BHARAT HEAVY ELECTRICALS LIMITED
(A Govt. of India Undertaking)

Ref: PSER:SCT:NBN-C2067:8042 Date: 14-07-2020

# NOTICE INVITING TENDER

NOTE: INTENDING BIDDER TO PARTICIPATE MAY DOWNLOAD FROM WEB SITES

Sealed offers in two part bid system are invited from reputed & experienced bidders meeting PRE QUALIFICATION CRITERIA as mentioned in Annexure-1 through E-Procurement Portal https://bhel.abcprocure.com only, for the subject job by the undersigned on the behalf of BHARAT HEAVY ELECTRICALS LIMITED as per the tender document. Issue/ forwarding intimation regarding tender to any bidder shall not construe that the bidder is considered to be qualified. Consideration of their offer is subject to CUSTOMER APPROVAL & compliance of loading criteria as per clause no. 8.0 of NIT etc. specified below. Following points relevant to the tender may please be noted and complied with.

1.0 Salient Features of NIT

| SL NO | ISSUE | DESCRIPTION | |
|---|---|---|---|
| i | TENDER NUMBER | PSER:SCT:NBN-C2067:20. | |
| ii | Broad Scope of job | *Construction of 4 nos 150 M Tall Single Flue RCC Chimney with Borosilicate Glass Block Lining System on MS Flue Can (excluding pile) at 4x250 MW BRBCL Nabinagar TPP FGD, Bihar.* | |
| iii | DETAILS OF TENDER DOCUMENT | | |
| a | Volume-IA | *General conditions of contract (Supply)* | *Not Applicable.* |
| b | Volume-IB | *General conditions of contract (Service)* | *Applicable.* |
| c | Volume-IC | *Special conditions of contract (Supply)* | *Not Applicable.* |
| d | Volume-ID | *Special conditions of contract (Service)* | *Applicable.* |
| e | Volume-IE | *Forms and Procedures etc.* | *Applicable.* |
| f | Volume-IF | *Technical Conditions of Contract (TCC) (CML, TS)* | *Applicable.* |
| g | Volume-III | *Price Schedule (Absolute value) – Rev-00* | *Applicable.* |
| iv | ISSUE OF TENDER DOCUMENTS | *This is an E-tender floated online through our E-Procurement Site https://bhel.abcprocure.com.* *Start date of the tender: 14-07-2020.* | *Applicable.* |
| v | DUE DATE & TIME OF OFFER SUBMISSION | *Date: 04-08-2020, Time: 15-00 Hrs. IST* *The bidder should respond by submitting their offer online in our e-Procurement platform at https://bhel.abcprocure.com only. Offers are invited in two-parts only.* *Hard copy bid or bids through email/fax shall not be accepted.* | *Applicable.* |
| vi | OPENING OF TENDER | *Date: 04-08-2020.* *1 hour after the latest due date and time of Offer submission* *Notes:* *(1) In case the due date of opening of tender becomes a non-working day, tenders shall be opened on next working day at the same time.* *(2) Bidder may depute representative to witness the opening of tender.* | *Applicable.* |

पावर सेक्टर पूर्वी क्षेत्र (मुख्यालय)
POWER SECTOR EASTERN REGION, DJ-9/1, SALT LAKE CITY, KOLKATA - 700 091
फैक्स/Fax : (033) 23211960 फोन/Phone : बोर्ड/EPABX : 23211691/ 23398000

| | | | |
|---|---|---|---|
| vii | EMD AMOUNT | -- | *Not Applicable.* |
| viii | COST OF TENDER | *Rs. 10,000/-* | *Applicable.* |
| ix | LAST DATE FOR SEEKING CLARIFICATION | *Date: 21-07-2020.*<br>*Along with soft version also, addressing to undersigned & to others as per contact address given below* | *Applicable.* |
| x | SCHEDULE OF Pre Bid Discussion (PBD) | -- | *Not Applicable (In case BHEL decides to conduct PBD, date, time & venue of PBD will be intimated suitably thru TCN.)* |
| xi | INTEGRITY PACT & DETAILS OF INDEPENDENT EXTERNAL MONITOR (IEM) | *IEM DETAILS:*<br><br>*Refer Clause No 34.0 below.* | *Applicable.* |
| xii | Latest updates | Latest updates on the important dates, Amendments, Correspondences, Corrigenda, Clarifications, Changes, Errata, Modifications, Revisions, etc to Tender Specifications will be hosted in BHEL webpage (www.bhel.com) ; CPP portal & E-Procurement Site https://bhel.abcprocure.com only. Bidders to keep themselves updated with all such information. | *Shall be intimated to bidder.* |

2.0 The offer shall be submitted as per the instructions of tender document and as detailed in this NIT. Bidders to note specifically that all pages of tender document, including these NIT pages of this particular tender together with subsequent correspondences shall be submitted by them, duly digitally signed & stamped on each page, as part of offer. Rates/Price including discounts/rebates, if any, mentioned anywhere/ in any form in the techno-commercial offer other than the Price Bid, shall not be entertained.

3.0 Unless specifically stated otherwise, bidder shall remit cost of tender (non-refundable) and courier charges if applicable, in the form of Demand Draft drawn in favour of Bharat Heavy Electricals Ltd, payable at Kolkata, issuing the Tender, along with techno-commercial offer.

4.0 Unless specifically stated otherwise, bidder shall have to deposit EMD through Demand Draft/Pay Order in favour of Bharat Heavy Electricals Ltd, payable at Kolkata. For other details please refer General Conditions of Contract.
Bidders may please be noted that "OEMD" provision stands deleted. Hence, bidders who have deposited Rs. 2 Lakh as OEMD are also requested to submit fresh EMD as mentioned in sl no vii under clause no 1.0 of NIT.

5.0 Procedure for Submission of Tenders: The Tenderers must submit their Tenders as detailed below:

**DOCUMENTS TO BE UPLOADED & MODALITY OF UPLOADING**

| Sl no | Description | Remarks |
|---|---|---|
| PART-I A | (TECHNO COMMERCIAL BID) | |
| | CONTAINING THE FOLLOWING:- | |
| i. | Covering letter/Offer forwarding letter of Tenderer. (**To be attached in relevant Attachment section**) | |
| ii. | Duly filled-in `No Deviation Certificate' as per prescribed format. (To be attached in relevant Attachment section) | |

| | | |
|---|---|---|
| | Note:<br>a. In case of any deviation, the same should be submitted separately for technical & commercial parts, indicating respective clauses of tender against which deviation is taken by bidder. The list of such deviation shall be attached in relevant attachment section of the e –procurement portal. It shall be specifically noted that deviation recorded elsewhere shall not be entertained.<br><br>b. BHEL reserves the right to accept/reject the deviations without assigning any reasons, and BHEL decision is final and binding.<br>i). In case of acceptance of the deviations, appropriate loading shall be done by BHEL<br>ii). In case of unacceptable deviations, BHEL reserves the right to reject the tender | |
| iii. | Supporting documents/ annexures / schedules/ drawing etc as required in line with Pre-Qualification criteria.<br><br>It shall be specifically noted that all documents as per above shall be attached in relevant attachment section and credential certificates issued by clients shall distinctly bear the name of organization, contact ph no, FAX no, etc. | |
| iv. | All Amendments/Correspondences/Corrigenda/Clarifications/Changes/ Errata etc pertinent to this NIT.<br>(To be attached in relevant Attachment section) | |
| v. | Integrity Pact Agreement (Duly signed by the authorized signatory) | Applicable |
| vi. | Duly filled-in annexures, formats etc as required under this Tender Specification/NIT<br>(To be attached in relevant Attachment section) | |
| vii. | Notice inviting Tender (NIT)<br>(To be attached in relevant Attachment section) | |
| viii. | Volume – I F: Technical Conditions of Contract (TCC)<br>(To be attached in relevant Attachment section) | |
| ix. | Volume – I D: Special Conditions of Contract (SCC)-Service<br>(To be attached in relevant Attachment section) | |
| x. | Volume – I B: General Conditions of Contract (GCC)-Service<br>(To be attached in relevant Attachment section) | |
| xii. | Volume – I E: Forms & Procedures etc.<br>(To be attached in relevant Attachment section) | |
| xiii. | Volume–III - (UNPRICED – without disclosing rates/price, but mentioning only 'QUOTED' or 'UNQUOTED' against each item.<br>(To be attached in Unpriced Bid Attachment section) | |
| xiv. | Any other details preferred by bidder with proper indexing.<br>(To be attached in relevant Attachment section) | |

| | | |
|---|---|---|
| PART-I B | EMD/ COST OF TENDER<br>(To be submitted offline within due date of offer submission) | |
| | CONTAINING THE FOLLOWING:- | |
| i. | 1. Earnest Money Deposit (EMD) in the form as indicated in this Tender<br><br>2. Cost of Tender (Demand Draft or copy of Cash Receipt as the case may be) | |

| | | |
|---|---|---|
| PART-II | PRICE BID<br>(TO BE ATTACHED IN PRICE BID ATTACHMENT SECTION) | |
| | CONTAINING THE FOLLOWING:- | |
| i | Covering letter/Offer forwarding letter of Tenderer enclosed in Part-I | |
| ii | Volume III – PRICE BID (Duly Filled in Schedule of Rates – rate/price to be entered in words as well as figures)<br>Any other document uploaded in the price bid, apart from above tender format, shall not be taken into cognizance for evaluation of offer. | |

SPECIAL NOTE:

A) Your offer & documents submitted along with offer shall be digitally signed & stamped in each page by your authorised representative. No overwriting/ correction in tender documents by bidders shall be allowed. However, if correction is unavoidable, the same may be signed by authorized signatory.
B) The credentials/ documents submitted towards compliance of Pre-qualification requirement shall be physically signed by the authorized signatory & stamped before uploading/submission with the offer in the e-procurement portal.
C) All documents/ annexures submitted with the offer shall be properly attached in the respective sections. BHEL shall not be responsible for any missing documents.

6.0 No Deviation with respect to tender clauses and no additional clauses/ suggestions/ in Techno-commercial bid/ Price bid shall normally be considered by BHEL. Bidders are requested to positively comply with the same.

7.0 BHEL reserves the right to accept or reject any or all Offers without assigning any reasons thereof. BHEL also reserves the right to cancel the Tender wholly or partly without assigning any reason thereof. Also BHEL shall not entertain any correspondence from bidders in this matter (except for the refund of EMD).

8.0 Assessment of Capacity of Bidders:

Bidder's capacity for executing the job under tender shall be assessed 'LOAD' wise and 'PERFORMANCE' wise as per the following:

I. LOAD: Load takes into consideration ALL the contracts of the Bidder under execution with BHEL Regions, irrespective of whether they are similar to the tendered scope or not. The cut off month for reckoning 'Load' shall be the 3rd Month preceding the month corresponding to the 'latest date of bid submission', in the following manner -
(Note: For example, if latest bid submission is in Jan 2017, then the 'load' shall be calculated up to and inclusive of Oct 2016)

Total number of Packages in hand = Load (P)

Where 'P' is the sum of all unit wise identified packages (refer table-1) under execution with BHEL Regions as on the cut off month defined above, including packages yet to be commenced, excepting packages which are on Long Hold.

II. PERFORMANCE: Here 'Monthly Performance' of the bidder for all the packages (under execution/ executed during the 'Period of Assessment' in all Power Sector Regions of BHEL) SIMILAR to the packages covered under the tendered scope, excepting packages not commenced shall be taken into consideration. The 'Period of Assessment' shall be 6 months preceding and including the cut off month. The cut off month for reckoning 'Period of Assessment' shall be the 3rd Month preceding the month corresponding to 'latest date of bid submission', in the following manner:

(Note: For example, if 'latest date of bid submission' is in Jan 2017, then the 'performance' shall be assessed for a 6 months' period up to and inclusive of Oct 2016 (i.e. from May 2016 to Oct 2016), for all the unit wise identified packages (refer Table I))

i). Calculation of Overall 'Performance Rating' for 'Similar Package/Packages' for the tendered scope under execution at Power Sector Regions for the 'Period of Assessment':

This shall be obtained by summing up the 'Monthly Performance Evaluation' scores obtained by the bidder in all Regions for all the similar Package/packages', divided by the total number of Package months for which evaluation should have been done, as per procedure below:

a) $P_1$, $P_2$, $P_3$, $P_4$, $P_5$ , …. $P_N$ etc. be the packages (under execution/ executed during the 'Period of Assessment' in all Regions of BHEL) SIMILAR to the packages covered under the tendered scope, excepting packages not commenced. Total number of similar packages for all Regions = $P_T$ (i.e. $P_T = P_1 + P_2 + P_3 + P_4 + \ldots P_N$)

b) Number of Months '$T_1$' for which 'Monthly Performance Evaluation' as per relevant formats, should have been done in the 'Period of Assessment' for the corresponding similar package $P_1$. Similarly $T_2$ for package $P_2$,$T_3$ for package $P_3$, etc. for the tendered scope. Now calculate cumulative total months '$T_T$' for total similar Packages '$P_T$' for all Regions (i.e. $T_T = T_1 + T_2 + T_3 + T_4 + ..T_N$ )

c) Sum '$S_1$ 'of 'Monthly Performance Evaluation' Scores ($S_{1\text{-}1}$, $S_{1\text{-}2}$, $S_{1\text{-}3}$, $S_{1\text{-}4}$, $S_{1\text{-}5}$…. $S_{1\text{-}T1}$) for similar package $P_1$, for the 'period of assessment' '$T_1$' (i.e. $S_1 = S_{1\text{-}1} + S_{1\text{-}2} + S_{1\text{-}3} + S_{1\text{-}4} + S_{1\text{-}5} + \ldots S_{1\text{-}T1}$). Similarly, $S_2$ for package $P_2$ for period $T_2$, $S_3$ for package $P_3$ for period $T_3$ etc. for the tendered scope for all Regions. Now calculate cumulative sum '$S_T$' of 'Monthly Performance Evaluation' Scores for total similar Packages '$P_T$' for all Regions (i.e. '$S_T$ '$= S_1 + S_2 + S_3 + S_4 + S_5 + \ldots S_N$.)

d) Overall Performance Rating '$R_{BHEL}$' for the Similar Package/Packages (under execution/ executed during the 'Period of Assessment') in all the Power Sector Regions of BHEL

$$= \frac{\text{Aggregate of Performance scores for all similar packages in all the Regions}}{\text{Aggregate of months for each of the similar packages for which performance should have been evaluated in all the Regions}}$$

$$= \frac{S_T}{T_T}$$

e) Bidders to note that the risk of non-evaluation or non-availability of the 'Monthly Performance Evaluation' reports as per relevant formats is to be borne by the Bidder.

f) Table showing methodology for calculating 'a', 'b' and 'c' above

| Sl. No. | Item Description | Details for all Regions | | | | | | | Total |
|---|---|---|---|---|---|---|---|---|---|
| (i) | (ii) | (iii) | (iv) | (v) | (vi) | (vii) | (viii) | (ix) | (x) |
| 1 | Similar Packages for all Regions → (under execution/ executed during period of assessment) | $P_1$ | $P_2$ | $P_3$ | $P_4$ | $P_5$ | … | $P_N$ | Total No. of similar packages for all Regions = $P_T$ i.e. Sum (Σ) of columns (iii) to (ix) |

| Sl. No. | Item Description | Details for all Regions | | | | | | | Total |
|---|---|---|---|---|---|---|---|---|---|
| (i) | (ii) | (iii) | (iv) | (v) | (vi) | (vii) | (viii) | (ix) | (x) |
| 2 | Number of Months for which 'Monthly Performance Evaluation' as per relevant formats should have been done in the 'period of assessment' for corresponding Similar Packages ( as in row 1) | $T_1$ | $T_2$ | $T_3$ | $T_4$ | $T_5$ | … | $T_N$ | Sum (Σ) of columns (iii) to (ix) = $T_T$ |
| 3 | Monthly performance scores for the corresponding period (as in Row 2) | $S_{1-1}$, $S_{1-2}$, $S_{1-3}$, $S_{1-4}$, … $S_{1-T1}$ | $S_{2-1}$, $S_{2-2}$, $S_{2-3}$, $S_{2-4}$, … $S_{2-T2}$ | $S_{3-1}$, $S_{3-2}$, $S_{3-3}$, $S_{3-4}$, … $S_{3-T3}$ | $S_{4-1}$, $S_{4-2}$, $S_{4-3}$, $S_{4-4}$, … $S_{4-T4}$ | $S_{5-1}$, $S_{5-2}$, $S_{5-3}$, $S_{5-4}$, … $S_{5-T5}$ | .. … … … … | $S_{N-1}$, $S_{N-2}$, $S_{N-3}$, $S_{N-4}$, … $S_{N-TN}$ | -------- |
| 4 | Sum of Monthly Performance scores of the corresponding Package for the corresponding period (as in row-3) | $S_1$ | $S_2$ | $S_3$ | $S_4$ | $S_5$ | … | $S_N$ | Sum (Σ) of columns (iii) to (ix) = $S_T$ |

ii). Calculation of Overall 'Performance Rating' ($R_{BHEL}$) in case at least 6 evaluation scores for 'similar Package/Packages' for the tendered scope ARE NOT AVAILABLE, during the 'Period of Assessment':

This shall be obtained by summing up the 'Monthly Performance Evaluation' scores obtained by the bidder in all Regions for ALL the packages, divided by the total number of Package months for which evaluation should have been done. '$R_{BHEL}$' shall be calculated subject to availability of 'performance scores' for at least 6 'package months' in the order of precedence below:

a) 'Period of Assessment' i.e. 6 months preceding and including the cut-off month
b) 12 months preceding and including the cut-off month
c) 24 months preceding and including the cut-off month

In case, $R_{BHEL}$ cannot be calculated as above, then Bidder shall be treated as 'NEW VENDOR'. Further eligibility and qualification of this bidder shall be as per definition of 'NEW VENDOR' described in 'Explanatory Notes'.

iii). Factor "L" assigned based on Overall Performance Rating ($R_{BHEL}$) at Power Sector Regions:

| Sl. no. | Overall Performance Rating ($R_{BHEL}$) | Corresponding value of 'L' |
|---|---|---|
| 1 | =60 | NA |
| 2 | > 60 and ≤ 65 | 0.4 |
| 3 | > 65 and ≤ 70 | 0.35 |
| 4 | > 70 and ≤ 75 | 0.25 |
| 5 | > 75 and < 80 | 0.2 |
| 6 | ≥ 80 | NA |

III. 'Assessment of Capacity of Bidder':

'Assessment of Capacity of Bidder' is based on the Maximum number of packages for which a vendor is eligible, considering the performance scores of similar packages, as below:

Max number of packages $P_{Max}$= ($R_{BHEL}$ - 60) divided by corresponding value of 'L', i.e. ($R_{BHEL}$- 60)/L

Note:

i). In case the value of $P_{Max}$ results in a fraction, the value of $P_{Max}$ is to be rounded off to next whole number

ii). For $R_{BHEL}$ = 60, $P_{Max}$ = '1'

iii). For $R_{BHEL} \geq 80$, there will be no upper limit on $P_{Max}$

The Bidder shall be considered 'Qualified' as per 'Assessment of Capacity of Bidder' for the subject Tender if $P \leq P_{Max}$

(Where P is calculated as per clause 'I' above)

Note: For the transition period of 1 year (i.e. for all the NITs floated between 11th May 2019 to 10th May 2020), in addition to above, 'Assessment of Capacity of Bidder' shall also be calculated considering 'performance scores' till 36 months as per Sl. no II ii).

Higher of the results obtained out of both shall be considered for 'Assessment of Capacity of Bidder'.

IV. Explanatory note:

i). Similar package means Boiler or ESP or Piping or Turbine or Civil or Structure or Electrical or C&I etc. at the individual level irrespective of rating of Plant and irrespective of whether the subject tender is a single package or as part of combined/composite packages. Normally Boiler, ESP, Piping, Turbine, Electrical, C&I, Civil, Structure etc. is considered individual level of package. For example, in case the tendered scope is a Boiler Vertical Package comprising of Boiler, ESP and Power Cycle Piping (i.e. the 'identified packages as per Table-1 below), the 'PERFORMANCE' part against sl.no. II above, needs to be evaluated considering all the identified packages (i.e. Boiler, ESP and Power Cycle Piping) and finally the Bidder's capacity to execute the tendered scope is assessed in line with III above.

ii). Identified Packages (Unit wise)

Table-1

| Civil | Electrical and C&I | Mechanical |
|---|---|---|
| i). Enabling works<br>ii). Pile and Pile Caps<br>iii). Civil Works including foundations<br>iv). Structural Steel Fabrication & Erection<br>v). Chimney<br>vi). Cooling Tower<br>vii). Others (Civil) | i). Electrical<br>ii). C&I<br>iii). Others (Elect. and C&I) | i). Boiler & Aux (All types including CW Piping if applicable)<br>ii). Power Cycle Piping/Critical Piping<br>iii). ESP<br>iv). LP Piping<br>v). Steam Turbine Generator set & Aux<br>vi). Gas Turbine Generator set & Aux<br>vii). Hydro Turbine Generator set & Aux<br>viii). Turbo Blower (including Steam Turbine)<br>ix). Material Management<br>x). Others (Mechanical) |

iii). Bidders who have not been evaluated for at least six package months in the last 24 months preceding and including the Cut-off month in the online BHEL system for contractor performance evaluation in BHEL PS Regions, shall be considered "NEW VENDOR".

A 'NEW VENDOR' shall be considered qualified subject to satisfying all other tender conditions.

A 'NEW VENDOR' if awarded a job (of package/packages identified under this clause) shall be tagged as "FIRST TIMER" on the date of first LOI from BHEL.

The "FIRST TIMER" tag shall remain till completion of all the contracts against which vendor has been tagged as First Timer or availability of 6 evaluation scores within last 24 months preceding and including the Cut-off month in the online BHEL system for contractor performance evaluation in BHEL PS Regions.

A Bidder shall not be eligible for the next job as long as the Bidder is tagged as "FIRST TIMER" excepting for the Tenders which have been opened on or before the date of the bidder being tagged as 'FIRST TIMER'.

After removal of 'FIRST TIMER' tag, the Bidder shall be considered 'QUALIFIED' for the future tenders subject to satisfying all other tender conditions including 'Assessment of Capacity of Bidders'.

iv). Consequent upon applying the criteria of 'Assessment of Capacity of Bidders' detailed above on all the bidders qualified against Technical and Financial Qualification criteria, if the number of qualified bidders reduces to less than four, then for further processing of the Tender, BHEL at its discretion reserves the right to also consider the bidders who are "not qualified" as per criteria of 'Assessment of Capacity of Bidders' and for this, procedure described in following three options shall be followed:

a) All the bidders having Overall Performance Rating ('$R_{BHEL}$') ≥60 shall be considered qualified against criteria of 'Assessment of Capacity of Bidders'.
b) If even after using option "a", the number of qualified bidders remains less than four, then in addition to bidders considered as per option "a", "First timer" bidders having average of available performance scores ≥60 upto and including the Cut Off month shall also be considered qualified against criteria of 'Assessment of Capacity of Bidders'.
c) If even after using option "a" and "b", the number of qualified bidders remains less than four, then in addition to bidders considered as per option "a" and "b", "First timer" bidders for whom no performance score is available in the system upto and including the Cut Off month, shall also be considered qualified against criteria of 'Assessment of Capacity of Bidders'.

Note:- In case, the number of bidders qualified against Technical and Financial Qualification criteria itself is less than four, then all bidders (a)- having Overall Performance Rating ('$R_{BHEL}$') ≥60, (b)- First timer" bidders having average of available performance scores ≥60 upto and including the Cut Off month, (c)- "First timer" bidders for whom no performance score is available in the system upto and including the Cut Off month, shall be considered qualified against criteria of 'Assessment of Capacity of Bidders' for further processing of tender.

v). 'Under execution' shall mean works in progress as per the following:

a. Up to execution of 90% of anticipated Contract Value in case of Civil, MM, Structural and Turbo Blower Packages
b. Up to Steam Blowing in case of Boiler/ESP/Piping Packages
c. Up to Synchronization in all Balance Packages

Note: BHEL at its discretion can extend (or reduce in exceptional cases in line with Contract conditions) the period defined against (a), (b) and (c) above, depending upon the balance scope of work to be completed.

vi). Contractor shall provide the latest contact details i.e. mail-ID and Correspondence Address to SCT Department, so that same can be entered in the Contractor Performance Evaluation System, and in case of any change/discrepancy same shall be informed immediately. Login Details for viewing scores in Contractor Performance Evaluation System shall be provided to the Contractor by SCT Department.

vii). Performance Evaluation for Activity Month shall be completed in Evaluation Month (i.e. month next to Activity Month) or in rare cases in Post Evaluation Month (i.e. month next to Evaluation Month) after approval from Competent Authority. In case scores are not acceptable, Contractor can submit Review Request to GM Site/ GM Project latest by 25th of Evaluation Month or 3 days after approval of score, whichever is later. However, acceptance/rejection of 'Review Request' solely depends on the discretion

of GM Site/GM Project. After acceptance of Review Request, evaluation score shall be reviewed at site and the score after completion of review process shall be acceptable and binding on the contractor.

viii). Project on Hold due to reasons not attributable to bidder -

a. Short hold: Evaluation shall not be applicable for this period, however Loading will be considered.

b. Long hold: Short hold for continuous six months and beyond or hold on account of Force Majeure shall be considered as Long Hold. Evaluation as well as Loading shall not be considered for this period.

ix). Performance evaluation in CL 8 above is applicable to Prime bidder and Consortium partner (or Technical tie up partner) for their respective scope of work.

9.0 Since the job shall be executed at site, bidders must visit site/ work area and study the job content, facilities available, availability of materials, prevailing site conditions including law & order situation, applicable wage structure, wage rules, etc before quoting for this tender. They may also consult this office before submitting their offers, for any clarifications regarding scope of work, facilities available at sites or on terms and conditions.

10.0 For any clarification on the tender document, the bidder may seek the same in writing, through e-mail or through E-Procurement Site https://bhel.abcprocure.com, as per specified format, within the scheduled date for seeking clarification, from the office of the undersigned. BHEL shall not be responsible for receipt of queries after due date of seeking clarification due to any delay. Any clarification / query received after last date for seeking clarification may not be normally entertained by BHEL and no time extension will be given.

11.0 BHEL may decide holding of pre-bid discussion [PBD] with all intending bidders as per date indicated in the NIT. The bidder shall ensure participation for the same at the appointed time, date and place as may be decided by BHEL. Bidders shall plan their visit accordingly. The outcome of pre-bid discussion (PBD) shall also form part of tender.

12.0 In the event of any conflict between requirement of any clause of this specification/ documents/drawings/data sheets etc or requirements of different codes/standards specified, the same to be brought to the knowledge of BHEL in writing for clarification before due date of seeking clarification (whichever is applicable), otherwise, interpretation by BHEL shall prevail. Any typing error/missing pages/ other clerical errors in the tender documents, noticed must be pointed out before pre-bid meeting/submission of offer else BHEL's interpretation shall prevail.

13.0 Unless specifically mentioned otherwise, bidder's quoted price shall deemed to be in compliance with tender including PBD.

14.0 Bidders shall submit Integrity Pact Agreement (Duly signed by authorized signatory who signs in the offer), along with techno - commercial bid. This pact shall be considered as a preliminary qualification for further participation. The names and other details of Independent External Monitor (IEM) for the subject tender is as given at point (xi) of 1 above.

15.0 The Bidder has to satisfy the Pre Qualifying Requirements stipulated for this Tender in order to be qualified. The Price Bids of only those bidders will be opened who will be qualified for the subject job on the basis of satisfying the Pre Qualification Criteria specified in this NIT as per Annexure-1 (as applicable), past performance etc. and date of opening of price bids shall be intimated to only such bidders. BHEL reserves the right not to consider offers of parties under HOLD.

16.0 In case BHEL decides on a `Public Opening', the date & time of opening of the PRICE BID shall be intimated to the qualified bidders and in such as case, price bid (Volume-III) uploaded in E-procurement Site https://bhel.abcprocure.com will be opened.

17.0 Validity of the offer shall be for six months from the latest due date of offer submission (including extension, if any) unless specified otherwise.

18.0 BHEL shall be resorting to Reverse Auction (RA) (Guidelines as available on www.bhel.com) for this tender. RA shall be conducted among all the techno-commercially qualified bidders.

Price bids of all techno-commercially qualified bidders shall be opened and same shall be considered as initial bids of bidders in RA. In case any bidder(s) do(es) not participate in online Reverse Auction, their sealed envelope price bid along with applicable loading, if any, shall be considered for ranking.

19.0 On submission of offer, further consideration will be subject to compliance to tender & qualifying requirement and customer's acceptance, as applicable.

20.0 In case the bidder is an "Indian Agent of Foreign Principals", 'Agency agreement has to be submitted along with Bid, detailing the role of the agent along with the terms of payment for agency commission in INR, along with supporting documents.

21.0 The bidders shall not enter into any undisclosed M.O.U. or any understanding amongst themselves with respect to tender.

22.0 Consortium Bidding (or Technical Tie up) shall be allowed only if specified in Pre Qualifying Requirement (PQR) criteria, and in such a case the details to be complied with is enclosed herewith as per Annexure-5 UNLESS SPECIFIED OTHERWISE IN PQR.

23.0 The bidder shall submit documents in support of possession of 'Qualifying Requirements' duly self certified and stamped/ digitally signed (as applicable) by the authorized signatory, indexed and properly linked in the format for PQR. In case BHEL requires any other documents/proofs, these shall be submitted immediately.

24.0 The bidder may have to produce original document for verification if so decided by BHEL.

25.0 The offers of the bidders who are on the banned list as also the offer of the bidders, who engage the services of the banned firms, shall be rejected. The list of banned firms is available on BHEL Website (www.bhel.com).

I) Integrity commitment, performance of the contract and punitive action thereof:

a) Commitment by BHEL:

BHEL commits to take all measures necessary to prevent corruption in connection with the tender process and execution of the contract. BHEL will during the tender process treat all Bidder(s) in a transparent and fair manner, and with equity.

b) Commitment by Bidder/ Supplier/ Contractor:

b.i) The bidder/ supplier/ contractor commit to take all measures to prevent corruption and will not directly or indirectly influence any decision or benefit which he is not legally entitled to nor will act or omit in any manner which tantamount to an offence punishable under any provision of the Indian Penal Code, 1860 or any other law in force in India.

b.ii) The bidder/ supplier/ contractor will, when presenting his bid, disclose any and all payments he has made, and is committed to or intends to make to agents, brokers or any other intermediaries in connection with the award of the contract and shall adhere to relevant guidelines issued from time to time by Govt. of India/ BHEL.

b.iii) The bidder/ supplier/ contractor will perform/ execute the contract as per the contract terms & conditions and will not default without any reasonable cause, which causes loss of business/ money/ reputation, to BHEL.

If any bidder/ supplier/ contractor during pre-tendering/ tendering/ post tendering/ award/ execution/ post-execution stage includes in mal-practices, cheating, bribery, fraud or and other misconduct or formation of cartel so as to influence the bidding process or influence the price or acts or omits in any manner which tantamount to an offence punishable under any provision of the Indian Penal code, 1860 or any other law in force in India, then, action may be taken against such bidder/ supplier/ contractor as per extant guidelines of the company available on www.bhel.com and/ or under applicable legal provisions.

26.0 It may please be noted that Guidelines/Rules in respect of Suspension of business dealings (Hold- 12 to 24 Months/ Banning – 3 years etc), Vendor Evaluation formats, quality, safety and HSE guidelines, standard T&P hire charges of BHEL etc may undergo change from time to time and the latest one shall be followed. Latest "Guidelines for Vendor Evaluation" is web based, quality, safety & HSE"; standard T&P hire charges shall be available at site and shall be given to the successful vendors/ subcontractors during execution.

27.0 MSE suppliers can avail the intended benefits in respect of the procurements related to the Goods and Services only (Definition of Goods and Services as enumerated by Govt. of India vide Office Memorandum F. No. 21(8)/2011-MA dtd. 09/11/2016 office of AS & DC, MSME) if they submit along with the offer, attested copies of either Udyam Registration Certificate or EM II certificate having deemed validity (five years from the date of issue of acknowledgement in EM II) or valid NSIC certificate or Udyog Aadhar Memorandum (UAM) & Acknowledgement or EM II certificate along with attested copy of a CA certificate (Format enclosed at Annexure – C where deemed validity of EM II certificate of five years has expired) applicable for the relevant financial year (latest audited). Date to be reckoned for determining the deemed validity will be the date of bid opening (Part 1 in case of two part bid). Non submission of such documents will lead to consideration of their bid at par with other bidders. No benefit shall be applicable for this enquiry if any deficiency in the above required documents are not submitted before price bid opening. If the tender is to be submitted through e-procurement portal, then the above required documents are to be uploaded on the portal. Documents should be notarized or attested by a Gazetted officer.

