SUPERSEDES INVENTORY NO.	ON-LINE (Continuous) CONDITION MONITORING SYSTEM FOR HYDROGENERATOR																																				
प्रारंभिक मूल्य at valuation	1.0 GENERAL: <p>This specification covers the requirements for design, supply, installation & commissioning of a on-line system to continuously monitor salient parameters (i.e. shaft vibrations in the vicinity of guide bearing journals and air gap in between stator & rotor etc.) of hydro generators in the powerhouse complete in all respects with sensors/ probes/ detectors, control unit, time delay relays, monitors with recorder output, alarm, level detectors, level relays etc. The complete system & the sensors offered by the supplier must be in line with equipment already installed and proven for satisfactory performance in the field for at least 5 years after commissioning. Installation & commissioning charges shall be quoted separately.</p> <p>The system must be complete in itself & should provide software to measure & display the parameters being monitored, storage & post processing of the measured data, its analysis & trending to monitor the condition of the generator. It should also provide complete diagnostic analysis with polar view of rotor inside stator from the measurements for air gap.</p>																																				
COPYRIGHT AND CONFIDENTIAL The information on this document is the property of Bharat Heavy Electricals, Limited. It must not be used directly or indirectly, in any way detrimental to the interest of the company.	2.0 DETAIL OF THE EQUIPMENT : <p>The supplier shall design, supply, permanently install & commission a complete system (hardware & software) comprising of monitor with recorder output for data acquisition, data processing, data storage, trending, alarm, level detectors and level relays etc.; colour display & printing unit; all the accessories for on-line condition monitoring system for Shaft vibrations in the vicinity of guide bearing journals generally as per BHEL Specification HG55036 (Rev.02) and Air Gap in between stator & rotor generally as per BHEL Specification HG55035 (Rev03) of hydro generator in the powerhouse, complete in all respects with detectors, pre-amplifiers, control unit, power supply, time delay relays; all interconnecting & field cables etc.</p>

					2.3.3 The commissioning team shall have adequate experience in interpreting the air gap readings obtained by AGMS. As a part of successful testing & commissioning the team shall submit a report giving assessment / interpretation of stator & rotor air gap, independent form of stator & rotor and overall behavior of the generator without any extra charge.			
					2.3.4 Besides providing assessment / Interpretation of initial system test readings as a part of commissioning activity (Ref. clause 2.3.3 above), supplier shall also provide assessment / interpretation of two subsequent test readings of each generator spread over first year of installation / commissioning without any additional charge.			
					2.4 TACHO PROBE / SPEED SENSOR / ROTOR REFERENCE PROBE: A synchronization probe used for rotor pole reference purposes shall be provided in each unit and shall be suitably installed near the rotor shaft. This reference probe shall be a proximity switch that shall detect a small magnetic target rigidly fixed to the rotor shaft. The leads for the synchronization probe shall be shielded twisted pair of copper wire of suitable size. The leads from the probe to the wall / floor mounted enclosure shall also be routed in a protective conduit.			
					2.5 FIELD CABLES & SENSOR/ REFERENCE PROBE LEADS: - In order to ensure completeness of the system, all field cables & connecting leads i.e. from sensors to probe amplifier to processor to monitor/ controller etc. are to be provided with the equipment as stipulated in Specifications HG55035 (Rev 03) & HG55036(Rev 02).

