NOTES:-

- THE EQUIPMENT SHALL BE INSTALLED IN ACCORDANCE WITH THE LATEST AND SUPERSEDED EDITIONS OF THE FOLLOWING STANDARDS: AMERICAN INSTITUTE OF STEEL CONSTRUCTION, INC. MINIMUM REQUIREMENT AND ACTUAL SIZE SHALL BE AS PER FUNCTIONAL REQUIREMENT BUT NOT LESS THAN THOSE INDICATED IN THESE CHARGES.
1. FLOOR COLUMNS, STRUCTURES ARE TO BE PLACED BELOW 7.0M TOP OF BOB IN FRONT OF BOILER BETWEEN THE 12.0M COMPRESSOR EXTRACTING MAIN AND FRONT ROW OF ROILER COLUMNS 11.4 CM HGT EXCEPT IN CONTROL TOWER AREA.
  2. LOCATION OF COMPRESSOR/BOILER CHARGES SHOWN IN THE DRAWINGS ARE ALLEGED AND SHALL BE EVALUATED USING DETAILING ENGINEERING.
  3. ALL DIMENSIONS ARE IN MM'S AND LEVELS ARE IN METERS.
  4. FIRE BARRELS SHALL BE PROVIDED ON A ROW BETWEEN AND NO. 2-8.14-20 & 16-22.
  5. ALL ELEVATIONS INDICATED IN THE DMS ARE  $\pm 0.0$  T.O. BUILDING GROUND FLOOR ELEVATION 650.000M.
  6. FINISHED FLOOR OF RAISING TANK IN ROILERS/12.0M TAN AREA SHALL BE (+)3.0M
  7. FINISHED FLOOR ELEVATION IN WALL SHY AT CHIMNEY LEVEL SHALL BE 0.0M
  8. FINISHED FLOOR LEVEL IN 11.4M HGT SHALL BE (+) 0.0M.
  9. FINISHED FLOOR LEVEL IN 12.0M CHIMNEY SHALL BE 0.0M.
  10. FINISHED FLOOR LEVEL IN THE VARIOUS BUILDINGS IN MAIN PLANT AREA SHALL BE 0.0M.
  11. ALL CABLE SPREADER ROOMS TO BE PROVIDED WITH CHARGE ARRANGEMENT.
  12. BOTTOM OF STEEL OF PIPE / CABLE BACK IN WALL SHY AREA SHALL BE MINIMUM 01.00M.
  13. FOR ALL AIR HANDLING OTHER VACUUM PUMPS OR EXTRACTOR AIR COMPRESSORS SHALL BE PROVIDED:
    - a) IN CASE OF VACUUM PUMPS FOR AIR SHY SYSTEM, THESE SHALL BE LOCATED BELOW TOP OF 12.0M T.O. BOB AND THE EXTRACTOR ROOM FOR THE SAME ALONG WITH TRANSFORMERS SHALL BE LOCATED IN ONE OF THE MAIN PLANT T.O. IN CASE OF EXTRACTOR AIR COMPRESSORS, THESE ROOMS WITH EXTRACT ROOM SHALL BE LOCATED IN AIR AREA ACROSS THE ROAD BEHIND CHIMNEY.
1. STACK WALL REQUIREMENTS
- a) ALL CHIMNEYS AT "A" ROW A "B" ROW SHALL BE PROVIDED WITH 232 mm THICK BRICK ENCASEMENT.
  - b) ALL CABLE SPREADER ROOM WALLS.
  - c) WALLS OF DMS ROOM.
  - d) M/VU BRICK CLEAN ROOMS, ROILER HOT ROOM.
  - e) AIR HANDLING UNIT(W/O).
  - f) IN EQUIPMENT ROOM.
1. ROIL WALL : 230 mm THK ROIL WALL FROM 0.00M TO 0.6M FOR LUBE OIL ROOM.
  2. D-HOW IS THE FIRST ROW OF ROILERS AND WALL SHY COLUMNS.
  3. WALL WITH PIPES SHALL BE ROUTED INSIDE THE COLUMN DEPTH IN ELECTRICAL, DWS AND 4. BUILDING (W/O).
  5. D. 0.00M CORRESPONDS TO RL (+) 121.7 M.
  6. LOCATION AND SIZE OF TRANSFORMERS SHOWN IN TRANSFORMER HALL IS ALLEGED ONLY.
  7. NO VERTICAL IN ELECTRICAL, BM AND IP, BUT DUCT MAY SHALL BE PROVIDED.
  8. UP TOWER DRAWING IS TO BE REFERRED FOR AVAILABLE SPACE FOR SYSTEM.

TECHNICAL SPECIFICATION FOR  
LOW VOLTAGE SWITCHGEAR**

SPECIFICATION NO.: SBD-TS-CPBG-CPJ087

VOLUME: I

SECTION: A

REVISION: 00

DATE: 31.05.2023

## 6. TECHNICAL SPECIFICATION

CLAUSE NO.	TECHNICAL REQUIREMENTS			
1.03.00	<b>Spare capacity and Future Requirements</b> All LV Switchboard shall be provided with spare feeders / modules as specified in relevant clause of Part-A of Technical Specification.			
1.04.00	<b>Standardization</b> It shall be preferred to have all LV Switchboards for the entire plant from a single manufacturer from maintainability and spares management point of view. It shall be preferred to follow a standardization of Terminal Numbers across all LV Modules for ease of Interconnection and maintenance.			
1.05.00	<b>Plant control cable Interconnections</b> Control cable interconnections between switchgears and transformer marshalling boxes, switchgears and motor terminal boxes / push button stations, and between various switchgears shall be in the contractor's scope. (a) Standard control cable sizes shall preferably be 3CX1.5, 5CX1.5, 7CX1.5 & 10CX1.5 mm <sup>2</sup> (b) Cable size for motor space heater application shall be 2CX2.5 mm <sup>2</sup> (c) Interconnections for Current Transformer terminals shall use two cores of 1.5mm <sup>2</sup> size per phase (d) Core identification shall be using core colour for up to 5-core cable and core number for cable with more cores (e) Separate control cables shall be used for current transformers (f) Separate control cables shall be laid for EPB (Emergency/Local Push Button) status from EPB to Switchgear for the Switchgear and DCS.			
2.00.00	<b>CODES AND STANDARDS</b>			
2.01.00	All equipment shall, generally, comply with the updated issues of (a.) Applicable Indian Standards (b.) Indian Electricity Act. (c.) Indian electricity rules			
2.02.00	Equipment complying with any other authoritative / internationally recognized standards such as IEC, British, U.S.A., German, etc. will also be considered if it ensures performance equivalent or superior to Indian Standards. In such cases the contractor shall clearly indicate the standard adopted and furnish the copy of latest English version of the same along with the bid and bring out the salient features for comparison.			
2.03.00	All standards, specifications and codes of practice referred to herein shall be the latest editions including all applicable official amendments and revisions as published one month prior to the date of opening of bids. In case of conflict between this specification and those (IS codes, Standards etc.) referred to herein, the former shall prevail. All work shall be carried out as per the following codes and standards.

	<b>4.00.00 CONSTRUCTIONAL DETAILS OF SWITCHBOARDS</b>
	4.01.00 All Switchboards i.e., 415 V Switchgears, Motor Control Centres (MCCs), AC Distribution Boards (ACDBs), 220 V DC Distribution Boards (DCDBs) and Solenoid Valve Distribution Boards, shall be of metal enclosed, indoor, floor-mounted, free-standing type.
	4.02.00 All switchboard frames and load bearing members shall be fabricated using suitable mild steel structural sections or pressed and shaped cold-rolled sheet steel of thickness 2.0 mm. Frames shall be enclosed in cold-rolled sheet steel of thickness 1.6 mm. Doors and covers shall also be of cold rolled sheet steel of thickness 1.6 mm. Stiffeners shall be provided wherever necessary. The gland plate thickness shall be 3.0 mm for hot / cold-rolled sheet steel and 4.0 mm for non-magnetic material.
	4.03.00 All panel edges and cover / door edges shall be reinforced against distortion by rolling, bending or by the addition of welded reinforcement members. The top covers of the panels should be designed such that they do not permanently bulge/ bend by the weight of maintenance personnel working on it.
	4.04.00 The switchboards shall be of bolted design. The complete structures shall be rigid, self-supporting, and free from flaws, twists and bends. All cut-outs shall be true in shape and devoid of sharp edges.
	4.05.00 All switchboards shall be of dust-proof and vermin-proof construction and shall be provided with a degree of protection of IP: 5X as per IS/IEC 60947. However, the busbar chambers having a degree of protection of IP: 42 are also acceptable where continuous busbar rating is 1600A and above. Provision shall be made in all compartments for providing IP: 5X degree of protection, when circuit - breaker or module trolley has been removed. All cut-outs shall be provided with EPDM / Neoprene gaskets.

CLAUSE NO.	TECHNICAL REQUIREMENTS			
4.06.00	Provision of louvers on switchboards would not be preferred. However, louvers backed with metal screen are acceptable on the busbar chambers where continuous busbar rating is 1600 A and above.			
4.07.00	The switchboards shall comply to the Internal arc fault containment tests of 50 kA for 0.3s.			
4.08.00	The enclosure for outdoor panels shall be constructed of stainless steel sheets in order to have protection against corrosion. The Degree of protection for outdoor panels shall be IP: 55. The panels shall be mounted on a pedestal at a height of 500mm from ground level.			
4.09.00	All switchboards shall be of uniform height not exceeding 2450 mm. The height of the operating handle, push buttons etc shall be restricted between 300mm and 2000mm.			
4.10.00	Switchboards shall be easily extendable on both sides by the addition of vertical sections after removing the end covers.			
4.11.00	Switchboards shall be supplied with base frames made of structural steel sections, along with all necessary mounting hardware required for welding down the base frame to the foundation / steel insert plates. The base frame height shall be such that floor finishing (50 mm thick) to be done by Contractor after erection of the switchboards does not obstruct the movement of doors, covers, withdrawable modules etc.			
4.12.00	<p>All switchboards shall be divided into distinct vertical sections (panels), each comprising of the following compartments:</p> <p>(a.) BUSBAR COMPARTMENT</p> <p>A completely enclosed bus bar compartment shall be provided for the horizontal and vertical bus bars. Bolted covers shall be provided for access to horizontal and vertical busbars and all joints for repair and maintenance, which shall be feasible without disturbing any feeder compartment. Auxiliary and power bus bars shall be in separate compartments.</p> <p>(b.) SWITCHGEAR / FEEDER COMPARTMENT</p> <p>All equipment associated with an incomer or outgoing feeder shall be housed in a separate compartment of the vertical section. Two-tier breaker arrangement in a vertical section shall be offered for outgoing breaker feeders of rating up to 1600A. The design of the vertical section for such an arrangement shall ensure ease of termination of power cables of size &amp; quantity appropriate to respective feeder rating. The compartment shall be sheet steel enclosed on all sides with the withdrawable units in position or removed. Insulating sheet at rear of the compartment is also acceptable. No live parts shall be accessible with equipment drawn out and degree of protection within the compartment shall be IP2X. The front of the compartment shall be provided with the hinged single leaf door with captive screws for positive closure.</p> <p>(c.) CABLE COMPARTMENT OR CABLE ALLEY</p> <p>A full-height vertical cable alley of adequate width shall be provided for power and control cables. Cable alley shall have no exposed live parts and shall have no communication with busbar compartment. Cable terminations located in cable alley shall be designed to meet the Form 4b as per IEC 61439 for safety purpose. Necessary grommets shall be provided at the cable entry of individual modules. Wherever cable alleys are not provided for distribution boards, segregated cable boxes for individual feeders shall be provided at the rear for direct termination of cables. For circuit breaker external cable connections, a separately enclosed cable compartment shall also be acceptable. The contractor shall furnish suitable plugs to cover the cable openings in the partition between feeder compartment and cable alley. Cable alley door shall be hinged.</p>