Any Bidder falling under MSME category, shall furnish the following details & submit documentary evidence/Govt. Certificate etc. in support of the same along with their techno-commercial offer: -

| Type under MSME | SC/ST owned | Women owned | Others |
|---|---|---|---|
| Micro | | | |
| Small | | | |
| Medium | | | |

Note: - If the bidder does not furnish the above, offer shall be processed construing that the bidder is not falling under MSME category.

28.0 The bidder along with its associates/collaborators/sub-contractors/sub-vendors/consultants/service providers shall strictly adhere to BHEL Fraud Prevention Policy displayed on BHEL website www.bhel.com and shall immediately bring to the notice of BHEL Management about any fraud or suspected fraud as soon as it comes to their notice.

29.0 Annexure-A -Amendment to GCC/SCC shall be read in conjunction with GCC-Volume-IB & SCC-Volume-ID. This Annexure-A (Amendment to GCC/SCC) of NIT shall not be considered as part of the NIT but addendum/corrigendum to the GCC/SCC only.

30.0 Annexure-B - Terms & conditions of Reverse Auction is enclosed herewith.

31.0 Annexure-D – Specific Clause w.r.t. BOCW Act & Cess Act is enclosed herewith.

32.0 Annexure-E- Statewise GST Registration nos. is enclosed herewith.

33.0 Duly filled & signed Annexure- CPP-GST/I to be submitted by bidders along with their techno-commercial offer.

34.0 Integrity Pact (IP) –

(a) IP is a tool to ensure that activities and transactions between the Company and its Bidders/ Contractors are handled in a fair, transparent and corruption free manner. Following Independent External Monitors (IEMs) on the present panel have been appointed by BHEL with the approval of CVC to oversee implementation of IP in BHEL.

| Sl | IEM | Email |
|---|---|---|
| 1. | Shri Arun Chandra Verma, IPS (Retd.) | acverma1@gmail.com |
| 2. | Shri Virendra Bahadur Singh, IPS (Retd.) | vbsinghips@gmail.com |

(b) The IP as enclosed with the tender is to be submitted (duly signed by authorized signatory) along with techno-commercial bid (Part-I, in case of two/three part bid). Only those bidders who have entered into such an IP with BHEL would be competent to participate in the bidding. In other words, entering into this Pact would be a preliminary qualification.

(c) Please refer Section-8 of IP for Role and Responsibilities of IEMs. In case of any complaint arising out of the tendering process, the matter may be referred to any of the above IEM(s). All correspondence with the IEMs shall be done through email only.

Note:

No routine correspondence shall be addressed to the IEM (phone/ post/ email) regarding the clarifications, time extensions or any other administrative queries, etc. on the tender issued. All such clarification/ issues shall be addressed directly to the tender issuing (procurement) department's officials whose contact details are provided below:

Details of contact person(s):

35.0 For this procurement, Public Procurement (Preference to Make in India), Order 2017 dated 15.06.2017, 28.05.2018, 29-05-2019 & 04-06-2020 and subsequent Orders issued by the respective Nodal Ministry shall be applicable even if issued after issue of this NIT but before finalization of contract/ PO/ WO against this NIT.
In the event of any Nodal Ministry prescribing higher or lower percentage of purchase preference and/ or local content in respect of this procurement, same shall be applicable.

Duly filled & signed Form-2 (Format for local content), as applicable, to be submitted by bidders along with their techno-commercial offer.

36.0 Bidders are requested to submit their best price as per latest price schedule of the tender.

37.0 It may please be noted that Bid should be free from correction, overwriting, using corrective fluid, etc. Any interlineation, cutting, erasure or overwriting shall be valid only if they are attested under full signature(s) of person(s) signing the bid, else bid shall be liable for rejection.
All overwriting/ cutting, etc will be numbered by bid opening officials and announced during bid opening.

38.0 The contractor shall, at all stages of work deploy skilled/ semi-skilled tradesmen who are qualified and

possess certificate in particular trade from CPWD Training Institute/ Industrial Training Institute/National Institute of Construction Management and Research (NICMAR), National Academy of Construction, CIDC or any similar reputed and recognized Institute managed/certified by State/ Central Government. The number of such qualified tradesmen shall not be less than 20% of total skilled/ semi-skilled workers required in each trade at any stage of work. The contractor shall submit number of man days required in respect of each trade, its scheduling and the list of qualified tradesmen along with requisite certificate from recognized Institute to Engineer-in-Charge for approval. Notwithstanding such approval, if the tradesmen are found to have inadequate skill to execute the work of respective trade, the contractor shall substitute such tradesmen within two days of written notice from Engineer-in-Charge. Failure on the part of contractor to obtain approval of Engineer-in-Charge or failure to deploy qualified tradesmen will attract a compensation to be paid by contractor at the rate of Rs. 100 per such tradesman per day. Decision of Engineer-in-Charge as to whether particular tradesman possesses requisite skill and amount of compensation in case of default shall be final and binding.

39.0 Order of Precedence

In the event of any ambiguity or conflict between the Tender Documents, the order of precedence shall be in the order below:

a. Amendments/Clarifications/Corrigenda/Errata etc issued in respect of the tender documents by BHEL
b. Notice Inviting Tender (NIT)
c. Price Bid-Volume-III
d. Technical Conditions of Contract (TCC) -- Volume-IF
e. Special Conditions of Contract (SCC) —Volume-ID
f. General Conditions of Contract (GCC) —Volume-IB
g. Forms and Procedures —Volume-IE

PRE QUALIFICATION CRITERIA

| | |
|---|---|
| JOB | CONSTRUCTION OF 4 NOS 150 M TALL SINGLE FLUE RCC CHIMNEY WITH BOROSILICATE GLASS BLOCK LINING SYSTEM ON MS FLUE CAN (EXCLUDING PILE) AT 4X250 MW BRBCL NABINAGAR TPP FGD, BIHAR. |
| TENDER NO | PSER:SCT:NBN-C2067:20. |

| SL NO | CRITERIA |
|---|---|
| A | |
| 1.0 (a) | BIDDER SHOULD HAVE AVERAGE MINIMUM ANNUAL FINANCIAL TURNOVER OF INR 1713.25 LACS DURING THE LAST 3 (THREE) YEARS, ENDING ON 31-03-2019 OR CORRESPONDING FINANCIAL YEAR FOLLOWED BY THE BIDDER AND HAVING POSITIVE NET WORTH AS ON LATEST AUDITED ACCOUNTS AS SUBMITTED FOR PARA 1(C). |
| (b) | BIDDER MUST HAVE EARNED PROFIT IN ANY ONE OF THE LAST THREE FINANCIAL YEARS ENDING ON 31-03-2019 OR CORRESPONDING FINANCIAL YEAR FOLLOWED BY THE BIDDER. AUDITED BALANCE SHEET AND PROFIT & LOSS ACCOUNT OF THE COMPANY FOR LAST 3 (THREE) FINANCIAL YEARS, ENDING ON 31-03-2019 OR CORRESPONDING FINANCIAL YEAR FOLLOWED BY THE BIDDER NEED TO BE SUBMITTED IN SUPPORT OF ABOVE. |
| (c) | IN CASE AUDITED BALANCE SHEET AND PROFIT AND LOSS ACCOUNT HAS NOT BEEN SUBMITTED FOR ALL THREE YEARS INDICATED ABOVE THEN THE APPLICABLE FINANCIAL AUDITED STATEMENTS SUBMITTED BY THE BIDDERS AGAINST THE REQUISITE THREE YEARS WILL BE AVERAGED FOR THREE YEARS. |
| (d) | IF FINANCIAL STATEMENTS ARE NOT REQUIRED TO BE AUDITED STATUTORILY, THEN INSTEAD OF AUDITED FINANCIAL STATEMENTS, FINANCIAL STATEMENTS ARE REQUIRED TO BE CERTIFIED BY CHARTERED ACCOUNTANT. |
| 2.1 | BIDDER SHOULD HAVE EXECUTED PILING OR CIVIL OR STRUCTURE OR 'CIVIL AND STRUCTURAL WORKS' OR RCC CHIMNEY OR RCC COOLING TOWER OR RCC SILO OR MILL BUNKER OR ANY COMBINATION OF THESE IN THE LAST 7 (SEVEN) YEARS, ENDING ON THE LATEST DATE OF BID SUBMISSION, VALUE OF WHICH SHOULD NOT BE LESS THAN EITHER OF THE FOLLOWING :<br><br>A) 1 (SINGLE) WORK OF VALUE NOT LESS THAN INR 4568.66 LACS.<br>OR<br>B) 2 (TWO) WORKS OF VALUE NOT LESS THAN INR 2855.42 LACS EACH<br>OR<br>C) 3 (THREE) WORKS OF VALUE NOT LESS THAN INR 2284.33 LACS EACH<br><br>RELEVANT DOCUMENT IN SUPPORT OF ABOVE SHALL BE SUBMITTED. |
| 2.2 | BIDDER SHOULD HAVE EXECUTED FOLLOWING JOB IN ANY POWER PLANT / INDUSTRIAL PROJECT DURING LAST 7 (SEVEN) YEARS, ENDING ON THE LATEST DUE DATE OF SUBMISSION OF OFFER.;<br>A. AT LEAST SHELL OF ONE RCC CHIMNEY OF MINIMUM 100 MTR HEIGHT IN A RUNNING/COMPLETED CONTRACT.<br>OR<br>B. AT LEAST SHELL OF ONE NDCT (NATURAL DRAFT COOLING TOWER) OF MIMIMUM 60 MTR HEIGHT IN A RUNNING/COMPLETED CONTRACT.<br><br>RELEVANT DOCUMENT IN SUPPORT OF ABOVE SHALL BE SUBMITTED. |

| | |
|---|---|
| 3.0 | BIDDER SHOULD HAVE VALID PAN.<br><br>RELEVANT DOCUMENT IN SUPPORT OF ABOVE SHALL BE SUBMITTED. |
| 4.0 | CONSORTIUM/JV BIDDING IS NOT ALLOWED. |
| B | GENERAL |
| 1.0 | 'EXECUTED' MEANS BIDDER SHOULD HAVE ACHIEVED THE CRITERIA SPECIFIED ABOVE EVEN IF THE CONTRACT HAS NOT BEEN COMPLETED OR CLOSED. |
| 2.0 | BIDDER SHOULD FURNISH INFORMATION REGARDING PROJECTS IN HAND, CURRENT LITIGATION, ORDERS REGARDING EXCLUSION/ EXPULSION OR BLACK LISTING. |
| 3.0 | AFTER SATISFACTORY FULFILLMENT OF ALL THE ABOVE CRITERIA, OFFER SHALL BE CONSIDERED FOR FURTHER EVALUATION AS PER NIT AND ALL OTHER TERMS OF THE TENDER, SUBJECT TO CUSTOMER'S APPROVAL |
| 4.0 | BIDDER MUST NOT BE UNDER BANKRUPTCY CODE PROCEEDINGS (IBC) BY NCLT OR UNDER LIQUIDATION / BIFR, WHICH WILL RENDER HIM INELIGIBLE FOR PARTICIPATION IN THIS TENDER, AND SHALL SUBMIT UNDERTAKING TO THIS EFFECT. |

**Explanatory Notes for the PQR (unless otherwise specified in the PQR):**

1. Bidder to submit Audited Balance Sheet and Profit and Loss Account for the respective years as indicated along with all annexures.
2. In case audited Financial statements have not been submitted for all the three years as indicated, then the applicable audited statements submitted by the bidders against the requisite three years, will be averaged for three years i.e total divided by three.
3. Net Worth (Only in case of companies) of the bidder should be positive. Net worth shall be calculated based on the latest Audited Accounts as furnished.Net worth = Paid up share capital + Reserves.
4. PROFIT shall be PBT earned during any one year of last three financial years.
5. 'Additional' Criteria in respect of 'Technical' criteria of PQR for Civil, Electrical, CI, unless otherwise specified:

    i) 'Similar' work means
        a. Piling or Civil or Structure or 'Civil and Structural works' or RCC Chimney or RCC Cooling Tower or RCC Silo or Mill Bunker or any combination of these shall be considered similar works for all packages mentioned under 'CIVIL WORKS'
        b. Electrical or C&I or 'Electrical and C&I' shall be considered similar works for all packages mentioned under 'ELECTRICAL AND C&I WORKS'

6. For evaluation of PQR of Civil, Electrical and C&I packages, in case Bidder alone does not meet the 'Additional' pre-qualifying technical criteria, bidder may utilize the experience of its Parent/ Subsidiary Company along with its own experience, subject to following:
    a. The parent company shall have a controlling stake of ≥50% in the subsidiary company (as per Format-1).
    b. The Parent Company/ Subsidiary Company of which experience is being utilized for bidding shall submit Security Deposit(SD) equivalent to 1% of the total contract value.
    c. The parent/ subsidiary company and bidder shall provide an undertaking that they are jointly or severally responsible for successful performance of the contract (as per Format-2).
    d. In case Bidder is submitting bid as a Consortium Partner, option of utilizing experience of parent/subsidiary Company can availed by Prime Bidder only.
    e. Parent Company/ Subsidiary Company of which experience is being used for bidding, cannot participate as a 'Standalone Bidder' or as a 'Consortium bidder'.
7. Completion date for achievement of the technical criteria specified in the Common QR should be in the last 7 years ending on the 'latest date of Bid Submission' of Tender irrespective of date of the start of work.
8. 'EXECUTED' means the bidder should have achieved the criteria specified in the Technical criteria of PQR even if the Contract has not been completed or closed
9. In case the Experience/PO/WO certificate enclosed by bidders do not have separate break up of prices for the E&C portion for Electrical and C&I works (i.e. the certificates enclosed are for composite order for supply and erection of Electrical and C&I and other works if any), then value of Erection & Commissioning for the Electrical and C&I portion shall be considered as 15% of the price for supply & erection of Electrical and C&I.
10. Unless otherwise specified, for the purpose of "Technical Criteria" of PQR , the word 'EXECUTED' means achievement of milestones as defined below -
    - "ACHIEVEMENT OF PHYSICAL QUANTITIES" as per PQRs.
    - "READINESS FOR COAL FILLING" of at least one Bunker, in respect of Mill Bunker Structure.
    - "CHARGING" in respect of Power Transformers/ Bus Ducts/ "HT/LT Switchgears" / "HT/LT Cabling".
    - For C&I works: "SYNCHRONISATION" in case of power project / "WORK EXECUTION of the value as defined in PQR" in case of industry.
    - "BOILER LIGHT UP" in respect of Boiler / CFBC / ESP.
    - "CHARGING OF ATLEAST ONE PASS" in respect of ESP(R&M)
    - "GAS IN" in respect of HRSG.
    - "STEAM BLOWING" in respect of Power Cycle Piping.
    - "HYDRAULIC TEST"/ ANY OTHER EQUIVALENT TEST LIKE "100% RT/UT OF WELDED JOINTS" of the system in respect of Pressure parts/ LP Piping/CW Piping.
    - "FULL LOAD OPERATION OF THE UNIT" in respect of Insulation work.
    - "SYNCHRONISATION" in respect of STG / GTG.
    - "SPINNING" in respect of HTG.
    - "GAS IN" in respect of FGD
11. Boiler means HRSG or WHRB or any other types of Steam Generator

12. Power Cycle piping means Main Steam, Hot Reheat, Cold Reheat, HP Bypass
13. For the purpose of evaluation of the PQR, one MW shall be considered equivalent to 3.5 TPH where ever rating of HRSG/BOILER is mentioned in MW. Similarly, where ever rating of Gas Turbine is mentioned in terms of Frame size, ISO rating of the same in terms of MW shall be considered for evaluation.
14. Value of work is to be updated with indices for "All India Avg. Consumer Price index for industrial workers" and "Monthly Whole Sale Price Index for All Commodities" with base month as per last month of work execution and indexed up to three (3) months prior to the month of latest due date of bid submission as per following formula-

$$P = R + 0.425 \times R \times \frac{(X_N - X_0)}{X_0} + 0.425 \times R \times \frac{(Y_N - Y_0)}{Y_0}$$

Where

P = Updated value of work

R = Value of executed work

$X_N$ = All India Avg. Consumer Price index for industrial workers for three months prior to the month of latest due date of bid submission (e.g. If latest bid submission date is 02-Mar-17, then bid submission month shall be reckoned as March'17 and index for Dec'2016 shall be considered).

$X_0$ = All India Avg. Consumer Price index for industrial workers for last month of work execution

$Y_N$ = Monthly Whole Sale Price Index for All Commodities for three months prior to the month of latest due date of bid submission (e.g. If latest bid submission date is 02-Mar-17, then bid submission month shall be reckoned as March'17 and index for Dec'2016 shall be considered).

$Y_0$ = Monthly Whole Sale Price Index for All Commodities for last month of work execution

15. Bidder must not be under Bankruptcy Code Proceedings (IBC) by NCLT or under Liquidation / BIFR, which will render him ineligible for participation in this tender, and shall submit undertaking to this effect.

ANNEXURE-5

CONDITIONS TO BE COMPLIED WITH FOR CONSORTIUM BIDDING (TECHNICAL TIE UP)

1 Prime Bidder and Consortium Partner or partners are required to enter into a consortium agreement with a validity period of six months initially. In case the consortium is awarded the contract, then the Consortium Agreement between the Prime Bidder and Consortium Partner or partners shall be extended till contractual completion period including extension periods if any applicable. The Prime Bidder and Consortium Partner(s) shall certify to BHEL regarding existence and validity of their consortium agreement on six monthly basis.

2 Standalone' bidder cannot become a 'Prime Bidder' or a 'Consortium bidder' or 'Technical Tie up bidder' in a consortium (or Technical Tie up) bidding. Prime bidder shall neither be a consortium partner to other prime bidder nor take any other consortium partners. However, consortium partner may enter into consortium agreement with other prime bidders. In case of non compliance, consortium bids of such Prime bidders will be rejected.

3 Number of partners for a consortium Bidding (or Technical Tie up) shall be as specified in the PQR.

4 Prime Bidder shall be as specified in the Pre Qualification Requirement, else the bidder who has the major share of work.

5 In order to be qualified for the tender, Prime Bidder and Consortium partner or partners shall satisfy (i) the Technical 'Pre Qualifying Requirements' specified for the respective package, (ii) "Assessment of Capacity of Bidder' as specified in clause 8.0

6 Prime Bidder shall comply with additional 'Technical' criteria of PQR as defined in 'Explanatory Notes for the PQR'

7 Prime Bidder shall comply with all other Pre Qualifying criteria for the Tender unless otherwise specified

8 In case customer approval is required, then Prime Bidder and Consortium Partner or partners shall have to be individually approved by Customer for being considered for the tender.

9 Prime Bidder shall be responsible for the overall execution of the contract

10 In case of award of job, Performance shall be evaluated for Prime Bidder and Consortium Partner or partners for their respective scope of work(s) as per prescribed formats.

11 In case the Consortium partner or partners back out, their SDs shall be encashed by BHEL. In such a case, other consortium partner or partners meeting the PQR have to be engaged by the Prime Bidder, and if not, the respective work will be withdrawn and executed on risk and cost basis of the Prime Bidder. The new consortium partner or partners shall submit fresh SDs as applicable.

12 In case the prime Bidder withdraws, the whole contract shall be considered cancelled and short closed.

13 After successful execution of one work with a consortium partner under direct orders of BHEL, the Prime Bidder shall be eligible for becoming a 'standalone' bidder for works similar to that for which consortium partner was engaged, for subsequent tenders.

14 The consortium partner shall submit SD equivalent to 1% of the total contract value in addition to the SD to be submitted by the prime Bidder for the total contract value. In case there are two consortium partners, then each partner shall submit SD equivalent to 0.5% of the total contract value in addition to the SD to be submitted by the prime Bidder for the total contract value.

15 In case of a Technical Tie up, all the clauses applicable for the Consortium partner shall be applicable for the Technical Tie up partner also.

Annexure - A

Amendment to GCC/SCC

1. Introduction of Clause No 1.15.13 in GCC as below:

Clause No 1.15.13: Additional security deposit (SD) has to be submitted by the successful bidder with value as follows:

"If the final price of successful bidder is lesser by 'more than 20%' of BHEL's estimate - 'Additional Security Deposit' will be required to be submitted by the successful bidder with value as follows:

Additional Security Deposit = 30 % of (A-B) limited to a maximum of 10% of the 'Total Price/Contract Value', where,

A = 80% of BHEL estimate

B = The final offered price of successful bidder through RA (In case of RA)

OR

Sealed paper price bid of successful bidder (in case of paper bid)

This 'Additional Security Deposit' shall have the same validity as that of the 'Security Deposit' and shall be revalidated/released in the manner as spelt out for the 'Security Deposit' as per relevant clause of GCC.

The BHEL's estimated value shall be disclosed to the successful bidder (on their request) at appropriate juncture in case 'Additional Security Deposit' is applicable."

2. Clause no. 1.9.1(ii) of GCC shall be read as below:

The EMD may be accepted only in the following forms:

(a) Cash deposit as permissible under the extant Income Tax Act (before tender opening)

(b) Electronic Fund Transfer credited in BHEL account (before tender opening)

(c) Banker's cheque/ Pay order/ Demand draft, in favour of BHEL (along with offer)

(d) Fixed Deposit Receipt (FDR) issued by Scheduled Banks/ Public Financial Institutions as defined in the Companies Act (FDR should be in the name of the Contractor, a/c BHEL).

In addition to above, the EMD amount in excess of Rs. 2 Lakh may also be accepted in the form of Bank Guarantee from scheduled bank. The Bank Guarantee in such cases shall be valid for at least six months. EMD of successful tenderer will be retained as part of Security Deposit.

Clause no. 1.9.1(iv) & (v) of GCC stands deleted.

3. Clause no. 1.10.1 of GCC shall be read as below:

The total amount of Security Deposit will be 5% of the contract value. EMD of the successful tenderer shall be converted and adjusted towards the required amount of Security Deposit.

4. Clause no. 1.10.2 of GCC shall be read as below:

At least 50% of the required Security Deposit, including the EMD, should be furnished before start of the work. Balance of the Security Deposit can be deposited by deducting 10% of the gross amount progressively

from each of the running bills of the Contractor till the total amount of the required Security Deposit is collected.

The recoveries made from running bills (cash deduction towards balance SD amount) can be released against submission of equivalent Bank Guarantee in acceptable form, but only once, before completion of work, with the approval of competent authorities.

5. Clause no. 1.10.3 of GCC shall be read as below:

The balance amount to make up the required Security Deposit of 5% of the contract value may be accepted in the following forms:

a) Cash (as permissible under the extant Income Tax Act)
b) Local cheques of Scheduled Banks (subject to realization)/ Pay Order/ Demand Draft/ Electronic Fund Transfer in favour of BHEL
c) Bank Guarantee from Scheduled Banks/ Public Financial Institutions as defined in the Companies Act. The Bank Guarantee format should have the approval of BHEL
d) Fixed Deposit Receipt issued by Scheduled Banks/ Public Financial Institutions as defined in the Companies Act (FDR should be in the name of the Contractor, a/c BHEL)
e) Securities available from Indian Post offices such as National Savings Certificates, Kisan Vikas Patras etc. (held in the name of Contractor furnishing the security and duly endorsed/ hypothecated/ pledged, as applicable, in favour of BHEL)

(Note: BHEL will not be liable or responsible in any manner for the collection of interest or renewal of the documents or in any other matter connected therewith)

6. Introduction of Clause No. 1.10.8 in GCC as below:

Clause No 1.10.8: SDBG to be furnished by the vendor before start of work. No payment will be released till SDBG is submitted by the vendor.
If requested by the vendor, cash recovery equivalent to SDBG value to be made from bills submitted by the vendor.
Also recovery of interest calculated @SBI PLR +2% on amount equivalent to SDBG / PBG value to be made for the gap period (difference between date of start of work and date of submission of BG / cash recovery).
In case of delay in extension of SDBG, in case of validity expiry, SDBG shall be invoked. However if the vendor submits a new BG after invocation of the previous BG then, it shall be refunded and recovery for the gap period, i.e. the duration for which BG is not available shall be made as stated above.

7. Clause no. 1.11 of GCC shall be read as below:

Security Deposit shall be refunded/Bank Guarantee(s) released to the Contractor along with the 'Final Bill' after deducting all expenses / other amounts due to BHEL under the contract / other contracts entered into with them by BHEL upon fulfilment of contractual obligations as per terms of the contract.

8. Clause no. 2.8.3, 2.8.4 and 2.8.5 of GCC shall be read as below:

Clause no. 2.8.3: The contractor shall comply with all applicable State and Central Laws, Statutory Rules, Regulations, Notifications, etc. such as Payment of Wages Act, Minimum Wages Act, Workmen Compensation Act, Employer's Liability Act, Industrial Disputes Act, Employers Provident Act, Employees State Insurance Scheme, Contract Labour (Regulation and Abolition) Act, 1970, Payment of Bonus & Gratuity Act, Building and Other Construction Workers (Regulation of Employment and Conditions of Service) Act, 1996, The Building and Other Construction Workers' Welfare Cess Act, 1996 and other Acts, Rules, and Regulations for labour/workers as applicable and as may be enacted by the State Government and Central Govt. during the tenure of the Contract and having force or jurisdiction at Site. The Contractor shall also comply with provisions of and give all such

notices to the local Governing Body, Police and other relevant Authorities as may be required by the Law.

Clause no. 2.8.4: The Contractor shall obtain independent License under the Contract Labour (Regulations and Abolition) Act, 1970 for engaging contract labour as required from the concerned Authorities based on the certificate (Form- V) issued by the Principal Employer/Customer.

Clause no. 2.8.5: The contractor shall pay and bear all taxes, fees, license charges, Cess, duties, deposits, tolls, royalties, commission or other charges which may be leviable on account of his operations in executing the contract.

9. Clause 2.12 of GCC (Overrun Compensation)

2.12 OVERRUN COMPENSATION (ORC)

2.12.1 ORC during original contract period: No ORC shall be applicable during the original contract period.

2.12.2 ORC during extended period for the reasons solely attributable to contractor: No ORC shall be applicable during the extended period granted for the reasons solely attributable to contractor and work executed during this period shall be paid as per original contract rates.

2.12.3 ORC during extended period for the reasons not attributable to contractor: ORC shall be payable as per following procedure:

2.12.3.1 For initial period of twelve months of extended period, ORC rate applicable over executed value shall be 5%. For every subsequent period of twelve months, ORC rate shall be further increased by 5% over the previous rate. For example, ORC rates applicable for initial period of 12 months and subsequent period of 12 months are given below.

| Sl. No. | Extended Period for the reasons attributable to BHEL | ORC rate applicable over executed value |
|---|---|---|
| 1 | First 12 months | 5% |
| 2 | 13th-24th month and so on | 10.25%<br>{[(1.05 x 1.05)-1] x 100} |

This process of increasing ORC rate for each subsequent period of 12 months shall continue till applicability of ORC.

2.12.3.2 On completion of original contract period as well as on completion of each subsequent period of twelve months i.e. at the time of change in applicable ORC rate, Delay Analysis shall be carried out and percentage shortfall attributable to both BHEL & Contractor shall be calculated.

2.12.3.3 For the purpose of calculation of ORC, executed value of work in the month shall be divided in Part-1 and Part-2 in proportion of percentage shortfall attributable to BHEL and contractor respectively, based on the last delay analysis as worked out in 2.12.3.2.
ORC shall be payable only on Part-1 and no ORC shall be payable on Part-2.

Value of Part-1 shall be further limited to the value of actual inputs provided by BHEL i.e. "Plan - Shortfall attributable to BHEL" for the month, as per Form-14 for calculation of ORC.

2.12.3.4 Payment of ORC amount shall be further regulated as follows:

(i) 50% of the ORC is allocated for deployment of matching resources (with weightages) agreed as per the joint programme drawn vide 2.11.4. ORC Payment against resources shall be calculated in proportion to percentage of resources actually deployed w.r.t. planned resources, as per Form-14.

(ii) 50% of ORC is allocated for achieving of planned progress agreed as per the joint programme drawn vide 2.11.4. ORC Payment shall be reduced in proportion to percentage shortfall attributable to contractor w.r.t. "Plan - Shortfall attributable to BHEL" for the month, as per Form-14.

2.12.3.5 The maximum amount of ORC payable for the month shall be limited to Rs. 5,00,000/-.

2.12.3.6 In case, there is no shortfall attributable to contractor for the month and also contractor has deployed the resources as agreed in Form-14 but ORC amount payable for the month worked out as per procedure mentioned in clause 2.12.3.3, 2.12.3.4 and 2.12.3.5, is less than Rs.1,00,000/-, then ORC amount payable for the month shall be Rs.1,00,000/- otherwise ORC amount payable for the month shall remain same.

2.12.3.7 In case execution is on HOLD (Other than Force Majeure), ORC shall be payable as per following:

i). Contractor has not been permitted by BHEL to de-mobilize
   a) ORC amount of Rs. 1,00,000/- per month shall be applicable during the period of HOLD provided resources as planned are deployed (not demobilised) during the period of hold.
   b) Subsequent to lifting of HOLD, Period of HOLD shall not be excluded in calculation of period for deciding applicable ORC rate as per clause 2.12.3.1.

ii). Contractor has been permitted to demobilize and to remobilize after lifting of HOLD
   a) No ORC shall be payable to contractor for the period of HOLD.
   b) Subsequent to lifting of HOLD, Period of HOLD shall not be excluded in calculation of period for deciding applicable ORC rate as per clause 2.12.3.1.

2.12.3.8 In case Force Majeure is invoked:
   (i) No ORC shall be applicable during the period of Force Majeure.
   (ii) Subsequent to revocation of Force Majeure, period of Force Majeure shall be excluded in calculation of period for deciding applicable ORC rate as per clause 2.12.3.1.

2.12.4 Applicability of ORC: ORC shall not be applicable for following activities.
   (i) Area cleaning, removal of temporary structures and return of scrap.
   (ii) Punch list points / pending points liquidation pending due to reasons attributable to contractor
   (iii) Submission of "As built Drawing"
   (iv) Material Reconciliation
   (v) Completion of Contract Closure formalities like HR Clearance/ No dues from various dept./ Statutory Authorities etc.

2.12.5 Total Over Run Compensation shall be limited to 10% of the cumulatively executed contract value till the month (excluding Taxes and Duties if payable extra). For this purpose, executed contract value excludes PVC, ORC and Extra/Supplementary Works.

10. Clause 2.14 of GCC (Quantity Variation)

a) Existing Clause 2.14.1 of GCC stands revised as follows:

"The quantities given in the contract are tentative and may change to any extent (both in plus side and minus side). The quoted rates for individual items shall remain firm irrespective of any variations in the individual quantities No compensation becomes payable in case the variation of the final executed contract value is within the limit of Minus (-) 15% of awarded contract value"

b) Existing Clause 2.14.2 ii). of GCC stands revised as follows:

"In case the finally executed contract value increases above the awarded Contract Value due to quantity variation, there will be no upward revision in the rates for the individual items and also contractor is not eligible for any compensation."