सुपरसेडि SUPERSEDES INVENTOR NO.	Maximum operating temperature of the sensor shall be 125°C. The material used for fabrication of the sensor should be preferably fiber glass with a semi-conductive material on the surface totally immune to the generator magnetic field. The supplier shall provide calibration charts for each sensor.		
कॉपीराइट एवं गोपनीय COPYRIGHT AND CONFIDENTIAL The information on this document is the property of Bharat Heavy Electrical Limited. It must not be used directly or indirectly in any way detrimental to the interest of the company.	2.2 ROTOR POLE REFERENCE PROBE: A synchronization probe used for rotor pole reference purposes shall be installed above the rotor near the shaft in the upper bracket. The reference probe shall be a proximity switch that shall detect a small magnetic target rigidly fixed to the rotor shaft. 2.3 SENSOR & REFERENCE PROBE CABLES / LEADS: The leads for sensor may be triaxial cables of suitable size. These shall be brought out and terminated in a wall-mounted enclosure. Each sensor should have one cable only. The cable lead distance between the sensors & the wall-mounted enclosure shall correspond to the generator data (ref. Annexure-I). The triaxial cable leads from the sensors to the wall mounted enclosure shall be routed in a liquid seal tight conduit. The leads for the synchronization probe shall be shielded twisted pair of copper wire of suitable size. The leads from the probe to the wall mounted enclosure shall also be routed in a protective conduit. All the cables shall be capable of withstanding the operating conditions specified for the probes/ sensors. Cables may be treated for noise level reduction, if necessary, to maintain the quality of signal transmission. Cable connectors / microdot end connectors/ microdot couplers wherever used with cable leads shall correspond to the size & type of cable. All leads/ cables shall be suitably labeled to show the associated equipment. The placement of all the conduits shall not interfere with normal operation & maintenance of the generator. The conduits shall be securely fastened to the stator frame / civil structure to prevent their movement due to vibrations etc. during operation of the generator.		
स्वतंत्रता एवं गोपनीय स्वतंत्रता एवं गोपनीय This document is the property of Bharat Heavy Electrical Limited. It must not be used directly or indirectly in any way detrimental to the interest of the company.	2.4 WALL-MOUNTED ENCLOSURE: The wall-mounted enclosure shall be oil and dust tight as per NEMA 4 or its equivalent international standard. Its dimensions shall be sized to accommodate on-line air-gap monitoring system with all cable leads. Protective conduit for sensor leads, reference probe leads and AC power line shall be rigidly fixed to the enclosure. The air gap monitoring system shall be rigidly connected to the generator earthing bus with a copper lead of suitable size with matching lugs. - The enclosure shall be mounted on the outer wall of generator barrel. The supplier shall ensure that it doesn't interfere with normal operation & maintenance of the generator. The supplier shall also ensure the suitability of conditioning units for probes & other components installed in this enclosure for operation in the following environmental conditions: a. Temperature 0 - 55°C. b. Humidity up to 95% - outside Gen. barrel (For rest of the system installed within generator barrel it shall be Temp. 0-100°C & Humidity 90%).

SUPERVISOR'S INVENTORY NO. (सूची में दर्शाया गया) (सूची में दर्शाया गया)	<p>2.5 AIR GAP MONITORING SYSTEM (AGMS):</p> <p>The system shall operate with a compatible computer and a printer. It shall measure the static and dynamic air gaps and shall be controlled by a user friendly software package to display the results in a suitable form say polar, rectangular & tabular.</p> <p>The AGMS shall provide a polar view of the rotor shape inside the generator stator complete with rotor & stator circularity and centre off set values. For this, the system should be capable of monitoring all parameters simultaneously in order to properly correlate data to the specific moment in time. The system should have provision of sensitivity setting for each probe/ probe amplifier. It should be user settable in software with provision to soft lock it. The AGMS should provide a software / hardware alarm when the air gap reaches set alarm levels and shall store automatically at least 20 turns before and after an alarm occurred event. The system must be capable of accepting externally triggered events to be able to take measurements during machine trips.</p> <p>The system shall also provide a communication inter-phase that allows the data being monitored by AGMS to be linked with SCADA system capable of receiving analog DC signals of 4-20mA.</p> <p>Communication from AGMS of individual units - proposed to be installed on the outer wall of the generator barrel - shall be connected to the computer of each generator. The computer shall be mounted on a cabinet that can be placed on floor. It shall be located in consultation with powerhouse authority. Communication from AGMS to the computer should be highly reliable. All the communication links (preferably opto-isolated) required between the AGMS and the computer shall be provided by the supplier.</p> <p><i>The feasibility of providing a common multiplexed monitor-cum-controller-cum data acquisition system for all the units in the power house to be located centrally may be examined. If found feasible, it may be offered as alternate option along with its techno-economic advantages/ disadvantages vis-à-vis independent system for each unit.</i></p>			
COPYRIGHT AND CONFIDENTIAL The information on this document is the property of Bharat Heavy Electricals Limited. It must not be used directly or indirectly in any way without the written permission of the company.	<p>2.6 GENERAL:</p> <ul style="list-style-type: none"> - The supplier shall include all field cables i.e. from sensor to probe amplifier to processor to monitor/ controller in their scope of supply. - Alarm output contacts shall be potential free and rated for a current of 5A, 240 volts AC 50 Hz. or 0.5A 220 V DC. All alarm output should be fuse protected. - The system shall have the provision of a 12V buffered rotor pole reference probe signal out put, to be used for testing purposes / in vibration monitoring system. - The supplier shall give frequency response curve along with roll-off characteristics. - The system shall have a design feature to reject & reduce line frequency & Electro magnetic interference (EMI). - The supplier shall provide a complete installation; test & operation guide with the AGMS for the operating personnel. It will include the circuit diagram of individual units. - The system shall be suitable for mains operation (240V $\pm 10\%$, 50Hz AC). Also there should be provision of UPS of compatible rating with 30minutes of backup - If the system is capable of providing Creep Detection facility, it may be offered as an optional item.

