COPYRIGHT AND CONFIDENTIAL The information on this document is the property of BHARAT HEAVY ELECTRICALS LIMITED, It must not be used directly or indirectly in any way detrimental to the interest of the company.		<u>TECHNICAL SPECIFICATION FOR</u> <u>ABSORBER SLURRY RECIRCULATION PUMP</u>																			
		<p>1. Intent of specification</p> <p>This specification is intended to cover the design, engineering, manufacturing, inspection and testing at manufacturer's works, packing and delivery to site, supervision of erection and commissioning of Slurry Recirculation pump along with its accessories complete in all respects.</p> <p>Each unit of 250/500/660/800MW, is associated with an FGD system. Each FGD system shall have recirculation pumps located inside Recirculation pump & Oxidation blower house. The pumps shall be suitable for outdoor application. The pumps shall be driven by a constant speed motor.</p> <p>The offered pump model shall be proven and must meet the proven-ness criteria indicated at clause 3. The list of deviations/exceptions with respect to the specification shall be submitted as per annexure-4. Deviations not listed in the format shall not be considered. No deviations/exceptions shall be permitted without the approval of purchaser.</p> <p>In case of additional requirement of instrumentation, controls and other accessories/auxiliaries for safe, reliable and trouble-free operation of the pump, necessary reasons for recommendation shall be furnished and the same shall be included in scope of supply with the purchaser's approval.</p> <p>2. Applicable codes and standards</p> <p>The design, manufacture and performance testing of the pumps as specified herein shall comply with requirement of all applicable codes in particular the following.</p> <table border="0"> <tr> <td>1. ANSI HI 12.1~12.6:</td> <td>Rotodynamic Centrifugal slurry pumps</td> </tr> <tr> <td>2. API 682:</td> <td>Shaft sealing system for centrifugal & rotary pump</td> </tr> <tr> <td>3. 6.6 Operating methodology of pumps

6.6.1 The offered pumps shall be capable of operating satisfactorily in the entire operating range of the pump. Preferred operating range, 60% to 120% of design.

6.6.2 All pumps of the unit are connected to the common header of the recirculation line.

6.6.3 The individual pump duty conditions are indicated at clause 6.1. The operating media details are indicated at clause 6.2.

6.6.4 Pumps shall be operated as follows:

6.6.4.1 Pumps shall be sequential started, one after the other.

Variant no.1

6.6.4.1.1 Four (04) pumps will be in continuous operation.

6.6.4.1.2 One pump per boiler will be standby

6.6.4.1.3 In order to optimize power consumption of FGD system at part load operation, slurry recirculation pump shall be capable of variable speed operation and shall be driven by Variable frequency drive (VFD). The operating range of the pump shall be 40 to 120% of duty point and pump shall be capable of operation.

S.No	Condition	Required total flow rate m3/hr	Required Pump Head m	Each Pump Capacity (m3/hr)	Pump Efficiency (%)	Shaft Power consumption (KW)	Remarks
1	4 Pumps in Continuous operation	50,000	18.40	12,500	≥90%	≤837	

Variant no.2

6.6.4.1.4 Two (02) pumps will be in continuous operation.

6.6.4.1.5 One pump per boiler will be standby

S.No	Condition	Required total flow rate m3/hr	Required Pump Head m	Each Pump Capacity (m3/hr)	Pump Efficiency (%)	Shaft Power consumption (KW)	Remarks
1	2 Pumps in Continuous operation	19,976	17.50	9,988	≥90%	≤675	

Variant no.3

6.6.4.1.6 Three (03) pumps will be in continuous operation.

6.6.4.1.7 One pump per boiler will be standby

S.No	Condition	Required total flow rate m3/hr	Required Pump Head m	Each Pump Capacity (m3/hr)	Pump Efficiency (%)	Shaft Power consumption (KW)	Remarks
1	3 Pumps in Continuous operation	41,601	18.0	13,867	> 87%	##	

- To be indicated by supplier.