CLAUSE NO.	TECHNICAL REQUIREMENTS			
	<p>(d.) CONTROL COMPARTMENT</p> <p>A separate compartment shall be provided for relays and other control devices associated with a circuit breaker.</p> <p>4.13.00 Sheet steel barriers shall be provided between two adjacent vertical panels running to the full height of the switchboard, except for the horizontal busbar compartment. EPDM / Neoprene gasket shall be provided between the panel sections to avoid ingress of dust into panels.</p> <p>4.14.00 After isolation of power and control circuit connections it shall be possible to safely carryout maintenance in a compartment with the busbar and adjacent circuit live. Necessary shrouding arrangement shall be provided for this purpose. Wherever two breaker compartments are provided in the same vertical section insulating barriers and shrouds shall be provided in the rear cable compartment to avoid accidental touch with the live parts of one circuit when working on the other circuit.</p> <p>4.15.00 All 415V switchgear (circuit-breaker) panels shall be of single-front type. MCCs and DBs shall be of single-front / double-front construction as per the requirements. All single-front switch boards shall be provided with single-leaf, hinged or bolted covers at the rear. The bolts shall be of captive type. The covers shall be provided with "DANGER" labels. All panel doors shall open by 90 deg or more. In case of double-front MCCs, if this cannot be achieved for panels adjacent to a breaker panel, suitable dummy panel shall be provided by the Contractor wherever necessary.</p> <p>4.16.00 All ACDBs, DCDBs and Solenoid Valve DBs shall be of fixed module type. All 415V circuit-breaker modules and contactor controlled motor modules shall be of fully draw-out type having distinct 'Service' and 'Test' positions. The equipment pertaining to a draw-out type incomer or feeder module shall be mounted on a fully withdrawable chassis which can be drawn out without having to unscrew any wire or cable connection. Suitable arrangement with cradle/ rollers, guides along with tool/lever operated racking in/out mechanism shall be provided for smooth and effortless movement of the chassis. For modules of size more than half the panel height, double guides shall be provided for smooth removal or insertion of module. All identical module chassis of same size shall be fully interchangeable without having to carry out any modifications. Suitable interlock shall be provided in DCDB for prevention of opening of Isolator (Incomer) when the bus coupler is open and vice-versa.</p> <p>4.17.00 All draw-out modules shall be provided with "Closed door operation" feature wherein movement of the module from "Isolated" position to "Service" position &amp; vice-versa and power ON / OFF operation of the module shall be possible only with the module door closed condition.</p> <p>4.18.00 All disconnecting contacts for power and control circuits of draw-out modules shall be of robust and proven design, fully self-aligning and spring-loaded. Both fixed and moving contacts shall be silver-plated and replaceable. The spring-loaded power and control draw-out contacts shall be on withdrawable chassis and the same on fixed portion shall not be accepted.</p> <p>4.19.00 Individual opening in the vertical bus enclosure shall permit the entry of moving contacts from the draw-out modules into vertical droppers.</p> <p>4.20.00 As indicated in schematic drawings of DDCMIS controlled modules, contractor shall supply &amp; mount two (2) coupling relays in the corresponding modules.</p> <p>4.21.00 All equipment and components shall be neatly arranged and shall be easily accessible for operation and maintenance. The internal layout of all modules shall be subject to Employer's approval. The Contractor shall submit dimensional drawings showing complete internal details of busbars and module components, for each type and rating for approval of Employer.</p>

CLAUSE NO.	TECHNICAL REQUIREMENTS			
4.22.00	Employer reserves the right to alter the cable entries, if required during detailed engineering, without any additional commercial implication.			
4.23.00	Each switchboard shall be provided with undrilled, removable type gland plate, which shall cover the entire cable alley. Contractor shall ensure that sufficient cable glanding space is available for all the cables coming in a particular section through gland plate. For all single core cables, gland plate shall be of non-magnetic material. The gland plate shall preferably be provided in two distinct parts for the easy of terminating addition cables in future. The gland plate shall be provided with gasket to ensure enclosure protection. Recommended drilling chart of gland plates for all power and control cables in the vertical panels shall be indicated by the Contractor in the respective G.A. drawings of the boards.			
4.24.00	The Contractor shall consider layout of panels in a switchboard consisting of various feeder modules in a straight line, unless specified otherwise. The actual composition and disposition of various modules in a switchboard shall be finalised during detailed engineering. The Contractor shall provide adopter panel / dummy panel required to meet various configuration / arrangement of busbars adopted by the Contractor. The Switchboards fed from indoor transformer will be flange connected to the same and the same shall be located as close as desirable to the transformer. The details of transformer flanges for those transformers not being supplied under this package shall be given to the contractor for matching the connections. The switchboards fed from outdoor transformers of rating 1000kVA and above shall be connected through busducts. For transformers of 1000kVA rating, cable connection may also be acceptable in case of layout constraints. For lower rated transformers, the connection shall be through cables. Busduct connections wherever applicable shall be preferably in a straight line alignment. Adopter panels and dummy panels shall be provided wherever required.			
4.25.00	Adequate space in a separate compartment shall be identified for mounting of Ethernet Switch (19" rack mounting), in all switchgears having numerical relays. Further, mounting of Ethernet switch in the above compartment at site and provision of inter-panel wiring (Cat5e Ethernet / Fibre Optic) for connection of numerical relays to Ethernet switch shall be in the contractor's scope. Arrangement to provide required control supply (110 V / 220 V DC) to Ethernet switch shall be made in the switchgear.			
4.26.00	CLEARANCES  The minimum clearance in air between phases and between phases and earth for the entire run of horizontal and vertical busbars and bus-link connections at circuit-breaker shall be 25 mm. For all other components, the clearance between "two live parts", "a live part and an earthed part", shall be at least ten (10) mm throughout. Wherever it is not possible to maintain these clearances, insulation shall be provided by sleeving or barriers. However, for horizontal and vertical busbars the clearances specified above should be maintained even when the busbars are sleeved or insulated. All connections from the busbars up to switch / fuses shall be fully shrouded / insulated and securely bolted to minimize the risk of phase to phase and phase to earth short circuits.			
5.00.00	PROTOTYPE PANELS  In order to establish the compliance with the requirements of this technical specification, prototype panels shall be made and offered for the Employer's inspection and approval before the start of manufacturing of panels for this project. The exact configuration of such prototype panels shall be finalized during detailed engineering.			
6.00.00	CONSTRUCTIONAL DETAILS OF AC & DC FUSE BOARDS			
6.01.00	All fuse boards shall be metal enclosed, fixed type, non-compartmentalized construction, suitable for indoor/ outdoor mounting on wall or steel structure.			
LOT-IA PROJECTS FLUE GAS DESULPHURISATION (FGD) SYSTEM PACKAGE		TECHNICAL SPECIFICATION SECTION –VI, PART-B BID DOC NO. : CS-0011-109(1A)-2	SUB SECTION II-E-10 LT SWITCHGEARS & LT BUSDUCTS	PAGE 12 OF 58

CLAUSE NO.	TECHNICAL REQUIREMENTS		
6.02.00	The fuse board frame shall be fabricated using suitable mild steel structures or pressed and shaped cold rolled sheet steel of thickness not less than 2.0 mm. The frames shall be enclosed by cold rolled sheet steel of thickness not less than 1.6 mm.		
6.03.00	The fuse boards shall be provided with doors on the front. The doors shall preferably be in two halves with hinges at the extreme ends and locking facility at the centre.		
6.04.00	Suitable EPDM/Neoprene gaskets shall be provided to make fuse boards completely dust and vermin-proof with a degree of protection of IP-52 for indoor and IP-54 for outdoor application, as per IS/IEC 60947.		
6.05.00	Each DC fuse board shall comprise of the following :  (a.) 1 no. 63 A switch as incomer  (b.) 100 A fully insulated (PVC sleeved or epoxy coated) busbars.  (c.) 8 nos. 16A outgoing Fuse feeders.  (d.) 1 no. auxiliary contactor for supply monitoring.  (e.) 1 no. indicating lamp with resistor and blue coloured lens.		
6.06.00	Each AC fuse board shall comprise of the following :  (a.) 1 no. 63A TPN switch as incomer.  (b.) 100 A, 3-phase, 4-wire, fully insulated (PVC sleeved or epoxy coated) busbars.  (c.) 9 nos. 16 A single phase switch fuse units and 3 nos. 16 A TPN switch fuse units as outgoing feeders or alternatively 16 amps MCCB can be provided.  (d.) 3 nos. indicating lamps with resistors and coloured lenses (R, Y, B) for incoming supply monitoring.		
6.07.00	The fuses shall be mounted in an insulating fuse carrier and it shall be possible to replace the outgoing feeder fuses without disturbing the other feeders. The handle of incoming switch shall be mounted on the door of the fuse board, with padlocking facility in both 'ON' and 'OFF' positions. The outgoing feeder switches shall preferably be of rotary type.		
6.08.00	Cable entry facilities shall be provided at bottom with removable gland plates of suitable thickness. However, top cable entry may be allowed in case of layout constraints. All incoming and outgoing cables shall be terminated on suitable terminal blocks.		
7.00.00	<b>POWER BUSBARS AND INSULATORS</b>		
7.01.00	All 415 V Switchboards, MCCs and ACDBs shall be provided with three phase and neutral busbars. Two separate sets of vertical busbars shall be provided in each panel of double front MCCs / DBs. Interleaving arrangement for busbars shall be adopted for switchboards with a rating of more than 1600A. DCDBs shall be provided with two (2) busbars. Entire busbar system shall be insulated with PVC sleeves. Busbar sleeves shall be compliant to UL224 (Extruded insulating tubing), CE/UL certified, having fire retardant properties and working temperature of 105°C.		
7.02.00	Vertical busbars of non-breaker panels shall be completely phase segregated by suitable insulating supports / walls made of fire-retardant, non-hygroscopic, track-resistant material to minimise the occurrence of arc faults.