उपरि उल्लिखित INVENTORY NO:	(यदि कोई अनुपस्थित हो तो यहाँ लिखें) If not present, write here:	3.0 RESPONSIBILITIES OF THE SUPPLIER: 3.1 The supplier shall design, supply, permanently install & commission a complete system along with all the accessories for on-line monitoring of air gap in between stator & rotor of generator in the power house. Accordingly, the supplier shall quote for design, manufacture, testing at works, despatch to site, installation & successful commissioning of the AGMS in all the generators (ref. Annex.-I) in the power house as per the details given above in para 1.0 & 2.0. 3.2 The equipment must be complete in all respects irrespective of whatever has been mentioned in para 1.0 & 2.0 above. Any accessories or equipment that has not been mentioned in the specification but are required as a part of the system are to be specified and included in the offer. 3.3 The supplier shall ensure that the modules that require power supply other than the mains have been provided with suitable adapters. 3.4 The supplier shall indicate accuracies / error of individual items like sensors, measuring system etc. The overall accuracy of the system should be equal to or better than 7.0 %. 3.5 The supplier may additionally provide & offer measurement for rotor flux in the air gap as optional feature. 3.6 The supplier shall give procedure for functional checking and calibration of the system at site. In case any fixture is required for it, the same should be included in the scope of supply (common for all the generators in the power house). 3.7 <i>The offer shall include & indicate separately the charges for installation testing & commissioning of the equipment in the powerhouse.</i> The commissioning team will carry with them all the necessary test equipment required to verify the proper operation of the AGMS. Supplier shall provide a complete diagnostic procedure guide including its interpretation part for the operating personnel. The supplier's team shall have adequate experience in interpreting the air gap readings obtained by AGMS and shall submit a report giving assessment of stator & rotor air gap, independent form of stator & rotor and overall behavior of the generator. To appreciate AGMS capability w.r.t. interpreting the data, the supplier should submit one case study 3.8 Offer shall be submitted in duplicate.	
COPYRIGHT AND CONFIDENTIAL The information on this document is the property of Bharat Heavy Electricals Limited. It may not be used directly or indirectly, in any way detrimental to the interest of the company.			
स्वाधिकार एवं गोपनीय इस दस्तावेज़ में दी गई जानकारी बलुआ भारी विद्युत यंत्रों की स्वामिता है। इसका प्रयोग केवल बलुआ भारी विद्युत यंत्रों के लिए ही किया जा सकता है। इसका प्रयोग अन्य किसी भी उद्देश्य के लिए ग्राहक की अनुमति के बिना नहीं किया जा सकता है।		4.0 TESTS: Type / routine tests shall be carried on the equipment at works before despatch to site. However, the tenderer in his offer shall list out all the tests to be carried out on the components of the system at works to prove the equipment. The procedure for these tests and acceptance norms shall be submitted for approval to BHEL. 4.1 Routine Tests: 4.1.1 Electrical continuity tests. Certificate of compliance to be given by supplier. 4.1.2 Preliminary functionality tests of electronic components. Certificate of compliance to be given by supplier. 4.1.3 Calibration tests (i.e. Calibration curves) for all sensors. 4.1.4 Tests for compliance to the specification. 4.2 Type Tests: Three stage temperature-cycling functionality test of assembled electronic items (signal conditioners, data acquisition units, monitors etc.) a. before b. during, & c. after 16 hrs. – maximum temperature tests.

