	PURCHASE SPECIFICATION	Rev. 0
	Hot Wire Anemometer	Dt. 24.3.2009
	Item Code No ED-04	Specification No. COECED-04

- **General:**
This specification covers the technical requirements for Constant temperature hot wire anemometer (CTA) for measurement of flows with very high turbulence and the study of flow micro structures. This equipment is needed for measurement of three dimensional flows with very fast fluctuations and the study of micro structures where there is a need to study eddies. This multi channel CTA system is needed for mapping of velocity and turbulence fields in air/ water flow.
- **Technical specifications:**

The CTA Anemometer shall be a research-grade instrument designed for high performance, fully automated operation and a frequency response of 250 kHz or greater. Adjustments to maximize frequency response shall be provided. Suitable bridge compensation technology shall be provided in the system. The system shall have excellent frequency response and the lowest noise; the power bridge shall have the features for selection from computer.

The system shall essentially consist of the following:

- Ø CTA modules, Controller and Calibration module housed together in a frame
- Ø Desktop computer with A/D converter,
- Ø Probe calibrator
- Ø Traversing system with traversing controller.
- Ø A set of probes and probe holders

The controller in the frame shall manage the communications between the hardware modules and the desktop computer through serial ports. The system functions and the optimization of set-up parameters shall be carried out through a microprocessor. This processor shall have high precision voltmeter function for measurement of output voltages from the modules. The controller shall also be provided with a temperature circuit to monitor the ambient temperature enabling the software to correct the anemometer voltages before conversion. It should be possible to optimise the band width of the signal through the software.