CLAUSE NO.	TECHNICAL REQUIREMENTS			
7.03.00	All busbars and jumper connections shall be of high conductivity Aluminium alloy / Copper of adequate size.			
7.04.00	The cross-section of the busbars shall be uniform throughout the length of switchboard section and shall be adequately supported and braced to withstand the stresses due to the specified short circuit currents. Neutral busbar short circuit strength shall be same as main busbars.			
7.05.00	All busbars shall be adequately supported by non-hygroscopic, non-combustible, track-resistant and high strength sheet moulded compound or equivalent type polyester fibre glass moulded insulator. Separate supports shall be provided for each phase and neutral busbar. If a common support is provided, anti-tracking barriers shall be provided between the supports. Insulator and barriers of inflammable material such as Hylam shall not be accepted. The busbar insulators shall be supported on the main structure.			
7.06.00	All busbar joints shall be provided with high tensile steel bolts, belleville / spring washers and nuts, so as to ensure good contacts at the joints. Non-silver plated busbar joints shall be thoroughly cleaned at the jointed locations and suitable contact grease shall be applied just before making a joint. All bolts shall be tightened by torque spanner to the recommended value. The overlap of the busbars at each joint surface shall be such that the length of overlap shall be equal to or greater than the width of the busbar. All Copper to Aluminium joints shall be provided with suitable bimetallic washers.			
7.07.00	All busbars shall be colour coded as per IS: 375.			
7.08.00	The Contractor shall furnish calculations establishing the adequacy of bus bar sizes for specified current ratings.			
8.00.00	AUXILIARY BUSBARS AND CONTROL TRANSFORMERS			
8.01.00	AC CONTROL SUPPLY BUSBAR			
	Each bus-section of all Switchgears and MCCs shall be provided with two (2) nos. 415V / 110V control transformers. The 110V AC control supply from the control transformers shall be run through the MCC by means of two sets of control supply busbars of electrolytic Copper. In case of one transformer failure, whole bus section can be fed through single transformer. The control supply to different modules shall be tapped individually from the control supply busbars.			
8.02.00	DC CONTROL SUPPLY BUSBARS			
	Electrically controlled circuit breaker boards shall be provided with DC control supply busbars. The manually controlled breakers shall also be provided with such busbars in case relays are provided. Each section of the switchboard shall be provided with a DC supply by the Contractor. The Contractor shall provide suitable terminals, switch-fuse etc. to receive the DC supply and distribute the same through above mentioned control busbars to the required modules of the respective section. The DC control supply bus of one section shall be coupled to the control supply of other section through a switch located in the bus-coupler breaker panel. The DC supply to the bus-coupler breaker may be given from any of the control buses. For Emergency Switchgear, two DC supplies shall be provided along with suitable diodes for deriving the control supply through diode auctioneering. Power Supply to Numerical Relay and Ethernet switch shall be an independent circuit with switch and fuse tapped from the panel DC supply. Exact scheme for segregation of switchgear & numerical relay DC supplies shall be finalized during detailed engineering.			
8.03.00	SPACE HEATER BUSBARS			
	Panel and motor space heaters shall be fed from separate AC auxiliary busbars running throughout the switchboard. The supply for these busbars shall be tapped from incomer, before the isolating switch/ circuit breaker. Incoming circuit to space-heater bus shall have an

Suitable terminals shall also be provided to facilitate energisation of space-heater bus from outside during long shutdowns of unit / switch-board.</p> <p><b>CONTROL TRANSFORMERS</b></p> <p>The control transformers shall be 415 V / 110 V with neutral point-earthed, of insulation class 'B' or better. The sizing of Control transformers shall be carried out by Contractor considering the actual load of power contactors, auxiliary contactors, indicating lamps and other equipment in the module circuit. An additional load of 15 watts should also be considered for each module, for remote auxiliary relays and lamps to be connected in the control circuit of modules. Contractor shall also ensure that control transformers are adequately designed for meeting the momentary loading requirements &amp; the voltage drop during this condition shall not be more than 5%.</p>			
9.00.00	<p><b>EARTH BUS AND EARTHING</b></p>			
9.01.00	<p>A galvanized steel / Copper / Aluminium earth bus shall be provided at the bottom of each panel and shall extend throughout the length of each switchboard. It shall be welded / bolted to the framework of each panel and breaker earthing contact bar. Vertical earth bus shall be provided in each vertical section which shall in turn be bolted / welded to main horizontal earth bus.</p>			
9.02.00	<p>The earth bus shall have sufficient cross section to carry the momentary short circuit and short time fault current to earth, as indicated in "Technical Parameters", without exceeding the allowable temperature rise.</p>			
9.03.00	<p>Suitable arrangements shall be provided at each end of the horizontal earth bus for bolting to Contractor's earthing conductors. The horizontal earth bus shall project out of the switchboard ends and shall have predrilled holes for this connection. All joint splices to earth bus shall be made through at least two bolts, and taps by proper lug and bolt connection.</p>			
9.04.00	<p>All non-current carrying metal work of the switchboard shall be effectively bonded to the earth bus. Electrical conductivity of the whole switchgear enclosure framework and truck shall be maintained even after painting.</p>			
9.05.00	<p>The carriage and breaker frame shall get earthed while being inserted in the panel and positive earthing of the breaker frame shall be maintained in all positions, i.e. SERVICE &amp; ISOLATED, as well as throughout the intermediate travel.</p>			
9.06.00	<p>Each module frame shall get engaged to the vertical earth bus before the disconnecting contacts on the module are engaged to the vertical busbars.</p>			
9.07.00	<p>All metallic cases of relays, instruments and other panel-mounted equipment shall be connected to earth by independent stranded Copper wires of size not less than 2.5 sq. mm. All the equipment mounted on the door shall be earthed through flexible wire/braids. Insulation colour code of earthing wires shall be green. Earthing wires shall be connected to terminals with suitable clamp connectors, soldering is not acceptable. Looping of earth connections, which would result in loss of earth connections to other devices, when a device is removed, is not acceptable. However, looping of earth connections between equipment to provide alternative paths to earth bus is acceptable.</p>			
9.08.00	<p>VT and CT secondary neutral point earthing shall be at one place only, i.e. on the terminal block. Such earthing shall be made through links so that earthing of one secondary circuit shall be removed without disturbing the earthing of other circuit.</p>			
9.09.00	<p>All hinged doors having potential carrying equipment mounted on it shall be earthed by flexible wire/ braid. For doors not having potential carrying equipment mounted on it, earth continuity through scraping hinges/ hinge pins of proven design may also acceptable. The Contractor shall establish earth continuity at site also.</p>

10.00.00	<b>Circuit Breakers</b>			
10.01.00	Circuit breakers shall be three pole, air break, horizontal draw out type, and shall have fault making and breaking capacities as specified in "Technical Parameters". The circuit breakers which meet specified parameters of continuous current rating and fault making / breaking capacity only after provision of cooling fans or special device shall not be acceptable.			
10.02.00	Circuit breakers along with its operating mechanism shall be provided with suitable arrangement for easy withdrawal. Suitable guides shall be provided to minimize misalignment of the breaker.			
10.03.00	There shall be "SERVICE", "TEST" and "FULLY WITHDRAWN" positions for the breakers. In "Test" position the circuit breaker shall be capable of being tested for operation without energizing the power circuits i.e. the power contacts shall be disconnected, while the control circuits shall remain undisturbed. Locking facilities shall be provided so as to prevent movement of the circuit breaker from the "SERVICE", "TEST" or "FULLLY WITHDRAWN" position. It shall be possible to close the door in "Test" position. The circuit breaker rack in and rack out from Service to Test, Test to Isolated position or vice-versa shall be possible only in the door closed position.			
10.04.00	All circuit breakers shall be provided with "6 NO" and "6NC" potential free auxiliary contacts. These contacts shall be in addition to those required, for internal mechanism of the breaker and should be directly operated from breaker operating mechanism. In case the manufacturer does not have a proven arrangement for providing the required number of circuit breaker auxiliary contacts on the fixed portion of the cubicle, necessary electrically reset latched relays shall be provided complete with all wiring in series with service position limit switch contacts, for multiplying the circuit breaker mounted auxiliary contacts and provide 4 NO and 4 NC contacts. Separate limit switches, each having required numbers of contacts shall be provided in both "SERVICE" and "TEST" position of the breaker. All contacts shall be rated for making, continuously carrying and breaking 10 Amp at 240 V AC and 1 Amp (Inductive) at 240 V DC respectively.			
10.05.00	Suitable mechanical indications shall be provided on all circuit breakers to show "OPEN", "CLOSE", "SERVICE ", "TEST" AND "SPRING CHARGED" positions.			
10.06.00	Main poles of the circuit breakers shall operate simultaneously in such a way that the maximum difference between the instants of contacts touching during closing shall not exceed half a cycle of rated frequency.			
10.07.00	All circuit breakers shall be provided with the following interlocks :			
10.07.01	Movement of a circuit breaker between "SERVICE" and "TEST" position shall not be possible unless it is in open position. Attempted withdrawal of a closed circuit breaker shall preferably not trip the circuit breaker. In case the offered circuit breaker trips on attempted withdrawal as a standard interlock, it shall be ensured that sufficient contact exists between the fixed and draw out contact at the time of breaker trip so that no arcing takes place even with the breaker carrying its full rated current.			
10.07.02	Closing of a circuit breaker shall not be possible unless it is in "SERVICE" position, "TEST" position or in "FULLY WITHDRAWN" position.			
10.07.03	Circuit-breaker cubicles shall be provided with safety shutters operated automatically by the movement of the circuit breaker carriage, to cover the stationary isolated contacts when the breaker is withdrawn. It shall however be possible to open the shutters intentionally against pressure for testing purposes.			
10.07.04	A breaker of particular rating shall be prevented from insertion in a cubicle of a different rating.