11. Clause 2.17 of GCC (Price Variation Compensation) stands revised as follows:

## 2.17 PRICE VARIATION COMPENSATION

2.17.1 In order to take care of variation in cost of execution of work on either side, due to variation in the index of LABOUR, HIGH SPEED DIESEL OIL, WELDING ROD, CEMENT, STEEL, MATERIALS,
Price Variation Formula as described herein shall be applicable (only for works executed during extended period, if any, subject to other conditions as described in this section)

2.17.2 85% component of Contract Value shall be considered for PVC calculations and remaining 15% shall be treated as fixed component. The basis for calculation of price variation in each category, their component, Base Index shall be as under:

| SL NO | CATEGORY | BASE INDEX | PERCENTAGECOMPONENT('K') | | | | |
|---|---|---|---|---|---|---|---|
| | | | CIVIL PACKAGES (See Note A/B/C) | | | MECHANICAL PACKAGES | Electrical, C&I Material Management/Handling and other labour oriented packages |
| | | | A | B | C | | |
| i) | LABOUR (ALL CATEGORIES) | 'MONTHLY ALL-INDIA AVERAGE CONSUMER PRICE INDEX NUMBERS FOR INDUSTRIAL WORKERS' published by Labour Bureau, Ministry of Labour and Employment, Government of India. (Website: labourbureau.nic.in) | 40 | 25 | 30 | 65 | 80 |
| ii) | HIGH SPEED DIESEL OIL | Name of Commodity: HSD<br>Commodity Code: 1202000005 (See Note E) | 5 | 3 | 5 | 5 | 5 |
| iii) | WELDING ROD | Name of Commodity: MANUFACTURE OF BASIC METALS<br>Commodity Code: 1314000000 (See Note E) | | | | 15 | |
| iv) | CEMENT | Name of Commodity: ORDINARY PORTLAND CEMENT<br>Commodity Code: 1313050003 (See Note E) | | 20 | 30 | | |
| v) | STEEL (Structural and Reinforcement Steel) | Name of Commodity: MILD STEEL: LONG PRODUCTS<br>Commodity Code: 1314040000 (See Note E) | | 25 | | | |
| vi) | All OTHER MATERIALS (Other than Cement & Steel) | Name of Commodity: ALL COMMODITIES<br>Commodity Code:1000000000 (See Note E) | 40 | 12 | 20 | | |

Note: A) Cement & Steel:Free Issue (BHEL Scope)
B) Cement & Steel :In Contractor Scope
C) Cement in Contractor Scope, and Steel is Free Issue (BHEL Scope)
D) For Composite packages (i.e. Civii+Mechanicai+Eiectrical and/or CI or Civil+Mechanical or Mechanicai+Eiectrical and/or CI}, the COMPONENT ('K') for various categories shall be as per respective packages as above.

E) As per the 'MONTHLY WHOLE SALE PRICE INDEX' for the respective Commodity and Type, published by Office of Economic Adviser, Ministry of Commerce and Industry, Government of India. (Website: http://eaindustry.nic.in/home.asp). Revisions in the index or commodity will be re adjusted accordingly.

2.17.3 #

2.17.4 Payment/recovery due to variation in index shall be determined on the basis of the following notional formula in respect of the identified COMPONENT ('K') viz LABOUR, HIGH SPEED DIESEL OIL, WELDING ROD, CEMENT, STEEL, MATERIALS.

$$P = K \times R \times \frac{(X_N - Xo)}{Xo}$$

Where

P =Amount to be paid/recovered due to variation in the Index for Labour, High Speed Diesel Oil, Welding Rod, Cement, Steel and Materials

K = Percentage COMPONENT ('K') applicable for Labour, High Speed Diesel Oil, Welding Rod, Cement, Steel and Materials

R=Value of work done for the billing month (Excluding Taxes and Duties if payable extra)

$X_N$ = Revised Index for Labour, High Speed Diesel Oil, Welding Rod, Cement, Steel and Materials for the billing month under consideration

Xo = Index for Labour, High Speed Diesel Oil, Welding Rod, Cement, Steel and Materials as on the Base date

2.17.5 Base date shall be the calendar month of the schedule completion date (i.e. Actual start date+ Scheduled Contractual completion period as per Letter of Intent/award and/or work order).

2.17.6 PVC shall not be payable for the ORC amount, Supplementary/Additional Items, Extra works.
However, PVC will be payable for items executed under quantity variation of BOQ items under originally awarded contract.

2.17.7 The contractor shall furnish necessary monthly bulletins in support of the requisite indices from the relevant websites along with his Bills.

2.17.8 The contractor will be required to raise the bills for price variation payments on a monthly basis along with the running bills irrespective of the fact whether any increase/decrease in the index for relevant categories has taken place or not. In case there is delay in publication of bulletins (final figure), the provisional values as published can be considered for payments and arrears shall be paid/recovered on getting the final values.

2.17.9 PVC shall be applicable only, during the extended period of contract (if any) after the scheduled completion period and for the portion of work delayed / backlog for the reasons not attributable to the Contractor.

However total quantum of Price Variation amount payable/recoverable shall be regulated as follows:

i. For the portion of shortfall / backlog not attributable to contractor, PVC shall be worked out on the basis of indices applicable for the respective month in which work is done. Base index shall be applicable as defined in clause 2.17.5

ii. In case of Force majeure, PVC shall be regulated as per (a) or (b) below:

a) Force majeure is invoked before "base date"/ “revised base date" (as explained below) OR immediately after "base date"/ “revised base date" in continuation (i.e. during the period when PVC is not applicable):

1. Base date shall be revised: Revised base date =Previous base date+ duration of Force majeure. No PVC will be applicable for the work done till revised base date.

2. PVC will be applicable for the work done after "base date"/ “revised base date" as the case may be (during extended period when delay is not attributable to contractor). PVC shall be worked out on the basis of

indices applicable for the respective month in which work is done with base index as on "base date"/"revised base date" as the case may be.

b) Force majeure is invoked after "base date"/ "revised base date" as the case may be (during extended period when delay is not attributable to contractor) -

1. PVC shall be applicable for the work done after revocation of force majeure.
2. PVC for the work done after revocation of force majeure shall be worked out on the basis of indices applicable for the respective month in which work is done excluding the effect of change in indices during total period of Force majeure(s) invoked after "base date"/ "revised base date" as the case may be. Base index shall be taken as on "base date"/ "revised base date" as the case may be.

iii. The total amount of PVC shall not exceed 15% of the cumulatively executed contract value. Executed contract value for this purpose is exclusive of PVC, ORC, Supplementary/Additional Items and Extra works except extra items due to quantity variation.

12. Clause 2.2 of GCC (Law governing the contract and court jurisdiction) stands revised as follows:

"The contract shall be governed by the Law for the time being in force in the Republic of India. Subject to Clause 2.21.1 or 2.21.2 of this Contract, the Civil Court having original Civil Jurisdiction at Delhi for PSNR, at Kolkata for PSER, at Nagpur for PSWR and at Chennai for PSSR, shall alone have exclusive jurisdiction in regard to all matters in respect of the Contract."

13. Existing Clause 2.21 "ARBITRATION" of GCC has been amended as follows:

2.21 ARBITRATION & CONCILIATION

2.21.1 ARBITRATION:

2.21.1.1 Except as provided elsewhere in this Contract, in case Parties are unable to reach amicable settlement (whether by Conciliation to be conducted as provided in Clause 2.21.2 herein below or otherwise) in respect of any dispute or difference; arising out of the formation, breach, termination, validity or execution of the Contract; or, the respective rights and liabilities of the Parties; or, in relation to interpretation of any provision of the Contract; or. in any manner touching upon the Contract (hereinafter referred to as the 'Dispute'), then, either Party may, commence arbitration in respect of such Dispute by issuance of a notice in terms of section 21 of the Arbitration & Conciliation Act, 1996 (hereinafter referred to as the 'Notice'). The Notice shall contain the particulars of all claims to be referred to arbitration in sufficient detail and shall also indicate the monetary amount of such claim. The arbitration shall be conducted by a sole arbitrator to be appointed by the Head of the BHEL Power Sector Region issuing the Contract within 60 days of receipt of the complete Notice. The language of arbitration shall be English.

The Arbitrator shall pass a reasoned award.

Subject as aforesaid, the provisions of Arbitration and Conciliation Act 1996 (India) or statutory modifications or re-enactments thereof and the rules made thereunder as in force from time to time shall apply to the arbitration proceedings under this clause. The seat of arbitration shall be Kolkata (the place from where the contract is Issued). The Contract shall be governed by and be construed as per provisions of the laws of India. Subject to this provision 2.21.1.1 regarding ARBITRATION, the principal civil court exercising ordinary civil jurisdiction over the area where the seat of arbitration is located shall have exclusive jurisdiction over any DISPUTE to the exclusion of any other court.

2.21.1.2 In case of Contract with Public Sector Enterprise (PSE) or a Government Department, the following shall be applicable:

In the event of any dispute or difference relating to the interpretation and application of the provisions of commercial contract(s) between Central Public Sector Enterprises (CPSEs)/ Port Trusts inter se and also between CPSEs and Government Departments/Organizations (excluding disputes concerning Railways, Income Tax, Customs & Excise Departments), such dispute or difference shall be taken up by either party for resolution through AMRCD (Administrative Mechanism for Resolution of CPSEs Disputes) as mentioned in DPE OM No. 4(1)/2013-DPE(GM)/FTS-1835 dated 22-05-2018 as amended from time to time.

2.21.1.3 The cost of arbitration shall initially be borne equally by the Parties subject to the final allocation thereof as per the award/order passed by the Arbitrator.

2.21.1.4 Notwithstanding the existence of any dispute or differences and/or reference for the arbitration, the Contractor shall proceed with and continue without hindrance the performance of its obligations under this Contract with due diligence and expedition in a professional manner unless the dispute inter-alia relates to cancellation, termination or short-closure of the Contract by BHEL.

2.21.2 CONCILIATION:

If at any time (whether before, during or after the arbitral or judicial proceedings), any Disputes (which term shall mean and include any dispute, difference, question or disagreement arising in connection with construction, meaning, operation, effect, interpretation or breach of the agreement, contract), which the Parties are unable to settle mutually, arise inter-se the Parties, the same may, be referred by either party to Conciliation to be conducted through Independent Experts Committee (IEC) to be appointed by competent authority of BHEL from the BHEL Panel of Conciliators.

Notes:

1. No serving or a retired employee of BHEL/Administrative Ministry of BHEL shall be included in the BHEL Panel of Conciliators.

2. Any other person(s) can be appointed as Conciliator(s) who is/are mutually agreeable to both the parties from outside the BHEL Panel of Conciliators.

The proceedings of Conciliation shall broadly be governed by Part-III of the Arbitration and Conciliation Act 1996 or any statutory modification thereof and as provided in Procedure 2.3 to this GCC. The Procedure 2.3 together with its Formats will be treated as if the same is part and parcel hereof and shall be as effectual as if set out herein in this GCC.

The Contractor hereby agrees that BHEL may make any amendments or modifications to the provisions stipulated in the Procedure 2.3 to this GCC from time to time and confirms that it shall be bound by such amended or modified provisions of the Procedure 2.3 with effect from the date as intimated by BHEL to it.

2.21.3 No Interest payable to Contractor

Notwithstanding anything to the contrary contained in any other document comprising in the Contract, no interest shall be payable by BHEL to Contractor on any moneys or balances including but not limited to the Security Deposit, EMD, Retention Money, RA Bills or the Final Bill, or any amount withheld and/or appropriated by BHEL etc., which becomes or as the case may be, is adjudged to be due from BHEL to Contractor whether under the Contract or otherwise.

14. Clause no. 2.7.2 and 2.7.3 of Volume-IB-GCC shall be revised as follows:

2.7.2.1 To terminate the contract or withdraw portion of work and get it done through other agency, at the risk and cost of the contractor after due notice <u>of a period of 14 days' by BHEL</u> in any of the following cases:

i). Contractor's poor progress of the work vis-à-vis execution timeline as stipulated in the Contract, backlog attributable to contractor including unexecuted portion of work does not appear to be executable within balance available period considering its performance of execution.
ii). Withdrawal from or abandonment of the work by contractor before completion of the work as per contract.
iii). Non-completion of work by the Contractor within scheduled completion period as per Contract or as extended from time to time, for the reasons attributable to the contractor.
iv). Termination of Contract on account of any other reason (s) attributable to Contractor.
v). Assignment, transfer, subletting of Contract without BHEL's written permission.
vi). Non-compliance to any contractual condition or any other default attributable to Contractor.

Risk & Cost Amount against Balance Work:

Risk & Cost amount against balance work shall be calculated as follows: Risk & Cost Amount= [(A-B) + (A x H/100)]
Where,
A= Value of Balance scope of Work (*) as per rates of new contract
B= Value of Balance scope of Work (*) as per rates of old contract being paid to the contractor at the time of termination of contract i.e. inclusive of PVC & ORC, if any.
H = Overhead Factor to be taken as 5

In case (A-B) is less than 0 (zero), value of (A-B) shall be taken as 0 (zero).

* Balance scope of work (in case of termination of contract):
Difference of Contract Quantities and Executed Quantities as on the date of issue of Letter for 'Termination of Contract', shall be taken as balance scope of Work for calculating risk & cost amount. Contract quantities are the quantities as per original contract. If, Contract has been amended, quantities as per amended Contract shall be considered as Contract Quantities.
Items for which total quantities to be executed have exceeded the Contract Quantities based on drawings issued to contractor from time to time till issue of Termination letter, then for these items total Quantities as per issued drawings would be deemed to be contract quantities.
Substitute/ extra items whose rates have already been approved would form part of contract quantities for this purpose. Substitute/ extra items which have been executed but rates have not been approved, would also form part of contract quantities for this purpose and rates of such items shall be determined in line with contractual provisions.
However, increase in quantities on account of additional scope in new tender shall not be considered for this purpose.

NOTE: Incase portion of work is being withdrawn at risk & cost of contractor instead of termination of contract, contract quantities pertaining to portion of work withdrawn shall be considered as 'Balance scope of work' for calculating Risk & Cost amount.

LD against delay in executed work in case of Termination of Contract:

LD against delay in executed work shall be calculated in line with LD clause no. 2.7.9 of GCC, for the delay attributable to contractor. For limiting the maximum value of LD, contract value shall be taken as Executed Value of work till termination of contract.

Method for calculation of "LD against delay in executed work in case of termination of contract" is given below.

i). Let the time period from scheduled date of start of work till termination of contract excluding the period of Hold (if any) not attributable to contractor = T1
ii) Let the value of executed work till the time of termination of contract= X
iii) Let the Total Executable Value of work for which inputs/fronts were made available to contractor and were planned for execution till termination of contract = Y
iv) Delay in executed work attributable to contractor i.e. T2=[1-(X/Y)] x T1
v) LD shall be calculated in line with LD clause (clause 2.7.9) of the Contract for the delay attributable to

contractor taking "X" as Contract Value and "T2" as period of delay attributable to contractor.

2.7.2.2 In case Contractor fails to deploy the resources as per requirement, BHEL can deploy own/hired/otherwise arranged resources at the risk and cost of the contractor and recover the expenses incurred from the dues payable to contractor. Recoveries shall be actual expenses incurred plus 5% overheads or as defined in TCC.

2.7.3 Recoveries arising out of Risk & Cost and LD or any other recoveries due from Contractor

Following sequence shall be applicable for recoveries from contractor:

a) Dues available in the form of Bills payable to contractor, SD, BGs against the same contract.
b) Demand notice for deposit of balance recovery amount shall be sent to contractor, if funds are insufficient to effect complete recovery against dues indicated in (a) above.
c) If contractor fails to deposit the balance amount to be recovered within the period as prescribed in demand notice, following action shall be taken for balance recovery:
   i) Dues payable to contractor against other contracts in the same Region shall be considered for recovery.
   ii) If recovery cannot be made out of dues payable to the contractor as above, balance amount to be recovered, shall be informed to other Regions/Units for making recovery from the Unpaid Bills/Running Bills/SD/BGs/Final Bills of contractor.
   iii) In-case recoveries are not possible with any of the above available options, Legal action shall be initiated for recovery against contractor.

15. Clause 2.24 of GCC (Performance Guarantee for Workmanship)

Term "Special Conditions of Contract" appearing in 3rdline of the current clause 2.24.1,is replaced by "Technical Conditions of Contract"

16. Clause 4.2.1.7 of Special Condition of Contract (SCC)

At the end of Clause 4.2.1.7 (i.e. after the line "Decision of BHEL shall be final and binding on the contractor") following para is to be added

"It is not obligatory on the part of BHEL to provide any tools and tackles or other materials other than those specifically agreed to do so by BHEL. However, depending upon the availability, BHEL /BHEL's Customer handling equipment and other plants may be made available to the contractor on payment of hire charges as fixed, subject to the conditions laid down by BHEL/Customer from time to time. Unless paid in advance, such hire charges, if applicable, shall be recovered from contractor's bill / security deposit or any other due payment in one installment."

17. Clause 9.61 of SCC (NON-COMPLIANCE)

Under NON-COMPLIANCE, at the end of Clause 9.61 (i.e. after the line "Also the amount will be spent for purchasing the safety appliances and supporting the safety activity at site.") following para is to be added:

"In case of any financial deduction made by Customer for lapses of safety other than what is provided above or elsewhere in the contract, the same shall be charged on back-to-back basis on the defaulting contractor without prejudice to any other right spelt anywhere in the tender / contract"

18. Clause 2.15 of GCC (EXTRA WORKS)

Existing Clause 2.15.5 of GCC stands revised as follows:

"After eligibility of extra works is established and finally accepted by BHEL engineer/designer, payment will be released on competent authority's approval at the following rate.

MAN-HOUR RATE FOR ELIGIBLE EXTRA WORKS: Single composite average labour man-hour rate, including overtime if any, supervision, use of tools and tackles and other site expenses and incidentals, consumables for carrying out any major rework/ repairs/ rectification/ modification/ fabrication as certified by site as may arise during the course of erection, testing, commissioning or extra works arising out of transit, storage and erection damages, payment, if found due will be at Rs 108/- per man hour."

19. Clause 9.1 & 9.2 to 9.62 of SCC (HSE & OHSAS Obligations)

| Cl. no. 9.0 | No change |
| Cl. no. 9.1 | HSE (Health, safety & Environment):<br>Contractor will comply with HSE (Health, safety & Environment) requirements of BHEL as per "HSE Plan for Site Operations by Sub-contractors" (Document no. HSEP:14, Rev.00) attached with this tender. |
| Cl. no. 9.2 to 9.62 | Deleted |

Annexure -B

## Terms & Conditions of Reverse Auction

Against this enquiry for the subject item/ system with detailed scope of supply/service as per tender specifications, BHEL *shall be resorting* to "REVERSE AUCTION PROCEDURE" i.e., ON LINE BIDDING (THROUGH A SERVICE PROVIDER). The philosophy followed for reverse auction shall be English Reverse (No ties).

1. For the proposed reverse auction, technically and commercially acceptable bidders only shall be eligible to participate.
2. *Price bids of all techno-commercially qualified bidders shall be opened and same shall be considered as initial bids of bidders in RA.*
3. BHEL will engage the services of a service provider who will provide all necessary training and assistance before commencement of on line bidding on internet.
4. In case of reverse auction, BHEL will inform the bidders the details of Service Provider to enable them to contact & get trained for participation in the reverse auction.
5. Business rules like event date, time, bid decrement, extension etc. also will be communicated through service provider for compliance.
6. Bidders have to fax /*e-mail* the Compliance form (annexure III) before start of Reverse auction. Without this, the bidder will not be eligible to participate in the event.
7. In line with the NIT terms, BHEL will provide the calculation sheet (e.g., EXCEL sheet) which will help to arrive at "Total Cost to BHEL" which is inclusive of all cost elements in line with terms & conditions of the tender for each of the bidder to enable them to fill-in the price and keep it ready for keying in during the Auction.
8. Reverse auction will be conducted on scheduled date & time.
9. At the end of Reverse Auction event, the lowest bidder value will be known on auction portal.
10. The lowest bidder has to fax/e-mail the duly signed and filled-in prescribed format for price breakup including that of line items, if required, (Annexure IV) as provided on case-to-case basis to Service provider within two working days of Auction without fail.
11. *Bidders shall be required to read the "Terms and Conditions" section of the auctions site of Service provider, using the Login IDs and passwords given to them by the service provider before reverse auction event. Bidders should acquaint themselves of the "Business Rules of Reverse Auction", which will be communicated before the Reverse Auction.*
12. If the Bidder or any of his representatives are found to be involved in Price manipulation/ cartel formation of any kind, directly or indirectly by communicating with other bidders, action *as per extant BHEL guidelines*, shall be initiated by BHEL and the results of the RA scrapped/ aborted.
13. The Bidder shall not divulge either his Bids or any other exclusive details of BHEL to any other party.
14. *In case of more than four techno commercially qualified bidders, H1 bidder (whose quote is highest in sealed envelope price bid) shall not be allowed to participate in RA. However, there will be no H1 removal in case H1 happens to be MSE or qualifying under PPP-MII, Order 2017 irrespective of the number of bidders qualifying techno-commercially. In case of multiple H1 bidders, all H1 bidders (excluding MSEs and bidders qualifying under PPP-MII, Order 2017) shall be removed provided minimum three bidders remain in fray, else no H1 removal.*

## Specific Clause w.r.t. BOCW Act & Cess Act

1. It shall be the sole responsibility of the contractor as employer to ensure compliance of all the statutory obligations under the Building and other Construction Workers' (Regulation of Employment and Conditions of Service) Act, 1996 and the Building and other Construction Workers' Welfare Cess Act, 1996 and the rules made thereunder.
2. It shall be sole responsibility of the contractor engaging Building Workers in connection with the building or other construction works in the capacity of employer to apply and obtain registration certificate specifying the scope of work under the relevant provisions of the Building and Other Construction Workers' (Regulation of Employment and Conditions of Service) Act, 1996 from the appropriate Authorities.
3. It shall be responsibility of the contractor to furnish a copy of such Registration Certificate within a period of one month from the date of commencement of Work.
4. It is responsibility of the contractor to register under the Building and other Construction Workers' Welfare Cess Act, 1996 and deposit the required Cess for the purposes of the Building and other Construction Workers' (Regulation of Employment and Conditions of Service) Act, 1996 at such rate as the Central Government may , by notification in the Official Gazette, from time to time specify. However, before registering and deposit of Cess under the Building and other Construction Workers' Welfare Cess Act, 1996, the contractor will seek written prior approval from the Construction Manager.
5. In case where the contractor has been accorded written approval by the Construction Manager and the contractor is required to furnish information in Form I and deposit the Cess under the Building and other Construction Workers' Welfare Cess Act, 1996, fails to do so, BHEL reserves right to impose penalty at the rate of 30% of Cess Amount.
6. It shall be sole responsibility of the contractor as employer to get registered every Building Worker, who is between the age of 18 to 60 years of age and who has been engaged in any building or other construction work for not less than ninety days during the preceding twelve months as Beneficiary under the Building and other Construction Workers' (Regulation of Employment and Conditions of Service) Act, 1996.
7. It shall be sole responsibility of the contractor as employer to maintain all the registers, records, notices and submit returns under the Building and other Construction Workers' (Regulation of Employment and Conditions of Service) Act, 1996 and the Building and other Construction Workers' Welfare Cess Act, 1996 and the rules made thereunder.
8. It shall be sole responsibility of the contractor as employer to provide notice of poisoning or occupation notifiable diseases, to report of accident and dangerous occurrences to the concerned authorities under the Building and other Construction Workers' (Regulation of Employment and Conditions of Service) Act, 1996 and the rules made thereunder and to make payment of all statutory payments & compensation under the Employees' Compensation Act, 1923.
9. It shall be responsibility of the Contractor to furnish BHEL on monthly basis, Receipts/ Challans towards Deposit of the Cess under the Building and other Construction Workers' Welfare Cess Act, 1996 and the rules made thereunder along with following statistics :
    (i) Number of Building Workers employed during preceding one month.
    (ii) Number of Building workers registered as Beneficiary during preceding one month.
    (iii) Disbursement of Wages made to the Building Workers for preceding wage month.
    (iv) Remittance of Contribution of Beneficiaries made during the preceding month
10. BHEL shall reimburse the contractor the Cess amount deposited for the purposes of the Building and other Construction Workers' (Regulation of Employment and Conditions of Service) Act, 1996 under the Building and other Construction Workers' Welfare Cess Act, 1996 and the rules made thereunder. However, BHEL shall not reimburse the Fee paid towards the registration of establishment, fees paid towards registration of Beneficiaries and Contribution of Beneficiaries remitted.

11. It shall be responsibility of the Building Worker engaged by the Contractor and registered as a beneficiary under the Building and other Construction Workers' (Regulation of Employment and Conditions of Service) Act, 1996 to contribute to the Fund at such rate per mensem as may be specified by the State government by notification in the Official Gazette. Where such beneficiary authorizes the contractor being his employer to deduct his contribution from his monthly wages and to remit the same, the contractor shall remit such contribution to the Building and other construction Workers' Welfare Board in such manner as may be directed by the Board , within the fifteen days from such deduction.

12. If any point of time during the contract period, non-compliance of the provisions of the Building and other Construction Workers' (Regulation of Employment and Conditions of Service) Act, 1996 and the Building and other Construction Workers' Welfare Cess Act, 1996 and the rules made thereunder is observed, BHEL reserves the right to withhold a reasonable amount from the payables to discharge any obligations on behalf of Contractors. The reasonable amount shall be decided by the Construction Manager in consultation with Resident Accounts Officer & Head HR and shall be final.

13. The contractor shall declare to undertake any liability or claim arising out of employment of building workers and shall indemnify BHEL from all consequences / liabilities / penalties in case of non compliance of the provisions of the Building and other Construction Workers' (Regulation of Employment and Conditions of Service) Act, 1996 and the Building and other Construction Workers' Welfare Cess Act, 1996 and the rules made thereunder.

# INTEGRITY PACT

**Between**

Bharat Heavy Electricals Ltd. (BHEL), a company registered under the Companies Act 1956 and having its registered office at "BHEL House", Siri Fort, New Delhi - 110049 (India) hereinafter referred to as "The Principal", which expression unless repugnant to the context or meaning hereof shall include its successors or assigns of the ONE PART

**and**

_____, (description of the party along with address), hereinafter referred to as "The Bidder/ Contractor" which expression unless repugnant to the context or meaning hereof shall include its successors or assigns of the OTHER PART

## Preamble

The Principal intends to award, under laid-down organizational procedures, contract/s for _____ _____ _____ . The Principal values full compliance with all relevant laws of the land, rules and regulations, and the principles of economic use of resources, and of fairness and transparency in its relations with its Bidder(s)/ Contractor(s).

In order to achieve these goals, the Principal will appoint Independent External Monitor(s), who will monitor the tender process and the execution of the contract for compliance with the principles mentioned above.

## Section 1- Commitments of the Principal

1.1 The Principal commits itself to take all measures necessary to prevent corruption and to observe the following principles:-

1.1.1 No employee of the Principal, personally or through family members, will in connection with the tender for, or the execution of a contract, demand, take a promise for or accept, for self or third person, any material or immaterial benefit which the person is not legally entitled to.

1.1.2 The Principal will, during the tender process treat all Bidder(s) with equity and reason. The Principal will in particular, before and during the tender process, provide to all Bidder(s) the same information and will not provide to any Bidder(s) confidential/ additional information through which the Bidder(s) could obtain an advantage in relation to the tender process or the contract execution.

1.1.3 The Principal will exclude from the process all known prejudiced persons.

1.2 If the Principal obtains information on the conduct of any of its employees which is a penal offence under the Indian Penal Code 1860 and Prevention of Corruption Act 1988 or any other statutory penal enactment, or if there be a substantive suspicion in this regard, the Principal will inform its Vigilance Office and in addition can initiate disciplinary actions:

## Section 2 - Commitments of the Bidder(s)/ Contractor(s)

2.1 The Bidder(s)/ Contractor(s) commit himself to take all measures necessary to prevent corruption. He commits himself to observe the following principles during his participation in the tender process and during the contract execution.

2.1.1 The Bidder(s)/ Contractor(s) will not, directly or through any other person or firm, offer, promise or give to the Principal or to any of the Principal's employees involved in the tender process or the execution of the contract or to any third person any material, immaterial or any other benefit which he/ she is not legally entitled to, in order to obtain in exchange any advantage of any kind whatsoever during the tender process or during the execution of the contract.

2.1.2 The Bidder(s)/ Contractor(s) will not enter with other Bidder(s) into any illegal or undisclosed agreement or understanding, whether formal or informal. This applies in particular to prices, specifications, certifications, subsidiary contracts, submission or non-submission of bids or any other actions to restrict competitiveness or to introduce cartelization in the bidding process.

2.1.3 The Bidder(s)/ Contractor(s) will not commit any penal offence under the relevant Indian Penal Code (IPC) and Prevention of Corruption Act; further the Bidder(s)/ Contractor(s) will not use improperly, for purposes of competition or personal gain, or pass on to others, any information or document provided by the Principal as part of the business relationship, regarding plans, technical proposals and business details, including information contained or transmitted electronically.

2.1.4 Foreign Bidder(s)/ Contractor(s) shall disclose the name and address of agents and representatives in India and Indian Bidder(s)/ Contractor(s) to disclose their foreign principals or associates. The Bidder(s)/ Contractor(s) will, when presenting his bid, disclose any and all payments he has made, and is committed to or intends to make to agents, brokers or any other intermediaries in connection with the award of the contract.

2.2 The Bidder(s)/ Contractor(s) will not instigate third persons to commit offences outlined above or be an accessory to such offences.

2.3 The Bidder(s)/ Contractor(s) shall not approach the Courts while representing the matters to IEMs and will await their decision in the matter.

## Section 3 - Disqualification from tender process and exclusion from future contracts

If the Bidder(s)/ Contractor(s), before award or during execution has committed a transgression through a violation of Section 2 above, or acts in any other manner such as to put his reliability or credibility in question, the Principal is entitled to disqualify the Bidder(s)/ Contractor(s) from the tender process or take action as per the separate "Guidelines on Banning of Business dealings with Suppliers/ Contractors", framed by the Principal.

## Section 4 - Compensation for Damages

4.1 If the Principal has disqualified the Bidder from the tender process prior to the award according to Section 3, the Principal is entitled to demand and recover the damages equivalent Earnest Money Deposit/ Bid Security.

4.2 If the Principal has terminated the contract according to Section 3, or if the Principal is entitled to terminate the contract according to section 3, the Principal shall be entitled to

demand and recover from the Contractor liquidated damages equivalent to 5% of the contract value or the amount equivalent to Security Deposit/ Performance Bank Guarantee, whichever is higher.

**Section 5 - Previous Transgression**

5.1 The Bidder declares that no previous transgressions occurred in the last 3 years with any other company in any country conforming to the anti-corruption approach or with any other Public Sector Enterprise in India that could justify his exclusion from the tender process.

5.2 If the Bidder makes incorrect statement on this subject, he can be disqualified from the tender process or the contract, if already awarded, can be terminated for such reason.

**Section 6 - Equal treatment of all Bidders/ Contractors / Sub-contractors**

6.1 The Principal will enter into agreements with identical conditions as this one with all Bidders and Contractors. In case of sub-contracting, the Principal contractor shall be responsible for the adoption of IP by his sub-contractors and shall continue to remain responsible for any default by his sub-contractors.

6.2 The Principal will disqualify from the tender process all bidders who do not sign this pact or violate its provisions.

**Section 7 - Criminal Charges against violating Bidders/ Contractors /Subcontractors**

If the Principal obtains knowledge of conduct of a Bidder, Contractor or Subcontractor, or of an employee or a representative or an associate of a Bidder, Contractor or Subcontractor which constitutes corruption, or if the Principal has substantive suspicion in this regard, the Principal will inform the Vigilance Office.

**Section 8 - Independent External Monitor(s)**

8.1 The Principal appoints competent and credible Independent External Monitor for this Pact. The task of the Monitor is to review independently and objectively, whether and to what extent the parties comply with the obligations under this agreement.

8.2 The Monitor is not subject to instructions by the representatives of the parties and performs his functions neutrally and independently. He reports to the CMD, BHEL.

8.3 The Bidder(s)/ Contractor(s) accepts that the Monitor has the right to access without restriction to all contract documentation of the Principal including that provided by the Bidder(s)/ Contractor(s). The Bidder(s)/ Contractor(s) will grant the monitor, upon his request and demonstration of a valid interest, unrestricted and unconditional access to his contract documentation. The same is applicable to Sub-contractor(s). The Monitor is under contractual obligation to treat the information and documents of the Bidder(s)/ Contractor(s) / Sub-contractor(s) with confidentiality in line with Non- disclosure agreement.

8.4 The Principal will provide to the Monitor sufficient information about all meetings among the parties related to the contract provided such meetings could have an impact on the contractual relations between the Principal and the Contractor. The parties offer to the Monitor the option to participate in such meetings.

8.5 The role of IEMs is advisory, would not be legally binding and it is restricted to resolving issues raised by an intending bidder regarding any aspect of the tender which allegedly restricts competition or bias towards some bidders. At the same time, it must be understood that IEMs are not consultants to the Management. Their role is independent in nature and the advice once tendered would not be subject to review at the request of the organization.