TD-106 Rev No. 00	Form No.	<div><div>बी एच ई एल</div><div>BHEL</div><div>HYDERABAD</div></div>	<div>PRODUCT STANDARD</div> <div>PUMPS</div> <div>HYDERABAD</div>	FP60317
				Rev No. 07
				Page 9 of 38
<div>6.6.4.2 Pumps shall be sequentially stopped, one after the other.</div> <div>6.6.4.3 In the event of power failure, all the running pumps will be shutdown instantaneously, i.e. at the same time. Pumps discharge valve will close fully in 15 sec. During this time, pump shall be capable of handling the reverse flow.</div> <div>7. Technical Requirements</div> <div>7.1 All recirculation pumps shall be identical and interchangeable.</div> <div>7.2 The pumps shall be designed for continuous operation. The pump shall be single stage centrifugal type, capable of delivering the rated flow at rated head, duty parameters indicated at clause 6.1.</div> <div>7.3 The pumps shall circulate the operating liquid from the absorber sump to the spray nozzles in the absorber.</div> <div>7.4 The pumps shall be resistant to wear and be equipped with flushing devices to prevent sedimentation. They shall be designed and installed to allow easy replacements, repair and maintenance.</div> <div>7.5 The pump bearing housings shall be equipped with oil level indicators and the collecting equipment for leakage shall made of corrosion resistant material.</div> <div>7.6 All the equipment in scope of supply except wearing parts shall be designed and fabricated/manufactured for a service life of 20 years and at least 18000 hours of un-interrupted operation.</div> <div>7.7 Pump shall be driven by the motor with gearbox.</div> <div>7.8 All the parts coming in contact with the slurry shall be provided with replaceable rubber/elastomer liners suitable to the media handled. The supplier can also offer a Hi-chrome alloy lined pump, Carbon steel/CI lined with high alloyed stainless steel, a Silicon Carbide impeller and SiC lining for casing if the Supplier has supplied a similar pump for a previous installation for similar service. The material used by the contractor shall be proven in previous installations.</div> <div>7.9 The pump casing shall be designed to withstand a pressure of 1.5 times the maximum possible pump shut off pressure under maximum suction pressure condition.</div> <div>7.10 Flushing water lines and drains are to be supplied for each pump handling the prevailing water to avoid corrosion even if the pump is out of operation for extended periods.</div> <div>7.11 Pumps must be carefully selected to ensure that the net positive suction head available under all operating conditions will be adequate. The NPSH values are to be referred to the least favorable operating conditions such as lowest atmospheric pressure, lowest level of water on the suction side of the pump and highest temperature of the pumped</div>