CLAUSE NO.	TECHNICAL REQUIREMENTS			
10.07.05	Circuit breakers shall be provided with coded key / electrical interlocking devices, as per requirements.			
10.08.00	Circuit breaker shall be provided with anti-pumping relay and trip free feature, even if mechanical anti-pumping feature is provided.			
10.09.00	Mechanical tripping shall be possible by means of front mounted Red "trip" push-button. In case of electrically operated breakers these push buttons shall be shrouded to prevent accidental operation.			
10.10.00	Complete shrouding / segregation shall be provided between incoming and outgoing bus links of breakers. In case of bus coupler breaker panels the busbar connection to and from the breaker terminals shall be segregated such that each connection can be approached and maintained independently with the other bus section live. Dummy panels if required to achieve the above feature shall be included in the Contractor's scope of supply.			
10.11.00	Circuit breaker shall be provided with Power operated mechanism as follows.			
	1.	Power operated mechanism shall be provided with a universal motor suitable for operation on 240 V DC / 240 AC Control supply, with voltage variation from 198 V to DC to 242 V DC . Motor insulation shall be class "E" or better.		
	2.	The motor shall be such that it requires not more than 30 seconds for fully charging the closing spring at minimum available control voltage.		
	3.	Once the closing springs are discharged, after one closing operation of circuit breaker, it shall automatically initiate recharging of the spring.		
	4.	The mechanism shall be such that as long as power is available to the motor, a continuous sequence of closing and opening operations shall be possible. After failure of power supply at least one open-close-open operation shall be possible.		
	5.	Provision shall be made for emergency manual charging and as soon as this manual charging handle is coupled, the motor shall automatically get mechanically decoupled.		
	6.	All circuit breakers shall be provided with closing and trip coils. The closing coil shall operate correctly at all values of voltage from 187-242 V DC. The trip coil shall operate satisfactorily at all values of voltage from 154-242V DC /77 V-121 V DC		
	7.	Provision for mechanical closing of the breaker only in "Test" and "WITHDRAWN" positions shall be made. Alternately, the mechanical closing facility shall be normally made inaccessible; accessibility being rendered only after deliberate removal of shrouds.		
	8.	It shall not be possible to open the ACB panel door in breaker closed condition. Further, the racking mechanism shall be accessible only after opening the breaker panel door.		
	<b>Note:</b> The circuit breakers for DC applications shall have manually operated mechanism of spring charged, stored energy type. The closing operation of the circuit breaker shall charge

The trolley shall be such that the top most breaker module can be withdrawn on the trolley and can be lowered for maintenance purpose. The telescopic trolley shall be such that all type, size and rating of breaker can be withdrawn /inserted of particular switchgear. The quantity of telescopic trolleys to be supplied shall be 2 Nos. per switchgear room.</p>			
12.00.00	<p><b>AIR BREAK SWITCHES</b></p>			
12.01.00	<p>Air break switches shall be of heavy duty, single throw, group operated, load break, fault make type when associated with fuses. All switches for motor circuits shall be of utilization category AC-23A with 1NO +1NC auxiliary contact, which shall be wired to the control circuit as shown in the schematic drawings. All switches for other outgoing feeders shall be of utilization category AC-22A. All switches for DC circuits shall be suitable for 240 V DC and shall be of DC-22 utilization category.</p>			
12.02.00	<p>Continuous current rating of the switches shall be selected from the 'Module Selection tables' for various feeders.</p>			
12.03.00	<p>The combination of switch-fuse unit would be preferred. However, if separate switch and fuses are provided, switch shall be located before fuses.</p>			
12.04.00	<p>The main switches shall be operable from outside the module door. The switch handle shall clearly indicate the position of switch. Switch operating handles shall be provided with padlocking facilities. However, incomer switches of switchboards shall be provided with padlocking facility in both 'ON' and 'OFF' positions.</p>			
12.05.00	<p>Interlocks shall be provided such that the cubicle door will not open when the switch is in closed position and the switch will close only when the door is closed.</p>			
12.06.00	<p>Switches and fuses for AC/DC control supply and heater supply wherever required, shall be mounted inside the cubicles. Toggle switch is not acceptable.</p>			
12.07.00	<p>Even if a single phase feeder is required for certain applications, Contractor shall provide TPN switch, fuse-bases and cable/ link connections between switch/fuse and vertical busbars for all the three phases, so that changing from single phase feeder to three phase feeder is possible without any modification other than inserting fuses at site.</p>			
13.00.00	<p><b>MCCB</b></p>			
13.01.00	<p>MCCB shall be fixed type / part of withdrawable feeder module as per specification, three pole, air break type having trip free mechanism with quick make and quick break type contacts. MCCB shall have current limiting feature. MCCB of identical ratings shall be physically and electrically interchangeable. MCCB shall be provided with 1 NO and 1NC auxiliary contacts.</p>			
13.02.00	<p>MCCB shall be provided with Microprocessor based inbuilt front adjustable releases (Overload &amp; Short-circuit) and shall have adjustable Earth Fault protection unit also. The protection settings shall have suitable range to achieve the required time &amp; current settings. LED indications shall also be provided for faults, MCCB status (on/off etc.).</p>			
13.03.00	<p>MCCB terminals shall be shrouded and designed to receive cable lugs for cable sizes relevant to circuit rating. Extended cable terminal arrangement for higher size cable may also be offered. ON and OFF position of the operating handle of MCCB shall be displayed and the rotary operating handle shall be mounted on the door of the compartment housing MCCB. The compartment door shall be interlocked mechanically with the MCCB to prevent opening</p>

13.04.00	<p>Auxiliary contacts of the MCCBs pertaining to critical feeders, to be decided during detailed engineering, shall be connected to the digital inputs available in the numerical relays of Incomer / Bus-coupler / Outgoing circuit breaker feeders, for integration into the numerical relay network.</p>									
14.00.00	<b>CONTROL AND SELECTOR SWITCHES</b>									
14.01.00	<p>Control and selector switches shall be of heavy duty, rotary type with escutcheon plates clearly marked to show the positions. The control &amp; selector switches should be as per IS/IEC 60947 Part V section 1. The switches shall be of sturdy construction suitable for mounting on panel front. Switches with shrouding of live parts and sealing of contacts against dust ingress shall be preferred.</p>									
14.02.00	<p>Ammeter and voltmeter selector switches shall have four stay put positions with adequate number of contacts for 3-phase 4-wire system. These shall have oval handles. Ammeter selector switches shall have make before break type contacts to prevent open circuiting of CT secondary.</p>									
14.03.00	<p>Contacts of the switches shall be spring assisted and shall be of suitable material to give a long trouble free service.</p>									
14.04.00	<p>The contact ratings shall be at least the following :</p> <table><tr><td>1.</td><td>Make and carry, continuously, 10 A at 240 V DC and 110 V AC</td></tr><tr><td>2.</td><td>Breaking current at 240 V DC, 1 A (inductive)</td></tr><tr><td>3.</td><td>Breaking current at 110 V AC and 0.3 lagging p.f., 5A</td></tr></table>				1. 15.00.00	<b>CONTACTORS</b>									
15.01.00	<p>Motor starter contactors shall be of air break, electromagnetic type rated for uninterrupted duty as per IS/IEC 60947 Part-4 Section- 1.</p>									
15.02.00	<p>Contactors shall be double-break, non-gravity type and their main contacts shall be silver faced.</p>									
15.03.00	<p>Direct-on-line contactors shall be of utilization category AC3. Reversing starters shall comprise of Forward and Reverse contactors mechanically and electrically interlocked with each other. These contactors shall be of utilization category AC4. DC contactors shall be of DC3 utilization category. For CHP conveyor motors, minimum rating of power contactors shall be 240% of full load current of the motors. For other CHP drives, minimum rating of power contactors shall be 160% of full load current of motor.</p>									
15.04.00	<p>The number of normally open (NO) and normally closed (NC) auxiliary contacts of a contactor shall be as per requirement shown in the respective module drawings. It shall, however, be not less than 2NO+2NC.</p>									
15.05.00	<p>Operating coil of contactors shall be of 110 V AC unless otherwise specified elsewhere. The contactor shall operate satisfactorily between 85% and 110% of the rated voltage. The contactor shall not drop out at 70% of the rated voltage but shall definitely drop out at 20% of the rated voltage.</p>

CLAUSE NO.	TECHNICAL REQUIREMENTS			
15.06.00	Contactors for DC drives shall have a coil voltage of 240 V DC. DC operated contactor coil shall have an economy resistor and shall be suitable for satisfactory continuous operation at 187-242 V DC/ 93.5-121 V			
16.00.00	FUSES			
16.01.00	All fuses shall be of HRC cartridge fuse link type. Screw type fuses shall not be accepted. Fuses for AC circuits shall be rated for 80kA rms (prospective) breaking capacity at 415V AC and for DC circuits, 20kA rms breaking capacity at 240V DC.			
16.02.00	Fuse shall have visible operation indicators. Insulating barriers shall be provided between individual power fuses.			
16.03.00	Fuse shall be mounted on insulated fuse carriers, which are mounted on fuse bases. Wherever it is not possible to mount fuses on carriers, fuses shall be directly mounted on plug-in type of bases. In such cases one set of insulated fuse pulling handles shall be supplied with each switchboard.			
16.04.00	Fuse ratings shall be selected by the Contractor from the 'Module Selection Tables' for various feeder ratings. However, the fuse ratings for motor feeders given in the 'Motor Module Selection Table' are indicative only, and the same shall be coordinated by the Contractor to achieve class-II protection coordination and also to match the motor characteristics. Switch rating shall in no case be less than the fuse rating.			
16.05.00	The Neutral links shall be mounted on fuse carriers which shall be mounted on fuse bases.			
17.00.00	Instrument Transformers			
17.01.00	All current and voltage transformers shall be of cast resin insulated type suitable for continuous operation at the temperature prevailing inside the switchgear enclosure, when the switchboard is operating at its rated condition and the specified ambient temperature. The class of insulation shall be 'E' or better.			
17.02.00	Alternatively, current transformers with unbreakable, flame retardant, self-extinguishing Nylon casing of UL94 grade are also acceptable.			
17.03.00	All instrument transformers shall be able to withstand the thermal and mechanical stresses resulting from the maximum RMS short circuit breaking and peak making current ratings of the associated switchgear.			
17.04.00	All instrument transformers shall have clear indelible polarity markings. All secondary terminals shall be wired to separate terminals on an accessible terminal block where star point formation and earthing shall be done.			
17.05.00	Current transformers may be multi or single-core type. All voltage transformers shall be single phase type.			
17.06.00	The bus VTs shall be housed in a separate compartment. All VTs shall have readily accessible HRC current limiting fuses on both primary and secondary sides.			
17.07.00	All CTs shall be provided with supports independent of busbar / busbar supports.			
17.08.00	The CTs shall be located in such a way that they can be easily approached for maintenance without necessitating shut down of adjacent feeders.			
18.00.00	Numerical relays & networking			
18.01.00	All circuit breaker feeders shall be provided with communicable numerical relays complying with IEC-61850, having protection, control, measurement and monitoring features. 18.02.00	<p>Control of circuit breakers shall be carried out from DDCMIS through hardwired control commands in the form of 24V DC signal. Preferably, binary input of all relays shall be configurable to accept 24V DC signals directly from DDCMIS and no separate coupling relays shall be provided. The Local control console of the relay flush mounted on the switchgear would normally be used only for testing of circuit breaker in isolated position, and for tripping it in an emergency. Provision for closing &amp; tripping of the circuit breaker locally from laptop through serial port shall be possible to facilitate commissioning activities. The basic control scheme of breaker feeders shall be developed using the programmable (soft) logics in the relay.</p>			
18.03.00	<p>Each numerical relay shall be connected to the Ethernet switch(in Employers's scope) provided in the Switchgear through Cat5e Ethernet /FO cable. Ethernet Switches shall be connected through Fibre Optic cable to form a ring network.</p>			
18.04.00	<p>The numerical relay shall be capable of measuring and storing values of a wide range of quantities, events, faults and disturbance recordings. The alarm / status of each of protection function and trip operation shall be communicated to Switchgear SCADA / DDCMIS. The numerical relays shall have built in feature / hardware interface to provide such inputs to Switchgear SCADA / DDCMIS for analog / digital values.</p>			
18.05.00	<p>The required .ICD / .CID files of the Numerical relays under the scope of this package for the integration with the SCADA shall be provided by the Numerical relay vendor along with necessary engineering support.</p>			
18.06.00	<p>All relays shall be rated for control supply voltage as mentioned elsewhere under parameters and shall be capable of satisfactory continuous operation between 80-120% of the rated voltage. Making, carrying and breaking current ratings of their contacts shall be adequate for the circuits in which they are used. Contacts for breaker close and trip commands shall be so rated as to be used directly used in the closing and tripping circuits of breaker without the need of any interposing / master trip relays. Threshold voltage for binary inputs shall be suitably selected to ensure avoidance of mal operation due to stray voltages and typically shall be more than 70% of the rated control supply voltage.</p>			
18.07.00	<p>One minute power frequency withstand test voltage for all numerical relays shall at least be 2kV (rms).</p>			
18.08.00	<p>Failure of a control supply and de-energization of a relay shall not initiate any circuit breaker operation.</p>			
18.09.00	<p>Disturbance Record waveforms, event records &amp; alarms shall be stored in Non-volatile memory and failure of control supply shall not result in deletion of any of these data.</p>