8.6 For ensuring the desired transparency and objectivity in dealing with the complaints arising out of any tendering process, the matter should be examined by the full panel of IEMs jointly as far as possible, who would look into the records, conduct an investigation, and submit their joint recommendations to the Management.

8.7 The IEMs would examine all complaints received by them and give their recommendations/ views to CMD, BHEL, at the earliest. They may also send their report directly to the CVO and the Commission, in case of suspicion of serious irregularities requiring legal/ administrative action. IEMs will tender their advice on the complaints within 10 days as far as possible.

8.8 The CMD, BHEL shall decide the compensation to be paid to the Monitor and its terms and conditions.

8.9 IEM should examine the process integrity, they are not expected to concern themselves with fixing of responsibility of officers. Complaints alleging mala fide on the part of any officer of the organization should be looked into by the CVO of the concerned organisation.

8.10 If the Monitor has reported to the CMD, BHEL, a substantiated suspicion of an offence under relevant Indian Penal Code/ Prevention of Corruption Act, and the CMD, BHEL has not, within reasonable time, taken visible action to proceed against such offence or reported it to the Vigilance Office, the Monitor may also transmit this information directly to the Central Vigilance Commissioner, Government of India.

8.11 The number of Independent External Monitor(s) shall be decided by the CMD, BHEL.

8.12 The word 'Monitor' would include both singular and plural.

## Section 9 - Pact Duration

9.1 This Pact shall be operative from the date IP is signed by both the parties till the final completion of contract for successful bidder and for all other bidders 6 months after the contract has been awarded. Issues like warranty / guarantee etc. should be outside the purview of IEMs.

9.2 If any claim is made/ lodged during currency of IP, the same shall be binding and continue to be valid despite the lapse of this pact as specified above, unless it is discharged/ determined by the CMD, BHEL.

## Section 10 - Other Provisions

10.1 This agreement is subject to Indian Laws and jurisdiction shall be registered office of the Principal, i.e. New Delhi.

10.2 Changes and supplements as well as termination notices need to be made in writing. Side agreements have not been made.

10.3 If the Contractor is a partnership or a consortium, this agreement must be signed by all partners or consortium members.

10.4 Should one or several provisions of this agreement turn out to be invalid, the remainder of this agreement remains valid. In this case, the parties will strive to come to an agreement to their original intentions.

10.5 Only those bidders / contractors who have entered into this agreement with the Principal would be competent to participate in the bidding. In other words, entering into this agreement would be a preliminary qualification.

# CHAPTER -1

## 1. GENERAL INSTRUCTION TO TENDERERS

### 1.1. DESPATCH INSTRUCTION

i) The General Conditions of Contract form part of the Tender specifications. All pages of the tender documents shall be duly signed, stamped and submitted along with the offer in token of complete acceptance thereof. The information furnished shall be complete by itself. The tenderer is required to furnish all the details and other documents as required in the following pages

ii) Tenderers are advised to study all the tender documents carefully. Any submission of tender by the tenderer shall be deemed to have been done after careful study and examination of the tender documents and with the full understanding of the implications thereof. Should the tenderers have any doubt about the meaning of any portion of the Tender Specification or find discrepancies or omissions in the drawings or the tender documents issued are incomplete or shall require clarification on any of the technical aspect, the scope of work etc., he shall at once, contact the authority inviting the tender well in time (so as not to affect last date of submission) for clarification before the submission of the tender. Tenderer's request for clarifications shall be with reference to Sections and Clause numbers given in the tender documents. The specifications and terms and conditions shall be deemed to have been accepted by the tenderer in his offer. Non compliance with any of the requirements and instructions of the tender enquiry may result in the rejection of the tender.

iii) Integrity pact (IP) shall be applicable for all tenders / contracts if indicated in NIT. This integrity pact shall be issued as part of the Tender documents and shall be returned by the bidder along with Techno-commercial bid duly filled, signed and stamped by the authorized signatory who signs the bid. Only those vendors / bidders who have entered into such an IP with BHEL shall be considered qualified to participate in the bidding. Entering into this pact shall be a preliminary qualification.

### 1.2. SUBMISSION OF TENDERS

1.2.1 The tenderers must submit their tenders to Officer inviting tender as per instructions in the NIT

1.2.2 Tenders submitted by post shall be sent by 'REGISTERED POST ACKNOWLEDGEMENT DUE / by COURIER' and shall be posted with due allowance for any postal/courier delays. BHEL takes no responsibility for delay, loss or non-receipt of tenders sent by post/courier. The tenders received after the specified time of their submission are treated as 'Late Tenders' and shall not be considered under any circumstances. Offers received by Fax/Email/Internet shall be considered as per terms of NIT.

1.2.3 Tenders shall be opened by authorised Officer of BHEL at his office at the time and date as specified in the NIT, in the presence of such of those tenderers or their authorised representatives who may be present

1.2.4 Tenderers whose bids are found techno commercially qualified shall be informed the date and time of opening of the Price Bids and such Tenderers may depute their representatives to witness the opening of the price bids. BHEL's decision in this regard shall be final and binding.

1.2.5 Before submission of Offer, the tenderers are advised to inspect the site of work and the environments and be well acquainted with the actual working and other prevalent conditions, facilities available, position of material and labour, means of transport and access to Site, accommodation, etc. No claim will be entertained later on the grounds of lack of knowledge of any of these conditions.

1.3. LANGUAGE

1.3.1 The tenderer shall quote the rates in English language and international numerals. These rates shall be entered in figures as well as in words. For the purpose of the tenders, the metric system of units shall be used.

1.3.2 All entries in the tender shall either be typed or written legibly in ink. Erasing and over-writing is not permitted and may render such tenders liable for rejection. All cancellations and insertions shall be duly attested by the tenderer.

1.4 PRICE DISCREPANCY:

1.4.1 Conventional (Manual) Price Bid opening : In the case of price bid opening without resorting to Reverse Auction, if there are differences between the rates given by the tenderer in words and figures or in amount worked out by him, the following procedure for evaluation and award shall be followed:

i) When there is a difference between the rates in figures and in words, the rates which corresponds to the amounts worked out by the contractor, shall be taken as correct

ii) When the amount of an item is not worked out by the contractor or it does not correspond with the rate written either in figure or in words, then the rate quoted by the contractor in words shall be taken as correct

iii) When the rate quoted by the contractor in figures and words tallies but the amount is not worked out correctly, the rate quoted by the contractor shall be taken as correct and not the amount.

iv) In case of lumpsum price, if there is any difference between the amount in figures and in words, the amount quoted by the bidder in words shall be taken as correct.

v) In case of omission in quoting any rate for one or more items, the evaluation shall be done considering the highest quoted rate obtained against the respective items by other tenderers for the subject tender. If the tenderer becomes L-1, the notional rates for the omission items shall be the lowest rates quoted for the respective items by the other tenderers against the respective omission items for the subject job and the 'Total quoted price (loaded for omissions)' shall be arrived at. However the overall price remaining the same as quoted originally, the rates for all the items in the 'Total quoted price (loaded for omissions)' shall be reduced item wise in proportion to the ratio of 'Original' total price and the 'Total quoted price (loaded for omissions)''.

vi) The 'Final Total Amount' shall be arrived at after considering the amounts worked out in line with 'i' to 'iv' above.

1.4.2 Reverse Auction: In case of Reverse Auction, the successful bidder shall undertake to execute

the work as per overall price offered by him during the Reverse Auction process. In case of omission of rates, the procedure shall be as per 'Guidelines for Reverse Auction' enclosed.

1.5. QUALIFICATION OF TENDERERS

i) Only tenderers who have previous experience in the work of the nature and description detailed in the Notice Inviting Tender and/or tender specification are expected to quote for this work duly detailing their experience along with offer.

ii) Offers from tenderers who do not have proven and established experience in the field shall not be considered

iii) .Offers from tenderers who are under suspension (banned) by any Unit/Region/Division of BHEL shall not be considered.

iv) Offers from tenderers who do not comply with the latest guidelines of Ministry/Commissions of Govt of India shall not be considered.

1.6. EVALUATION OF BIDS

i) Technical Bids submitted by the tenderer will be opened first and evaluated for fulfilling the Pre Qualification criteria and other conditions in NIT/Tender documents, based on documentary evidences submitted along with the offer

ii) In case the same qualifying experience is claimed by more than one agency, then the agency who has executed the work as per documentary evidence submitted shall only be qualified. Scope of qualifying work should be totally with the agency who has executed and in case it is only labour+consumables without T&P, then the responsibility of execution is assigned to the first agency and not to the agency who has executed only as labour supply contractor. Further, BHEL reserves the right to ask for further proofs including submission of TDS certificates for the said job

iii) In case the qualifying experience is claimed by private organizations based on Work Order and completion certificates from another private organization, BHEL reserves the right to ask for further proofs including submission of TDS certificates for the said job

iv) Assessing Bidder Capacity for executing the current tender shall be as per Notice Inviting Tender

v) Price Bids of shortlisted bidders shall only be opened either through the conventional price bid opening or through electronic Reverse Auction, at the discretion of BHEL

vi) Price Bids of unqualified bidders shall not be opened. Reasons for rejection shall be intimated in due course after issue of LOI/LOA to successful bidder and receipt of unqualified acceptance from the successful bidder

vii) Bidders are advised to also refer to clause no 2.9.4 regarding evaluation of their performance in ongoing projects for the current tender

1.7. DATA TO BE ENCLOSED

Full information shall be given by the tenderer in respect of the following. Non-submission of this information may lead to rejection of the offer.

i) INCOME TAX PERMANENT ACCOUNT NUMBER

Certified copies of Permanent Account Numbers as allotted by Income Tax Department for the Company/Firm/Individual Partners, etc. shall be furnished along with tender.

ii) ORGANIZATION CHART

The organization chart of the tenderer's organization, including the names, addresses and contact

information of the Directors/Partners shall be furnished along with the offer.

iii) An attested copy of the Power of Attorney, in case the tender is signed by an individual other than the sole proprietor

iv) IN CASE OF INDIVIDUAL TENDERER:
His / her full name, address and place & nature of business.

v) IN CASE OF PARTNERSHIP FIRM
The names of all the partners and their addresses, A copy of the partnership deed/instrument of partnership dully certified by the Notary Public shall be enclosed.

vi) IN CASE OF COMPANIES:

a. Date and place of registration including date of commencement certificate in case of Public Companies (certified copies of Memorandum and articles of Association are also to be furnished).
b. Nature of business carried on by the Company and the provisions of the Memorandum relating thereof.

1.8 AUTHORISATION AND ATTESTATION
Tenders shall be signed by a person duly authorized/empowered to do so. An attested copy of the Power of Attorney, in case the tender is signed by an individual other than the sole proprietor shall be submitted along with the tenders

1.9 EARNEST MONEY DEPOSIT

1.9.1 Every tender must be accompanied by the prescribed amount of Earnest Money Deposit (EMD) in the manner described herein.

i) EMD shall be furnished along with the offer in full as per the amount indicated in the Special Conditions of Contract / NIT
ii) EMD is to be paid in cash (as permissible under Income Tax Act), Pay order or Demand Draft in favour of 'Bharat Heavy Electricals Limited' and payable at Regional HQ issuing the tender.
iii) No other form of EMD remittance shall be acceptable to BHEL
iv) Bidder may opt to deposit "One Time EMD" of Rs. 2.0 lakhs (Rupees Two lakhs only) with BHEL:Power Sector Region HQ issuing the tender, which will enable them to participate in all the future tender enquiries in respect of Erection and Commissioning services issued from the respective office. Interested bidders may clearly send their consent for converting the present EMD into a "One Time EMD" in their offer.
   - Note : The 'One Time EMD' cannot be withdrawn by the tenderers within 3 years from the date of deposit, under any circumstances. The Tenderer who wishes to withdraw after three years will not be allowed to submit 'One Time EMD' again.
v) Bidders who have already deposited such "One Time EMD" of Rs. 2.00 lakh are exempted from submission of EMD for this tender. However a copy of 'One Time EMD' certificate issued by BHEL Regional HQ issuing the tender shall be enclosed along with the offer.

1.9.2 EMD by the bidder will be forfeited as per Tender Documents if

i) After opening the tender, the bidder revokes his tender within the validity period or increases his

earlier quoted rates.

ii) The bidder does not commence the work within the period as per LOI/Contract. In case the LOI / contract is silent in this regard then within 15 days after award of contract.

1.9.3 EMD shall not carry any interest.

1.9.4 In the case of unsuccessful bidders, the Earnest Money will be refunded to them within a reasonable time after acceptance of award by successful tenderer.

1.10 SECURITY DEPOSIT

1.10.1 Upon acceptance of Tender, the successful Tenderer should deposit the required amount of Security Deposit for satisfactory completion of work, as per the rates given below:

| SN | Contract Value | Security Deposit Amount |
|---|---|---|
| 1 | Up to Rs. 10 lakhs | 10% of Contract Value |
| 2 | Above Rs. 10 lakhs upto Rs.50 lakhs | 1 lakh + 7.5% of the Contract Value exceeding Rs. 10 lakhs. |
| 3 | Above Rs. 50 lakhs | Rs 4 lakhs + 5% of the Contract Value exceeding Rs. 50 lakhs. |

1.10.2 The security Deposit should be furnished before start of the work by the contractor.

1.10.3 Security Deposit may be furnished in any one of the following forms

i) Cash (as permissible under the Income Tax Act)
ii) Pay Order / Demand Draft in favour of BHEL.
iii) Local cheques of scheduled banks, subject to realization.
iv) Securities available from Post Offices such as National Savings Certificates, Kisan Vikas Patras etc. (Certificates should be held in the name of Contractor furnishing the security and duly pledged in favour of BHEL and discharged on the back).
v) Bank Guarantee from Scheduled Banks / Public Financial Institutions as defined in the Companies Act. The Bank Guarantee format for Security Deposit shall be in the prescribed formats
vi) Fixed Deposit Receipt issued by Scheduled Banks / Public Financial Institutions as defined in the Companies Act. The FDR should be in the name of the contractor, A/C BHEL, duly discharged on the back.
vii) Security deposit can also be recovered at the rate of 10% from the running bills. However in such cases at least 50% of the Security Deposit should be deposited in any form as prescribed before start of the work and the balance 50% may be recovered from the running bills.
viii) EMD of the successful bidder can be converted and adjusted against the cash portion of Security Deposit excepting for such bidders who have remitted One Time EMD.

NOTE: Acceptance of Security Deposit against Sl. No. (iv) and (vi) above will be subject to hypothecation or endorsement on the documents in favour of BHEL. However, BHEL will not be liable or responsible in any manner for the collection of interest or renewal of the documents or in any other matter connected therewith.

1.10.4 The Security Deposit shall not carry any interest.

1.10.5 In case the value of work exceeds / reduces from the awarded / accepted value, the Security Deposit shall be correspondingly enhanced / reduced as given below:

i) The enhanced part of the Security Deposit shall be immediately deposited by the Contractor or adjusted against payments due to the Contractor.

ii) There will be no reduction in Security Deposit value in case of variation in contract value upto the lower limit specified in Quantity variation clause. In case of reduction of contract value beyond the lower limit specified in Quantity Variation clause, then the Security Deposit shall be re adjusted in proportion.

iii) In case of reduction, the reduced Contract value shall be certified by BHEL Construction Manager after ascertaining / freezing of BOQ / Drawings from the Design / Engineering Centre. The reduced Security Deposit value can only be considered after taking into account the adequacy of the securities held by BHEL to meet the liabilities of the contractor for the contract, and the performance of the contract in general. In such cases, the revised value of Security Deposit shall be worked out only after execution of not less than the lower limit of the revised scope of work/contract value as per quantity variation clause, and as certified by Construction Manager. This reduction in value of Security Deposit shall not entitle the contractor to any amendment of Contract and shall be operated at the discretion of BHEL

iv) Contract value for the purpose of operating the reduced/increased value of Security Deposit due to Quantity Variation, shall be exclusive of Price Variation Clause, Over Run Compensation and Extra works done on manday rates.

1.10.6 The validity of Bank Guarantees towards Security Deposit shall be initially upto the completion period as stipulated in the Letter of Intent/Award + 3 months, and the same shall be kept valid by proper renewal till the acceptance of Final Bills of the Contractor, by BHEL

1.10.7 BHEL reserves the right of forfeiture of Security Deposit in addition to other claims and penalties in the event of the Contractor's failure to fulfill any of the contractual obligations or in the event of termination of contract as per terms and conditions of contract. BHEL reserves the right to set off the Security Deposit against any claims of other contracts with BHEL.

1.11 RETURN OF SECURITY DEPOSIT

Security Deposit shall be refunded/Bank Guarantee(s) released to the Contractor along with the 'Final Bill' after deducting all expenses / other amounts due to BHEL under the contract / other contracts entered into with them by BHEL.

1.12 BANK GUARANTEES

Where ever Bank Guarantees are to be furnished/submitted by the contractor, the following shall be complied with

i) Bank Guarantees shall be from Scheduled Banks / Public Financial Institutions as defined in the Companies Act.

ii) The Bank Guarantees shall be as per prescribed formats.

iii) It is the responsibility of the bidder to get the Bank Guarantees revalidated/extended for the required period (subject to a minimum period of six months), as per the advice of BHEL Site Engineer / Construction Manager. BHEL shall not be liable for issue of any reminders regarding expiry of the

Bank Guarantees.

iv) In case extension/further extensions of any Bank Guarantees are not required, the bidders shall ensure that the same is explicitly endorsed by the Construction Manager and submitted to the Regional HQ issuing the LOI/LOA.

v) In case the Bank Guarantees are not extended before the expiry date, BHEL reserves the right to invoke the same by informing the concerned Bank in writing, without any advance notice/communication to the concerned bidder.

vi) Bidders to note that any corrections to Bank Guarantees shall be done by the issuing Bank, only through an amendment in an appropriate non judicial stamp paper.

vii) The Original Bank Guarantee shall be sent directly by the Bank to BHEL under Registered Post (Acknowledgement Due), addressed to the Subcontracting Department of the respective Region.

1.13 VALIDITY OF OFFER

The rates in the Tender shall be kept open for acceptance for a minimum period of SIX MONTHS from latest due date of offer submission (including extension, if any) . In case BHEL (Bharat Heavy Electricals Ltd) calls for negotiations, such negotiations shall not amount to cancellation or withdrawal of the original offer which shall be binding on the tenderers.

1.14 EXECUTION OF CONTRACT AGREEMENT

The successful tenderer's responsibility under this contract commences from the date of issue of the Letter of Intent by Bharat Heavy Electricals Limited. The Tenderer shall submit an unqualified acceptance to the Letter of Intent/Award within the period stipulated therein.

The successful tenderer shall be required to execute an agreement in the prescribed form, with BHEL, within a reasonable time after the acceptance of the Letter of Intent/Award, and in any case before releasing the first running bill. The contract agreement shall be signed by a person duly authorized/empowered by the tenderer. The expenses for preparation of agreement document shall be borne by BHEL

1.15 REJECTION OF TENDER AND OTHER CONDITIONS

1.15.1 The acceptance of tender will rest with BHEL which does not bind itself to accept the lowest tender or any tender and reserves to itself full rights for the following without assigning any reasons whatsoever:-

a. To reject any or all of the tenders.

b. To split up the work amongst two or more tenderers as per NIT

c. To award the work in part if specified in NIT

d. In case of either of the contingencies stated in (b) and (c) above, the time for completion as stipulated in the tender shall be applicable.

1.15.2 Conditional tenders, unsolicited tenders, tenders which are incomplete or not in the form specified or defective or have been materially altered or not in accordance with the tender

conditions, specifications etc., are liable to be rejected.

1.15.3 Tenders are liable to be rejected in case of unsatisfactory performance of the tenderer with BHEL, or tenderer under suspension (hold/banning /delisted ) by any unit / region / division of BHEL or tenderers who do not comply with the latest guidelines of Ministry/Commissions of Govt of India. BHEL reserves the right to reject a bidder in case it is observed that they are overloaded and may not be in a position to execute this job as per the required schedule in line with clause no. 9.0 of the 'NIT'. The decision of BHEL will be final in this regard.

1.15.4 If a tenderer who is a proprietor expires after the submission of his tender or after the acceptance of his tender, BHEL may at their discretion, cancel such tender. If a partner of a firm expires after the submission of tender or after the acceptance of the tender, BHEL may then cancel such tender at their discretion, unless the firm retains its character.

1.15.5 BHEL will not be bound by any Power of Attorney granted by changes in the composition of the firm made subsequent to the execution of the contract. They may, however, recognise such power of Attorney and changes after obtaining proper legal advice, the cost of which will be chargeable to the contractor concerned.

1.15.6 If the tenderer deliberately gives wrong information in his tender, BHEL reserves the right to reject such tender at any stage or to cancel the contract if awarded and forfeit the Earnest Money/Security Deposit/any other money due.

1.15.7 Canvassing in any form in connection with the tenders submitted by the Tenderer shall make his offer liable to rejection.

1.15.8 In case the Proprietor, Partner or Director of the Company/Firm submitting the Tender, has any relative or relation employed in BHEL, the authority inviting the Tender shall be informed of the fact as per specified format, along with the Offer. Failing to do so, BHEL may, at its sole discretion, reject the tender or cancel the contract and forfeit the Earnest Money/Security Deposit.

1.15.9 The successful tenderer should not sub-contract part or complete work detailed in the tender specification undertaken by him without written permission of BHEL's Construction Manager/Site Incharge. The tenderer is solely responsible to BHEL for the work awarded to him.

1.15.10 The Tender submitted by a techno commercially qualified tenderer shall become the property of BHEL who shall be under no obligation to return the same to the bidder. However unopened price bids and late tenders shall be returned to the bidders

1.15.11 Unsolicited discount received after the due date and time of Bid Submission shall not be considered for evaluation. However, if the party who has submitted the unsolicited discount/rebate becomes the L-I party, then the awarded price i.e contract value shall be worked out after considering the discount so offered.

1.15.12 BHEL shall not be liable for any expenses incurred by the bidder in the preparation of the tender irrespective of whether the tender is accepted or not.

# CHAPTER-2

2.1 DEFINITION: The following terms shall have the meaning hereby assigned to them except where the context otherwise requires

i) BHEL shall mean Bharat Heavy Electricals Limited (of the respective Power Sector Region inviting the Tender), a company registered under Indian Companies Act 1956, with its Registered Office at BHEL HOUSE, SIRI FORT, NEW DELHI – 110 049, or its Power Sector Regional Offices or its Authorised Officers or its Site Engineers or other employees authorised to deal with any matters with which these persons are concerned on its behalf.

ii) "EXECUTIVE DIRECTOR" or 'GROUP GENERAL MANAGER' or "GENERAL MANAGER (Incharge)" or "GENERAL MANAGER" shall mean the Officer in Administrative charge of the respective Power Sector Region.

iii) "COMPETENT AUTHORITY" shall mean Executive Director or Group General Manager or General Manager (Incharge) or General Manager or BHEL Officers who are empowered to act on behalf of the Executive Director or General Manager (Incharge) or General Manager of BHEL.

iv) "ENGINEER" or "ENGINEER IN CHARGE" shall mean an Officer of BHEL as may be duly appointed and authorized by BHEL to act as "Engineer" on his behalf for the purpose of the Contract, to perform the duty set forth in this General Conditions of Contract and other Contract documents. The term also includes 'CONSTRUCTION MANAGER' or 'SITE INCHARGE' as well as Officers at Site or at the Headquarters of the respective Power Sector Regions.

v) "SITE" shall mean the places or place at which the plants/equipments are to be erected and services are to be performed as per the specification of this Tender.

vi) "CLIENT OF BHEL" or "CUSTOMER" shall mean the project authorities with whom BHEL has entered into a contract for supply of equipments or provision of services.

vii) "CONTRACTOR" shall mean the successful Bidder/Tenderer who is awarded the Contract and shall include the Contractor's successors, heirs, executors, administrators and permitted assigns.

viii) "CONTRACT" or "CONTRACT DOCUMENT" shall mean and include the Agreement of Work Order, the accepted appendices of Rates, Schedules, Quantities if any, General Conditions of Contract, Special Conditions of Contract, Instructions to the Tenderers, Drawings, Technical Specifications, the Special Specifications if any, the Tender documents, subsequent amendments mutually agreed upon and the Letter of Intent/Acceptance issued by BHEL. Any conditions or terms stipulated by the contractor in the tender documents or subsequent letters shall not form part of the contract unless, specifically accepted in writing by BHEL in the Letter of Intent/Award and incorporated in the agreement.

ix) "GENERAL CONDITIONS OF CONTRACT" shall mean the 'Instructions to Tenderers' and 'General Conditions of Contract' pertaining to the work for which above tenders have been called for.

| | |
|---|---|
| x) | "TENDER SPECIFICATION" or "TENDER" or "TENDER DOCUMENTS" shall mean General Conditions, Common Conditions, Special Conditions, Price Bid, Rate Schedule, Technical Specifications, Appendices, Annexures, Corrigendums, Amendments, Forms, procedures, Site information, etc and drawings/documents pertaining to the work for which the tenderers are required to submit their offers. Individual specification number will be assigned to each Tender Specification. |
| xi) | "LETTER OF INTENT" shall mean the intimation by a Letter/Fax/email to the tenderer that the tender has been accepted in accordance with provisions contained in the letter. The responsibility of the contractor commences from the date of issue of this letter and all terms and conditions of the contract are applicable from this date. |
| xii) | "COMPLETION TIME" shall mean the period by 'date/month' specified in the 'Letter of Intent/Award' or date mutually agreed upon for handing over of the intended scope of work, the erected equipment/plant which are found acceptable by the Engineer, being of required standard and conforming to the specifications of the Contract. |
| xiii) | "PLANT" shall mean and connote the entire assembly of the plant and equipments covered by the contract. |
| xiv) | "EQUIPMENT" shall mean equipment, machineries, materials, structural, electricals and other components of the plant covered by the contract. |
| xv) | "TESTS" shall mean and include such test or tests to be carried out on the part of the contractor as are prescribed in the contract or considered necessary by BHEL, in order to ascertain the quality, workmanship, performance and efficiency of the contractor or part thereof. |
| xvi) | "APPROVED", "DIRECTED" or "INSTRUCTED" shall mean approved, directed or instructed by BHEL. |
| xvii) | "WORK or CONTRACT WORK" shall mean and include supply of all categories of labour, specified consumables, tools and tackles and Plants required for complete and satisfactory site transportation, handling, stacking, storing, erecting, testing and commissioning of the equipments to the entire satisfaction of BHEL. |
| xviii) | "SINGULAR AND PLURALS ETC" words carrying singular number shall also include plural and vice versa, where the context so requires. Words imparting the masculine Gender shall be taken to include the feminine Gender and words imparting persons shall include any Company or Associations or Body of Individuals, whether incorporated or not. |
| xix) | "HEADING" – The heading in these General Conditions are solely for the purpose of facilitating reference and shall not be deemed to be part thereof or be taken as instructions thereof or of the contract. |
| xx) | "MONTH" shall mean calendar month unless otherwise specified in the Tender. |

xxi) Day' or 'Days' unless herein otherwise expressly defined shall mean calendar day or days of twenty four (24) hours each. A week shall mean continuous period of seven (7) days.

xxii) "COMMISSIONING" shall mean the synchronisation testing and achieving functional operation of the Equipment with associated system after all initial adjustments, trials, cleaning, re-assembly required at site if any, have been completed and Equipment with associated system is ready for taking into service.

xxiii) "WRITING" shall include any manuscript type written or hand written or printed statement or electronically transmitted messages, under the signature or seal or transmittal of BHEL.

xxiv) "TEMPORARY WORK" shall mean all temporary works for every kind required in or for the execution, completion, maintenance of the work.

xxv) 'CONTRACT PRICE' or 'CONTRACT VALUE' shall mean the sum mentioned in the LOI/LOA/Contract Agreement subject to such additions thereto or deductions there from as may be made under provisions hereinafter contained

xxvi) "COMMENCEMENT DATE" or "START DATE" shall mean the commencement/start of work at Site as per terms defined in the Tenderl

xxvii) "SHORT CLOSING" or "FORE CLOSING" of Contract shall mean the premature closing of Contract, for reasons not attributable to the contractor and mutually agreed between BHEL and the contractor

xxviii) "TERMINATION" of Contract shall mean the pre mature closing of contract due to reasons as mentioned in the contract

xxix) "DE MOBILISATION" shall mean the temporary winding up of Site establishment by Contractor leading to suspension of works temporarily for reasons not attributable to the contractor

xxx) "RE MOBILISATION" shall mean the resumption of work with all resources required for the work after demobilization.

2.2 LAW GOVERNING THE CONTRACT AND COURT JURISDICTION

The contract shall be governed by the Law for the time being in force in the Republic of India. The Civil Court having original Civil Jurisdiction at Delhi for PSNR, at Kolkata for PSER, at Nagpur for PSWR and at Chennai for PSSR, shall alone have exclusive jurisdiction in regard to all claims in respect of the Contract. No other Civil Court shall have jurisdiction in case of any dispute, under this contract

2.3 ISSUE OF NOTICE

2.3.1 Service of notice on contractor

Any notice to be given to the Contractor under the terms of the contract shall be served by sending the same by Registered Post / Speed Post to or leaving the same at the Contractor's last known address of the principal place of business (or in the event of the contractor being a company, to or at its Registered Office). In case of change of address, the notice shall be served at changed address as notified in writing by the Contractor to BHEL. Such posting or leaving of the notice shall be deemed to be good service of such notice and the time mentioned to the condition for doing any act after notice shall be reckoned from the date so mentioned in such notice.

2.3.2 Service of notice on BHEL

Any notice to be given to BHEL in-charge/Region under the terms of the Contract shall be served by sending the same by post to or leaving the same at BHEL address or changed address as notified in writing by BHEL to the Contractor.

2.4 USE OF LAND

No land belonging to BHEL or their Customer under temporary possession of BHEL shall be occupied by the contractor without written permission of BHEL.

2.5 COMMENCEMENT OF WORK

2.5.1 The contractor shall commence the work as per the time indicated in the Letter of Intent from BHEL and shall proceed with the same with due expedition without delay.

2.5.2 If the contractor fails to start the work within stipulated time as per LOI or as intimated by BHEL, then BHEL at its sole discretion will have the right to cancel the contract. The Earnest Money and/or Security Deposit with BHEL will stand forfeited without any further reference to him without prejudice to any and all of BHEL's other rights and remedies in this regard.

2.5.3 All the work shall be carried out under the direction and to the satisfaction of BHEL.

2.6 MEASUREMENT OF WORK AND MODE OF PAYMENT:

2.6.1 All payments due to the contractors shall be made by e mode only, unless otherwise found operationally difficult for reasons to be recorded in writing
.

2.6.2 For progress running bill payments: - The Contractor shall present detailed measurement sheets in triplicate, duly indicating all relevant details based on technical documents and connected drawings for work done during the month/period under various categories in line with terms of payment as per contract. The basis of arriving at the quantities, weights shall be relevant documents and drawings released by BHEL. These measurement sheets shall be prepared jointly with BHEL Engineers and signed by both the parties.

2.6.3 These measurement sheets will be checked by BHEL Engineer and quantities and percentage eligible for payment under various groups shall be decided by BHEL Engineer. The abstract of quantities and percentage so arrived at based on the terms of payment shall be entered in Measurement Book and signed by both the parties.

2.6.4 Based on the above quantities, contractor shall prepare the bills in prescribed format and work out the financial value. These will be entered in Measurement Book and signed by both the parties. Payment shall be made by BHEL after effecting the recoveries due from the contractor.

2.6.5 All recoveries due from the contractor for the month/period shall be effected in full from the corresponding running bills unless specific approval from the competent authorities is obtained to the contrary.

2.6.6 Measurement shall be restricted to that portion of work for which it is required to ascertain the financial liability of BHEL under this contract.

2.6.7 The measurement shall be taken jointly by persons duly authorized on the part of BHEL and by the Contractor.

2.6.8 The Contractor shall bear the expenditure involved if any, in making the measurements and testing of materials to be used/used in the work. The contractor shall, without extra charges, provide all the assistance with appliances and other things necessary for measurement.

2.6.9 If at any time due to any reason whatsoever, it becomes necessary to re-measure the work done in full or in part, the expenses towards such re measurements shall be borne by the contractor unless such re measurements are warranted solely for reasons not attributable to contractor.

