SUPERSEDES INVENTORY NO.	मासकी सूची संख्या को अतिरिक्त करना है	3.0 Designation 3.1 The Turbine oil cooler shall be designated as below 3.1.1 ON DRAWINGS AND INDENTS Material specification column: HE 57075 Description column : Turbine Oil Cooler (PHE) 3.1.2 ON ENQUIRIES AND PURCHASE ORDER In addition to incorporating the above detail a copy of this product standard shall be enclosed along with enquiry. 4.0 Codes and Standards: This standard is not based on any standard. Details have been taken from supplier's approved design. 5.0 Technical Requirements 5.1 The construction shall be as per figure (sketch 1 & 2). 5.2 Construction of heat exchanger Heat transfer plates shall be packed in a frame consisting of fixed frame plate and movable pressure plate and aligned at top and bottom of carrying bars. Design shall be such that cleaning is possible without dismantling the piping Heat transfer plates shall be sealed at their outer edges and around the ports and gaskets in order to prevent leakage and inter-mixing of fluids. Double sealing arrangement shall be provided at outer edge and around ports. The inter space between the seals shall be vented to atmosphere in order to avoid inter-mixing of liquids in case of gasket failure.

सामग्री सूची संख्या INVENTORY NO.	SUPERSEDES INVENTORY NO.	The gasket arrangement shall be such that it receives continuous support to ensure a long gasket life. The gasket should be able to retain its properties and shape over a life period of 10 years. Heat transfer plates shall be provided with sufficient thickness in order to impart sufficient rigidity to the plates particularly from handling considerations. Plates shall have contact points in order to provide inter plates support. The recesses on the plates are suitably strengthened by a reinforcement plate. Plate thickness shall be adequate to withstand all operating conditions as specified in data sheet furnished after placement of order enquiry. Thickness of pressure and frame plates shall be as per ASME Sect VIII div.1. Extra capacity of 30% over and above required margin for additional plates shall be provided in frame. Each plate shall be numbered in sequence. The number shall be marked by indelible ink on the plate to permit easy reassembly. The plates shall be pressed from one piece. They shall be pressed in single/ progressive manner. The corrugation shall be smooth, uniform, and identical for every plate. The PHE bottom frame plate and support should have fixing jigs and cleats to keep provision for enabling to fit through with outlet nozzle fitted underneath to collect and drain water in the event of leakages.

मासगी सूची संख्या INVENTORY NO.		SUPERSEDES INVENTORY NO.	6.0 Quality Assurance, Inspection and Testing 6.1 The Manufacturer shall conduct all tests required to ensure that all the major component of the cooler offered confirm to the requirements of the specification and is in compliance with requirements of applicable codes and standards. 6.2 The bidder shall submit quality plan along with his offer. 6.3 The particular of proposed shop tests and procedures for the test shall be Submitted to BHEL/owner for approval along with quality plan. 6.4 The minimum tests /checks to be carried out on the cooler as envisaged by BHEL are given below. This is however not intended to form a comprehensive testing program, as it is supplier responsibility to prepare the detailed quality plan, which also include tests/checks carried out by supplier as a part of his normal practice. This quality plan is subject to the approval of BHEL /owner and BHEL/owner reserve to right to ask for any more checks at the time of quality plan finalization. 6.4.1 Testing of material: The material of major component shall be tested as per relevant specification for its chemical composition and mechanical properties viz. Y.S, UTS, Impact, % age elongation. Suitable NDT to ensure freedom from surface and subsurface defect shall be carried out. Plate material used for pressing shall be furnished with mill test report showing chemical and physical properties and heat treatment records. The following tests shall be carried out during various stages of manufacturing at Manufacturer's works. 6.4.1.1 All the component parts of the cooler including assembly shall be subjected to dimensional and visual inspection. After pressing visual and dimensional checks on the plates shall be made in the presence of BHEL's inspector, on sampling basis.

COPYRIGHT AND CONFIDENTIAL The information on this document is the property of Bharat Heavy Electricals Limited. It must not be used directly or indirectly in any way detrimental to the interest of the company		Bidder to note that heat transfer area measured by white light scanning during contract stage should not have negative tolerance more than 3% w.r.t to the heat transfer area indicated by bidder against the offered mode of PHE. However, in the case of negative tolerance (limited to maximum 3%). Bidder has to provide additional plates proportionately, as free issue assembled into all the applicable PHE'S before the final inspection and as built certificate shall be issued by the bidder accordingly. Bidder to note that negative tolerance beyond three percent shall not be accepted. 6.6 The heat transfer plates from each lot of the plates shall be tested by liquid/dye penetrant test in order to check for cracks and other surface defects in presence BHEL/BHEL nominated third party If any defect is detected in any of these plates, the whole lot shall be tested and plates without defects only shall be accepted. Plate cleaning agent, liquid penetrant and developer shall not contain any halogen. 6.7 The heat transfer plates shall be tested by light box in order to check for cracks and other surface defects in presence of BHEL/BHEL nominated Third party. The plates without defects only shall be accepted. Gaskets: Certificate on chemical composition of the gasket material shall be furnished to prove the quality sample testing in presence of BHEL's inspector, if desired. Shore hardness test shall be conducted on the gasket and certificate shall be furnished. Visual and dimensional check on a sampling basis shall be done. Plates and gaskets assembled together will be inspected for proper assembly. Frame assembly: All materials for various components of frame assembly viz. frame plate, pressure plate, carrying bar, guide bar, tightening/clamping bolts and nuts etc. shall be tested quality and test certificates for chemical composition and physical properties shall be furnished