18.10.00	<p>All IEDs shall have freely programmable optically isolated binary inputs (BI) and potential free binary output (BO) contacts, the quantity of which shall be adequate to realize the associated interlocks / feedbacks.</p> <p>In case the offered IED does not have the required number of I/Os, the same can be achieved through external I/O device of same make complying with the requirement stated elsewhere in this specification.</p>			
18.11.00	<p>All the numerical relays shall have communications on three ports, local front port for communication with laptop and dual ports on IEC 61850 to communicate with the Switchgear SCADA System.</p>			
18.12.00	<p>All the numerical relays shall have adequate processor memory for implementing the programmable scheme logic required for the realization of the protection / control schemes, in addition to the built in protection algorithms.</p>			
18.13.00	<p>All Numerical relays shall have features for electrical measurements including voltage, current, power (active &amp; reactive), frequency, power-factor and energy parameters.</p>			
18.14.00	<p>Relays shall have event recording feature, recording of abnormalities and operating parameters with time stamping.</p>			
18.15.00	<p>Master trip (86) and non-86 trips shall be software configurable to output contacts and no separate master trip relay shall be used.</p>			
18.16.00	<p>All numerical relays shall have provision of both current (CT) and voltage (VT) inputs. Relays shall be suitable for both residually connected neutral CT input as well as CBCT input. Relays shall be suitable for CT secondary current of 1A. Motor relays shall have 4 CT inputs. Relays for Incomers, Bus-couplers &amp; Ties shall have 4 CT inputs. All relays except incomers, ties and bus-couplers shall have 3Nos of VT inputs. Relays used in incomers, ties and bus couplers shall have provision of two sets of voltage inputs (3Nos for bus voltage &amp; 1No. for line voltage) for the purpose of synchronization.</p>			
18.17.00	<p>All CT terminals on the relays shall be of fixed type suitable for connection of ring-type lugs to avoid any hazard due to loose connection leading to CT open-circuit. In no circumstances Plug-in type connectors shall be used for CT / VT connections.</p>			
18.18.00	<p>All numerical relay shall have key pad / keys to allow relay settings from relay front. All hand reset relays shall have reset button on the relay front. Relay to be self or hand reset shall be software selectable. Manual resetting shall be possible from remote.</p>			
18.19.00	<p>Relays shall have self-diagnostic feature with self-check for power failure, programmable routines, memory and main CPU failures and a separate output contact for indication of any failure.</p>			
18.20.00	<p>Relays shall have at least two sets or groups of two different sets of adaptable settings. Relays shall have multiple IEC / ANSI programmable characteristics.</p>			
18.21.00	<p>Design of the relay must be immune to any kind of electromagnetic interference. Vendor shall submit all related type test reports for the offered model along with the offer.</p>

18.22.00	All cards / hardware of numerical relays shall be suitable for operation in Harsh Environmental conditions with respect to high temperature, humidity & dust.			
18.23.00	Relay shall be immune to capacitance effect due to long length of connected control cables. Any external hardware, if required for avoiding mal operation of the relay due to cable capacitance shall be included as a standard feature.			
18.24.00	All I/Os shall have galvanic isolation. Analog inputs shall be protected against switching surges, harmonics etc.			
18.25.00	Numerical relays shall have two level password protections, one for read only and other for authorization for modifying the setting etc.			
18.26.00	Numerical relays shall have feature for Time synchronization through the Switchgear SCADA System. The resolution of time synchronization shall be +/- 1.0 millisecond or better throughout the entire system.			
18.27.00	Relays & Ethernet switches shall be suitable to accept both AC & DC supplies with range 110V or 220V with tolerance of 70 % to 120 % of rated voltage & shall be finalized during detailed engineering.			
19.00.00	Other Protections and Control functions in the Relays			
19.01.00	Trip circuit supervision shall be provided for all feeders to monitor the circuit breaker trip circuit both in pre-trip and post-trip conditions.			
19.02.00	Schematics requiring auxiliary relays / timers for protection function shall be a part of numerical relay. The number of auxiliary relay and timer function for protection function shall be as required. Timer functions shall be programmable for on/off delays.			
19.03.00	Bus no volt condition shall be configured to an output contact of the relay of incomers for suitably interfacing with DDCMIS wherever required.			
19.04.00	The numerical relay shall be able to provide supervisory functions such as trip circuit monitoring, circuit breaker state monitoring, VT and CT supervisions and recording facilities with post fault analysis.			
19.05.00	The numerical processor shall be capable of measuring and storing values of a wide range of quantities, all events, faults and disturbance recordings with a time stamping using the internal real time clock. Battery backup for real time clock in the event of power supply failure shall be provided.			
19.06.00	At least 200 time tagged events / records shall be stored with time stamping. Details of at least 5 previous faults including the type of protection operated, operating time, all currents & voltages and time of fault.			
19.07.00	Diagnostics Automatic testing, power on diagnostics with continuous monitoring to ensure high degree of reliability shall be shall be provided. The results of the self-reset functions shall be stored in battery back memory. Test features such as examination of input quantities, status of digital inputs and relay outputs shall be shall be available on the user interface.

24.02.00	All inter-cubicle and inter-panel wiring and connections between panels of same switchboard including all bus wiring for AC and DC supplies shall be provided by the Contractor.			
24.03.00	All auxiliary wiring shall be carried out with 650V grade, single core stranded Copper conductor, colour coded, PVC insulated wires. Conductor size shall be 1.5 mm <sup>2</sup> (min.) for control circuit wiring and 2.5 mm <sup>2</sup> (min) for CT and space heater circuits.			
24.04.00	Extra flexible wires shall be used for wiring to devices mounted on moving parts such as hinged doors. The wire bunches from the panel inside to the doors shall be properly sleeved or taped.			
24.05.00	All wiring shall be properly supported, neatly arranged, readily accessible and securely connected to equipment terminals and terminal blocks.			
24.06.00	All internal wiring terminations shall be made with solderless crimping type tinned Copper lugs which shall firmly grip the conductor or an equally secure method. Similar lugs shall also be provided at both ends of component to component wiring. Insulating sleeves shall be provided over the exposed parts of lugs to the extent possible. Screw-less (spring loaded) / cage clamp type terminal shall also be provided with lugs.			
24.07.00	Printed single tube ferrules marked to correspond with panel wiring diagram shall be fitted at both ends of each wire. The wire identification marking shall be in accordance with IS: 375. Red Ferrules should be provided on trip circuit wiring.			
24.08.00	Wiring for equipment, which are to be supplied by the Contractor and for which the Contractor has to provide mounting arrangement in his panels, shall also be provided by the Contractor, up to the terminal blocks.			
24.09.00	All connections from vertical busbars for individual modules above 100 A shall be by Copper / Aluminium links only. The cable connections for modules less than 100 A shall be selected in such a way that there will not be any melting / shorting in case of a short circuit inside the module and the cable shall have current rating to carry the let through energy of the corresponding fuses in case of a fault. The insulation of the cable and its cross section shall be decided considering the high ambient temperature within the module. For all modules where use of cable is envisaged by the Contractor specific approval from the Employer regarding cable details are to be taken. For power wiring colour coded wire insulation / tapes shall be provided.			
25.00.00	CONTROL TERMINAL BLOCKS			
25.01.00	Terminal blocks shall be 650V grade, 10Amps rated, made up of unbreakable polyamide 6.6 grade. The terminals shall be either screw type or screw-less (spring loaded) / cage clamp type with lugs. Marking on terminal strips shall correspond to the terminal numbering in wiring diagrams. All metal parts shall be of non-ferrous material. In case of screw type terminals the screw shall be captive, preferably with screw locking design.			
25.02.00	Terminal blocks for CT and VT secondary leads shall be of stud type, made up of unbreakable polyamide 6.6 grade. They shall be provided with links to facilitate testing, isolation star / delta formation and earthing. Terminal blocks for CT secondary shall have the short circuiting facility. The terminals for remote ammeter connection etc. shall also be