2.6.10 Passing of bills covered by such measurements does not amount to acceptance of the completion of the work measured. Any left out work has to be completed, if pointed out at a later date by BHEL.

2.6.11 Final measurement bill shall be prepared in the final bill format prescribed for the purpose based on the certificate issued by BHEL Engineer that entire works as stipulated in tender specification has been completed in all respects to the entire satisfaction of BHEL. Contractor shall give unqualified "No Claim" Certificate. All the tools and tackles loaned to him should be returned in satisfactory condition to BHEL. The abstract of final quantities and financial values shall also be entered in the Measurement Books and signed by both parties to the contract. The Final Bill shall be prepared and paid within a reasonable time after completion of work.

2.7 RIGHTS OF BHEL

BHEL reserves the following rights in respect of this contract during the original contract period or its extensions if any, as per the provisions of the contract, without entitling the contractor for any compensation.

2.7.1 To withdraw any portion of work and/or to restrict/alter quantum of work as indicated in the contract during the progress of work and get it done through other agencies to suit BHEL's commitment to its customer or in case BHEL decides to advance the date of completion due to other emergent reasons/ BHEL's obligation to its customer.

2.7.2 To terminate the contract or get any part of the work done through other agency or deploy BHEL's own/hired/otherwise arranged resources , at the risk and cost of the contractor after due notice <u>of a period of two weeks by BHEL,</u> in the event of:-

i) Contractor's continued poor progress
ii) Withdrawal from or abandonment of the work before completion of the work
iii) Contractor's inability to progress the work for completion as stipulated in the contract
iv) Poor quality of work
v) Corrupt act of Contractor
vi) Insolvency of the Contractor
vii) Persistent disregard to the instructions of BHEL
viii) Assignment, transfer, sub-letting of contract without BHEL's written permission
ix) Non fulfillment of any contractual obligations
x) In the opinion of BHEL, the contractor is overloaded and is not in a position to execute the job as per required schedule

2.7.3 To meet the expenses including BHEL overheads on the differential cost at 5%, over and above the Liquidated damages/penalties arising out of "Risk & Cost" as explained above under Sl.No. 2.7.2. BHEL shall recover the amount from any money due from Contractor, or from any money due to the Contractor including Security Deposit, or by forfeiting any T&P or material of the contractor under this contract or any other contract of BHEL or by any other means or any combination thereof

2.7.4 To terminate the contract or to restrict the quantum of work and pay for the portion of work executed in case BHEL's contract with their customer are terminated for any reason, as per mutual agreement.

2.7.5 To effect recovery from any amounts due to the contractor under this or any other contract or in any other form, the moneys BHEL is statutorily forced to pay to anybody, due to contractor's failure to fulfill any of his obligations. BHEL shall levy overheads of 5% on all such payments along with interest as defined elsewhere in the GCC.

2.7.6 While every endeavour will be made by BHEL to this end, they cannot guarantee uninterrupted work due to conditions beyond their control. The Contractor will not be normally entitled for any compensation/extra payment on this account unless otherwise specified elsewhere in the contract.

2.7.7 In case the execution of works comes to a complete halt or reaches a stage wherein worthwhile works cannot be executed and there is no possibility of commencement of work for a period of not less than two months, due to reasons not attributable to the contractor and other than Force Majeure conditions, BHEL may consider permitting the contractor to de mobilize forthwith and re mobilize at an agreed future date. Cost of such demobilization/remobilization shall be mutually agreed. ORC in such cases shall not be applicable for the period between the period of demobilization and re mobilisation. The duration of contract/time extension shall accordingly get modified suitably. In case of any conflict, BHEL decision in this regard shall be final and binding on the contractor.

2.7.8 In the unforeseen event of inordinate delay in receipt of materials, drawings, fronts, etc, due to which inordinate discontinuity of work is anticipated, BHEL at its discretion may consider contractor's request to short close the contract in following cases:

a) The balance works (including but not limited to Trial Operation, PG Test, etc) are minor vis a vis the scope of work envisaged as per the contract.
b) There has been no significant work in past 6 months OR no significant work is expected in next 6 months (example in Hydro projects or in projects where work has stopped due to reasons beyond the control of BHEL)
c) The balance works cannot be done within a reasonable period of time as they are dependent on unit shutdown or on other facilities of customer or any other reasons not attributable to the contractor

At the point of requesting for short closure, contractor shall establish that he has completed all works possible of completion and he is not able to proceed with the balance works due to constraints beyond his control. In such a case, the estimated value of the unexecuted portion of work ( or estimated value of services to be provided for carrying out milestone/stage payments like

Trial Operation/PG Test, etc) as mutually agreed, shall however be reduced from the final contract value.

2.7.9 LIQUIDATED DAMAGES/PENALTY

If the contractor fails to maintain the required progress of work which results in delay in the completion of the work as per the contractual completion period, BHEL shall have the right to impose Liquidated Damage/Penalty at the rate of 0. 5% of the contract value, per week of delay or part thereof subject to a maximum of 10% of the contract value. For this purpose, the period of delay shall be the delay attributable to the Contractor for the completion of work as per contract. Contract Value for this purpose, shall be the final executed value exclusive of ORC, Extra Works executed on Manday rate basis, Supplementary/Additional Items and PVC.

2.8 RESPONSIBILITIES OF THE CONTRACTOR IN RESPECT OF LOCAL LAWS, EMPLOYMENT OF WORKERS ETC.

The following are the responsibilities of the contractor in respect of observance of local laws, employment of personnel, payment of taxes etc. The subcontractor shall fully indemnify BHEL against any claims of whatsoever nature arising due to the failure of the contractor in discharging any of his responsibilities hereunder:

2.8.1 As far as possible, Unskilled Workers shall be engaged from the local areas in which the work is being executed.

2.8.2 The contractor at all times during the continuance of this contract shall, in all his dealings with local labour for the time being employed on or in connection with the work, have due regard to all local festivals and religious and other customs.

2.8.3 The contractor shall comply with all applicable State and Central Laws, Statutory Rules, Regulations etc. such as Payment of Wages Act, Minimum Wages Act, Workmen Compensation Act, Employer's Liability Act, Industrial Disputes Act, Employers Provident Act, Employees State Insurance Scheme, Contract Labour (Regulation and Abolition) Act 1970, Payment of Bonus & Gratuity Act and other Acts, Rules and Regulations for labour as may be enacted by the Government during the tenure of the Contract and having force or jurisdiction at Site. The Contractor shall also give to the local Governing Body, Police and other relevant Authorities all such notices as may be required by the Law.

2.8.4 The contractor shall obtain independent License under the Contract Labour (Regulations and Abolition Act, 1970)as required from the concerned Authorities based on the certificate (Form-V) issued by the Principal Employer/Customer

2.8.5 The contractor shall pay all taxes, fees, license charges, deposits, duties, tolls, royalties, commission or other charges which may be leviable on account of his operations in executing the contract.

2.8.6 While BHEL would pay the inspection fees and Registration fees of Boiler/Electrical Inspectorate,

all other arrangements for site visits periodically by the Inspectorate to site, Inspection certificate etc. will have to be made by contractor. However, BHEL will not make any payment to the Inspectorate in connection with contractor's Welders/Electricians qualification tests etc.

2.8.7 Contractor shall be responsible for provision of Health and Sanitary arrangements (more particularly described in Contract Labour Regulation & Abolition Act), Safety precautions etc. as may be required for safe and satisfactory execution of contract.

2.8.8 The contractor shall be responsible for proper accommodation including adequate medical facilities for personnel employed by him.

2.8.9 The contractor shall be responsible for the proper behavior and observance of all regulations by the staff employed by him.

2.8.10 The contractor shall ensure that no damage is caused to any person/property of other parties working at site. If any such damage is caused, it is responsibility of the contractor to make good the losses or compensate for the same.

2.8.11 All the properties/equipments/components of BHEL/their Client loaned with or without deposit to the contractor in connection with the contract shall remain properties of BHEL/their Client.

2.8.12 The contractor shall use such properties for the purpose of execution of this contract. All such properties/equipments/components shall be deemed to be in good condition when received by the contractor unless he notifies within 48 hours to the contrary. The contractor shall return them in good condition as and when required by BHEL/their Client. In case of non-return, loss, damage, repairs etc, the cost thereof as may be fixed by BHEL Engineer will be recovered from the contractor

2.8.13 In case the contractor is required to undertake any work outside the scope of this contract, the rates payable shall be those mutually agreed upon if the item rates are not mentioned in existing contract

2.8.14 Any delay in completion of works/or non achievement of periodical targets due to the reasons attributable to the contractor, the same may have to be compensated by the contractor either by increasing manpower and resources or by working extra hours and/or by working more than one shift. All these are to be carried out by the contractor at no extra cost.

2.8.15 The contractor shall arrange, coordinate his work in such a manner as to cause no hindrance to other agencies working in the same premises.

2.8.16 All safety rules and codes applied by the Client/BHEL at site shall be observed by the contractor without exception. The contractor shall be responsible for the safety of the equipment/material and works to be performed by him and shall maintain all light, fencing guards, slings etc. or other protection necessary for the purpose. Contractor shall also take such additional precautions as may be indicated from time to time by the Engineer with a view to prevent pilferage, accidents, fire hazards. Due precautions shall be taken against fire hazards and atmospheric conditions. Suitable number of Clerical staff, watch and ward, store keepers to take care of equipment/materials and construction tools and tackles shall be posted at site by the contractor till the completion of work

under this contract.

The contractor shall arrange for such safety devices as are necessary for such type of work and carry out the requisite site tests of handling equipment, lifting tools, tackles etc. as per prescribed standards and practices.

Contractor has to ensure the implementation of Health, Safety and Environment (HSE) requirements as per directions given by BHEL/Customer. The contractor has to assist in HSE audit by BHEL/Customer and submit compliance Report. The contractor has to generate and submit record/reports as per HSE plan/activities as per instruction of BHEL/Customer

2.8.17 The contractor will be directly responsible for payment of wages to his workmen. A pay roll sheet giving all the payments given to the workers and duly signed by the contractor's representative should be furnished to BHEL site for record purpose, if so called for.

2.8.18 In case of any class of work for which there is no such specification as laid down in the contract, such work shall be carried out in accordance with the instructions and requirements of the Engineer.

2.8.19 Also, no idle charges will be admissible in the event of any stoppage caused in the work resulting in contractor's labour and Tools & Plants being rendered idle due to any reason at any time.

2.8.20 The contractor shall take all reasonable care to protect the materials and work till such time the plant/equipment has been taken over by BHEL or their Client whichever is earlier.

2.8.21 The contractor shall not stop the work or abandon the site for whatsoever reason of dispute, excepting force majeure conditions. All such problems/disputes shall be separately discussed and settled without affecting the progress of work. Such stoppage or abandonment shall be treated as breach of contract and dealt with accordingly

2.8.22 The contractor shall keep the area of work clean and shall remove the debris etc. while executing day-to-day work. Upon completion of work, the contractor shall remove from the vicinity of work, all scrap, packing materials, rubbish, unused and other materials and deposit them in places specified by the Engineer. The contractor will also demolish all the hutments, sheds, offices, etc. constructed and used by him and shall clean the debris. In the event of his failure to do so, the same will be arranged to be done by the Engineer and the expenses recovered from the contractor.

2.8.23 The contractor shall execute the work in the most substantial and workman like manner in the stipulated time. Accuracy of work and timely execution shall be the essence of this contract. The contractor shall be responsible to ensure that the quality, assembly and workmanship conform to the dimensions and clearance given in the drawings and/ or as per the instructions of the Engineer.

2.8.24 The Contractor to note that some of BHEL's T&Ps/MMDs may not be insured. The Contractor will take necessary precautions and due care to protect the same while in his custody from any damage/ loss till the same is handed over back to BHEL. In case the damage / loss is due to carelessness/ negligence on the part of the contractor, the Contractor is liable to get them repair/

replaced immediately and in case of his failure to do so within a reasonable time, BHEL will reserve the right to recover the loss from the contractor.

2.9 PROGRESS MONITORING, MONTHLY REVIEW AND PERFORMANCE EVALUATION

2.9.1 A detailed plan/programme for completion of the contractual scope of work as per the time schedule given in the contract shall be jointly agreed between BHEL and Contractor, before commencement of work . The above programme shall be supported by monthwise deployment of resources viz Manpower, T&P, Consumables, etc. Progress will be reviewed periodically (Daily/Weekly/Monthly) vis a vis this jointly agreed programme. The Contractor shall submit periodical progress reports (Daily/Weekly/Monthly) and other reports/information including manpower, consumables, T&P mobilization etc as desired by BHEL.

2.9.2 Monthly progress review between BHEL and Contractor shall be based on the agreed programme as above, availability of inputs/fronts etc, and constraints if any, as per prescribed formats. Manpower, T&P and consumable reports as per prescribed formats shall be submitted by contractor every month. Release of RA Bills shall be contingent upon certification by BHEL Site Engineer of the availability of the above prescribed formats duly filled in and signed.

2.9.3 The burden of proof that the causes leading to any shortfall is not due to any reasons attributable to the contractor is on the contractor himself. The monthly progress review shall record shortfalls attributable to (i) Contractor, (ii) Force Majeure Conditions, and (iii) BHEL

2.9.4 Performance of the Contractor shall be assessed as per prescribed formats and shall form the basis for 'Annual/Overall Performance Evaluation' of the Contractor and also for 'Assessment of Capacity of Bidder' for Tenders where the Contractor is a bidder. BHEL reserves the right to revise the evaluation formats during the course of execution of the works

2.10 TIME OF COMPLETION

2.10.1 The time schedule shall be as prescribed in the Contract. The time for completion shall be reckoned from the date of commencement of work at Site as certified by BHEL Engineers

2.10.2 The entire work shall be completed by the contractor within the time schedule or within such extended periods of time as may be allowed by BHEL under clause 2.11

2.11 EXTENSION OF TIME FOR COMPLETION

2.11.1 If the completion of work as detailed in the scope of work gets delayed beyond the contract period, the contractor shall request for an extension of the contract and BHEL at its discretion may extend the Contract.

2.11.2 Based on the monthly reviews jointly signed, the works balance at the end of original contract period less the backlog attributable to the contractor shall be quantified, and the number of months of 'Time extension' required for completion of the same shall be jointly worked out. Within this period of 'Time extension', the contractor is bound to complete the portion of backlog attributable to the contractor. Any further 'Time extension' or 'Time extensions' at the end of the previous extension shall be worked out similarly.

2.11.3 However if any 'Time extension' is granted to the contractor to facilitate continuation of work and completion of contract, due to backlog attributable to the contractor alone, then it shall be without prejudice to the rights of BHEL to impose penalty/LD for the delays attributable to the contractor, in addition to any other actions BHEL may wish to take at the risk and cost of contractor.

2.11.4 A joint programme shall be drawn for the balance amount of work to be completed during the period of 'Time Extension', along with matching resources (with weightages) to be deployed by the contractor as per specified format. Review of the programme and record of shortfall shall be done

every month of the 'Time extension' period in the same manner as is done for the regular contract period.

2.11.5 During the period of 'Time extension', contractor shall maintain their resources as per mutually agreed program

2.11.6 At the end of total work completion as certified by BHEL Engineer, and upon analysis of the total delay, the portion of time extensions attributable to (i) Contractor, (ii) Force majeure conditions, and (iii) BHEL, shall be worked out and shall be considered to be exhausted in the same order. The total period of time extensions shall be the sum of (i), (ii) and (iii) above and shall be equal to period between the scheduled date of completion and the actual date of completion of contract. LD shall be imposed/levied for the portion of time extensions attributable to contractor and recoverable from the dues payable to the contractor.

2.12 OVERRUN COMPENSATION

2.12.1 Over Run Compensation (ORC) is payable for works done during the extension period, by way of rate revisions for periods beyond original contract period subject to the following terms and conditions.

2.12.2 Rates shall be increased by 10% for the first twelve months of one or more extensions beyond original contract period. For the next twelve months of further extensions if any, rates shall be increased as above by 10% over the previous twelve months, and similarly for each subsequent twelve months extension.

2.12.3 The amount of increase payable per month due to rate revisions is subject to a minimum of Rs 1,00,000/- per month and a maximum of Rs 10,00,000/- per month.

2.12.4 Should there be any 'Time extension' for reasons attributable only to the contractor, then the work shall be executed by the contractor at the rates applicable for the period the work was planned

2.12.5 Payment of ORC shall be regulated as follows:

i) Contractor is entitled to Over Run Compensation (ORC) only for the portion of backlog attributable to BHEL.

ii) 50% of the compensation as per clause 2.12.3 is allocated for deployment of resources agreed as per the joint programme drawn vide 2.11.4. Payment shall however be based on the actual deployment of resources for the month as certified by BHEL, as per weightages assigned therein

iii) 50% of the compensation as per clause 2.12.3, is allocated for achieving of planned progress agreed as per the joint programme drawn vide 2.11.4. Payment shall be on pro rata basis for actual achieved quantities

iv) Total Over Run Compensation shall be limited to 10% of the executed contract value as certified in Final Bill. For this purpose executed contract value excludes PVC, ORC, Supplementary/Additional Items and Extra Works done on Manday rate basis

2.12.6 Contractor shall not be entitled for any Over Run Compensation (ORC) for the portion of backlog attributable to the contractor. Such works shall be executed at the rates applicable for the period the work was planned

2.13 INTEREST BEARING RECOVERABLE ADVANCES

2.13.1 Normally no advance is payable to the contractor. However, advance payment in exceptional circumstances shall be interest bearing and secured through a Bank Guarantee and shall be limited to a maximum of 5% of contract value. This 'Interest Bearing Recoverable Advance' shall be

payable in not less than two installments with any of the installment not exceeding 60% of the total eligible advance.

2.13.2 In exceptional circumstances, with due justification, Competent Authority of BHEL is empowered to approve proposals for payment of additional interim interest bearing advance against Bank Guarantee, for resource augmentation towards expediting work for project implementation.

2.13.3 Bank Guarantee towards 'Interest Bearing Recoverable Advance' shall be atleast 110% of the advance so as to enable recovery of not only principle amount but also the interest portion, if so required.

2.13.4 Contractor shall establish the utilization of advance drawn before the release of next installment.

2.13.5 Payment and recovery of Interest Bearing Recoverable advance shall be at the sole discretion of BHEL and shall not be a subject matter of arbitration.

2.13.6 The rate of interest applicable for the above advances shall be the prime lending rate of State Bank of India prevailing at the time of disbursement of the advance + 2%, and such rate will remain fixed till the total advance amount is recovered

2.13.7 Unadjusted amount of advances paid shall not exceed 5% of the total contract value at any point of time. Recovery of advances shall be made progressively from each Running Bill such that the advance amounts paid along with the interest is fully recovered by the time the contractor's billing reaches 80% of contract value.

2.13.8 Recovery rate per month shall be the sum of:

a. Not less than 10% of Running Bill amount
b. Simple interest up to the date of RA Bill on the outstanding Principle amount/amounts

2.13.9 Contractor to submit Bank Guarantee as per prescribed formats for each of the advance and shall be valid for at least one year or the recovery duration or the balance contract period which ever is later. In case the recovery of dues does not get completed within the aforesaid BG period, the contractor shall renew the BG or submit fresh BG for the outstanding amount and the remaining recovery period.

2.13.10 BHEL is entitled to make recovery of the entire outstanding amount in case the contractor fails to comply with the BG requirement

2.14 QUANTITY VARIATION

2.14.1 The quoted rates shall remain firm irrespective of any variations in the individual quantities. No compensation becomes payable in case the variation of the final executed contract value is within the limits of Plus (+) or Minus (-) 15% of awarded contract value

2.14.2 Compensation due to variation of final executed value in excess of the limits defined in clause above, shall be as follows:

i) In case the finally executed contract value reduces below the lower limit of Contract Value due to quantity variation specified above, the contractor will be eligible for compensation @ 15% of the difference between the lower limit of the contract value and the actual executed value.

ii) In case the finally executed contract value increases above the upper limit of Contract Value

due to quantity variation specified above, there will be no revision in the rates within the contract period.

2.15 EXTRA WORKS

2.15.1 All rectifications/modifications, revamping, and reworks required for any reasons not due to the fault of the contractor, or needed due to any change in deviation from drawings and design of equipments, operation/maintenance requirements, mismatching, or due to damages in transit, storage and erection/commissioning, and other allied works which are not very specifically indicated in the drawings, but are found essential for satisfactory completion of the work, will be considered as extra works.

2.15.2 Extra works arising on account of the contractor's fault, irrespective of time consumed in rectification of the damage/loss, will have to be carried out by the contractor free of cost. Under such circumstances, any material and consumable required for this purpose will also have to be arranged by the contractor at his cost.

2.15.3 All the extra work should be carried out by a separately identifiable gang, without affecting routine activities. Daily log sheets in the pro-forma prescribed by BHEL should be maintained and shall be signed by the contractor's representative and BHEL engineer. No claim for extra work will be considered/entertained in the absence of the said supporting documents i.e. daily log sheets. Signing of log sheets by BHEL engineer does not necessarily mean the acceptance of such works as extra works.

2.15.4 BHEL retains the right to award or not to award any of the major repair/ rework/modification/rectification/fabrication works to the contractor, at their discretion without assigning any reason for the same

2.15.5 After eligibility of extra works is established and finally accepted by BHEL engineer/designer, payment will be released on competent authority's approval at the following rate.

MAN-HOUR RATE FOR ELIGIBLE EXTRA WORKS: Single composite average labour man-hour rate, including overtime if any, supervision, use of tools and tackles and other site expenses and incidentals, consumables for carrying out any major rework/ repairs/ rectification/ modification/ fabrication as certified by site as may arise during the course of erection, testing, commissioning or extra works arising out of transit, storage and erection damages, payment, if found due will be at Rs 60/- per man hour.

2.15.6 The above composite labour man hour rate towards extra works shall remain firm and not subject to any variation during execution of the work. PVC will not be applicable for extra works. Rate revision, Over Run Charges/compensation etc will not be applicable due to extra works.

2.15.7 Extra Works for Civil Packages shall be regulated as follows

i) Rates for Extra Works arising due to (1) non availability of BOQ (Rate Schedule), OR (2) change in Specifications of materials/works (3) rectification/modification/dismantling & re erecting etc due to no fault of Contractor, shall be in the order of the following:

a) Item rates are to be derived from similar nature of items in the BOQ (Rate Schedule) with applicable escalation derived from All India Consumer Price Index for Whole Sale Commodities.
b) As per CPWD-DSR-2007 (or latest edition) with applicable escalation derived from All India Consumer price Index for Whole Sale Commodities, OR, Notification issued by the office of CPWD for 'Cost Index' in that Region where the project is being executed, whichever is less
c) Item rates are to be worked out on the basis of prevailing market rates mutually agreed between BHEL and Contractor, plus 15% towards Contractor's overheads and profit.

ii) PVC and ORC will not applicable be for (i) above.

2.16 SUPPLEMENTARY ITEMS

2.16.1 For NON Civil Works

Supplementary items are items/works required for completion of entire work but not specified in the scope of work. Subject to certification of such items/works as supplementary items by BHEL Engineer, rates shall be derived on the basis of any one of the following on mutual agreement:

i) Based on percentage breakup/rates indicated for similar/nearby items

ii) In case (i) above does not exist, then BHEL/site may derive the percentage breakup/rates to suit the type of work

2.16.2 For Civil Works

i) Rates for Supplementary Works/Additional Works arising out due to additions/alterations in the original scope of works as per contract subject to certification of BHEL Engineer shall be worked out as under:

a) Item rates which are available in existing BOQ (Rate Schedule) shall be operated with applicable escalation derived from All India Consumer Price Index for Whole Sale Commodities
b) Items of works which are not available in existing BOQ shall be operated as an 'Extra Works' and rate shall be derived as per clause no 2.15.7

ii) Execution of Supplementary Works/Additional Works through the Contractor shall be at the sole discretion of BHEL, and shall be considered as part of executed contract value for the purpose of Quantity Variation as per clause 2.14

iii) BHEL Engineer's decision regarding fixing the rate as above is final and binding on the contractor.

iv) PVC and ORC will not be applicable for (i) above.

2.17 **PRICE VARIATION COMPENSATION**

2.17.1 In order to take care of variation in cost of execution of work on either side, due to variation in the index of LABOUR, HIGH SPEED DIESEL OIL, WELDING ROD, CEMENT, STEEL, MATERIALS, Price Variation Formula as described herein shall be applicable

2.17.2 85% component of Contract Value shall be permitted to be adjusted for variation in various relevant indices during execution of work. The remaining 15% shall be treated as fixed component

2.17.3 The basis for calculation of price variation in each category, their component, Base Index, shall be as under:

| SL NO. | CATEGORY | BASE INDEX | COMPONENT ('K') | | |
|---|---|---|---|---|---|
| | | | CIVIL PACKAGES (See Note A/B/C) | MECHANICAL PACKAGES | LABOUR ORIENTED |

| | | | A | B** | C | | PACKAGES (See Note D ) |
|---|---|---|---|---|---|---|---|
| i) | LABOUR (ALL CATEGORIES) | 'MONTHLY ALL-INDIA AVERAGE CONSUMER PRICE INDEX NUMBERS FOR INDUSTRIAL WORKERS' published by Labour Bureau, Ministry of Labour and Employment, Government of India. (Website: labourbureau.nic.in) | 40 | 25 | 30 | 65 | 80 |
| ii) | HIGH SPEED DIESEL OIL | Name of Commodity : HSD OIL. Type : INDIVIDUAL COMMODITY (See Note F) | 5 | 3 | 5 | 5 | 5 |
| iii) | WELDING ROD | Name of Commodity : WELDING ROD Type: INDIVIDUAL COMMODITY (See Note F) | | | | 15 | |
| iv) | CEMENT | Name of Commodity : GREY CEMENT Type: INDIVIDUAL COMMODITY (See Note F) | | 20 | 30 | | |
| v) | STEEL (Structural and Reinforcement Steel) | Name of Commodity : a1. IRON & SEMIS Type: GROUP ITEM (See Note F) | | 25 | | | |
| vi) | MATERIALS (Other than Cement & Steel) | Name of Commodity: ALL COMMODITIES Type: GROUP ITEM (See Note F) | 40 | 12 | 20 | | |

Note: A) Cement & Steel : Free Issue (BHEL Scope)
B) Cement & Steel : In Contractor Scope {**: unless otherwise specified in Special Conditions of Contract (SCC) }
C) Cement in Contractor Scope, and Steel is Free Issue (BHEL Scope)
D) Predominantly 'Labour Oriented' packages including Material Handling & Management, Insulation, Painting, Electrical and CI or a combination thereof, which are separately tendered and awarded
E) For Composite packages (i.e. Civil+Mechanical+Electrical/CI or Civil+Mechanical or Mechanical+Electrical/CI), the components for various categories shall be as per respective packages
F) As per the 'MONTHLY WHOLE SALE PRICE INDEX' for the respective Commodity and Type, published by Office of Economic Adviser, Ministry of Commerce and Industry, Government of India. (Website : www.eaindustry.nic.in). Revisions in the index or commodity will be re adjusted accordingly.

2.17.4 Payment/recovery due to variation in index shall be determined on the basis of the following notional formula without any initial absorption, in respect of the identified components viz LABOUR, HIGH SPEED DIESEL OIL, WELDING ROD, CEMENT, STEEL, MATERIALS

$$P = K \times R \times \frac{(X_N - X_o)}{X_o}$$

Where

P = Amount to be paid/recovered due to variation in the Index for Labour, High Speed Diesel Oil, Welding Rod, Cement, Steel and Materials

K = Percentage component applicable for Labour, High Speed Diesel Oil, Welding Rod, Cement, Steel and Materials

R = Value of work done for the billing month (Excluding Taxes and Duties if payable extra)

XN = Revised Index No for Labour, High Speed Diesel Oil, Welding Rod, Cement, Steel and Materials for the billing month under consideration

Xo = Index no for Labour, High Speed Diesel Oil, Welding Rod, Cement, Steel and Materials as on the Base date.

2.17.5 Base date shall be calendar month of the latest date of submission of Tender.

2.17.6 PVC shall not be payable for the ORC amount, Supplementary/Additional Items, Extra works.

2.17.7 The contractor shall furnish necessary monthly bulletins for the necessary indices from the relevant websites along with his Bills.

2.17.8 The contractor will be required to raise the bills for price variation payments on a monthly basis along with the running bills irrespective of the fact whether any increase/decrease in the index for relevant categories has taken place or not. In case there is delay in publication of bulletins (final figure), the provisional values as published can be considered for payments and arrears shall be paid/recovered on getting the final values.

2.17.9 PVC shall be applicable for the entire original contract period plus the extended period. However the Total Quantum of Price Variation amount payable/recoverable shall be regulated as follows:

i) For the portion of backlog attributable to the contractor, the PVC will be based on the average of the indices for the period of the original contract period.

ii) For the period of Force Majeure, the PVC will be limited to the indices applicable at the beginning of the force majeure period.

iii) For the portion of backlog attributable to BHEL, the PVC will be as per the indices applicable for the respective months

iv) The total amount of PVC shall not exceed 20% of the cumulatively executed contract value. Executed contract value for this purpose is exclusive of PVC, ORC, Supplementary/Additional Items and Extra works.

2.18 INSURANCE

2.18.1 BHEL/their customer shall arrange for insuring the materials/properties of BHEL/customer covering the risks during transit, storage, erection and commissioning.

2.18.2 It is the sole responsibility of the contractor to insure his materials, equipments, workmen, etc. against accidents and injury while at work and to pay compensation, if any, to workmen as per Workmen's compensation Act. The work will be carried out in a protected area and all the rules and regulations of the client /BHEL in the area of project which are in force from time to time will have to be followed by the contractor.

2.18.3 If due to negligence and or non-observation of safety and other precautions by the contractors, any accident/injury occurs to the property / manpower belong to third party, the contractor shall have to pay necessary compensation and other expense, if so decided by the appropriate authorities.

2.18.4 The contractor will take necessary precautions and due care to protect the material, while in his custody from any damage/ loss due to theft or otherwise till the same is taken over by BHEL or customer. For lodging / processing of insurance claim the contractor will submit necessary documents. BHEL will recover the loss including the deductible franchise from the contractor, in case the damage / loss is due to carelessness / negligence on the part of the contractor. In case of any theft of material under contractor's custody , matter shall be reported to police by the contractor immediately and copy of FIR and subsequently police investigation report shall be submitted to BHEL for taking up with insurance. However this will not relieve the contractor of his

contractual obligation for the material in his custody.

2.19 STRIKES & LOCKOUT

2.19.1 The contractor will be fully responsible for all disputes and other issues connected with his labour. In the event of the contractor's labour resorting to strike or the Contractor resorting to lockout and if the strike or lockout declared is not settled within a period of one month, BHEL shall have the right to get the work executed through any other agencies and the cost so incurred by BHEL shall be deducted from the Contractor's bills.

2.19.2 For all purposes whatsoever, the employees of the contractor shall not be deemed to be in the employment of BHEL

2.20 FORCE MAJEURE

The following shall amount to Force Majeure:-

2.20.1 Acts of God, act of any Government, War, Sabotage, Riots, Civil commotion, Police action, Revolution, Flood, Fire, Cyclones, Earth quake and Epidemic and other similar causes over which the contractor has no control.

2.20.2 If the contractor suffers delay in the due execution of the contractual obligation due to delays caused by force majeure as defined above, the agreed time of completion of the job covered by this contract or the obligations of the contractor shall be extended by a period of time equal to period of delay, provided that on the occurrence of any such contingency, the contractor immediately reports to BHEL in writing the causes of delay and the contractor shall not be eligible for any compensation.

2.21 ARBITRATION & RECONCILIATION

2.21.1 In case amicable settlement is not reached in the event of any dispute or difference arising out of the execution of the Contract or the respective rights and liabilities of the parties or in relation to interpretation of any provision by the Contractor in any manner touching upon the Contract, such dispute or difference shall (except as to any matters, the decision of which is specifically provided for therein) be referred to the sole arbitration of the arbitrator appointed by BHEL/In charge(Region).