<div><div>COPYRIGHT AND CONFIDENTIAL</div><div>The information on this document is the property of BHARAT HEAVY ELECTRICALS LIMITED. It must not be used directly or indirectly in any way detrimental to the interest of the company.</div></div>			Ref Doc	<p>fluid. An adequate safety margin of normally greater than 1m to the max NPSH required shall be provided. NPSH(R) at 120% of rated flow shall have margin over NPSH (A).</p> <p>7.12 The Pump flow & head characteristics shall be such that within the operation range the head will continuously increase with decreasing flow. Shut off head being at least 20% higher than the duty point head.</p> <p>7.13 Pumps shall have stable head-capacity characteristics curve from run-off to shut-off. Shut-off head should be minimum 125% of Best Efficiency Point (BEP).</p> <p>7.14 Venting valve shall be fitted to all pumps at suitable points on the pump casing. Drainage facilities shall be provided on the pump casing or adjacent pipe work to facilitate the dismantling of pumps.</p> <p>7.15 Pumps shall be designed such that they are not damaged during reverse rotation at up to 150% of design RPM, at full discharge head in the event where one pump trips while the other pumps are operational.</p> <p>7.16 Selection of Duty point should preferably be at BEP (Best Efficiency Point). Selection point beyond 105% of BEP is not acceptable. It should be noted that head variation is due to level variation in tank. Pump has to run in the system without compromising the NPSH requirement at lowest water level in tank. Hence, when tanks are filled-up and is at normal water level, pump will operate at the right of BEP, pump's operating zone should be considered accordingly.</p> <p>7.17 A factor for "Froth" should be taken into account for sizing the pump. Supplier from their past experience, may specify the froth factor to be taken into account for FGD pump. Suction size of the pump should be adequate to take this extra capacity and the same should be reflected in master curve.</p> <p>7.18 External flushing is required to remove the accumulated particles and all related information such as flow rate, pressure etc. should be mentioned in data sheet.</p> <p>7.19 Pump should have provision for adjusting the axial clearance between casing and impeller for maintaining the performance at best efficiency when there is wear in between impeller and casing.</p> <p>7.20 In case rubber or nonmetallic linings are used, these will be two pieces molded under pressure and adjusted to the screwed metallic clamping which have been welded to the casting.</p> <p>7.21 The pump shall be provided with seals of proven type and shall be designed for minimization of seal water consumption. The shaft shall be supported on heavy duty ball/roller bearings.</p> <p>7.22 The Antifriction bearing of the pumps shall be designed for minimum useful life (L-10) of 25,000 hours of continuous operation (Under the design condition). The thrust bearing will be selected for twice the operating load.</p> <p>7.23 Mechanical seal with automatic flushing, and an additional connection for manual flushing shall be provided.</p> <p>7.24 The mechanical seals of cartridge type with self-lubrication sliding ring cartridges are preferable. The static part will be mounted on the seal plate with circumferential ring (O-ring) or another flexible sealing ring. Built in seal design will not be accepted.</p> <p>7.25 The sealing areas shall be designed in such a way so that solids do not precipitate in them and affect the cooling or affect the adjustment and mechanical functioning of the seals. Seals which do not need jet cleaning are preferred.</p>

It must not be used directly or indirectly in any way detrimental to the interest of the company.</div>			Ref Doc	<p>consecutive bearings must include a sufficiently large safety margin to satisfy this condition.</p> <p>8.4.4 Shafts shall be conservatively designed to transmit maximum power required and to assure rigidity. Shafts shall be machined and ground to close tolerances and shall be tapered to permit easy assembly & withdrawal of the seals and bearings.</p> <p>8.4.5 Shaft shall run in high precision heavy duty roller bearings.</p> <p>8.4.6 The shaft shall be finished to close tolerance at the rotor, coupling and bearing diameters.</p> <p>8.4.7 Shaft shall be made of carbon steel. No exposed part of the shaft shall come in contact with the medium handled.</p> <p>8.4.8 Shaft sleeve should be CD4M Cu ASTM A-743 or equivalent. Sleeve should have this as a guaranteed value/parameter to prevent wear and corrosion of mating surface. Manufacture to indicate the diameter in data sheet.</p> <p>8.4.9 Shaft shall have a keyed joint at impeller hub. Threaded connection between impeller and shaft is not acceptable.</p> <p>8.5 Coupling</p> <p>8.5.1 The HT drive motor is excluded from the scope of supply. However, the Supplier shall supply coupling between pump & gear box, coupling between gear box & motor along with gear box.</p> <p>8.5.2 Couplings shall be of flexible membrane type and shall not need any lubrication.</p> <p>8.5.3 Couplings shall be dynamically balanced as per ISO 1940 G2.5. Balancing shall be done before slotting the key ways.</p> <p>8.5.4 Couplings shall be suitable for accommodating axial movements and parallel offsets. The maximum permissible axial and parallel misalignment to be indicated in the coupling drawings.</p> <p>8.5.5 Construction of the coupling shall be such that in case of membrane failure, no component of the coupling shall fly off while the equipment is in rotation</p> <p>8.5.6 Membrane element shall be independently replaceable without requiring the replacement of the spacer.</p> <p>8.5.7 All the nuts and bolts shall be with metric threads.</p> <p>8.5.8 The Couplings shall be provided with adapter plates on both ends of spacer assembly, to facilitate removal of spacer assembly without dismantling the membrane packs</p> <p>8.5.9 Gaging Screws shall be provided for Transportation and Installation of coupling. These Screws must be accessible from outside when the Coupling is fully assembled.</p> <p>8.5.10 All the couplings shall be provided with over load washers designed adequately</p> <p>8.5.11 A notch of 30x15x3 mm shall be provided on the periphery of each coupling hub for speed measurement.</p> <p>8.5.12 Coupling halves shall be machine matched to ensure accurate alignment. Couplings and gears must have a rated capacity of at least 120% of the maximum potential power transmission requirement.</p> <p>8.5.13 All rotating parts such as coupling shall be covered with suitable protective guards. Guards shall be easily removable type. If weight of the coupling is heavy (>40 kgs), provision of tapped hole should be incorporated in right place of hub to handle the same effortlessly.</p>