25.04.00	<p>All terminal blocks shall be suitable for terminating on each side two (2) nos. stranded Copper conductors of size up to 2.5 sq. mm each, or alternatively, the terminal blocks shall have the possibility of double shorting space to facilitate looping. However for DDCMIS terminals shall be suitable for 1.5 mm<sup>2</sup> cable.</p>			
25.05.00	<p>All terminals shall be numbered for identification and grouped according to the function. Engraved white-in-black labels shall be provided on the terminal blocks.</p>			
25.06.00	<p>Wherever duplication of a terminal block is necessary it shall be achieved by solid bonding links.</p>			
25.07.00	<p>Terminal blocks shall be arranged with at least 100mm clearance between two sets of terminal blocks. The minimum clearance between the first row of terminal blocks and the associated cable gland plate shall be 250 mm.</p>			
26.00.00	<p><b>Power Cable Termination</b></p>			
26.01.00	<p>Cable termination compartment and arrangement for power cables shall be suitable for heavy duty, 1.1 kV grade, stranded Aluminium conductor, PVC/ XLPE insulated, armored / unarmored and PVC sheathed cables. The size and type of cable for individual modules shall, preferably, be as indicated in the 'Module Selection Tables'. All necessary cable terminating accessories such as supporting clamps and brackets, hardware etc. for cables shall be provided by the contractor to suit the final cable sizes.</p>			
26.02.00	<p>All power cable terminals shall be of stud type and the power cable lugs shall be of tinned Copper solderless crimping ring type conforming to IS: 8309. All lugs shall be insulated/ sleeved.</p>			
27.00.00	<p><b>LOCAL PUSH BUTTON STATIONS</b></p>			
27.01.00	<p>The enclosure shall be provided with a hinged guard at the front, covering full length, to avoid inadvertent operation of push buttons Support structure for mounting the LPBS shall also be supplied by Contractor. The local push button stations shall be dust and vermin proof and shall have a degree of protection of IP -55 as per IS/IEC 60947. The DOP shall be IP-65 in case the same are located in dusty areas.</p>			
27.02.00	<p>The local push button stations shall be metal enclosed, suitable for outdoor / indoor mounting on wall or steel structures. The enclosure shall be die-cast Aluminium or cold-rolled sheet steel of at least 1.6 mm thickness. LPBS shall be painted to shade no. RAL: 9002.</p>			
27.03.00	<p>Local push button stations enclosure made of FRP (Fiberglass Reinforced Polymer) may also be offered. The FRP enclosure shall be of SMC Hot press Moulded, Halogen free and flame retardant as per UL94, V-0. The thickness of the FRP enclosure shall be at least 4mm.</p>

	The colour of the FRP type LPBS shall be of RAL 7035 and the hinges, nuts & bolts shall be of Polyamide / Stainless Steel material.		
27.04.00	The push button stations shall be suitable for bottom cable entry and shall be provided with removable undrilled gland plates or knockouts to facilitate termination of two numbers of control cables. Adequate space shall be available inside the push button station enclosure for terminating external cables directly on pushbutton terminals. Overall size of push button stations shall be subject to Employer's approval.		
27.05.00	The push button station shall comprise of a latched type EMERGENCY STOP push button with two (2) NO and two (2) NC contacts.		
27.06.00	Support structure for mounting in local push button stations shall be supplied by the Contractor.		
28.00.00	LOCAL MOTOR STARTERS		
28.01.00	Local motor starters shall be suitable for manual switching of 415 V, 3-phase, squirrel cage motors rated up to 5.5 kW. They shall have constructional features similar to those specified for local push button stations.		
28.02.00	Each starter shall comprise of :		
	1.	A 3-pole contactor, mechanically latched type.	
	2.	Start push button, coloured green.	
	3.	Stop push button, coloured red.	
	4.	Ambient temperature compensated, thermal over load relay with single phasing protection. The continuously variable relay setting range shall be suitable for the motor rating which shall be advised to the Contractor in due course. The relay shall trip the contactor.	
28.03.00	The start push button, when pressed, shall preferably remain in depressed position and shall be released along with the contactor when the stop push button is pressed or when thermal overload relay operates.		
28.04.00	Local starters shall be suitable for loop-in and loop-out of incoming cable and for one outgoing cable to motor. Support structure for mounting in local motor starters shall be supplied by the Contractor.		
29.00.00	Name Plates and Labels		
29.01.00	All Switchgears, MCCs, Distribution Boards, Fuse boards, all feeders, local push-button stations and local motor starters shall be provided with prominent, engraved identification plates. The module identification plate shall clearly give the feeder number and feeder designation. For single front switchboards, similar panel and board identification labels shall be provided at the rear switchgear also.		
29.02.00	All name plates shall be of non-rusting metal or 3-ply Lamicoid, with white engraved lettering on black background. Letter size shall be of at least 10mm height.

These labels shall be positioned so as to be clearly visible and shall have the device number, as mentioned in the module wiring drawings.			
29.04.00	Caution name plate "Caution Live Terminals" shall be provided at all points where the terminals are likely to remain live and isolation is possible only at remote end.			
30.00.00	METAL ENCLOSED NON SEGREGATED PHASE BUSDUCT(AIR INSULATED)			
30.01.00	Three phase and neutral metal enclosed non segregated phase busduct assemblies shall be supplied for incoming connections from the transformers to the switch boards and inter connecting sections between switch boards, wherever applicable. The rating of the incoming and interconnecting busducts shall be same as the rating of the switchboard.			
30.02.00	The enclosure shall be made of minimum 3 mm thick Aluminium alloy. The section of the busduct shall be rectangular. The design of the busduct enclosures shall be of sturdy construction such that it will withstand the internal or external forces resulting from the various operating conditions.			
30.03.00	The entire busduct shall be designed for dust, vermin and weather proof construction. A suitable Aluminium sheet flange-protection hood shall be provided to cover all outdoor busduct enclosure joints to facilitate additional protection against rain water ingress. All horizontal runs of busducts shall have a suitable sloped enclosure top to prevent retention of water for both indoor and outdoor portion of busducts. Busduct enclosure shall have a degree of protection of IP-55.			
30.04.00	The inside of the bus enclosure may be treated with black paint to enable efficient heat dissipation. The matt paint used shall be suitable for temperature experienced during continuous loading of the bus conductor. The busduct exterior paint shade shall be RAL 5012.			
30.05.00	Flexible expansion joints for the enclosure shall be provided wherever deemed necessary by the Contractor. Necessary bonding shall be provided at the expansion joints if made of insulating materials.			
30.06.00	Enclosures shall be provided with flanged ends with drilling dimensions to suit the flanges at the switchgear and transformer terminals. Any adapter boxes required for this purpose are in the Contractor's scope of supply. The flanges shall be provided with gaskets, nuts, bolts, etc. Details of the flanges provided on transformer ends will be furnished to the successful Contractor.			
30.07.00	Suitable Inspection covers shall be provided for periodic inspection of insulators. Handle shall be provided on each inspection cover to facilitate easy lifting.			
30.08.00	The EPDM / Neoprene gaskets shall be provided so as to satisfy the operating conditions imposed by temperature, weathering, durability etc. Flange gaskets shall be provided at the equipment terminal connections.

34.00.00	<b>GASKETS</b> The gaskets, wherever specified, shall be of good quality EPDM / Neoprene with good ageing, compression and oil resistance characteristics suitable for panel applications.			
35.00.00	<b>TEMPERATURE –RISE</b> The temperature rise of the horizontal and vertical busbars and main bus links including all power draw-out contacts when carrying 90% of the rated current along the full run shall in no case exceed 55 <sup>0</sup> C with silver plated joints and 40 <sup>0</sup> C with all other types of joints over an outside ambient temperature of 50 <sup>0</sup> C. The temperature rise of the accessible parts/external enclosures expected to be touched in normal operation shall not exceed 20 <sup>0</sup> C. The temperature rise of manual operating means shall not exceed 10 <sup>0</sup> C for metallic & 15 <sup>0</sup> C for insulating material. Temperature rise for the busbars shall be carried out at 90% of the rated current. The above temperature rise limits are applicable for busducts also without any current derating.			
36.00.00	<b>DERATING OF EQUIPMENTS</b> The Contractor shall ensure that the equipment offered will carry the required load current at site ambient conditions specified and perform the operating duties without exceeding the permissible temperature as per Indian Standards / Specification. Continuous current rating at 50 <sup>0</sup> C ambient in no case shall be less than 90% of the normal rating specified.  The Contractor shall indicate clearly the derating factors if any employed for each component and furnish the basis for arriving at these derating factors duly considering the specified current ratings and ambient temperature of 50 <sup>0</sup> C.			
37.00.00	<b>PROTECTION CO-ORDINATION</b> It shall be the responsibility of the Contractor to fully coordinate the overload and short circuit tripping of the circuit breakers with the upstream and downstream circuit breakers / fuses / motor starters, to provide satisfactory discrimination. Further the various equipment supplied shall meet the requirements of Type 2 class of Co-ordination as per IS: 8544.			
38.00.00	<b>TESTS AND TEST REPORTS</b>			
38.01.00	<b>GENERAL</b>  (a.) All equipment to be supplied shall be of type tested design. The Contractor shall submit for Employer's approval the reports of all the type tests as listed in this specification and carried out not earlier than ten years prior to the date of bid opening. These reports should be for the tests conducted on the equipment similar to those proposed to be supplied under this contract and the test(s) should have been either conducted at an independent laboratory or should have been witnessed by a client.  (b.) In case the Contractor is not able to submit report of the type test(s) conducted not earlier than ten years prior to the date of bid opening, or in case the type test report(s) are not found to be meeting the specification requirements, the Contractor shall conduct all such tests under this contract at no additional cost either at third party lab or in presence of client/Employer's representative and submit the reports for approval.  (c.) All routine tests as per the specification and relevant standards shall be carried out.

38.02.00	The following type test certificates of LT Switchgear and MCC panels shall be submitted.			
	1)	Circuit breaker of each rating		
	a)	Test sequence 1		
	b)	Combined test sequence (With Circuit breakers mounted inside the Switchgear panel)		
	2)	Complete design verification of Switchgear/MCC Panels as per IEC 61439 Part-1, Annexure-D		
	3)	Internal arc test for Personnel and Assembly Protection as per IEC/TR 61641		
	4)	MCC modules of any three ratings, as selected by the Employer, for class - II protection Co-ordination.		
	5)	Test for single phasing protection feature on 3 nos. bimetallic thermal overload relay selected by Employer. The relay shall be tested for compliance with manufacturer's printed / declared characteristic curve.		
38.03.00	<p>For the following equipment the contractor shall submit the reports of all the type tests as per applicable standards and carried out not earlier than ten years prior to the date of bid opening. These reports should be for the tests conducted on the equipment similar to those proposed to be supplied under this contract and the test(s) should have been either conducted at an independent laboratory or should have been witnessed by a client. 39.00.00	ERECTION / INSTALLATION OF SWITCHBOARDS AND OTHER EQUIPMENTS			
39.01.00	Each equipment shall be installed in a neat, workman-like manner so that it is levelled, plumbed, squared and properly aligned and oriented. Tolerances shall be as established in Contractor's drawings or as stipulated by Employer. No equipment shall be permanently fixed down to foundations until the alignment has been checked and found acceptable by the Employer.			
39.02.00	Contractor shall furnish all supervision, labour, tools, equipment, rigging materials, bolts, wedges, anchors, etc., in proper time, required to completely install, test and commission the equipment.			
39.03.00	Manufacturer's and Employer's instructions and recommendations shall be correctly followed in handling, setting, testing and commissioning of all equipment.

## **Numerical relays & networking**

These relays shall be connected to the Switchgear SCADA System, through Ethernet switches. Each numerical relay shall be connected to the Ethernet switch provided in the Switchgear through Cat5e Ethernet /FO cable. Ethernet Switches shall be connected through Fibre Optic cable to form a ring network. The alarm / status of each of protection function and trip operation shall be communicated to Switchgear SCADA / DDCMIS. The numerical relays shall have built in feature / hardware interface to provide such inputs to Switchgear SCADA / DDCMIS for analog / digital values. The required .ICD / .CID files of the Numerical relays under the scope of this package for the integration with the SCADA shall be provided by the Numerical relay vendor along with necessary engineering support. At least one no. of each type of Numerical Relay shall be made available during the Factory Acceptance Test (FAT) of the Switchgear SCADA system along with the necessary engineering support from the Numerical Relay vendor.