The award of the Arbitrator shall be binding upon the parties to the dispute

Subject as aforesaid, the provisions of Arbitration and Reconciliation Act 1996 (India) or statutory modifications or re enactments thereof and the rules made there under and for the time being in force shall apply to the arbitration proceedings under this clause. The venue of the arbitration shall be the place from which the contract is issued or such other place as the Arbitrator at his discretion may determine

2.21.2 In case of Contract with Public Sector Enterprise (PSE) or a Government Department, the following shall be applicable :

In the event of any dispute or difference relating to the interpretation and application of the provisions of the Contract, such dispute or difference shall be referred to by either party to the arbitration of one of the arbitrators in the department of public enterprises. The award of the arbitrator shall be binding upon the parties to the dispute, provided, however, any party aggrieved by such award may make further reference for setting aside or revision of the award to the Law Secretary, Department of Legal Affairs, Ministry of Law and Justice, Government of India. Upon such reference the dispute shall be decided by the Law Secretary or the Special Secretary or Additional Secretary when so authorized by the Law Secretary, whose decision shall bind the parties hereto finally and conclusively.

2.21.3 The cost of arbitration shall be borne equally by the parties.

2.21.4 Work under the contract shall be continued during the arbitration proceedings

2.22 RETENTION AMOUNT

2.22.1 Retention Amount shall be 5% of executed contract value and shall be recovered at the rate of 5% from each Running Bill admitted, including PVC Bills.

2.22.2 Refund of Retention Amount shall be as follows:

i) 50% of retention amount along with 'Final Bill'

ii) Balance 50% of retention amount shall be retained towards 'Performance Guarantee for Workmanship' and shall become refundable after expiry of Guarantee period, provided all the defects noticed during the guarantee period have been rectified to the satisfaction of BHEL Site Engineer/BHEL Construction Manager, and after deducting all expenses/other amounts due to BHEL under the contract/other contracts entered into by BHEL with them. This portion of the retention amount can be released on commencement of the Guarantee period, on submission of equivalent Bank Guarantee.

2.23 PAYMENTS

Payments to Contractors are made in any one of the following forms

2.23.1 Running Account Bills (RA Bills)

i) These are for interim payments when the contracts are in progress. The bills for such interim payments are to be prepared by Contractor in prescribed formats (RA Bill forms).

ii) Payments shall be made according to the extent of work done as per measurements taken up to the end of the calendar month and in line with the terms of payments described in the Tender documents

iii) Recoveries on account of electricity, water, statutory deductions, etc are made as per terms of contract

iv) Full rates for the work done shall be allowed only if the quantum of work has been done as per the specifications stipulated in the contract. If the work is not executed as per the stipulated specifications, BHEL may ask the contractor to re do the work according to the required specifications, without any extra cost. However, where this is not considered necessary 'OR' where the part work is done due to factors like non-availability of material to be supplied by BHEL 'OR' non availability of fronts 'OR' non availability of drawings, fraction payment against full rate, as is considered reasonable, may be allowed with due regard for the work remaining to be done. BHEL decision in this regard will be final and

binding on the contractor.

v) In order to facilitate part payment, BHEL Site Engineer at his discretion may further split the contracted rates/percentages to suit site conditions, cash flow requirements according to the progress of work

2.23.2 Final Bill

Final Bill' is used for final payment on closing of Running Account for works or for single payment after completion of works. 'Final Bill' shall be submitted as per prescribed format after completion of works as per scope and upon material reconciliation, along with the following.

i) 'No Claim Certificate' by contractor
ii) Clearance certificates where ever applicable viz Clearance Certificates from Customer, various Statutory Authorities like Labour department, PF Authorities, Commercial Tax Department, etc
iii) Indemnity bond as per prescribed format

BHEL shall settle the final bills after deducting all liabilities of Contractor to BHEL

2.24 PERFORMANCE GUARANTEE FOR WORKMANSHIP

2.24.1 Even though the work will be carried out under the supervision of BHEL Engineers the Contractor will be responsible for the quality of the workmanship and shall guarantee the work done for a period of twelve months from the date of commencement of guarantee period as defined in Special Conditions of Contract, for good workmanship and shall rectify free of cost all defects due to faulty erection detected during the guarantee period. In the event of the Contractor failing to repair the defective works within the time specified by the Engineer, BHEL may proceed to undertake the repairs of such defective works at the Contractor's risk and cost, without prejudice to any other rights and recover the same from the Guarantee money.

2.24.2 BHEL shall release the guarantee money subject to the following

i) Contractor has submitted 'Final Bill'
ii) Guarantee period as per contract has expired
iii) Contractor has furnished 'No Claim Certificate' in specified format
iv) BHEL Site Engineer/Construction Manager has furnished the 'No Demand Certificate' in specified format
v) Contractor has carried out the works required to be carried out by him during the period of Guarantee and all expenses incurred by BHEL on carrying out such works is included for adjustment from the Guarantee money refundable.

2.25 CLOSING OF CONTRACTS

The Contract shall be considered completed and closed upon completion of all contractual obligations and settlement of Final Bill or completion of Guarantee period whichever is later. Upon closing of Contract, BHEL shall issue a completion certificate as per standard format, based on specific request of Contractor.

2.26 REVERSE AUCTION:

BHEL reserves the right to go for Reverse Auction for Price Bid Opening by BHEL appointed service provider, instead of opening the submitted sealed price bid in the conventional way. The Business Rules for Reverse Auction shall be as per BHEL guidelines issued from time to time.

2.27 SUSPENSION OF BUSINESS DEALINGS

BHEL reserves the right to take action against Contractors who either fail to perform or Tenderers/Contractor who indulge in malpractices, by suspending business dealings with them in

| | |
|---|---|
| | line with BHEL guidelines issued from time to time. |
| 2.28 | OTHER ISSUES |
| 2.28.1 | Value of Non judicial Stamp Paper for Bank Guarantees and for Contract Agreement shall be not less than Rs 100/- unless otherwise required under relevant statutes. |
| 2.28.2 | In case of any conflict between the General Conditions of Contract and Special Conditions of Contract, provisions contained in the Special Conditions of Contract shall prevail. |
| 2.28.3 | Unless otherwise specified in NIT, offers from consortium/JVs shall not be considered. |
| 2.28.4 | BHEL may not insist for signing of Contract Agreements in respect of low value and short time period contracts like providing services for Hot water flushing, Chemical Cleaning, Transportation, etc |

| | |
|---|---|
| 1.0 | INTENT OF THE SPECIFICATION |
| 1.1 | The intent of this erection specification is to provide services for execution of the project according to most modern and proven techniques and codes. The omission of specific reference to any method, equipment or material necessary for the proper and efficient services towards installation of the plant shall not relieve the contractor of the responsibility of providing such services / facilities to complete the work or portion of work awarded to him. The quoted / accepted rates / price shall deem to be inclusive of all such contingencies. |
| 1.2 | The work shall conform to dimensions and tolerances given in various drawings and documents that will be provided during erection. If any portion of works is found to be defective in workmanship and not conforming to drawings / documents or other stipulations, the contractor shall dismantle and re-do the work duly replacing the defective materials at their own cost, failing which recoveries, as determined by BHEL, shall be effected from contractor's bills. |
| 1.3 | It is not the intent of this specification to specify herein all the details of erection and commissioning. However, the system shall conform in all respects to high standards of quality and workmanship for performing the required duties in a manner acceptable to purchaser who will interpret the meaning of drawings and specifications and shall be entitled to reject any work or material, which in his judgments is not in full accordance herewith. |
| 1.4 | The omission of specific reference to any fabrication / erection or other method, equipment or material necessary for proper and efficient working of the plant shall not relieve the tenderer of the responsibility of providing such facilities to complete the work at quoted rates. Any mismatch/ defect found due to mistake in fabrication / erection shall have to be rectified by the vendor free of cost. Inspection by BHEL/Customer does not relieve vendor of his responsibility of executing quality erection. |
| 1.5 | The work covered under this specification is of highly sophisticated nature, requiring the best quality workmanship, supervision, engineering and construction management. The contractor should ensure proper planning and successful and timely completion of the work to meet the overall project schedule. The contractor must deploy adequate quantity of tools & plants, modern / latest construction aids etc. He must also deploy adequate trained, qualified and experienced supervisory staff and skilled personnel. |

| | |
|---|---|
| 1.6 | Contractor shall erect and commission all the equipments and auxiliaries as per the sequence & methodology prescribed by BHEL depending upon the technical requirements. Availability of materials and fronts will decide this. BHEL Engineer's decision regarding correctness of the work and method of working shall be final and binding on the contractor. No claims for extra payment from the contractor will be entertained on the ground of deviation from the methods / sequence adopted in erection of similar sets elsewhere. |
| 1.7 | Following shall be the minimum responsibility of contractor and have to be provided within finally accepted rates / prices: |
| 1.7.1 | Provision as required of all types of labour, supervisors, engineers, watch and ward, tools & tackles, calibrated MMEs (Monitoring and Measuring Equipment) as specified and otherwise required for the work, consumables for erection, testing and commissioning including material handling |
| 1.7.2 | Achieving Proper out-turn / Turn-over as per BHEL plan and commitment. |
| 1.7.3 | Completion of work as per BHEL Schedule |
| 1.7.4 | Good quality and accurate workmanship for proper performance of the equipment |
| 1.7.5 | Repair and rectification |
| 1.7.6 | Preservation / Re-conservation of all components during storage / erection / commissioning till handing over. |

| | |
|---|---|
| 2.0 | GENERAL SERVICES TO BE RENDERED BY THE BIDDER |
| 2.1 | Services for construction, fabrication, equipment erection testing as well as trial run & commissioning of various equipment and accessories under the contract shall include but not be limited to the following: |
| 2.2 | Issuing materials from store/open yard from time to time for erection as per the construction programme. The Contractor shall be the custodian of all the materials issued till the plant/equipment is officially taken over by the owner / BHEL after complete erection any successful trial run & commissioning. |
| 2.3 | Transport of material to their respective places of erection and erection of the complete plant & equipment as supplied under this specification. |
| 2.4 | Trial run and commissioning of individual equipment / sub-systems to the satisfaction of Owner/BHEL. |
| 2.5 | Deployment of all skilled and unskilled manpower required for erection, supervision of erection, watch & ward, commissioning and other services to the rendered under this specification. |
| 2.6 | Deployment of all erection tools & tackle, construction machinery, transportation vehicles and all other implements in adequate number and size, appropriate for the erection work to be handled under scope of this specification except otherwise specified. |
| 2.7 | Supply of all consumables, eg welding electrodes, cleaning agents, diesel oil, lubricant etc as well as materials required for temporary supports, scaffolding etc as necessary for such erection work, unless specified other wise. |
| 2.8 | Providing support services for the contractor's erection staff eg construction of site offices, temporary stores, residential accommodation and transport to work site for erection personnel, watch and ward for security and safety of the materials under the Contractor's custody etc. as required. |
| 2.9 | Maintaining proper documentation of all the site activities undertaken by the Contractor as per the proforma mutually agreed with BHEL, Submission of monthly progress reports and any such document as and when desired by BHEL/owner, taking approval of all statutory authorities i.e Boiler Inspector, Factory Inspector, Inspector of Explosives etc , as applicable for respective portions of work fall under the jurisdiction of such statutes of laws. |
| 2.10 | Any other service, although not specifically called for but required for a contract of the size and nature indicated in the specification. |

| | |
|---|---|
| 3.0 | GENERAL TECHNICAL REQUIREMENTS (CODES AND STANDARDS) |
| 3.1 | Except where otherwise specified, the plant/equipment shall comply with the appropriate Indian Standard or an agreed internationally accepted Standard Specification as mentioned elsewhere in contract specifications, each incorporating the latest revisions at the time of tendering. Where no internationally accepted standard is applicable, the Bidder shall give all particulars and details as necessary, to enable BHEL to identify all of the plant/equipment in the same detail as would be possible had there been a Standard Specification. |
| 3.2 | Where the Bidder proposes alternative codes or standards he shall include in his tender one copy (in English) of each Standard Specification to which materials offered shall comply. In such case, the adopted alternative standard shall be equivalent or superior to the standards mentioned in the specification. |
| 3.3 | In the event of any conflict between the codes and standards referred above, and the requirements of this specification, the requirements which are more stringent shall govern. |
| 3.4 | Tools used during erection and commissioning shall not be accepted except with the specific approval of the Engineer. |

| | |
|---|---|
| 4.0 | OBLIGATIONS OF CONTRACTOR |
| 4.1 | CONSUMABLES & OTHER ITEMS |
| 4.1.1 | The contractor shall provide within finally accepted price / rates, all consumables (excepting those indicated in BHEL scope) like welding electrodes (including alloy steel and stainless steel), filler wires, TIG filler wires (over & above as supplied by the unit along with the plant materials, which will be given free of cost to bidder), gases (inert, welding, cutting), soldering material, dye penetrants, radiography films, etc. Other erection consumables such as tapes, jointing compound, grease, mobile oil, M-seal, Araldite, petrol, CTC / other cleaning agents, grinding and cutting wheels are to be provided by the contractor. Steel, packers, shims, wooden planks, scaffolding materials hardware items etc required for temporary works such as supports, scaffoldings are to be arranged by the contractor. Sealing compounds, gaskets, gland packing, wooden/concrete sleepers, for temporary work, required for completion of work except those which are specifically supplied by manufacturing unit are also to be arranged by the contractor. |
| 4.1.2 | All the shims, gaskets and packing, which go finally as part of plant equipment, shall be supplied by BHEL free of cost. |
| 4.1.3 | It shall be the responsibility of the contractor to plan the activities and store sufficient quantity of consumables. Non-availability of any consumable materials or equivalent suggested by BHEL cannot be considered as reason for not attaining the required progress or for additional claim. |
| 4.1.4 | <u>TIG Filler wire for Boiler and Filler wires for Electrodes for P91/T91 piping:</u><br>These shall be supplied by BHEL free of cost as supplied by BHEL Manufacturing Units as part of regular supply. Required quantity as arrived at by calculation / standards will only be supplied. It would be the contractors' responsibility to account for the consumption of these filler wires. Additional consumption beyond standard / calculated quantity will be at cost recovery basis only unless and otherwise accounted for. Surplus quantity of TIG filler wire, if any, shall be properly stored and returned to BHEL stores. |
| 4.1.5 | It shall be the responsibility of the contractor to obtain prior approval of BHEL, regarding suppliers, type of electrodes etc before procurement of welding electrodes. On receipt of electrodes at site these shall be subjected to inspection and approval by BHEL. The contractor shall inform BHEL details regarding type of electrodes, batch number, date of expiry etc and produce test certificate for each lot / batch with correlation of batch / lot number with respective test certificate. No |

| | |
|---|---|
| | electrode without a valid test certificate will to be used. |
| 4.1.6 | BHEL reserves the right to reject the use of any consumable including electrodes, gases, lubricants / special consumables if it is not found to be of the required standard / make / purity or when shelf life has expired. Contractor shall ensure display of shelf life on consumable wherever required and records maintained. |
| 4.1.7 | Storage of all consumables including welding electrodes shall be done as per requirement / instruction of the Engineer by the contractor at his cost. |
| 4.1.8 | In case of improper arrangement for procurement of any consumable, BHEL reserves the right to procure the same from any source and recover the cost from the Contractor's first subsequent bill at market value plus the departmental charges of BHEL from time to time. Postponement of such recovery is normally not permitted. The decision of Engineer in this regard shall be final and binding on the Contractor. |
| 4.1.9 | All lubricants and chemicals required for pre-commissioning, commissioning, testing, preservation and lubricants for trial runs of the equipment shall be supplied by BHEL / BHEL's client. All services including labour and T&P will be provided by the contractor for handling, filling, emptying, refilling etc. The consumption of lubricants / chemicals shall be properly accounted for. Surplus material if any shall be properly stacked/tagged and returned to BHEL/ CUSTOMER stores at no extra cost to BHEL. BHEL reserves the right to recover costs for wastage by the contractor. |
| 4.1.10 | Transportation of oil drums, from stores, filling of oil for flushing, first filling, subsequent changeover if any, topping/making up till the unit is fully commissioned and handed over to customer is included in scope of this contract. The contractor shall have to return all the empty drums to BHEL / BHEL's client store at no extra cost. Any loss / damage to above drums shall be to contractor's account. |
| 4.1.11 | All charges on account of Octroi, terminal or sales tax and other duties on materials obtained from any source for carrying out the works in the scope of the contractor shall be borne by the contractor. |
| 4.2 | TOOLS AND PLANTS / MONITORING AND MEASURING EQUIPMENT (MMEs) |
| 4.2.1 | T&Ps and MMEs to be provided by Contractor |
| 4.2.1.1 | All T&Ps and MMEs excepting those specifically indicated in BHEL scope are to be provided by the Contractor. Contractor has to make his own arrangement at his cost for completing the formalities (including arrangement of Road permits, if any) if required with Sales Tax/VAT authorities, for bringing their materials, plants and |

| | |
|---|---|
| | equipments at site for the execution of work under this contract. |
| 4.2.1.2 | All suitable cranes, lifting and transport equipments for material handling at stores/yard/siding of BHEL/Customer are included in scope. BHEL's cranes will not be available for this purpose unless otherwise specifically permitted as per contract conditions |
| 4.2.1.3 | All T&Ps to be deployed by the contractor shall have the approval of BHEL Engineer with regard to brand, quality and specification. |
| 4.2.1.4 | Indicative list of Major T&Ps in the scope of Contractor are given in the Technical Conditions of Contract. Bidders to note that these are only indicative and as such all other T&P necessary for timely and satisfactory completion of work in scope shall be mobilized by Contractor |
| 4.2.1.5 | Timely deployment of adequate T&Ps is the responsibility of the contractor. The contractor shall be prepared to augment the T&P at short notice to match the planned programme and to achieve the milestones. |
| 4.2.1.6 | Contractor shall maintain and operate his tools and plants in such a way that major breakdowns are avoided. In the event of major breakdown, contractor shall make alternative arrangements expeditiously so that the progress of work is not hampered. |
| 4.2.1.7 | In the event of contractor failing to arrange the required tools, plants, machinery, equipment, material or non-availability of the same owing to breakdown, BHEL will make alternative arrangement at the risk and cost of the contractor. Decision of BHEL shall be final and binding on the contractor |
| 4.2.1.8 | The T&P to be arranged by the contractor shall be in proper working condition and their operation shall not lead to unsafe condition. The movements of cranes, and other equipment should be such that no damage / breakage occurs to foundations, other equipments, material, property and men. All arrangements for the movement of the T&P etc shall be the contractor's responsibility. |
| 4.2.1.9 | Use of welding generators/ rectifiers only shall be permitted for welding. Use of welding transformers will be subject to specific approval of BHEL engineer. |
| 4.2.1.10 | The contractor at his cost shall carry out periodical testing of his construction equipments. Test certificates shall be furnished to BHEL. |
| 4.2.1.11 | Contractor shall ensure deployment of serviced and healthy T&Ps including cranes, lifting tackles, wire ropes, manila ropes, winches and slings etc. History card and maintenance records for major T&Ps will be maintained by the contractor and will be made available to BHEL Engineer for inspection as and when required. |

| | |
|---|---|
| | Fitness certificate / Test Certificates of T&P shall have to be submitted before it is put in use. Identification for such T&Ps will be done as per BHEL Engineer's advice.<br>BHEL reserves the right to permit only new slings up to 20 mm and lifting tackles up to 3 MT capacities. |
| 4.2.1.12 | Contractor shall ensure deployment of reliable and calibrated MMEs (Inspection measuring and Monitoring equipment). The MMEs shall have test / calibration certificates from authorized / Government approved / accredited agencies traceable to National / International standards. Each MME shall have a label indicating calibration status i.e. date of calibration, calibration agency and due date for calibration. A list of such instruments deployed by contractor at site with its calibration status is to be submitted to BHEL Engineer for control. |
| 4.2.1.13 | Re-testing / re-calibration shall also be arranged at regular intervals during the period of use as advised by BHEL Engineer within the contract price. The contractor will also have alternate arrangements for such MME so that work does not suffer when the particular instrument is sent for calibration. If any MMEs not found fit for use, BHEL shall have the right to stop the use of such item. It will be necessary for the contractor to deploy proper item. Any readings taken by the defective instrument will be recalled and repeat the readings taken by that instrument with a proper one. In case he fails to do so, BHEL may deploy MMEs and retake the readings at contractor's cost. |
| 4.2.1.14 | BHEL shall have lien on all T&P, MMEs and other equipment of the contractor brought to the site for the purpose of erection, testing and commissioning. BHEL shall continue to hold the lien on all such items throughout the period of contract / extended period. The contractor and / or his sub-contractors, without the prior written approval of the Engineer, shall remove no material brought to the site. |
| 4.2.1.15 | The month wise T&P deployment plan to execute the work is to be submitted as per relevant format as per the instruction of BHEL. It shall be the contractor's responsibility to deploy the required T&P, for timely and successful completion of the job, to any extent. |
| 4.2.2 | Obligations in respect of T&Ps and MMEs provided by BHEL |
| 4.2.2.1 | T&P / MMEs being provided by BHEL to sub-contractor free of hire charges shall be shared by other subcontractors working for BHEL at site and the allotment done by BHEL Engineer shall be final and binding. |
| 4.2.2.2 | BHEL T&P will be issued in basic assembled condition. Additional loose components / sub-assemblies / attachments as and when necessary, will be |

| | |
|---|---|
| | issued by BHEL. Assembly of such additional loose components/sub-assemblies/ attachments is in contractor's scope. |
| 4.2.2.3 | In case of non-availability of the T&Ps to be provided by BHEL due to breakdown, major overhauls, distribution pattern or any other reason, the contractor shall plan / amend / alter his activities to meet erection / commissioning targets in consultation with BHEL. |
| 4.2.2.4 | void |
| 4.2.2.5 | The contractor shall engage trained and experienced operators for the operation of BHEL's T&Ps. Their skill / performance will be checked by BHEL Engineer before they are allowed to operate the same. However checking of skills by BHEL does not absolve the contractor of his responsibilities for proper and safe handling of equipment, consistent good performance of operators and regular performance evaluation of operators. |
| 4.2.2.6 | The day to day operation and maintenance of BHEL's T&Ps (Other than cranes) shall be carried out by contractor as per manufacturer's / BHEL's maintenance schedule at his cost. The contractor shall arrange, at his own cost, trained operators, fuel and other consumables for their operation.BHEL shall arrange all spares needed for upkeep of major T&Ps provided like Huck Bolting Machine*, DG Set, Induction Machine and Hydraulic Test pumps. The contractor has to arrange for fixing of the spares; supervision in specialized cases will be provided by BHEL. For upkeep of all other T&Ps supplied by BHEL, spares shall be arranged by the Contractor. BHEL supplied T&Ps shall be maintained in good working condition during the entire period of use. T&Ps in defective / damaged condition shall be rectified promptly to the full satisfaction of BHEL engineer. Contractor shall maintain records for maintenance of major T&Ps. These shall be made available for Inspection whenever required. In case of any lapses on the part of the contractor, BHEL at its own discretion shall get the servicing / repair of equipment done at the risk and cost of the contractor along with BHEL overheads. Further, if there are breakdowns / damages due to negligence of the contractor, the complete service / repair charges and cost of all the spares damaged with BHEL overheads shall be recovered from contractor's RA bills.<br>*: for operation and maintenance of ESP Huck bolting machine, BHEL shall provide the basic power rig and hose. Balance toolingsie Guns, chuck jaws etc are to be arranged by contractor. |
| 4.2.2.7 | void |

| | |
|---|---|
| 4.2.2.8 | Increasing / shortening of the crane boom to suit work requirements shall have to be arranged by the indenting contractor at his cost including restoration to a state as directed by BHEL. All necessary manpower tools, support, consumables, illumination etc. will have to be arranged by contractor at his cost. If required, contractor has to return the crane with original boom. |
| 4.2.2.9 | The area and infrastructure development of the area to be carried out by the customer. However in construction projects of this magnitude it is possible that all the areas / approaches may not be ready. In such cases backfilling of approaches where ever necessary, consolidation of ground and arrangement of sleepers / sand bag filling etc for safe operation / movement of equipment including cranes / trailers etc shall be the responsibility of the contractor at his cost. No compensation on this account shall be payable. |
| 4.2.2.10 | In the event of contractor not using and maintaining BHEL T&Ps according to BHEL's instructions. BHEL will have the right to withdraw such item without any notice and no claim in this regard shall be entertained and contractor shall be responsible for delay in execution on this account. |
| 4.2.2.11 | The contractor shall furnish regular utilization report of the BHEL T&Ps, as per requirement of BHEL. |
| 4.2.2.12 | Any loss / damage to any part of BHEL T&Ps and MMEs shall be to the contractor's account and any expenditure on these accounts by BHEL will be recovered from the contractor's bill in case the contractor fails to make good the loss. |
| 4.2.2.13 | It shall be responsibility of the contractor to take delivery of T&Ps and MMEs from stores or place of use by other contractor at project site, transport the same to site and return the same to BHEL store / place as intimated by Engineer in project site in good working conditions after use. |
| 4.2.2.14 | The contractor shall return BHEL T&Ps and MMEs issued to him in good working condition as and when desired by BHEL (on completion or reduction of workload). If contractor delays return of T&P and MME, hire charges as applicable shall be levied by BHEL from time, it was requisitioned till the time of actual return.<br>T&Ps and MMEs returned in damaged / unserviceable condition shall be got repaired by BHEL at its own discretion and entire cost of repair with BHEL overheads shall be recovered from the contractor. |
| 4.2.2.15 | Replacement cost including BHEL overheads in respect of irreparable / completely damaged / non return of T&Ps and MMEs shall be recovered from the |

| | |
|---|---|
| | contractor's running / final bills |
| 4.2.2.16 | Obligations in respect of Cranes provided by BHEL |
| a) | BHEL will make available the cranes (as per Technical Conditions of Contract) free of charge to the contractor on sharing basis mainly for the purposes enumerated/indicated therein. BHEL cranes have to be shared with other agencies / contractors of BHEL. The allocation of cranes shall be the discretion of BHEL engineer, which shall be binding on the contractor. |
| b) | BHEL Cranes may be initially issued in basic assembled condition. Any alteration/addition like boom reduction / extension, assembly of components/sub-assemblies needed for modulating the capacity/reach/other features of cranes and restoration to the state as directed by BHEL shall be the contractor's responsibility. |
| c) | In case the BHEL cranes are not covered under AMC of BHEL, then the day-to-day upkeep and running maintenance like filling / topping up of lubricants, changing filters, etc including repair of self starter and dynamo of these cranes shall be the responsibility of the contractor.If on checking it is found that the same is not followed, BHEL will exercise its right to get the job/works done at the risk and cost of contactor.<br><br>In case BHEL cranes are covered under AMC awarded by BHEL, then the day-to-day upkeep and running maintenance as described above are excluded from scope. However any additional helpers if any required during Preventive/Breakdown Maintenance, Assembly/disassembly shall be provided by contractor at no extra cost.<br><br>BHEL may also provide cranes through crane hiring agencies in which case the day-to-day upkeep and running maintenance shall be excluded from scope of contractor. |
| d) | Minor consumables like cotton cloth, cotton waste, etc is to be supplied by Contractor. All spares and lubricants/grease is excluded from scope. Contractor to give the requirements of these items well in advance in case the cranes provided by BHEL are BHEL owned cranes. |
| e) | Unless otherwise specified, trained operators for BHEL owned cranes shall be provided by the contractor. These operators should possess valid license for heavy vehicle. |
| f) | BHEL cranes will be withdrawn for regular and capital maintenance as per the respective schedule of maintenance. As far as possible such schedules will be intimated to the contractor in advance and may be adjusted depending on the work |

| | |
|---|---|
| | requirements at site. However no claim whatsoever will be entertained on account of non-availability of cranes. |
| g) | Where the services of the cranes provided by BHEL are to be shared by other agencies/ contractors of BHEL, the contractor's responsibilities defined above will also be apportioned accordingly to the beneficiary agency. Working arrangements in this regard will be done at site by BHEL engineer and in any case his decision shall be final and binding. |
| h) | Major breakdowns will be attended to by BHEL. However, in case of breakdowns or damages due to negligence of the contractor, the complete service/repair charges including cost of spares shall be to the account of the contractor, along with BHEL overheads. |
| 4.2.2.17 | Obligations in respect of Construction Lift/Elevators provided by BHEL |
| a) | The total erection including commissioning, maintenance, statutory clearances shall be in included in scope of work. Supervision by the original equipment supplier or their authorized agency shall be arranged for by BHEL, in case found necessary. |
| b) | All day to day and routine maintenance and checking is to be carried out by the contractor as per the recommendations of the supplier. He should periodically check the brakes and carry out the all works to ensure the safety of all those using the lift/elevator. BHEL shall arrange spares required for upkeep of Construction lift/elevator |
| c) | The construction lift/elevator should never be overloaded as this can lead to serious accidents. Ensuring all safety aspects in operation of the lift shall be the responsibility of the contractor. Erection of all the required number of landing platforms is included in scope. Landing platforms are to be provided with proper barricades and hand railings. |
| d) | After completion of contractual scope of work or as per BHEL advice, the temporary elevator/lift shall be dismantled and handed over to BHEL neatly identified/tagged. Temporary structures/platforms etc erected for the elevators/lifts are also to be dismantled and materials to be returned to stores as applicable. The construction and dismantling of the foundations required for the construction/elevator lifts is includedin the scope of the contractor. |

| | |
|---|---|
| 5.0 | RESPONSIBILITIES OF CONTRACTOR IN RESPECT OF LABOUR, SUPERVISORY STAFF, ETC. |
| 5.1 | Refer relevant clauses of General Conditions of Contract (GCC) also in this regard |
| 5.2 | The contractor shall deploy all the necessary skilled/semiskilled/ unskilled labour including highly skilled workmen etc. These workmen should have previous experience on similar job. They shall hold valid certificates wherever necessary. BHEL reserves the right to insist on removal of any employee of the contractor at any time if he is found to be unsuitable and the contractor shall forthwith remove him. |
| 5.3 | Contractor shall also comply with the requirements of local authorities/ project authorities calling for police verification of antecedents of the workmen, staff etc. |
| 5.4 | It is the responsibility of the contractor to engage his workmen in shifts and or on overtime basis for achieving the targets set by BHEL. This target may be set to suit BHEL's commitments to its customer or to advance date of completion of events or due to other reasons. The decision of BHEL in regard to setting the erection and commissioning targets will be final and binding on the contractor. |
| 5.5 | Contractor shall provide at different elevation suitable arrangement for urinal and drinking water facility with necessary plumbing & disposal arrangement including construction of septic tank. These installations shall be maintained in hygienic condition at all times. |
| 5.6 | The Contractor in the event of engaging 20 or more workmen, shall obtain Independent license under the Contract labour (Regulation and Abolition) Act 1970 from the concerned authorities based on Form-V issued by the Principal Employer/Customer. In order to issue Form-V by Customer, Contractor shall fulfill all Statutory requirements like Insurance Policy, PF Code/PF Account number etc as per the requirement of BHEL/Customer |
| 5.7 | Contractor shall deduct the necessary amount towards Provident Fund and contribute equal amount as per Government of India laws. This amount will be deposited regularly to the provident Fund Commissioner. BHEL/Customer may insist for submission of the account code duly certified by PF Commissioner |
| 5.8 | Contractor may also be required to comply with provisions of ESI Act in vogue if applicable and submit evidence to BHEL. |
| 5.9 | BHEL / customer may insist for witnessing the regular payment to the labour. They may also like to verify the relevant records for compliance with statutory |

| | |
|---|---|
| | requirements. Contractor shall enable such facilities to BHEL / Customer. |
| 5.10 | Contractor shall deploy only qualified and experienced engineers/ supervisors. They shall have professional approach in executing the work. |
| 5.11 | The contractor's supervisory staff shall execute the work in the most professional manner in the stipulated time. Accuracy of work and aesthetic finish are essential part of this contract. They shall be responsible to ensure that the assembly and workmanship conform to dimensions and tolerances given in the drawings/instructions given by BHEL engineer from time to time. |
| 5.12 | The supervisory staff employed by the contractor shall ensure proper outturn of work and discipline on the part of the labour put on the job by the contractor. Also in general they should see that the works are carried out in a safe and proper manner and in coordination with other labour and staff employed directly by BHEL or other contractors of BHEL or BHEL's client. |
| 5.13 | It is the responsibility of the contractor to arrange gate pass for all his employees, T&P etc for entering the project premises. Necessary coordination with customer officials is the responsibility of the contractor. Contractor to follow all the procedures laid down by the customer for making gate passes. Where permitted, by customer / BHEL, to work beyond normal working hours, the contractor shall arrange necessary work permits for working beyond normal working hours. |
| 5.14 | The actual deployment will of Labour and Engineer/supervision staff shall be so as to satisfy the erection and commissioning targets set by BHEL. If at any time, it is found that the contractor is not in a position to deploy the required engineers/supervisors/workmen due to any reason, BHEL shall have the option to make alternate arrangements at the contractor's risk and cost.The expenditure incurred along with BHEL overheads thereon shall be recovered from the contractor |
| 5.15 | Contractor shall not deploy women labour at night. |