<p style="text-align: center;">COPYRIGHT AND CONFIDENTIAL</p> <p>The information on this document is the property of BHARAT HEAVY ELECTRICALS LIMITED. It must not be used directly or indirectly in any way detrimental to the interest of the company.</p>		Ref Doc	<p>8.6 Base plate</p> <p>8.6.1 A common base plate shall be provided for pump, gearbox & Motor and the same shall be rigidly constructed, adequately braced and provided with finish pads for mounting the equipment.</p> <p>8.6.2 Common base plate for pump, gearbox and Motor shall be in the scope of the Supplier and the details of the Motor will be furnished to the Supplier to provide Motor mounting bolts.</p> <p>8.6.3 Base plate must have provision for jacking the driver and driven equipment in both directions of base plate for alignment. Similarly, provision must be provided for alignment of shaft in vertical plane.</p> <p>8.6.4 Pump manufacturer is to supply base plate along with Foundation bolt & Nut, shims/spacers, "Taper wedge" and the necessary fastener for Pump and Motor with Base plate. Even if Motor is excluded from their scope, necessary fastener for motor foot with base plate will remain in pump scope of supply in order to avoid any problem.</p> <p>8.6.5 Base plate must be provided with a trough, material of which must be compatible to pumping liquid. Leaked liquid collected in trough, can be systematically routed to designated point.</p> <p>8.6.6 Base plate must be stress-relieved for any residual welding stress and certificate to that effect is to be submitted as per inspection requirement.</p> <p>8.7 Bearings</p> <p>8.7.1 The bearings may be ball, roller or sleeve bearing. The bearings shall be designed to take the necessary radial load as well as the net axial thrust. Bearings shall be lubricated properly and sized for an operating life of 25,000 hours on the basis of maximum load. Bearing lubrication provided shall be such that visual inspection of lubricant level is possible.</p> <p>8.7.2 The bearings shall be of automatic oil lubricated type. Bearing Temperature transmitter shall be provided with local monitoring of the bearing metal temperature. In case, external cooling water is required, flow, pressure, etc. shall be specified.</p> <p>8.7.3 Bearing housings shall be designed such that they can be replaced without removing the pump or motor from its mounting. Supplier shall inform the bearing withdrawal length for suitable selection of coupling. Bearing housings shall be effectively protected against the ingress of water, pumped fluid and dust by suitable nonferrous deflectors.</p> <p>8.7.4 Bearing temperature transmitter shall be provided with local monitoring of the bearing metal temperature of pump. Bearing temperature Transmitter shall provide signals to FGD DCS for continuous monitoring.</p> <p>8.7.5 Lubricating oil will be the responsibility of pump manufacturer. Hence, manufacturer has to make arrangement of first fill of oil at installation, and at commissioning stage. Quantity of oil and its grade is to be indicated in Drawing and Operation Manual.</p>

Ref Doc

11. Supervision of Erection and Commissioning

11.1

The erection of Recirculation Pumps will be done by owner as per Erection & commissioning Manual and check List. However, the Supplier shall make one visit per boiler for the supervision of erection, pre-commissioning & post- commissioning check-up, start-up, testing and trial runs of all the items covered under the scope of supply.

11.2

There will be one visit per boiler. Supplier shall include 10 working days per visit. Per day cost of visit shall be furnished separately. This shall be considered for evaluation of offer. Separate service order shall be issued for each visit.