HEED HGE NAME OR ADDRESS	<h2 style="text-align: center;">ON-LINE VIBRATION MONITORING SYSTEM FOR HYDROGENERATORS</h2>				
COPYRIGHT AND CONFIDENTIAL The information on this document is the property of Heep Hydro. It should not be used or reproduced in any way without the written consent of the company.	<h3>1.0 GENERAL:</h3> <p>This specification covers the requirements for design, supply, installation & commissioning of on-line vibration monitoring system for hydro generators in the powerhouse, complete in all respects with detectors, control unit, time delay relays, monitors with recorder output, alarm, level detectors and level relays etc. The probes will be mounted on locations best suited to detect vibration of rotating and stationary components. The gap variation between vibration probe and shaft will give signal to a signal sensor, which will amplify it to an indicating instrument mounted on racks that shall be installed on the outer wall of generator barrel. The instrument will be solid state device and equipped with adjustable setting on display rack for alarm and trip contacts.</p> <p>The complete system & the vibration probes/ detectors must be in line with equipment already installed and proven for satisfactory performance on a vertical shaft hydro generator in the field for at least 5 years.</p> <p>The instrument / system shall be rack mounted programmable digital processor based unit to provide continuous display of channels indicating dynamic relative shaft & bearing bracket vibration measurements as required to frequently and randomly monitor the condition of rotating shafts & bearing brackets while the machine is operating. The system shall be such that the measurements taken by it are not affected / altered by the electro-magnetic field, residual magnetism, moist air, oil/oil vapors and other foreign particles generally found in an operating set. System installation shall be done at site during erection / commissioning of the generator or during a routine shutdown for inspection. It shall not compromise with the reliability and safety of the generator.</p> <p>The system must be complete in itself along with requisite software.</p>				
	<h3>2.0 DETAILS OF THE EQUIPMENT :</h3> <p>Details of the equipment furnished below provide a general guideline to the supplier. In case the supplier wishes to offer an alternative proven equipment that meets the functional requirements of the system and is fully compatible with the operating conditions of the generator provided in this specification. However, in that case, the points of departure shall be listed giving relative merits of each of them. This should provide sufficient information in respect of operating principle, material used, relevant specification/ standards etc., if any, along with the offer.</p>

सप्लायर की सूची नं. SUPPLIER'S NO		Relevant data pertaining to the power station & generator in which the system is to be installed is given as per the Annexure-I.			
स्वतंत्रताधिकार एवं गोपनीय इस दस्तावेज़ में दी गई सूचना भारत भारी बिजलीघरों की संपत्ति है। इसका प्रयोग केवल उद्देश्य से ही किया जा सकता है जो कि भारत भारी बिजलीघरों के हितों में है। इसका उपयोग किसी भी प्रकार से न किया जाये।	2.1 VIBRATION MONITORING INSTRUMENTATION & DISPLAY RACK :				
The supplier shall design, supply, permanently install & commission a complete system (hardware & software) comprising of monitor with recorder output for data acquisition & data processing, alarm, level detectors and level relays etc.; display unit; all the accessories for on-line monitoring of vibrations for hydro generator in the powerhouse, complete in all respects with detectors, pre-amplifiers, control unit, power supply, time delay relays, all interconnecting cables etc.					
<ul style="list-style-type: none"> The system shall provide & display dynamic relative shaft & bearing bracket vibration level magnitude in displacement mode for overall, 1f & 2f components in peak-to-peak microns and trend data display at identified locations as required to monitor the condition of rotating shafts & bearing brackets while the machine is operating. The system shall be capable of using a buffered 12V rotor pole reference probe (i.e. speed) signal that is likely to be provided in the machine as a part of air gap monitoring system, if required for providing 1f & 2f components. Otherwise, it should be quoted as an additional item The software & hardware for display of vibrations in polar, orbit & transient mode may be offered as an optional item only. 					
The instrumentation and display rack unit shall be suitable for wall mounting. It shall be suitable for mains operation (240V, single phase, 50Hz AC). Modules / sensors that require power supply other than the mains shall be provided with suitable adopters/ connectors. In-built storage battery having suitable recharging arrangement from AC mains shall also be provided as a standby source of supply to maintain programmed variable levels when power is removed for 2 years.					
It shall be provided with: -					
<ul style="list-style-type: none"> No. of channels in accordance with the requirement of no. of probes as per the details provided in annexure-I along with 2nos. spare channels. A front-panel key pad for easy programming of all key settings such as: <ul style="list-style-type: none"> alarm levels of each channel for overall value; alarm delay time; units of measurement; display brightness etc. A communication interface that allows vibration signal data of each monitored channel to be linked with a computer / SCADA system capable of receiving analog DC signals of 4-20mA; The system shall have provision of sensitivity setting for each probe/ probe amplifier. It should be user settable in software with provision to soft lock it. Front panel BNC connectors to allow raw vibration signals to be analysed with portable equipment;