| | |
|---|---|
| 6.0 | MATERIAL HANDLING, STORAGE AND PRESERVATION ETC |
| 6.1 | MATERIAL HANDLING AND STORAGE |
| 6.1.1 | All the equipments/materials furnished under this contract shall be received from the project stores, sheds / storage yards and transported to pre assembly area / erection site and stored in the storage spaces in a manner so that they are easily retrievable till the contractor erects them. While drawing/lifting material from BHEL / customer stores, the contractor shall ensure that the balance / other materials are stacked back immediately. No claim is admissible on this account |
| 6.1.2 | While BHEL will endeavor to store / stack / identify materials properly in their open / close / semi closed / tarpaulins covered storage yard / shed, it shall be contractor's responsibility to assist BHEL in identifying materials well in time for erection. They should take the delivery of the same, following the procedure indicated by BHEL, and transport the material safely to pre-assembly yard / erection site in time, according to program. |
| 6.1.3 | The contractor shall take delivery of components, equipment / consumables from storage area after getting the approval of BHEL Engineer on standard indent forms. |
| 6.1.4 | The contractor shall identify and deploy necessary Engineers / supervisors / workmen for the above work in sufficient number as may be needed by BHEL, for areas covering their scope. |
| 6.1.5 | All the equipment shall be handled very carefully to prevent any damage or loss. No untested wire ropes / slings etc. shall be used for unloading / handling. The equipment shall be properly protected to prevent damage either to the equipment or to the floor where they are stored. The equipment from the stores shall be moved to the actual location at the appropriate time so as to avoid damage of such equipment at site. |
| 6.1.6 | Contractor shall ensure that while lifting slings shall be put over the points indicated on the equipment or as indicated in the manufacturer's drawings. Slings / shackles of proper size shall be used for all lifting and rigging purposes. All care shall be taken to safe guard the equipment against any damage. Dragging of piping / valves should be avoided. In case of any damage the cost shall be covered from the contractor. |
| 6.1.7 | Approach road conditions from the stores / yards to the erection site may not |

| | |
|---|---|
| | be equipped and ideal for smooth transportation of the equipment. Contractor may have to be adequately prepared to transport the materials under the above circumstances without any extra cost. . The contractor may familiar himself with soil conditions at site. |
| 6.1.8 | Contractor shall be responsible for examining all the plant and materials issued to him and notify the Engineer immediately of any damage, shortage, discrepancy etc before they are moved out of the stores / storage area. The contractor shall be solely responsible for any shortages or damages in transit, handling, storage and erection of the equipment once received by him. As the erection work will be spread in different areas / locations of the project, contractor has to arrange sufficient number of watch / ward personal to avoid any pilferage of material |
| 6.1.9 | The contractor shall maintain an accurate and exhaustive record-detailing out the list of all equipment received by him for the purpose of erection and keep such record open for the inspection of the engineer at any time. |
| 6.1.10 | All the material in the custody of contractor and stored in the open or dusty locations must be covered with suitable weather proof / fire retardant covering material wherever applicable and shall be blocked up on raised level above ground. All covering materials including blocks and sleeper shall be arranged by the contractor at his cost. |
| 6.1.11 | If the material belonging to the contractor are stored in area other than those earmarked for his operation the engineer will have the right to get it moved to the area earmarked for the contractor at the contractors risk and cost. |
| 6.1.12 | The contractor shall be responsible for making suitable indoor storage facilities to store all equipment (drawn by the contractor from BHEL / customer stores), which require indoor storage till the time of their installation. The Engineer will direct the contractor in this regard, which item in his opinion will require indoor storage, and the contractor shall comply with Engineer's decision. |
| 6.1.13 | The contractor shall ensure that all surplus / damaged / scrap / unused material, packing wood / containers/ special transporting frames etc are returned to BHEL at a place in project area identified by the Engineer. The contractor will maintain an account for all items received and returned to BHEL. Any shortage in returning such items shall be chargeable to the contractor except allowable wastage for packing wood only. |
| 6.1.14 | The contractor shall hand over all parts / materials remaining extra over the normal requirement with proper identification tags to the stores as directed by |

| | |
|---|---|
| | the concerned BHEL engineer. |
| 6.1.15 | The contractor shall ensure that all the packing materials and protective devices installed on equipment during transit and storage are removed before installation. |
| 6.1.16 | It shall be the responsibility of the contractor to keep the work / storage areas in neat, tidy and working conditions. All surplus/unusable packing and other materials shall be removed and deposited at location(s) specified by BHEL within the project premises. If required weighing of the same within the project premises will have to be carried out. |
| 6.2 | PRESERVATION OF COMPONENTS |
| 6.2.1 | After taking delivery from BHEL / customer's stores, plant materials storage shall be subjected to the following protection besides other provisions indicated in these specifications elsewhere. |
| 6.2.1.1 | Items stored outdoors shall be stacked up at least six inches (6") off the ground.Items should not be stored in a low lying area where water logging is a possibility. Contractor should have sufficient numbers of wooden / concrete / steel sleepers for the job. |
| 6.2.1.2 | Motors, valves, electrical equipment, control equipment and instruments, and special or precision items requiring special care,etc shall be stored indoors. Motor windings shall be kept dry by use of external heat or space heaters. |
| 6.2.1.3 | Bearings and other wearing surfaces of plant materials shall be protected against corrosion and kept clean and should be regularly monitored. |
| 6.2.1.4 | Insulation materials shall be stored indoors or otherwise protected against getting wet/ damaged, using suitable measures and should be protected from direct rain. |
| 6.2.2 | It shall be the responsibility of the contractor to apply preservatives / touch up paints (primer) on equipment handled and erected by him till such time of final painting. It shall be contractor's responsibility to arrange for required paints (primer), thinners, labour, scaffolding materials, cleaning materials like wire brush, emery sheets, etc, cleaning of surface and provide one coat of preservatives / paints (primer) from time to time as decided by BHEL engineer. The accepted rate shall include this work also. It is to be noted that such painting may have to be done as and when required till such time the final painting is carried out. |
| 6.2.3 | The contractor shall effectively protect the finished work from action of weather |

| | |
|---|---|
| | and from damage or defacement and shall cover the finished parts then and there for their protection. |
| 6.2.4 | Any failure on the part of contractor to carry out works according to above clauses will entail BHEL to carry out the job from any other party and recover the cost from contractor. |

| | |
|---|---|
| 7.0 | DRAWINGS AND DOCUMENTS |
| 7.1 | The detailed drawings, specifications available with BHEL engineers will be made available to the contractor during execution of work at site. The contractor will also ensure availability of all drawings / documents at work place. |
| 7.2 | Necessary drawings to carry out the erection work will be furnished to the contractor by BHEL on loan, which shall be returned to BHEL Engineer at site after completion of work. Contractor shall ensure safe storage and quick retrieval of these documents. |
| 7.3 | The contractor shall maintain a record of all drawings and documents available with him in a register as per format given by BHEL Engineer. Contractor shall ensure use of pertinent drawings / data / documents and removal of obsolete ones from work place and returning to BHEL. |
| 7.4 | The data furnished in various annexure enclosed with this tender specification are only approximate and for guidance. However, the change in the design and in the quantity may occur as is usual in any such large scale of work. The contractors quoted rates shall be inclusive of the above factor |
| 7.5 | Should any error or ambiguity be discovered in the specification or information the contractor shall forthwith bring the same to the notice of BHEL before commencement of work. BHEL's interpretation in such cases shall be final and binding on the contractor. |
| 7.6 | Deviation from design dimensions should not exceed permissible limit. The contractor shall not correct or alter any dimension / details, without specific approval of BHEL. |

| | |
|---|---|
| 8.0 | INSPECTION AND QUALITY |
| 8.1 | Inspection, Quality Assurance, Quality Control |
| 8.1.1 | Preparation of quality assurance log sheets and protocols with customer/ consultants/statutory authority, welding logs, NDE records, testing & calibration records and other quality control and quality assurance documentation as per BHEL engineer's instructions, is within the scope of work/specification. These records shall be submitted to BHEL/customer for approval from time to time. |
| 8.1.2 | The protocols between contractor and customer/ BHEL shall be made prior to installation for correctness of foundations, materials, procedures, at each stage of installation, generally as per the requirement of customer/ BHEL. This is necessary to ensure elimination of errors or keeping them within tolerable limits and to avoid accumulation and multiplication of errors. |
| 8.1.3 | A daily log book should be maintained by every supervisor/engineer of contractor on the job in duplicate (one for BHEL and one for contractor) for detailing and incorporating alignment/clearance / centering / leveling readings and inspection details of various equipments etc.<br>High pressure welding details like serial number of weld joints, welders name, date of welding, details of repair, heat treatment etc. will be documented in welding log as per BHEL Engineer's instructions.<br>Record of radiography containing details like serial number of weld joints, date of radiography, repairs, if any, re-shots etc shall also be maintained as per BHEL Engineer's instructions.<br>Record of heat treatments performed shall be maintained as prescribed by BHEL |
| 8.1.4 | The performance of welders will be reviewed from time to time as per the BHEL standards. Welders' performance record shall be furnished periodically furnished for scrutiny of BHEL's Engineer. Corrective action as informed by BHEL shall be taken in respect of those welders not conforming to these standards. This may include removal/ discontinuance of concerned welder(s). Contractor shall arrange for the alternate welders immediately |
| 8.1.5 | All the welders shall carry identity cards as per the proforma prescribed by BHEL/Customer/Consultant. Only welders duly authorized by |

| | |
|---|---|
| | BHEL/customer/consultant shall be engaged on the work. |
| 8.1.6 | Contractor shall provide all the Measuring Monitoring Equipments (MMEs) required for completion of the work satisfactorily. These MMEs shall be of brand, quality and accuracy specified by BHEL Engineer and should have necessary calibration and other certificates as per the requirement of BHEL Engineer. Decision of BHEL Engineer regarding acceptance or otherwise of the measuring instruments/gauges/tools for the work under this specification, is final and binding on the contractor. BHEL may give an indicative list of MMEs required for this work and to be made available by the contractor. The list will be reviewed by BHEL and the contractor shall meet any augmentation needed wherever required. |
| 8.1.7 | It is the responsibility of the contractor to prove the accuracy of the testing/measuring/calibrating equipments brought by him based on the periodicity of calibration as called for in the BHEL's quality assurance standards/BHEL Engineer's instructions. |
| 8.1.8 | Any re-laying or re-termination of cables/re-erection of instruments/ recalibration of instruments etc. required due to contractor's mistake or design requirement and found at any stage inspection, shall be carried out by the contractor at no extra cost. |
| 8.1.9 | BHEL, Power Sector Regions (PSNR/PSER/PSWR/PSSR) have already been accredited with ISO 9001 certification and as such this work is subject to various audits to meet ISO 9001 requirements. One particular aspect which needs special mention is about arrangement of calibration of instruments by the contractor. Contractor shallensure deployment of reliable andcalibratedMMEs (Measuring and Monitoring Equipments). The MMEs shall have test / calibration certificates from authorised / Government approved / Accredited agencies traceable to National / International Standards. Re-testing / re-calibration shall also be arranged at regular intervals during the period of use as advised by BHEL Engineer within the contract price. The contractor will also have alternate arrangements for such MMEs so that work does not suffer when the particular equipment / instrument is sent for calibration. Also if any MMEs not found fit for use, BHEL shall have the right to stop the use of such item and instruct the contractor to deploy proper item and recall ie repeat the readings taken by that instrument, failing which BHEL may deploy MME and retake the readings at Contractor's cost. |
| 8.1.10 | Re-work necessitated on account of use of invalid MMEs shall be entirely to the |

| | |
|---|---|
| | contractor's account. He shall be responsible to take all corrective actions, including resource augmentation if any, as specified by BHEL to make-up for the loss of time. |
| 8.1.11 | In the courses of erection, it may become necessary to carry repeated checks of the work with instruments recently calibrated, re-calibrated. BHEL may counter/ finally check the measurements with their own MMEs. Contractor shall render all assistance in conduct of such counter/final measurements. |
| 8.1.12 | Total Quality is the watchword of the work and Contractor shall strive to achieve the Quality Standards, procedures laid down by BHEL. He shall follow all the instructions as per BHEL drawings and Quality Standards. |
| 8.2 | Stage Inspection By FES/QA Engineers |
| 8.2.1 | Apart from day-to-day inspection by BHEL Engineers stationed at Site and Customer's Engineers, stage inspection of equipments under erection and commissioning at various stages shall also be conducted by teams of Engineers from Field Engineering Services of BHEL's Manufacturing Units, Quality Assurance teams from Field Quality Assurance, Unit/Factory Quality Assurance and Commissioning Engineers from Technical Services etc. Contractor shall arrange all labour, tools and tackles etcalong with proper access for such stage inspections free of cost. |
| 8.2.2 | Any modifications suggested by BHEL FES and QA Engineers' team shall be carried out. Claims of contractor, if any, shall be dealt as per Section 13, and provided such modifications have not arisen for reasons attributable tothe contractor. |
| 8.3 | Statutory Inspection of Work |
| 8.3.1 | The work to be executed under these specifications has to be offered for inspection, at appropriate stages of work completion, to various statutory authorities for compliance with applicable regulations.<br>The work related statutory inspections, though not limited to, are as under:<br>1) Inspectorate of Steam Boilers and Smoke Nuisance<br>2) Electrical Inspector<br>3) Factory Inspector, Labour Commissioner, PF Commissioner and other authoritiy connected to this project work |

| | |
|---|---|
| | The scope includes getting the approvals from the statutory authorities, which includes arranging for inspection visits of statutory authority periodically as per BHEL Engineer's instructions, arranging materials for ground inspection, taking rub outs for the pressure parts to be offered for inspection, submitting co-related inspection reports, documents, radiographs etc and following up the matter with them. Contractor shall also make all arrangements for offering the Products / Systems for inspection at location, as applicable, to the concerned authority. |
| 8.3.2 | Contractor should be qualified to execute pressure parts & piping work coming under the purview of IBR, for which he should register himself with CIB of state concerned. contractor also should be aware of the latest IBR regulations and Electricity Act, including the amendments thereof. |
| 8.3.3 | Contractor shall comply with 'Qualification Tests for welders engaged in welding of Boilers and Steam Pipes under Construction, Erection and Fabrication at Site in India and in repairing Boilers and steam pipes by welding' in line with Chapter XIII of Indian Boiler Regulations-1950, for testing his welders / men / workers, including all associated fees, procedures, required instruments and equipments and their calibration there of. It shall be contractor's responsibility to obtain approval of Statutory Authorities, wherever applicable, for the conducting of any work which comes under the purview of these authorities, at his cost. |
| 8.3.4 | The following fees shall be excluded from scope of Contractor:<br>1. Registration Fee as per Regulation 385 of Chapter IX of Indian Boiler Regulations-1950<br>2. Fees for inspection of Boiler at the site of Construction as per Regulation 395 A, sl no 4 of Chapter IX of Indian Boiler Regulations-1950<br>However all other fees like visit fees charged by the Boiler Inspector and other arrangements for his visit or visits till satisfactory completion of work, shall be included in scope of Contractor |
| 8.4 | The Quality Management System of BHEL, Power Sector Regions (PSNR/PSER/PSWR/PSSR) have already been certified and accredited under ISO 9002 standards in this regard. The basic philosophy of the Quality Management System is to define the organizational responsibility, work as per |

| | |
|---|---|
| | documented procedures, verify the output with respect to acceptance norms, identify the non-conforming product/ procedure and take corrective action for removal of non-conformance specifying the steps for avoiding recurrence of such non-conformities, & maintain the relevant quality records. The nonconformities are to be identified through the conduct of periodical audit of implementation of quality systems at various locations/stages of work. Suppliers/vendors of various products/services contributing in the work are also considered as part of the quality management system. .as such the contractor is expected not only to conform to the quality management system of BHEL but also it is desirable that they themselves are accredited under any quality management system standard. |
| 8.5 | Field Quality Assurance |
| 8.5.1 | Contractor shall carry out all activities conforming to the approved Field Quality Plan (FQP) as revised from time to time. Total quality shall be the watchword of the work and contractor shall strive to achieve the quality standards, procedures laid down by BHEL. He shall follow all the instructions as per BHEL drawings and quality standards. Contractor shall provide the services of quality assurance engineer as per the relevant clauses. |

| | |
|---|---|
| 9.0 | OCCUPATIONAL HEALTH, SAFETY & ENVIRONMENT MANAGEMENT/ QUALITY ASSURANCE PROGRAMME:<br>BHEL, Power Sector Regions (PSNR/ER/WR/SR) are each certified for ISO 9001. Quality of work to customer's satisfaction and fulfillment of system requirements are the essence of ISO 9001 certification. BHEL, PS Regions have HSE certification (ISO 14001 & OHSAS 18001) and therefore Contractor also shall organise/ plan/ perform all their activities to meet with the applicable requirements of these standards. |
| 9.1 | HSE (Health, safety & Environment):<br>Contractor will comply with HSE (Health, safety & Environment) requirements of BHEL. HSE requirements in brief, are given below :- |
| 9.1.1 | Contractor will nominate one of their qualified and experienced employees as Safety Officer, who will be responsible for all HSE related issues of contractors work area. Safety Officer will have authority to stop any activity, in case he observes that the activity is not being carried out in safe manner. He will conduct surprise inspection as well as periodic inspection/drill (at least once in a month) and submit such reports to BHEL. He will conduct periodic meetings with supervisors of different working groups and explain HSE issues and use of PPEs to them. Reports of such meetings will be submitted to BHEL. Contractor will develop suitable work procedures based upon HSE guidelines and OCPs and implement it. Such work procedures will consist of Area of work, T&P Details, Work Procedure, PPE requirements etc. Please refer Schedule VIII of BOCW Rules for number of safety officers, qualification, duties etc.<br><br>Contractor should highlight the requirement of safety to staff and labour through daily tool box meeting before start of the days job.<br><br>Contractor to also submit monthly safety reports as per the format/procedure of BHEL. |
| 9.1.2 | The contractor shall arrange induction and regular health check of their employees as per schedule VII of BOCW rules by aregistered medical practitioner. The contractor shall take special care of the employees affected with occupational diseases under rule 230 and schedule II of BOCW Rules. The employees not meeting the fitness requirement should not be engaged for such job |
| 9.1.3 | Following personnel protective equipments (PPEs), in adequate numbers, will |

| | |
|---|---|
| | be made available at site & their regular use by all concerned will be ensured :- |
| | - HELMET |
| | - SAFETY GOGGLES & WELDING FACE SHIELDS |
| | - SAFETY BELTS AND PROTECTIVE NET FOR WORKING AT HEIGHT |
| | - SAFETY SHOES |
| | - EAR PLUG |
| | - ANY OTHER SAFETY EQUIPMENT REQUIRED FOR SAFE COMPLETION OF THE WORK |
| | Contractor to also submit monthly reports on above as per the format/procedure of BHEL. |
| 9.1.4 | Providing appropriate First Aid facilities for prompt treatment of injuries and illness at work place. Arranging training to contractor workmen/ employees for giving first aid. |
| 9.1.5 | Arranging ambulance in case of any emergency situation . |
| 9.1.6 | Identification of nearest hospital and health check-up of workmen/employees |
| 9.1.7 | Providing filtered drinking water at work place in cool container. |
| 9.1.8 | Providing Canteen, Rest Room, Washing facilities to the contracted employees as per provisions of Contract Labour Regulation Act 1970 (Chapter V). |
| 9.1.9 | Providing appropriate fire fighting equipment at designated work place and nominate a fire officer/warden adequately trained for his job. |
| 9.1.10 | Identification of nearest fire station and display contact telephone nos. / person's name around work places for cases of emergencies . |
| 9.1.11 | Providing adequate no. of 24 V sources and ensure that no hand lamps are operating at voltage level above 24 Volts. |
| 9.1.12 | Fulfilling safety requirements at all power tapping points. |
| 9.1.13 | Red & White caution tape of proper width(1.5 to 2 inch) to be used for cordoning unsafe area such as open trench, excavation area etc. |
| 9.1.14 | Providing contractors company logo on cloths /uniform/ proper identity cards with photographs, for correct identification of people working at project site . |
| 9.1.15 | High/ Low pressure welders to be identified with separate colourclothings. No welders will be deployed without passing appropriate tests and holding valid welding certificates. Approved welding procedure should be displayed at work place. |
| 9.1.16 | Displaying safe handling procedures for all chemicals such as lube oil, acid, alkali, sealing compounds etc , at work place . |

| | |
|---|---|
| 9.1.17 | All scaffolding/ platforms should be made from materials of appropriate quality/grade so that these are safe for use. It should be certified/declared safe for use by an experienced contractor person, before any scaffolding/platform is used. Please refer IS:3696 part 1&2 and 4014 part 1 & 2 |
| 9.1.18 | All T&Ps/ MMEs should be of reputed brand/appropriate quality & must have valid test/calibration certificates bearing endorsement from competent authority of BHEL.. Contractor to also submit monthly reports of T&Ps deployed and validity test certificates to BHEL safety Officer as per the format/procedure of BHEL. |
| 9.1.19 | Ensure that the regulatory requirement of excessive weight limit (to carry/lift/ move weights beyond prescribed limits) for male and female workers are complied with. |
| 9.1.20 | Safety slogan, Safety/ Caution boards , wherever required to be displayed in consultation with BHEL. |
| 9.1.21 | Take suitable measures for waste management and environment related laws/legislation as a part of normal construction activities. Compliance with the legal requirements on storage/ disposal of paint drums (including the empty ones), Lubricant containers, Chemical Containers, and transportation and storage of hazardous chemicals will be strictly maintained. Ensure proper cleanliness of work place, housekeeping and waste management (including proper waste disposal ) on daily basis. |
| 9.1.22 | It is imperative on the part of the contractor to join and effectively contribute in joint measures such as tree plantation, environment protection, contributing towards social upliftment, conversion of packing woods to school furniture, keeping good relation with local populace etc. |
| 9.1.23 | The contractor shall carry out periodic air and water quality check and illumination level checking in his area of work place and take suitable control measure. |
| 9.1.24 | The Contractor is required to provide proper safety net systems (IS-11057) where ever the hazard of fall from height is present as per instruction of BHEL Engineer. The safety nets shall be fire resistant, duly tested and shall be of ISI Mark and the nets shall be located as per site requirements to arrest or to reduce the consequences of a possible fall of persons working at different heights. |
| 9.1.25 | All applicable OCPs (Operational control procedures) will be followed by contractor as per BHEL instructions. This will be done as part of normal scope of work. List of such OCPs is given below . In case any other OCP is found to |

| | |
|---|---|
| | be applicable during the execution of work at site, then contractor will follow this as well, within quoted rate. These OCPs (applicable ones) will be made available to contractor during work execution at site. However for reference purpose, these are kept with Safety Officer of BHEL at the Power Sector Regional HQ, or available in downloadable format in the website, which may be refereed by contractor, if they so desire. |

| 9.2 | SAFETY AND CLEANLINESS :<br>The contractor shall take all necessary safety precautions and arrange for appropriate appliances as per discretion of BHEL or its authorised officials (Site Construction Manager) to prevent loss of human lives, injuries, to personnel engaged and damage to property. Before commencing the work, the contractor shall submit a "Safety Plan" to the above authorised BHEL official and obtain approval on the same. The safety plan shall indicate in detail the measures that would be taken by the contractor to ensure safety of men, equipment, materials and environment during execution of the work. This will also include an organization structure, role and responsibilities of the concerned key |

| | |
|---|---|
| | personnel, the safety practices that will be followed, PPEs deployed, plan for handling critical activities and emergencies. |
| 9.3 | If the contractor fails to take appropriate safety precautions or to provide necessary safety devices and equipment or to carry out instructions issued by the authorised BHEL official, BHEL shall have the right to take corrective steps at the risk and cost of the contractor. |
| 9.4 | During the course of construction, alternation or repairs, scrap with protruding nail, sharp edge etc and all other debris shall be kept clean from working areas, passage, ways and stairs in and around site. |
| 9.5 | Combustible scrap and debris shall be removed at regular intervals during the course of execution. Safe means shall be provided to facilitate such removal. The combustible scrap should be stored in safe place away from the plant materials to avoid fire accidents. The area shall be chosen in consultation with the Engineer and to be cordoned off. |
| 9.6 | Rigging equipment for materials handling shall be inspected prior to use in each shift and as necessary during its use to ensure that it is safe. Defective rigging equipment will be removed from service. |
| 9.7 | Rigging equipment shall not be loaded in excess of its recommended safe working load. Rigging equipment, when not in use, shall be removed from the original work area so as not to present a hazard to employees. |
| 9.8 | Contractor shall notify the engineer, of his intention to bring on to site any equipment or any container, with liquid or gaseous fuel or other substance which may create a hazard. The Engineer shall have the right to prescribe the condition under which such equipment or container may be handled and used during the performance of the works and the contractor shall strictly adhere to such instructions. The Engineer shall have the right to inspect any construction tool and to forbid its use, if in his opinion it is unsafe. No claim due to such prohibition will be entertained. |
| 9.9 | Where it is necessary to provide and/or store petroleum products or petroleum mixture & explosives, the contractor shall be responsible for carrying out such provision / storage in accordance with the rules & regulations laid down in the relevant petroleum act, explosive act and petroleum and carbide of calcium manual, published by the chief inspector of explosives of India. All such storage shall have prior approval if necessary from the chief inspector of explosives or any other statutory authority. The contractor shall be responsible for obtaining |

| | |
|---|---|
| | the same. |
| 9.10 | Cylinders shall be moved by tilting and rolling them on their bottom edges. They shall not be intentionally dragged, struck or permitted to strike each other violently. |
| 9.11 | When cylinders are transported by powered vehicle they shall be secured in a vertical position. |
| 9.12 | All workmen of the contractor working on construction area shall wear safety shoes, hand gloves, safety helmets and safety belt as applicable. The contractor shall provide to its workforce and ensure the use of following personnel protective equipment as found necessary and as directed by BHEL. |
| 9.12.1 | Safety Helmets conforming to IS-2925 : 1984 |
| 9.12.2 | Safety Belts conforming to IS-3521:1983 |
| 9.12.3 | Safety Shoes conforming to IS-1989 : 1978 |
| 9.12.4 | Eye and face protection devices conforming to IS – 1179:1967, IS 5983:1980, IS 8521 Part 1:1977, IS 8521 Part 2: 1994. |
| 9.12.5 | Hand and body protection devices conforming to IS 4770:1991 and IS- 6994 : Part 1: 1973, IS – 8619 : 1977 |
| 9.12.6 | Ear protection IS-9167:1979 |
| 9.12.7 | Respiratory Protective Devices as per IS-9473:2002, i4746:1999 and 14166:1994 |
| 9.13 | The contractor shall insure his workmen against all accidents and the policy shall be presented to BHEL Engineer on demand. Other wise, BHEL will arrange the same and the expenditure towards this will be debited to the contractor. In case of a fatal or disabling injury accident to any person at construction site due to lapses by the contractor, the victim and/or his/her dependants shall be compensated by the contractor as per statutory requirements. However, if considered necessary BHEL shall have the right to impose appropriate financial penalty on contractor and recover the same from payments due to the contractor for suitably compensating the victim and/or his/her dependence before imposing any such penalty. Appropriate enquiry shall be held by BHEL giving opportunity to the contractor for presenting his case. Above safety conditions are not exhaustive but gives an idea for the contractor and contractor shall adhere to all safety precaution given by the |

| | |
|---|---|
| | Engineer at site. |
| 9.14 | The contractor shall arrange at his cost adequate lighting facilities e.g. flood lighting, hand lamps, area lighting etc. at various levels for safe and proper working operations during night hours at the work spot as well as at the pre-assembly area. |
| 9.15 | The contractor shall be responsible for provision of all the safety notices and safety equipment as enjoined on him by the application of relevant statutory regulation / provisions and/or as called upon by BHEL from time to time. He shall be held responsible for any violation of statutory regulations (local, state or central) and BHEL instruction that may endanger safety of men, equipment and material. |
| 9.16 | The contractor shall provide temporary fencing wherever required as a safety measure against accident and damage to properties. Suitable caution notices shall be displayed where access to any part is found to be unsafe and hazardous. |
| 9.17 | Contractor shall ensure safety of all the workmen, material and equipment either belonging to him or to others working at site. He shall observe safety rules and codes applied by BHEL without exception. |
| 9.18 | It will be the responsibility of the contractor to ensure safe lifting of the equipment, taking due precaution to avoid any accident and damage to other equipment and personnel. All requisite tests and inspection of handling equipment, tools & tackle shall be periodically done by the contractor by engaging only the COMPETENT PERSONS as per law. Defective equipment or uncertifiedshall be removed from service. Any equipment shall not be loaded in excess of its recommended safe working load. |
| 9.19 | The contractor shall provide necessary first aid facilities as per schedule III. In addition, ambulance facilities, OHC and CMO as per schedule IV, V, X and XI of BOCW Rules as applicable for all his employees, representatives and workmen at site and BHEL shall have no obligation in this regard. The first aid boxes should be placed at various elevations so as to make them available within the reach and at the quickest possible time. The contractor should conduct periodical first –aid classes to keep his supervisor and Engineers properly trained for attending to any emergency. |
| 9.20 | Training |

| | |
|---|---|
| 9.20.1 | The contractor shall arrange induction safety training for all employees before assigning work. In addition, awareness programme, mock drill at regular intervals and daily tool box meetings shall be arranged. Monthly report of the above to be given to BHEL safety Officer as per prescribed BHEL formats |
| 9.20.2 | All the contractor's supervisory personnel and sufficient number of workers shall be trained for fire protection systems. Enough number of such trained personnel must be available during the tenure of contract. Contractor should nominate his supervisor to coordinate and implement the safety measures. |
| 9.21 | Contractor shall provide enough fire protecting equipment of the types and numbers at his office, stores, temporary structure in labour colony etc. Such fire protection equipment shall be easy and kept open at all times. The fire extinguishers shall be properly refilled and kept ready which should be certified at periodic intervals. The date of changing should be marked on the Cylinders. All other fire safety measures as laid down in the "codes for fire safety at construction site" issued by safety coordinator of BHEL shall be followed. Non-compliance of the above requirement under fire protection shall in no way relieve the contractor of any of his responsibility and liabilities to fire accident occurring either to his materials or equipment or those of others. Emergency contacts nos must be displayed at prominent locations |
| 9.22 | The contractor shall at his cost, remove from vicinity of work at least once each day all combustible waste, scrap, panting materials, rubbish, unused or other materials and deposit them in places specified by BHEL to keep the work site clear and tidy. Use of undercoated canvas paper, corrugated paper, fabricated carton, plastic or other flammable materials shall be restricted to the minimum and promptly removed. |
| 9.23 | The contractor shall not use any hand lamp energized by Electric power with supply voltage of more than 24 volts in confined spaces like inside water boxes, turbine casings, condensers etc. |
| 9.24 | All portable electric tools used by the contractor shall have safe plugging system to source of power and be appropriately earthed. Only electricians licensed by appropriate statutory authority shall be employed by the contractor to carry out all types of electrical works. Details of earth resource ad their test date to be given to BHEL safety officer as per the prescribed formats of BHEL |
| 9.25 | In case of any delay in completion of a job due to mishaps attributable to lapses by the contractor, BHEL shall have the right to recover cost of such delay from |