11.3

TA/DA, boarding and lodging shall be borne by the Supplier.

12. Exclusions

The following shall be exclusions in the scope:

12.1

Supply of main drive Motor.

12.2

Civil foundations.

12.3

Vibration monitoring system including sensors.

13. Inspection and Testing

13.1

Minimum Testing requirements to be considered are as below:

13.1.1

Hydrostatic test is to be conducted at 150 % of design pressure for duration of 30 minutes at operating temperature of 60 degC.

13.1.2

Impeller and rotor shall be first statically balanced and then dynamically balanced according to ISO 1940 (in the case of impellers this shall be done before and after mounting of the service rotor shaft).

13.1.3

Vibration levels measured on the non-rotating parts shall not exceed the zone limit “B” as defined in ISO 10816 at steady conditions and shall not exceed the zone limit “C” as defined in ISO 10816 at transient conditions.

13.1.4

List of Non-Destructive test over and above the material test are as follows:

13.1.4.1

Casing: Material test, Magnetic particle (MPI), DP and Hydro test as applicable

13.1.4.2

Impeller- DPT and MPI as applicable

13.1.4.3

Shaft- Ultrasonic (UT), DPT and MPI

13.1.4.4

Sleeve- DP and Hardness test/ Manufacturer’s recommendation

13.1.4.5

Mechanical Seal- Manufacturer’s recommendation.

13.1.4.6

Base Plate- Stress relieving of weld if applicable.

13.1.4.7

Replaceable Rubber liner- Shore Hardness, Class and Type certificate

13.1.5

Once mounting is finished, performance test will be conducted on each pump to determine the characteristic curves. The mechanical running & performance testing shall be performed & witnessed.

13.1.6

NPSH Test, Vibration test and Noise level test shall be witnessed at shop.

13.1.7

For surfaces with rubber lining Welding shall be visually inspected to verify the absence of rough area and unacceptable transition between surfaces which prevent

The acceptance criteria shall be as per latest standard.</p> <p>13.1.8 For surfaces with rubber lining, degree of cleaning shall be visually checked before the application of the coating. There must be no area with oxidation, dirt or partially or generalized corrosion defects.</p> <p>13.1.9 Test certificates shall be issued for each lot of raw material used in the coating, corresponding to specific weight and traction resistance.</p> <p>13.1.10 For surfaces with rubber lining, adherence test shall be conducted on production samples. Adherence test shall be conducted on the actual surface through hammering. In order to verify the absence of air packets (or) surface without adherence.</p> <p>13.1.11 For surfaces with rubber lining, Coating thickness shall be checked at 100%. A High voltage porosity test will be conducted on 100 % of the coated surface.</p> <p>13.2 General Inspection requirements to be considered are as below:</p> <p>13.2.1 Supplier shall furnish written copies of shop production, fabrication and quality test procedures and drawings to be used for review by BHEL/end customer prior to manufacture. Inspection of above mentioned tests by BHEL representative at Supplier's works is envisaged.</p> <p>13.2.2 The Supplier shall furnish performance test procedure along with standard. The test procedure shall be submitted for approval by BHEL.</p> <p>13.2.3 Out of total Recirculation Pumps, One Number of Recirculation Pump will be inspected at the Supplier's works before dispatch or where the test facilities are available.</p> <p>13.2.4 The Supplier shall conduct performance test for the remaining pumps and submit the reports.</p> <p>13.2.5 A dynamic balancing certificates stating that the rotating assembly has been balanced dynamically shall be sent to BHEL within one (1) week of the successful completion of balancing.</p> <p>13.2.6 Acceptance tolerance of actual versus guaranteed performance for capacity, head, efficiency and power absorbed shall be as per applicable standard.</p> <p>13.2.7 Vibration levels shall be measured during shop running/performance tests.</p> <p>13.2.8 Contract shaft seals shall be used during shop tests, unless the seal design is unsuitable for the shop-test condition.</p> <p>13.2.9 Recirculation pumps shall not be released for shipment, until shop tests data and performance tests curves have been approved by BHEL/end customer.</p> <p>13.2.10 Supplier should furnish performance guarantee as per applicable standard, guarantee for the design, manufacture, material and safe operation of the equipment.</p> <p>13.2.11 BHEL shall witness the test at Supplier's works and a notice of minimum three (3) weeks shall be given for attending the inspection.</p> <p>13.2.12 Supplier to arrange all calibrated gauges, Instruments during inspection.</p> <p>13.2.13 Mechanical running and the performance test shall be carried out. Supplier to inform in advance the Motor rating for the shop test and inspection.</p> <p>13.2.14 The performance test may be carried out using water at shop and shall be converted to the design condition.</p>

