1.0 GENERAL This specification calls for supply of calibrated long radius, low beta ratio throat tap flow nozzle assembly for the accurate determination of primary flow in the Performance Guarantee test on the TG set of the project indicated in sheet-5.					
2.0 SCOPE Supply of calibrated flow nozzle assembly comprising primary flow element, flow straightener(s), end flanges, gaskets (including one extra set for future use), requisite zinc plated bolts/studs & nuts, single piece upstream and downstream pipe sections and suitable root valves for tap sets. Each of the four pressure tap sets shall be 90° apart and calibrated as per ASME PTC-6-2004.					
3.0 TECHNICAL REQUIREMENTS Long Radius, low beta ratio throat tap flow nozzle assembly is to be designed as per para 4.8.4 to 4.8.11 of "ASME PTC-6 2004", "ASME PTC 19.5 2004 -Flow Measurement" along with data in Sheet No. 5. The overall dimensions & design of the flow meter(s) should match with those indicated in sketch in sheet No.6. Major technical requirements are reproduced as follows:					
a) The flow nozzle(s) shall be designed, manufactured and calibrated as per ASME PTC-6 2004.					
b) The supplier should calibrate the nozzle(s) preferably by Weigh tank method with Reynolds number, Water Temperature & other flow conditions as close to test conditions as possible. When it is not possible to calibrate at the test Reynolds number, the calibration Reynolds number should be obtained in accordance with para 4.8.16 of ASME PTC-6-2004. While calibrating, the transition region from 1.0 million to 4.0 million should be established. It is recommended that the value of the coefficient be established at the highest Reynolds No. possible, to minimize the effects of the transition region (in accordance with para 4.8.13 of ASME-PTC-6-2004). It is recommended that nozzles be sized to produce throat Reynolds Nos. beyond this range if possible to avoid effects of the Transition region as described in para 4.8.17, pg.37 of ASME-PTC-6-2004.					
c) The supplier should get the flow nozzle calibrated only at a recognized facility having international repute. Calibration should be separately conducted on each pairs of four taps & preferably consist of at least 20 separate acceptable points over a wide range of Reynolds Nos. For each set of selected taps, the calibration curve shall be within 0.25% of the reference curve and shall have the same slope. The reference curve is given in fig. 4.10 & table 4.2 on pg. 37 of ASME PTC-6-2004. The calibration of the flow nozzle shall comply with the conditions listed in clause 4-8.14 and 4-8.15 on pg. 36 & 37 of ASME PTC-6-2004.

Its surface should be hydraulically smooth and have a 0.4 microns or better finish and shall be free from all burrs, scratches, imperfections or ripples. For additional requirements on the design and manufacture of the nozzle(s) and its pressure taps, refer paras. 5.1, 5.2, 5.3, 5.4 of ASME PTC 19.5-2004 Flow Measurement & paras 4.8.6 & 4.8.7 of ASME PTC-6-2004. e) The flow straightener shall be of Perforated or tubed plate design with non-uniform hole distribution (also called Gallagher Straightener) as shown in Fig 4.5 & described in Para 4.8.4 & Table 4.1 on Pg. 30 & 32 of ASME PTC-6-2004. f) The bidder should confirm that in case the calibration curves are not within the limits prescribed in ASME PTC-6, they will manufacture fresh flow nozzle(s) and calibrate it to achieve the calibration regimes of ASME PTC-6 and supply the new piece(s) without any price / delivery implications. g) The total length of the flow assembly including flow straighteners; upstream & downstream pipe pieces; flanges of size Nb400 CL400 RF Weld neck type as per ANSI-B16.5 etc. is to be exactly as indicated in the sketch in sheet No.6 of this document. The upstream & downstream pipe should be without any weld joint and should be internally machined for a length of 4D & 2D respectively in accordance with clause no: 5-3 of ASME PTC-19.5 2004. h) All external surfaces of the assembly shall be painted with one coat of rust preventive primer and minimum one coat of heat resistive paint suitable for 160 Deg C application, to avoid rusting due to sea transportation (if applicable) and open storage at site for period up to one year. The end faces shall be provided with suitable covers and conservation shall be done by filling Nitrogen and blanking the nozzle at the ends to avoid rusting/damage of the pipe internals. The nozzle shall remain filled with nitrogen until installation for Performance Test. Alternatively if supplier is not able to provide Nitrogen filling then the internals of the pipe should be provided with suitable conservation (like Volatile Corrosion Inhibitor). Open ends of upstream and downstream taps should be sealed with covers to prevent damages to thread. The nozzles shall be packed in suitable seaworthy crates to avoid damage during transport and temporary storage before use. i) Serial No. of the nozzle, tag FP01 should be clearly indicated on a name plate permanently affixed to the assembly. Tap set identification mark(s) shall also be hard punched as well as painted in large letters on the assembly so that they can be easily identified by the customer at site. These should also be clearly indicated in the assembly drawing. j) The nozzle should be placed in box with name plate facing upward. The box should have arrow mark indicating upper direction and should at least carry Name of supplier, S.No. Of nozzle, Name of the project, package size, gross weight and net weight. k) To avoid loss of Root Valves and/ or Spare Gaskets packed with nozzles, Supplier should tie these loose items to the pipe body using wire or other suitable sturdy material.