### **ETHERNET SWITCH**

1. Ethernet switches shall be 'substation hardened', and shall comply with IEC61850 for communications and environment requirements. The Ethernet switches shall be of managed type with two (2) No of Fibre Optic cable ports and Sixteen / Eight Copper ports to achieve the LAN configuration indicated in the drawings. The Ethernet switches shall have features to support the dual redundant rings as shown in the architecture drawings. These switches shall be mounted inside the switchgear Panels and shall be suitable for accepting dual redundant power supplies. The FO ports shall be Single-mode 1000Mbps ports. Copper ports shall be 10/100Mbps ports.
2. Necessary software for configuration and real-time network monitoring shall be provided along with the Ethernet switches. Network monitoring feature shall be integrated with the SCADA software to provide complete network status on the HMI.

### **LAN CABLE & CONNECTOR**

1. Cat5e Ethernet cable shall be used for connecting the numerical relays to Ethernet switches. In case FO ports are proposed on the numerical relays, Ethernet switches shall also have suitable FO ports as per the quantity mentioned above. Further, additional FO patch cords of maximum length (quantity – 10% of total quantity of IEDs) shall be supplied to facilitate maintenance.

**FURTHER THE CONNECTION BETWEEN NUMERICAL RELAYS TO ETHERNET SWITCHES THROUGH cat5E/ OFC IS IN BIDDER'S SCOPE.**

Ethernet switches shall have provision to receive dual redundant power supplies

SHEET 1 OF 2

**1. General Specification:**

All 415V switchgears, MCC's, AC & DC distribution boards etc. shall be painted by powder coating process.

**2. Pre-Treatment or Surface Preparation:**

Minimum 7 tank process or better shall be used for pre-treatment or surface preparation of sheet steel used for enclosures. The sequence of pre-treatment process shall include but not be limited to the following steps:

**TANK-1: DEGREASING**

Sheet Metal Surface shall be cleaned of grease, oils, soils, lubricants, oxide films, Heat Treatment / welding Scales etc. by using ALKALINE DEGREASER at Room Temperature for a Duration of 30-40 Minutes

**TANK-2: WATER RINSE-I**

Sheet Metal Surface shall be rinsed with water

**TANK-3: DERUSTING**

Sheet Metal Surface shall be cleaned of Rust by using Mixed HYDROCHLORIC ACID at Room Temperature for a Duration of 20 Minutes.

**TANK-4: WATER RINSE-II**

Sheet Metal Surface shall be rinsed with water

**TANK-5: SURFACE ACTIVATION**

Sheet Metal Surface shall be activated for Zn & Mn phosphate Coating by using ACTIVATION CHEMICALS ACID at Room Temperature for a Duration of 20 Minutes.

**TANK-6: PHOSPHATING**

Sheet Metal Surface shall be smoothly & uniformly coated with Zn Phosphate by using ZINC PHOSPHATE SOLUTION at Room Temperature for a Duration of 5 - 20 Minutes

**TANK-7: WATER RINSE-III**

Sheet Metal Surface shall be rinsed with water

**TANK-8: PASSIVATION**

For Sealing Pores of Sheet Metal Surface for obtaining Maximum Corrosion Resistance over Phosphate Coating by DECXYLITE SOLUTION at Room Temperature for a Duration of 15 - 20 Minutes

**3. Powder Coating:**

The following steps shall be followed to complete the powder coating process -

• **OVEN DRYING**

Sheet Metal Parts shall be dried by HOT AIR at 150 Deg C Process, Duration-10-20 Minutes.

• **POWDER COATING**

Within 24 Hours of Oven Drying, Sheet Metal parts shall be coated with Powder of shade desired by client through Spraying in Spray Booths, and then Epoxy-Powder Coated/Sprayed Sheet Metal parts are BAKED in an electrically fired oven at 140-150 Deg C for 10-15 Minutes.

**4. Paint Thickness:**

To be followed as per Customer Specifications or Project-wise Technical Specification documents.

**5. Paint Shade:**

To be followed as per Customer Specifications or Project-wise Technical Specification documents.

**6. Testing and Verification of Painting Process:**

To be followed as per Customer Approved or Project-wise approved Quality Plan.

Routine tests:

- Test for Paint shade with reference to shade card
- Paint thickness measurement
- Adhesion test

Special Tests:

If any special tests are specified, the same shall be carried out as per approved Quality Plan

Supplier shall raise the inspection call along with Internal Test Report, Manufacture Test Certificates/Type Test Reports (wherever applicable) for BHEL/BHEL TPIA /Customer Inspection.

**Note:**

1. The SQAP (EPD\_QP\_CP\_2021-22\_0001; REV: 01) shall be read in conjunction with BHEL Specification mentioned in Purchase Order and shall deem to include any additional tests as per the specification/Standard.
2. Material supplied shall be in line with BHEL Purchase Order, Technical Specification, Data Sheet, BOM, Approved Drawings, applicable Standard References, or any other document/references.
3. In case of any contradiction between this SQAP, BHEL Specifications the following precedence shall be followed:  
1<sup>st</sup>: BHEL Purchase Order Specification;  
2<sup>nd</sup>: This STANDARD QUALITY ASSURANCE PLAN & Applicable standard;
4. **Packing** shall be as per BHEL purchase order packing specification/ or as per Manufacturer standard or approved Drgs from BHEL Engineering.
5. All **packing** cases should be marked with BHEL Purchase Order no, Item description and **CQIR NO** (by which material has been cleared for dispatch).

**Documentation Part:**

1. Supplier shall raise the inspection call in the CQIR with inspection agency as BHEL SBD URL: [www.cqir.bhel.in](http://www.cqir.bhel.in). and shall upload documents mention under Note 2 in CQIR Portal.
2. Supplier to furnish the Test Certificates, Internal Tests Report and Type Test Reports (wherever applicable) as per this SQAP along with inspection call.
3. The items will be inspected at BHEL approved manufacturer work.

NOTES

- BUS DUCTS ARE OF FOLLOWING TYPE :  
MEDIUM VOLTAGE SYSTEM 3.3kV SEGREGATED PHASE BUSDUCT  
LOW VOLTAGE SYSTEM 415V NON-SEGREGATED PHASE BUSDUCT
- MV SYSTEM IS 3PH, 3W, 50HZ. LV SYSTEM IS 3PH, 4W, 50HZ EXCEPT EMERGENCY BOARD WHICH IS 3PH, 3W, 50HZ
- MOTORS RATED ABOVE 1500kW ARE CONNECTED TO 11kV SYSTEM WHILE MOTORS RATED ABOVE 200kW & UPTO 1500kW ARE CONNECTED TO 3.3kV SYSTEM. MOTORS RATED 200kW AND BELOW ARE CONNECTED TO THE LV SYSTEM.
- ONE DG SET IS PROVIDED TO CATER FOR EMERGENCY REQUIREMENT OF FGD PLANT.
- CHANGEOVER FACILITY  
(A) 11/ 3.3KV SYSTEM BUSES ARE PROVIDED WITH MANUAL LIVE C/O WITH CHECK SYNCHRONIZATION BETWEEN I/C & B/C. BUS-COUPERS ARE PROVIDED WITH AUTO CLOSING FACILITY FOR SLOW C/O.  
(B) ALL 415V SYSTEM BUS INCOMERS ARE PROVIDED WITH MANUAL DEAD BUS CLOSING AND MANUAL LIVE CHANGEOVER FACILITY. DG WILL AUTO START UPON ATTAINING NORMAL VOLTAGE AND FREQUENCY. DG INCOMER WILL CLOSE AUTOMATICALLY TO RESTORE EMERGENCY POWER SUPPLY TO EMERGENCY LOADS OF FGD PLANT.
- INTERLOCKING  
THE 11kV, 3.3 kV & 415V SWITCHBOARDS/MCCs ARE PROVIDED WITH POSITIVE ELECTRICAL INTERLOCKING TO ENSURE THAT DIFFERENT POWER SUPPLY SOURCES ARE NOT OPERATED IN PARALLEL FOR PROLONGED DURATION TO AVOID FAULT LEVEL EXCEEDING THE DESIGNATED SWITCHBOARD CAPABILITY. EXCEPT DURING MOMENTARY PARALLELING IN CASE OF ON-LOAD LIVE CHANGEOVER, WHERE PROVIDED
- ELECTRICAL EQUIPMENT RATINGS ARE INDICATED FOR AN AMBIENT TEMPERATURE OF 50 °C
- LT MOTORS RATED 110kW AND ABOVE SHALL BE ACB CONTROLLED. MOTORS RATED BELOW 110kW SHALL BE CONTACTOR CONTROLLED.
- NUMBERS AND RATINGS OF LV SYSTEM TRANSFORMERS & ASSOCIATED SWBDs/ MCCs ARE INDICATIVE AND NOT UNDERGO REVISIONS DURING DETAILED DESIGN, TO SUIT THE ELECTRICAL LOADS AND LAYOUT REQUIREMENTS WITHOUT AFFECTING THE OVERALL SYSTEM.
- THE RATINGS OF MV CIRCUIT BREAKERS ARE DENOTED BY AN ALPHABET ON THE RIGHT HAND SIDE OF BREAKERS AND THE CORRESPONDING AMPERE RATINGS ARE INDICATED IN TABLE -4.
- PERMISSIBLE VOLTAGE VARIATION AT 11kV, 3.3kV VOLTAGE LEVELS SHALL BE AS FOLLOWS:  
VOLTAGE : +/- 6%  
FREQUENCY : +3 TO -5%
- PERMISSIBLE VOLTAGE VARIATION AT 415V VOLTAGE LEVELS SHALL BE AS FOLLOWS:  
VOLTAGE : +/- 10%  
FREQUENCY : +3 TO -5%  
COMBINED VOLTAGE & FREQUENCY VARIATION : 10% (ABSOLUTE SUM)
- THE SELECTION OF LT OUTGOING FEEDERS (DRAW OUT TYPE) SHALL BE AS INDICATED HEREUNDER:  
(i) BELOW 100A : SFU  
(ii) 100A-400A : MCCB  
(iii) ABOVE 400A : BREAKER
- THE RATING OF EMERGENCY DG & CORRESPONDING EMERGENCY MCC SHALL BE INCLUDED AFTER FINALIZATION OF DG SIZING CALCULATION.
- 20% SPARE (MIN.) OF EACH TYPE SHALL BE PROVIDED IN ALL LT SWITCHGEARS, MCCs, AC/ DC DISTRIBUTION BOARDS, IN LINE WITH TECHNICAL SPECIFICATION.
- PERMISSIBLE VOLTAGE VARIATION AT 220V VOLTAGE LEVEL SHALL BE -15% TO +10%. THE RATING OF 220V DC BATTERY & FLOAT-CUM-BOOST CHARGER SHALL BE INDICATED AFTER FINALISATION OF DC SYSTEM ENGINEERING.
- FOR EACH CRUSHER MOTOR, 2 NOS. OF MV FEEDER TO BE TAKEN FOR FORWARD & REVERSE OPERATION.
- MISC SER PMCC # ODB IS ENVISAGED FOR FEEDING ALL MISCELLANEOUS LOADS (FOR WATER SYSTEM COMP AIR SYSTEM, AC & VENTILATION, CHEMICAL DOSING ETC.). LOADS FOR GYPSUM DEWATERING SYSTEM AND LOADS LOCATED NEAR GDW AREA.

