sensed and displayed on the control panel using ceramic micro switches. Transport frame, guide wheels, endless belt should be made of ss and the bearings of the transport mechanism should be vacuum compatible. Sputtering Cathode: Sputter Up Configuration, HV Compatible Mounting Arrangement suitable to mount 15" x 5" Target. Magnetron design should be based on Rare earth magnets and the cathode should have the provision to CLAMP Target of thickness ranging from 5mm to 40mm. The cathode should have provision to cool the target by flowing chilled water and suitable electrical connectors to connect the power supply to the target. Chilled water at 15°C temperature and 2.5-kg/cm² pressure will be provided by BHEL. The chamber should have 4 ports to fix two cathode assemblies for future expansion. However only one assembly is in the scope of supply. Two ports will be blinded. Slit Valves (Custom built)/Gate valve: Two numbers, one compatible with one adjacent process chamber and other compatible with adjacent isolation chamber of the existing process line. The gate valve should be pneumatically operated. Compressed air at 6-kg/cm² pressure through a ¼" flexible PVC tube will be provided by BHEL. Smooth transfer of sample carrier plate in vacuum from one chamber to other and the deposition of ITO layers will have to be ensured by the supplier. **The dimensions in the schematics must be considered as approximate.** The supplier has to take exact measurements and prepare drawings to ensure proper matching of mechanical parts to ensure perfect alignment of chambers for smooth carrier movement in the modified deposition system.
- The slit valves will be of rectangular shape or standard gate valves and will vacuum seal the sample entry and exit slits, between the chambers, when switched on and will leave the slit clear for sample transfer, when switched off. The valve will be operated pneumatically and should have the provision of air to open and air to close. A suitable

arrangement will have to be designed by the supplier to mount it between two adjacent chambers.

3. The chamber will have to be mounted on a frame of square powder coated MS channel frame compatible with the present arrangement.

4. Pre-dispatch acceptance criteria:

The supplier will have to demonstrate following at his works:

- A. Smooth movement of the substrate carrier in the chamber. The substrate carrier will be provided by BHEL.