14. Painting

14.1 Surface Preparation: Blast Cleaning SA 2.5

14.2 Primer Coat

14.2.1 Zinc Epoxy

14.2.2 DFT= 80micron per coat

14.2.3 No of coats = 1.

14.2.4 Primer coat thickness 80 micron.

14.3 Finish Coat

14.3.1 Epoxy High Solid

14.3.2 DFT= 50micron per coat

14.3.3 No of coats = 2.

14.3.4 Coat thickness 100 micron.

14.3.5 Total DFT : 180 micron.

14.4 Color Code (based on DIN 2403:2007-05 & DIN 5381)

14.4.1 Base: Signal Orange, RAL: 2010

14.4.2 Lettering: Signal Black, RAL: 9004.

14.5 Rust preventive paint after inspection & before dispatch from shop is in Supplier's scope

14.6 Corrosion protection, coating and galvanizing, painting shall be taken care by the Supplier. Supplier shall submit the painting scheme during detail Engg and shall be subject to approval of end customer/BHEL.

15. Spares, Tools & Tackles

15.1 Start-up & Commissioning Spares

Start-up & Commissioning Spares shall be part of the main supply of the Recirculation pumps. Start-up & commissioning spares are those spares which may be required during the start- up and commissioning of the equipment/system. Supplier shall provide an adequate stock of such start up and commissioning spares for the equipment erection and commissioning. The spares must be available at site before the equipment is energized. These start-up & commissioning spare part list shall not be included in "Initial Spare Parts List".

15.2 Recommended Spares

Suppliers shall also furnish the recommended spares list along with the offer. Supplier shall provide a "Recommended Spare Parts List" which shall comprise of all items of the Initial Spare Parts List as well as other spares required for long term routine/planned and breakdown maintenance. Supplier shall indicate all details for each item of aforesaid Recommended Spare Parts List, such as Supplier's/ Original equipment manufacturers (OEM's) name and location, drawings, normal delivery period, quantity, service life, Supplier's/OEM's serial numbers and price etc. The format and content of the final spare parts list shall be agreed in the basic/detailed engineering phase. Then the final spare parts list shall be submitted by the Supplier to BHEL for approval not later than eighteen (18) months prior to the Scheduled Commercial Operation Date (COD) of the 1st Unit. The Supplier shall name OEM/ three (3) vendors with complete address for each of the spare parts.

5	IMPELLER FOR SLURRY RECIRCULATION PUMP	1 No of each type and Size	EA	FP9760317052	Var-01

Note to supplier regarding mandatory spares:

23. Supplier shall clearly indicate with a P&ID, drawings, various instruments used in the scope of supply and the highlight the mandatory spares diagrammatically to avoid any ambiguity. Supplier shall contact the purchaser in case of ambiguity, prior to submitting the offer. Revision/ Alteration after bid submissions shall not be considered.
24. Casing liners shall be a complete replacement of liners in the supplied pump, if applicable.
25. Set of seals shall include Mechanical seal, oil seals, wear rings at impeller location, oil thrower & oil guards in the entire scope of supply.
26. Set of Transmitters along with accessories shall include all the transmitters and its accessories where ever used in the entire scope of supply.
27. Temperature elements with Thermowell shall include all temperature elements where ever used in the entire scope of supply.
28. Local gauges along with accessories shall include all local gauges where ever used in the entire scope of supply.