**24. LETTER OF TECHNICAL SUPPORT FOR LT SWGR AIR CIRCUIT BREAKER**

## FORMAT FOR FILLING THE DETAILS OF PROVENNESS

### LETTER OF TECHNICAL SUPPORT FOR SATISFACTORY PERFORMANCE OF .....(Name of Equipment)

TO

[EMPLOYER'S NAME & ADDRESS]

**Sub:** Letter of Support submitted From .....(name of the Associate\*/Collaborator\*/Technology provider\*/Licensor\*) undertaking the responsibility for satisfactory performance of .....(name of the equipment).

Dear Sirs,

4. In accordance with the Award of the Contract by ..... (Name of the Contractor) to M/s. .... (Name of the sub-vendor), we, the aforesaid Associate\*/Collaborator\*/Technology provider\*/Licensor\*, (M/s ..... ) shall be fully responsible for the satisfactory performance of the .....(equipment name).
5. Further, the manner of achieving the objective set forth in point 1 above shall be as follows  
For ..... (Equipment name):
  - (e) We shall provide manufacturing and assembly drawings of..... (Equipment name).  
..... (Equipment name) shall be manufactured and supplied as per above drawings provided by us.
  - (f) We shall depute technical experts to Bidder's/sub-vendor's works for supervision during manufacturing, assembly, inspection, as and when required by Employer. We shall participate in site erection, commissioning and final testing (as and when necessary) of the.....( equipment name).
  - (g) We shall participate in Technical Co-ordination meetings (TCMs) from time to time, as and when required by Employer.
  - (h) We shall promptly carry out all the corrective measures and shall promptly provide corrected design and shall undertake replacements, rectifications or modifications to the equipment as and when required by Employer in case the equipment fails to demonstrate successful performance as per contract at site.
6. We, the Associate\*/Collaborator\*/Technology provider\*/Licensor\* do hereby undertake and confirm that this Letter of Support shall be valid till 90(ninety) days after the end of the defect liability period of the contract.

**25. PROVENESS FOR NUMERICAL RELAY**

CLAUSE NO.	INTENT OF SPECIFICATION	एनटीपीसी NTPC		
4.03.03.06	The Bidder/ Sub Vendor should have manufactured and supplied at least one hundred (100) numbers of Vacuum Circuit Breakers for 11kV and /or 6.6kV panels with a rating of 40kA rms BREAKING, 100kA peak MAKING and 40kA withstand for one (1) second, reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder.			
4.03.03.07	Bidder's/ Sub Vendor's Associate or Collaborator meets the qualifying requirement stipulated at 4.03.03.02 & 4.03.03.03 stipulated under Route 1.			
4.03.03.08	<p>Bidder/ Sub Vendor furnishes a Deed of Joint Undertaking jointly executed by it and its Associate/ Collaborator as per format enclosed in the bidding document in which the Bidder/ Sub Vendor and its Associate/ Collaborator are jointly and severally liable to the Employer for successful performance of the MV Switchgears. This Deed of Joint Undertaking should be submitted prior to the placement of order on approved Sub Vendor. In case of award, the Associate or Collaborator of the Bidder / Sub Vendor (as applicable) will be required to furnish an on-demand Bank Guarantee for INR 1 Million (Indian Rupees One Million only) <b>per project</b>.</p> <p><b>Note:</b> Equipment designed by the Bidder itself or through its Collaborator/Associate for reference plant, shall also be considered meeting the requirement of design.</p>			
4.03.04	<b>NUMERICAL RELAYS &amp; NETWORKING</b>			
4.03.04.01	Numerical Relays shall be offered from a Manufacturer who has manufactured and supplied and successfully configured at least 100 No's of Numerical Relays with IEC 61850 used for application in Feeder Protections/Transformer Protections/Motor Protections. These relays should have been in successful operation for at least one (1) year reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder.			
4.03.04.02	The Numerical Relay Network system shall be offered from an Integrator /Manufacturer who has designed and successfully done FAT for a network on IEC 61850 with at least 100 no's of Communicable Numerical Relays reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder.			
4.03.05	<b>AUXILIARY OIL FILLED TRANSFORMERS</b>			
4.03.05.01	The Bidder/ Sub-Vendor should have manufactured & supplied at least two numbers (one each at two different installations) of 16 MVA, 11KV or higher rating oil filled transformers which should have been in successful operation for a period of at least two (2) years reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder.

**STANDARD DESIGN DIRECTIVES FOR LV SWITCHGEAR**

The following points to be considered in LV Switchgear Engineering Design.

1. For DC circuits, suitable DC components shall be selected like MCB, MCCB, Fuses, DC Power Contacts, DC circuit protection relays etc.
2. Each Single front/Double front vertical shall have not more than one supply feeder of 400A and above, or not more than one DOL feeder of 45 KW & above. Additional feeders of these ratings may be placed in the next vertical. DOL feeders of rating 45 KW & above shall be preferably placed at the centre position with respect to operating height middle of the vertical for easy module handling during maintenance.
3. Outgoing terminals of any AC/DC feeders above 400A capacity shall have provision/shall be suitably sized to accept 2 runs of 630 sq.mm cable connections per phase. The terminals shall be suitably placed to achieve the specified Ph-Ph and Ph-E clearances after connection of field cables.
4. Draw out modules of height 500mm and above, shall have additional guides on both sides at the upper end in order to minimize /eliminate misalignment of power contacts and sliding in contacts (SIC).
5. Components shall be suitably positioned or fixed in the draw out modules such that the weight distribution shall be balanced/uniform and not lead to imbalance while drawing in/out and handling the modules.
6. All SIC shall have spring loaded terminals /pins to avoid loose connections /disturbance during operation and to improve reliability.
7. For Draw-out or fixed type modules inside the panels, all connections of the power circuit, 25 sq.mm and above wires/cables shall be terminated using long barrel and heavy-duty copper lugs only.
8. If any special cable(s) are used for the power wiring, suitable cable lugs (rating & duty) shall be selected based on cable manufacturer's recommendations or in coordination with the cable supplier.
9. In case of electrical components like Digital meters, transducers, Intelligent motor controllers, etc. that may have special termination requirements, designer shall obtain the confirmation from supplier for special lug requirement (if any) and also add spare requirements. (For example, Secure Energy meter and Rishab Transducers require special lugs).
10. If any System/Switchboard/Module is designed for 3 Phase-4 wire, all the supply feeders shall be provided with 4 Pole Breaker (ACB/SFU/MCCB etc) or 3 Pole with provision of neutral isolation.
11. In case of any fixed/draw-out vertical contains any supply feeder above 400A, respective cable compartment shall have aluminium cable gland plate, to eliminate eddy currents.
12. Aluminium gland plates shall be provided for all breaker-controlled incoming, outgoing, and motor feeders, except Bus duct connected incomers & bus couplers.
13. CT secondary circuit should not allow to extend through SIC for remote indication purpose. However, transducers may be additionally used within the draw-out module to extend the 4-20mA signal through SIC.
14. If the Breaker is in service position, it shall not be possible to open the breaker compartment front door. However, it shall mandatorily be ensured that the breaker compartment front door shall be opened only when the Breaker is in isolated position (Door defeat interlock).
15. In case of fixed/draw-out modules for PT & CST, the thickness of bottom mounting plate (minimum 3mm) shall be sufficiently selected to cater to the weight of CST & PT.

LOW VOLTAGE SWITCHGEAR**

SECTION: A

REVISION: 00

DATE: 31.05.2023

16. Class 30 protection of OLR and AM type fuse shall be considered for all high inertia loads like Fans, Compressors, Blowers, Conveyor feeders, Gates, MOV/Actuators, Hoists, Centrifugal Loads etc.
17. All panel protective barrier sheets/vertical dropper shrouds shall be of fire-retardant material, preferably perforated CRCA sheet module and Breaker compartment live bus bar protective shutters shall be of the fire-retardant material/FRP sheet (no metallic shutter allowed).
18. For MPCB/MCCB/SFU, support bracket may be provided to ensure proper alignment of handle/ROH, with door to prevent damages to handles/ROH mechanism.
19. If any electrical components are mounted in the panel/module compartment door, the door shall be earthed.
20. All the name plates shall be riveted /bolted, fixing of name plates with adhesive is not allowed.
21. Control supplies for breaker & module feeders shall be with 100% redundancy as a default. This would not be applicable for Projects with individual CST at module level.
22. In DCDB bus coupler, only Positive isolation shall be provided. Negative terminal shall be directly connected to Bus A & B (No isolation required).
23. If the door length/width is more than 500 mm and numerical relays & other accessories are fixed in the door, the number of door hinges shall be increased and additional supports to be provided to cater to the additional weight.
24. During panel packing, water proof packing material/GI sheet to be provided at top shall have minimum life of 2 years.
25. Packed Panels loaded into trucks/trailers shall be covered with tarpaulin to avoid the water ingress and protection from environmental factors during transportation.
26. The outside of packing (Front, back and sides) shall be inscribed with the following words. "PANELS TO BE STORED IN CLOSED SHED/COVERED AREA" in RED Paint with Capital letters of at least 2 inches height for each shipping section.
27. 4 wire supply loads are not recommended for EMERGENCY MCCs connected to DG supply (like Emergency MCC, Boiler & Turbine valve MCC and ESP ID Fan area MCC, Switchyard boards etc). The above MCC control & heater supply shall be designed with CST arrangement for 415/110 or 415/230 V. However, if the MCC is designed with neutral, then the neutral shall not be used.
28. Since, REF protection is part of Transformer protection, it should be included in the Transformer HT breaker control panel and not in LT Breaker panels. However, if REF protection is required, PS class CT shall be provided in the Transformer incomers (LT SWGR) and also ensure through system engineering, Transformer neutral CT and SWGR end CT-ratio, Rct, Knee Point voltage shall be same.
29. Each shipping section (Single or Double or Three vertical) bottom frame shall be single common piece and each side shall have straight single piece without any welding joints piece. However top lifting frame shall also be single common piece.
