1.0 INTRODUCTION:

The auxiliary converter employs a common mode filter to suppress the Electro Magnetic interference at the output of the 3ph Inverter. The Aluminum Housed Power Resistor will act as the damping resistor element in the common mode filter.

2.0 FUNCTION:

The damping resistor will absorb the high frequency components in the inverter output generated as a result of IGBT switching. A ferrite core assembly is provided at the output of the auxiliary inverter which will trap the high frequencies which are dissipated by the damping resistor.