निष्कापक संख्या INVENTORY NO	निष्कापक संख्या INVENTORY NO	<ul style="list-style-type: none"> - Alarm output contacts shall be potential free and rated for a current of 5A, 240 volts AC 50 Hz. or 0.5A 220 V DC. All alarm output should be fuse protected. - The supplier may additionally provide & offer the optional feature for display of vibration spectrum up to 500Hz, as and when required. - It shall be possible to get DC gap voltage on the display of the monitor for non contact type probes without going to the field. - The system shall be capable of calibrating itself to check for the drifts in the electronic circuits and to adjust the outputs accordingly based on the results of the calibration cycle. - An intuitive user-interface shall provide help menus for each monitor display. - The tenderer shall give frequency response curve of conditioning amplifier of each channel with the offer. - The system shall have a design feature to reject & reduce line frequency & electro-magnetic interference (EMI). - The system shall have provision for storing & post processing the data. - Part of the system that shall be installed outside of generator barrel, should be able to perform satisfactorily under following environmental conditions: <ul style="list-style-type: none"> a. Temperature 0 - 55°C. b. Humidity up to 95% (For the system that shall be installed within generator barrel, it shall be : Temp 0-100°C & Humidity 90%). 			
COPYRIGHT AND CONFIDENTIAL The information on this document is the property of Bharat Heavy Electrical Limited. It must not be used directly or indirectly in any way detrimental to the interest of the company.		<p>2.2 VIBRATION PROBES / DETECTORS AND CABLE LEADS:</p> <p>The operation of vibration probes / detectors to detect vibration of rotating and stationary components should be totally immune to electro-magnetic field, shaft currents, dust, oil vapors and also to any residual shaft magnetism. They shall be suitable for working in the temperature range of 0-100°C.</p> <p>2.2.1 To detect the vibration of rotating components, proximity probes shall be permanently installed at or near each guide bearing in the machine. Two (2nos.) probes shall be used to measure radial vibration at each guide bearing and shall be placed 90° from each other. The system shall have a measuring range of 2 mm with signal repeatability better than ±1% at the mid point of the measuring range. The probe frequency response shall cover the bandwidth of 0 to 2000 Hz. Direct inter-changeability of the probes shall incur no more than 5% error. The probe must be insensitive to cable length changes. The vendor shall provide calibration chart for each probe. <i>Option of variable low pass cut-off frequency in either amplifiers or signal processing circuit shall be preferred.</i></p> <p>Power supply requirement, if any, for the probes shall be in-built in the system. Suitable installation details required for permanently mounting the probes at or near each guide bearing in the machine, as foreseen by the vendor, shall form a part of his supply.</p> <p>2.2.2 To detect the vibration of bearing brackets, one (1no.) accelerometer probe shall be permanently installed on each bracket. These shall be of delta shear design and shall have sturdy sealed construction. It shall be possible for the accelerometer to be permanently</p>

ANNEXURE-I

DATA OF POWER STATION / GENERATOR FOR INSTALLATION OF VIBRATION MONITORING SYSTEM

1.General:

- Name of P/H
- No. of Units x Rating
- Customer
- Location

Refer Annexure-I of HG55064

- Type of Generator
- Type of Construction of Generator
- Rated/Run-away Speed/Frequency:

2. Vibration Monitoring of rotating component (Shaft) near Guide Bearings:

- Generator Guide Bearings
- Turbine Guide Bearing
- No. of Proximity Probes for Vibration measurement
- Tacho/ Speed Sensor/Rotor Pole Reference Probe

Refer Annexure-I of HG55064

- ### Generator & Turbine Shaft Forging Material Chemical Composition

Carbon	Silicone	Manganese	Sulphur	Phosphorous