| | |
|---|---|
| | the payments due to the contractor, after notifying the contractor suitably. |
| 9.26 | Valve protection caps shall be kept in place and secured. |
| 9.27 | The contractor shall be responsible for the safe storage and handling of his radio-active sources as per BARC rules and regulations. |
| 9.28 | Tarpaulin being inflammable should not be used (instead, only non infusible covering materials shall be used) as protective cover while preheating, welding, stress relieving etc. at site. |
| 9.29 | If the contractor fails to improve the standards of safety in its operation to the satisfaction of BHEL after being given reasonable opportunity to do so and/or if the contractor fails to take appropriate safety precautions or to provide necessary safety devices and equipment or to carry out instruction regarding safety issued by BHEL, BHEL shall have the right to take corrective steps at the risk and cost of the contractor after giving a notice of not less than 7 days indicating the steps that would be taken by BHEL. |
| 9.30 | If the contractor succeeds in carrying out its job in time with out any fatal or disabling injury accident and without any damage to property BHEL may, at its sole discretion, favorably consider to reward the contractor suitably for the performance. |
| 9.31 | The contractor shall carefully follow the safety requirement of BHEL/ the purchaser with the regard to voltages used in critical areas. |
| 9.32 | The contractor shall use only properly insulated and armored cables which conform to the requirement of Indian Electricity Act and Rules for all wiring, electrical applications at site. BHEL reserves the right to replace any unsafe electrical installations, wiring, cabling etc. at the cost of the contractor. All electrical appliances used in the work shall be in good working condition and shall be properly earthed. No maintenance work shall be carried out on live equipment. The contractor shall maintain adequate number of qualified electricians to maintain his temporary electrical installations. Area wise Electrical safety inspection is to be carried out on monthly basis as per “Electrical Safety Inspection checklist’ and the report is to be submitted to BHEL safety officer |
| 9.33 | The contractor shall arrange adequate number of persons specifically for clearing any debris and for house keeping of the erection area including restacking of components in the erection areas. Housekeeping to be carried out |

| | |
|---|---|
| | as per BHEL's checklistand report is to be submitted to BHEL safety officer |
| 9.34 | In case of any damage to property due to lapses by the contractor, BHEL shall have the right to recover the cost of such damages from the contractor after holding an appropriate enquiry. |
| 9.35 | The contractor shall submit report of all accidents, fires and property damage etc to the Engineer immediately after such occurrence, but in any case not later then 24 hours of the occurrence. Such reports shall be furnished in the manner prescribed by BHEL. In addition periodic reports on safety shall also be submitted by the contractor to BHEL from time to time as prescribed by the Engineer.Compiled monthly reports of all kinds of accidents, fires and property damage to be submitted to BHEL safety officer as per prescribed formats |
| 9.36 | Before commencing the work, the contractor shall appoint/nominate a responsible person to supervise implementation of all safety measures and liaison with his counterpart of BHEL. |
| 9.37 | Suitable scaffolds shall be provided for workman for all works that cannot safely be done from the ground, or from solid construction except in the case of short duration of work which can be done safely from ladders. When a ladder is used, it shall be of rigid construction made of steel. The steps shall have a minimum width of 45 cm and a maximum rise of 30 cm. Suitable handholds of good quality wood or steel shall be provided and the ladder shall be given an inclination not steeper then ¼ horizontal and 1 vertical. |
| 9.38 | Scaffolding or staging more than 3.6 m above the ground floor, swung or suspended from an overhead support or erected with stationery support shall have a guard rail properly bolted, braced or otherwise secured, at least 90 cm above the floor or platform of such scaffolding or staging and extending along the entire length of the out side and ends thereof with only such openings as may be necessary for the delivery of materials. Such scaffolding or staging shall be so fastened as to prevent it form saver, from swaying, from the building or structure. |
| 9.39 | Working platforms, gangways and stairways shall be so constructed that they do not sag unduly or unequally and if the height of the platform gangways provided is more than 3.6 m above ground level or floor level, they shall be closely boarded and shall have adequate width which shall not be less than 750 mm and be suitably fenced as described above. |

| | |
|---|---|
| 9.40 | Every opening in the floor or a building or in a working platform shall be provided with suitable means to prevent the fall of persons or materials by providing suitable fencing or railing whose minimum height shall be 90 cm. |
| 9.41 | Wherever there are open excavation in ground, they shall be fenced off by suitable railing and danger signals installed at night so as to prevent persons slipping into the excavations. |
| 9.42 | Safe means of access shall be provided to all working places. Every ladder shall be securely fixed. No portable single ladder shall be over 9 m in the length while the width between side rails in rung ladder shall in no case be less than app. 29.2 cm for ladder upto and including 3 m in length. For longer ladders this width shall be increased at least ¼'' for each additional foot of length. |
| 9.43 | A sketch of the ladders and scaffolds proposed to be used shall be prepared and approval of the Engineer obtained prior to Construction. |
| 9.44 | All personnel of the Contactor working within the plant site shall be provided with safety helmets. All welders shall wear welding goggles while doing welding work and all metal worker shall be provided with safety gloves. Persons employed on metal cutting and grinding shall wear safety glasses. |
| 9.45 | Adequate precautions shall be taken to prevent danger for electrical equipment. No materials on any of the sites of work shall be so stacked or placed as to cause danger or inconvenience to any person or the public. |
| 9.46 | All trenches, four feet or more in depth, shall at all times be supplied with at least one ladder for each 30 m in length or fraction thereof. The ladder shall be extended from bottom of the trench to at least 90 cm above the surface of the ground. Sides of the trenches which are 1.50 m or more in depth shall be stepped back to give suitable slope or securely held by timer bracing, so as to avoid the danger of sides collapsing. The excavated materials shall not be placed within 1.5 m of the edges of the trench or half of the depth of the trench whichever is more. Cutting shall be done from top to bottom. Under no circumstances undermining or undercutting shall be done. |
| 9.47.1 | The contractor shall take permission of BHEL prior to risky jobs such as working at height, hot work, liftig activities, etc through permits. No job should be started without permits. |
| 9.47.2 | The Contactor shall take all measures at the sites of the work to protect all persons from accidents and shall be bound to bear the expenses of defense of |

| | |
|---|---|
| | every suit, action or other proceeding at law that may be brought by any persons for injury sustained or death owing to neglect of the above precautions and to pay any such persons such compensation or which may with the consent of the Contractor be paid to compromise any claim by any such person should such claim proceeding be filed against BHEL, the Contractor hereby agrees to indemnify BHEL against the same. |
| 9.48 | Before any demolition work is commenced and also during the process of the work the following shall be ensured: |
| 9.48.1 | All roads and open areas adjacent to the work site shall either be closed or suitably protected. |
| 9.48.2 | No electric cable or apparatus which is liable to be a source of danger nor a cable or an apparatus used by the operator shall remain electrically charged. |
| 9.48.3 | All practical steps shall be taken to prevent danger to persons employed from the risks of fire or explosion or flooding. No floor, roof or other part of the building shall be so overloaded with debris or materials as to render them unsafe. |
| 9.49 | All necessary personnel safety equipment as considered adequate by the Engineer should be kept available for the use of the persons employed in the Site and maintained in a condition suitable for immediate use and the Contactor should take adequate steps to ensure proper use of equipment by those concerned. |
| 9.49.1 | Workers employed on mixing asphalted materials, cement and lime mortars shall be provided with protective foot wear and protective goggles. |
| 9.49.2 | Those engaged in white washing and mixing or stacking of cement bags or any materials which is injurious to the eyes shall be provided with protective goggles. |
| 9.49.3 | Those engaged in welding works shall be provided with welder's protective eyesight lids. |
| 9.49.4 | Stone breakers shall be provided with protective goggles and protective clothing and seated sufficient to safe intervals. |
| 9.49.5 | Where workers are employed in sewers and manholes, which are in use, the Contractor shall ensure that the manhole covers are opened and ventilated at least for an hour before the workers are allowed to get into manhole, and the manholes so opened shall be cordoned off with suitable railing and provided |

| | |
|---|---|
| | with warning signals or boards to prevent accident to the public. |
| 9.49.6 | The Contractor shall not employ men below the age of 18 years and women on the work of painting with products containing lead in any form. Wherever men above the age of 18 are employed on the work of lead painting, the following precautions should be taken. |
| 9.49.6.1 | No paint containing lead or lead products shall be used except in the form of paste or ready made paint. |
| 9.49.6.2 | Suitably face masks should be supplied for use by the workers where paints are applied in the form of spray or a surface having lead paint dry rubbed and scrapped. |
| 9.49.6.3 | Overalls shall be supplied by the Contractor to the workmen and adequate facilities shall be provided to enable the working painters to wash during the cessation of work. |
| 9.50 | When the work is being done near any place where there is risk of drowning all necessary equipment should be provided and kept ready for use and all necessary steps taken for prompt rescue of any person in danger and adequate provision should be made for prompt first aid treatment of all injuries likely to be sustained during the course of the work. |
| 9.51 | Motors, gearing, transmission, electric wiring and other dangerous parts of hoisting appliances should be provided with efficient safe guards. Hoisting appliance should be provided with such means as will reduce to the minimum the risk of any part of a suspended load becoming accidentally displaced. When workers employed on electrical installations which are already energized, insulting mats, wearing apparel, such as gloves, sleeves and boots as may be necessary should be provided. The worker should not wear any rings, watches and carry keys or other materials which are good conductor of electricity. |
| 9.52 | All scaffolds, ladders and other safety devices mentioned or described herein shall be maintained in safe condition and no scaffold, ladder or equipment shall be altered or removed while it is in use. Adequate washing facilities should be provided at or near the places of work. |
| 9.53 | The contractor shall maintain and ensure necessary safety measures as required for inspection and tests HV test, Pneumatic test, Hydraulic test, Spring test, Bend test etc as applicable, to enable inspection Agency for performing Inspection. If any test equipment is found not complying with proper safety |

| | |
|---|---|
| | requirements then the Inspection Agency may withhold inspection, till such time the desired safety requirements are met. |
| 9.54 | The Contractor shall notify BHEL of his intention to bring to site any equipment or material which may create hazard. BHEL shall have the right to prescribe the conditions under which such equipment or materials may be handled and the contractor shall adhere to such instructions. BHEL may prohibit the use of any construction machinery, which according to him is unsafe. No claim for compensation due to such prohibition will be entertained by BHEL. |
| 9.55 | All safety precautions shall be taken for welding and cutting operations as per IS-818. All safety precautions shall be taken for foundation and other excavation marks as per IS-3764. |
| 9.56 | .All gas cylinders shall be stored in upright position. Suitable trolley shall be used. There shall be flash-back arrestors conforming to IS-11006 at both cylinder and burner ends. Damaged tube and regulators must be immediately replaced. No of cylinders shall not exceed the specified quantity as per OCP |
| 9.57 | These safety provisions should be brought to the notice of all concerned by display on a notice board at a prominent, place at work spot. The persons responsible for compliance of the safety code shall be named therein by the Contractor |
| 9.58 | To ensure effective enforcement of the rules and regulations relating to safety precautions the arrangement made by the contract shall be open to inspection by the Engineer of the Engineer's Representative. |
| 9.59 | Keeping the work area clean/ free from debris, removed scaffoldings, scraps, insulation/sheeting wastage /cut pieces, temporary structures, packing woods etc. will be in the scope of the contractor. Such cleanings has to be done by contractor within quoted rate, on daily basis by an identified group. If such activity is not carried out by contractor / BHEL is not satisfied, then BHEL may get it done by other agency and actual cost alongwith BHEL overheads will be deducted from contractor's bill. Such decisions of BHEL shall be binding on the contractor. |
| 9.60 | Notwithstanding the above clauses there is nothing to exit the Contractor from the operations of any other Act or Rule in force in area of work in this respect.<br>Provided always that all safety measures apart from those specifically provided in this agreement which are brought to the notice of the Contractor from time to time by the Engineer shall be complied by the Contractor. Provided further that |

all consequences, damages, or losses arising by reason of any safety code shall be met with by the Contractor.

9.61 NON COMPLIANCE:-

NONCONFORMITY OF SAFETY RULES AND SAFETY APPLIANCES WILL BE VIEWED SERIOUSLY AND BHEL HAS RIGHT TO IMPOSE FINES ON THE CONTRACTOR AS UNDER for every instance of violation noticed:

| SN | Violation of Safety Norms | Fine (in Rs) |
|---|---|---|
| 01 | Not Wearing Safety Helmet | 50/- * |
| 02. | Not wearing Safety Belt or not anchoring life line | 100/-* |
| 03 | Not wearing safety shoe | 100/-* |
| 04 | Not keeping gas cylinders vertically | 100/- |
| 05 | Not using flash back arrestors | 50/- |
| 06 | Not wearing gloves | 50/- * |
| 07. | Grinding Without Goggles | 50/- * |
| 08. | Not using 24 V Supply For Internal Work | 500/- |
| 09. | Electrical Plugs Not used for hand Machine | 100/- |
| 10. | Not Slinging property | 200/- |
| 11. | Using Damaged Sling | 200/- |
| 12. | Lifting Cylinders Without Cage | 500/- |
| 13. | Not Using Proper Welding Cable With Lot of Joints And Not Insulated Property. | 200/- |
| 14. | Not Removing Small Scrap From Platforms | 200/- |
| 15. | Gas Cutting Without Taking Proper Precaution or Not Using Sheet Below Gas Cutting | 200/- |
| 16. | Not Maintaining Electric Winches Which are Operated Dangerously | 500/- |
| 17. | Improper Earthing Of Electrical T&P | 500/- |
| 18 | No or improper barricading | 500/- |
| 19. | Activity carried out without Safety work permit (Height work, Lifting activity, Hot work-each person/case) | 1000/- |
| 20. | Accident Resulting in Partial Loss in Earning Capacity | 25,000/- per victim |

| | | | |
|---|---|---|---|
| | 21. | Fatal Accident/Accidents Resulting in total loss in Earning Capacity | 1,00,000/- per victim # |

Legend:-*: per head,
#: or as deducted by Customer whichever is higher

Any other non-conformity noticed not listed above will also be fined as deemed fit by BHEL. The decision of BHEL engineer is final on the above. The amount will be deducted from running bills of the contractor. The amount collected above will be utilized for giving award to the employees who could avoid accident by following safety rules. Also the amount will be spent for purchasing the safety appliances and supporting the safety activity at site.

9.61 CITATION:-If safety record of the contractor in execution of the awarded job is to the satisfaction of safety department of BHEL, issue of an appropriate certificate to recognize the safety performance of the contractor may be considered by BHEL after completion of the job

9.62 MEMORANDUM OF UNDERSTANDING

After Award Of Work, Contractors Are Required To Enter Into A Memorandum Of Understanding As Given Below:

Memorandum of Understanding

- BHEL, Power Sector _____ Region is committed to Health, Safety and Environment Policy (EHS Policy).
- M/s _____ do hereby also commit to the same EHS Policy while executing the Contract Number _____
- M/s _____ shall ensure that safe work practices not limited to the above are followed by all construction workers and supervisors. Spirit and content therein shall be reached to all workers and supervisors for compliance.
- BHEL will be carrying out EHS audits twice a year and M/s _____ shall ensure to close any non-conformity observed/reported within fifteen days.

Signed by authorized representative of M/s ----------

| | |
|---|---|
| | Name :<br><br>Place & Date: |

| | |
|---|---|
| 10.0 | RA Bill Payments |
| 10.1 | The contractor shall submit his monthly RA bills with all the details required by BHEL on specified date every month covering progress of work in all respects and areas for the previous calendar month. |
| 10.2 | Mode of payment and measurement of work completed shall be as per relevant clauses of General Conditions of Contract |
| 10.3 | Release of payment in each running bill including PVC Bills where ever applicable will be restricted to 95% of the value of work admitted as per stages of progressive pro rata payments. |
| 10.4 | The 5% thus remaining shall be treated as 'Retention Amount' and shall be released as per terms specified in the General Conditions of Contract. |
| 10.5 | The payment for running bills will normally be released within 30 days of submission of running bill complete in all respects with all documents. It is the responsibility of the contractor to make his own arrangements for making timely payments towards labour wages, statutory payments, outstanding dues etc and other dues in the meanwhile.<br><br>In case of Civil works, 60% of RA Bills complete and correct in all respects and certified by BHEL Engineer, shall be paid within 15 days of receipt. Balance payment shall be within 30 days. |
| 10.6 | BHEL shall release payment through Electronic Fund Transfer (EFT)/RTGS. In order to implement this system, Contractor to furnish details pertaining to his Bank Accounts where proceeds will be transferred through BHEL's banker, as per prescribed formats:<br><br>Note: BHEL may also choose to release payment by other alternative modes as applicable |
| 10.7 | Paying Authority shall be the Construction Manager of the Site. Any change in the paying Authority shall be intimated to the Contactor accordingly. |

| | |
|---|---|
| 11.0 | Performance Monitoring |
| 11.1 | Performance of the contractor is monitored through various reports/reviews and shall be jointly evaluated every month for unit wise identified packages as per prescribed formats. Based on the net weighted scores obtained, Contractors shall be rated 'Good' or 'Satisfactory' or 'Unsatisfactory' |
| 11.2 | In case of any dispute on performance rating and the contractor refuses to sign on the performance rating given by BHEL package Incharge, the same shall be reviewed by BHEL site Incharge/Construction Manager and his decision shall be final. |
| 11.3 | Release of RA Bills will be contingent upon joint evaluation of performance |
| 11.4 | Performance of the contractor will be taken into consideration for assessing the capacity of the bidder to execute future jobs under tender, as detailed in the Notice Inviting Tender. Risk of non evaluation or non availability of the Monthly performance evaluation reports is to be borne by the Bidder. |
| 11.5 | In case of 'Unsatisfactory performance' for a continuous period of three or more months for a package or packages, BHEL has the right to get the balance works executed at the risk and cost of the contractor. |
| 11.6 | In case of 'Unsatisfactory performance' in a financial year, BHEL reserves the right to put on hold such Contractors for a period of six months for similar package or similar packages |

| | |
|---|---|
| 12.0 | Suspension of Business dealings |
| 12.1 | BHEL reserves the right to take action against contractors who fail to perform or indulge in malpractices, by suspending business dealings with them. |
| 12.2 | Suspension could be in the form of 'Hold', 'De-listing' or 'Banning' a contractor. |
| 12.3 | A bidder may be put on HOLD for a period of 6 months, for future tenders for specific works on the basis of one or more of the following reasons:<br><br>a) Bidder does not honour his own offer or any of its conditions within the validity period.<br>b) Bidder fails to respond against three consecutive enquires of BHEL.<br>c) After placement of order, Bidder fails to execute a contract.<br>d) Bidder fails to settle sundry debt account, for which he is legitimately liable, within one year of its occurrence.<br>e) Bidder's performance rating falls below 60% in specific category (more fully described in chapter 'Performance Monitoring')<br>f) Bidder works are under strike/ lockout for a long period. |
| 12.4 | A Bidder may be de-listed from the list of registered Bidders of the region for a period of 1 year on the basis of one or more of the following reasons:-<br><br>a) Bidder tampers with tendering procedure affecting ordering process or commits any misconduct which is contrary to business ethics.<br>b) Bidder has substituted, damaged, failed to return, short returned or unauthorizedly disposedoff materials/ documents/ drawings/ tools etc of BHEL.<br>c) Bidder no longer has the technical staff, equipment, financial resources etc. required to execute the orders/ contracts. |
| 12.5 | A Bidder can be banned from doing any business with all Units of BHEL for a period of 3 years on the basis of one or more of the following reasons:<br>a) Bidder is found to be responsible for submitting fake/ false/ forged documents, certificates, or information prejudicial to BHEL's interest.<br>b) In spite of warnings, the Bidder persistently violates or circumvents the provisions of labour laws/ regulations/ rules and other statutory requirements.<br>c) Bidder is found to be involved in cartel formation |

| | |
|---|---|
| | d) The Bidder has indulged in malpractices or misconduct such as bribery, corruption and fraud, pilferage etc which are contrary to business ethics.<br>e) The Bidder is found guilty by any court of law for criminal activity/ offences involving moral turpitude in relation to business dealings.<br>f) The Bidder is declared bankrupt, insolvent, has wound up or been dissolved; i.e ceases to exist for all practical purposes.<br>g) Bidder is found to have obtained Official Company information/ documentation by questionable means.<br>h) Communication is received from the administrative Ministry of BHEL to ban the Bidder from business dealings. |
| 12.6 | Contracts already entered with a contractor before the date of issue of order of 'HOLD' or 'DE-LISTING' shall not be affected. |
| 12.7 | All existing contracts with a 'BANNED' contractor shall normally be short closed |
| 12.8 | Once the order for suspension is passed, existing offers/new offers of the contractor shall not be entertained |
| 12.9 | The above guidelines are not exhaustive but enunciate broad principles governing action against contractors |

EXECUTE SAFELY

## SAFETY DURING WORK EXECUTION

**PERMIT TO WORK**

Height work (above 2 meters), Hot Work, Heavy Lifting, Confined Space, Radiography, Excavation (More than 1.22 meters), Lockout / Tag out

**OPERATIONAL CONTROL**

- Welding, Gas Cutting Grinding
- Rigging, Signaling
- Cylinder- Storage & Movement
- Demolition work
- T&Ps
- Chemical Handling
- Electrical works
- Painting
- Fire
- Scaffolding
- Height work
- Working Platform
- Excavation / Civil Work
- Ladder
- Lifting
- Hoisting appliance
- Hard Barricading

**HOUSE KEEPING**

**WASTE MANGEMENT**

**TRAFFIC MANAGEMENT**

**ENVIRONMENTAL CONTROL**

**EMERGENCY PREPAREDNESS AND RESPONSE PLANNING**

CHECKS

**HSE AUDITS & INSPECTION**

- Daily Checks
- Inspection of Height work
- Inspection of PPEs
- Inspection of T & Ps
- Inspection of Cranes & Winches
- Inspection of Welding and Gas cutting
- Inspection of elevators etc.

**HSE PERFORMANCE EVALUATION PARAMETERS**

NON CONFORMANCE

**PENALTY for NON CONFORMANCE**
**Refer Clause 16 Incremental penalty**

For repeated violation by the same person, the penalty would be double of the previous penalty

For repeated fatal incident in the same contract / package, incremental penalty to be imposed. The subcontractor will pay 2 times the penalty compared to the previously paid in case there are repeated cases of fatal incidents under the same subcontractor for the same package in the same unit.

**COMPENSATION TO ACCIDENT VICTIMS**
**Refer Clause 17**
**Employee Compensation Act, 1922**
**Other Acts and Guidelines relevant to employee compensation**

# GENERAL

## 1. PURPOSE

**1.0** The purpose of this HSE Plan is to provide for the systematic identification, evaluation, prevention and control of general workplace hazards, specific job hazards, potential hazards and environmental impacts that may arise from foreseeable conditions during installation and servicing of industrial projects and power plants.

**1.1** This document shall be followed by BHEL's Sub-Contractors at all installation and servicing sites. In case BHEL has contractual HSE obligations towards customer, this document will be followed in conjunction with (BHEL's) customer specific requirements, ensuring that applicable systems, controls and checks of both are implemented in letter and spirit.

**1.2** In case the customer has any specific requirement, the same is to be fulfilled but may not include financial inclusion.

**1.3** This document shall be followed unless otherwise mentioned in TCC (technical condition of contract) or elsewhere in NIT or contract documents. This supersedes all HSE clauses in GCC.

**1.4** Although every effort has been made to make the procedures and guidelines in line with statutory requirements, in case of any discrepancy relevant statutory guidelines must be followed.

## 2. SCOPE

The document is applicable on all activities and assets including managerial, supervisory, professional, technical, clerical and other workers including contract laborers; and equipment operating under the control of BHEL's Subcontractors at all installation / servicing activities of BHEL Power Sector as per the relevant contractual obligations.

## 3. OBJECTIVES

The HSE Plan reflects that BHEL places high priority upon the Occupational Health, Safety and Environment at workplaces. The Sub-contractor shall:

***Health & Safety***

- Prevent injury and ill health of all persons at site ('Persons' refers to all personnel including managerial, supervisory, professional, technical, clerical and other workers including contract laborers)

***Environment***

- Prevent pollution to environment and ensure protection of environment taking into account interested party concern and conservation of resources and reduction of wastage

***Legal Requirements***

- Comply at all times with the relevant statutory and contractual HSE requirements.

***Planning & Resources***

- Ensure that all work planning takes into account all persons that may be affected by the work.
- Ensure timely provision of resources to facilitate effective implementation of HSE requirements.

***Competency, Training & Awareness***

- Provide trained, experienced and competent personnel. Ensure medically fit personnel only are engaged at work.
- Provide all personnel with adequate information, instruction, training and supervision on the safety aspect of their work.

***Maintenance of Equipment***

- Ensure fitness testing of all T&Ps. Lifting appliances like cranes, chain pulley blocks etc. are certified by competent authority.

***Safety during Operations***

- Provide and maintain plant, places and systems of work that are safe and without risk to health and the environment.
- Effectively control, co-ordinate and monitor the activities of all personnel on the Project sites including subcontractors in respects of HSE.
- Establish effective communication on HSE matters with all relevant parties involved in the Project works.

***HSE Improvement***

- Capture the data of all incidents including near misses, process deviation etc. Investigate and analyze the same to find out the root cause
- Ensure timely implementation of correction, corrective action.
- Ensure continual improvement in HSE performance
-

## GOALS AND TARGETS

- **To achieve "Zero Incident at Site" (LTI)**
- **100% compliance of all legal/statutory requirements related to HSE.**
- **100% Health, Safety and Environmental Induction training attendance for all workers.**
- **100% High Risk activities to be carried out only after approved Method Statement, HIRA / Aspect-Impact / JSA / OCP and Permit to Work are implemented.**
- **100% PPEs compliance in high and medium risk activities.**
- **100% monitoring of all Work Areas**
- **100% detection of non-conformities in work area and 100% closure within specified time**
- **100% incident (near miss, minor, major, other) reporting, recording and reviewing for corrective actions.**
- **Regular Safety Reviews to assess HSE program compliance and 100% closure of any recognized gaps to continually improve safety management and incident prevention.**

## 5. BHEL HEALTH, SAFETY & ENVIRONMENT POLICY:

In BHEL, Health, Safety and Environment (HSE) responsibilities are driven by our commitment to protect our employees and people we work with, community and environment. BHEL believes in zero tolerance for unsafe work/non-conformance to safety and in minimizing environmental footprint associated with all its business activities. We commit to continually improve our HSE performance by:

- Developing safety and sustainability culture through active leadership and by ensuring availability of required resources.
- Ensuring compliance with applicable legislation, regulations and BHEL systems.
- Taking up activities for conservation of resources and adopting sound waste management by following Reduce/Recycle/Reuse approach.
- Continually identifying, assessing and managing environmental impacts and Occupational Health & Safety risks of all activities, products and services adopting approach based on elimination/ substitution/reduction/control.
- Incorporating appropriate Occupational Health, Safety and Environment criteria into business decisions, design of products & systems and for selection of plants, technologies and services.
- Imparting appropriate structured training to all persons at workplace and promoting awareness amongst customers, contractors and suppliers on HSE issues.
- Reviewing periodically this policy and HSE Management Systems to ensure its relevance, appropriateness and effectiveness.
- Communicating this policy within BHEL and making it available to interested parties.

Atul Sobti
Chairman & Managing Director

## 6. TERMS AND DEFINITIONS

### 6.0 INCIDENT

Work- related or natural event(s) in which an injury or ill health (regardless of severity) or fatality, damage to property/environment occurred, or could have occurred.

### 6.1 NEAR MISS

An incident where no ill health, injury, damage or other loss occurs, but it had a potential to cause, is referred to as “Near-Miss incident”.

### 6.2 MAN-HOURS WORKED

The total number of employee hours worked by all employees including subcontractors working in the premises.
It includes managerial, supervisory, professional, technical, clerical and other workers including contract laborers.
Man-hours worked shall be calculated from the payroll or time clock recorded including overtime. When this is not feasible, the same shall be estimated by multiplying the total man-days worked for the period covered by the number of hours worked per day. The total number of workday for a period is the sum of the number of men at work on each day of period. If the daily hours vary from department to department separate estimate shall be made for each department and the result added together.

### 6.3 FIRST AID CASES

First aid cases include:

1. Visit to a physician or a licensed health care professional solely for observation or counselling
2. Conduct of diagnostic procedures like X rays, blood test including the prescription medications used solely for diagnostic purposes (e.g. eye drops to dilate eyes)
3. Using a non-prescription medicine at non-prescription strength (for medication available in both prescription and non-prescription form as recommendation by a physician or other licensed health care professional to use a non-prescription medication at prescription strength is considered medical treatment for record keeping purposes};
4. Administering tetanus immunizations (other immunizations, such as Hepatitis B vaccine or rabies vaccine, are considered medical treatment);
5. Cleaning, flushing or soaking wounds on the surface of the skin;
6. Using wound coverings such as bandages, Band-Aids TM, gauze pads, etc.; or using butterfly bandages or Steri-Strips TM (other wound closing devices such as sutures, staples, etc., are considered medical treatment);
7. Using hot or cold therapy;
8. Using any non-rigid means of support, such as elastic bandages, wraps, non-rigid back belts, etc. (devices with rigid stays or other systems designed to immobilize parts of the body are considered medical treatment for record-keeping purposes);

9. Using temporary immobilization devices while transporting an accident victim (e.g., splints, slings, neck collars, back boards, etc.).
10. Drilling of a fingernail or toenail to relieve pressure, or draining fluid from a blister;
11. Using eye patches;
12. Removing foreign bodies from the eye using only irrigation or a cotton swab;
13. Removing splinters or foreign material from areas other than the eye by irrigation, tweezers, cotton swabs or other simple means;
14. Using finger guards;
15. Using massages (physical therapy or chiropractic treatment are considered medical treatment for recordkeeping purposes); or
16. Drinking fluids for relief of heat stress.

No other treatments are considered first aid.

## 6.4 MEDICAL TREATMENT CASES

An incident involved with an injury or illness that needs medical attention beyond First-aid as per 6.3 above.

## 6.5 TYPE OF INCIDENT / ACCIDENT & THEIR REPORTING:

The categories of Incident / accident are as follows:

**Non-Reportable Cases:**

An accident, where the injured person is given first aid and discharged for work without counting any lost time.

**Reportable Cases (LTI or Loss Time Injury Cases):**

**Minor:** In this case the injured person resumes duty within 48 hours of incident

**Major:** In this case the injured person is disable for 48 hours or more and is not able to perform his duty. (as per IS 3786)

## 6.6 TOTAL REPORTABLE FREQUENCY RATE

Frequency rate is the number of Reportable Lost Time Injury (LTI) per one Million Man hours worked. Mathematically, the formula read as:

$$\frac{\text{Number of Reportable LTI}}{\text{Man Hours Worked}} \times 1{,}000{,}000 \text{ Total}$$

## 6.7 SEVERITY RATE

Severity rate is the Number of days lost due to Lost Time Injury (LTI) per one Million Man hours worked. Mathematically, the formula reads as:

$$\frac{\text{Days lost due to LTI}}{\text{Total Man Hours Worked}} \times 1{,}000{,}000$$

## 6.8 FREQUENCY SEVERITY INDEX (FSI)

Frequency Severity Index, FSI =√ FR*SR/1000

## 6.9 INCIDENCE RATE

Incidence Rate is the Number of LTI per one thousand manpower deployed. Mathematically, the formula reads as:

$$\frac{\text{Number of LTI} \times 1000}{\text{Average number of manpower deployed}}$$

## 6.10 JOB SAFETY ANALYSIS

A job safety analysis (JSA) is a procedure which helps integrate accepted safety and health principles and practices into a particular task or job operation. In a JSA, each basic step of the job is to identify potential hazards and to recommend the safest way to do the job. Other terms used to describe this procedure are job hazard analysis (JHA) and job hazard breakdown.

## 6.11 SAFETY WALK

It's a walk (conducted periodically) by an official through a portion or whole of a site as an HSE officer, noting down HSE observations, speaking to concerned workmen and supervisor on observation, recording and reporting to in charges of agencies, getting the same rectified with personal follow up - to send out a strong message on Management's commitment to safety.

## 6.12 HEAVY & COMPLEX LIFTING

**A** heavy and complex lifting activity includes:

1. Lifting above 50 Tons
2. Tandem Lifting using multiple cranes
3. Total load exceeding 75% of capacity of crane
4. Lift of unusual difficulty or geometry or rigging
5. Lift over operating units
6. Any other lift as decided by site HSE / Erection

In any case, Job Safety Analysis to be carried out for any lift above 5 Tons.

## 6.13 SAFETY COMMITTEE

As per the BOCW, Safety Committee shall be constituted if there are more than five hundred or more construction workers are employed at any site. As per the Factories Act, 1948 it is for 250 workers. It shall be represented by equal number of representatives of employer and construction workers.

## 6.14 NIGHT WORK

Work conducted after sunset when only a fraction of total manpower is available

Section-A

# *Main Requirements*

*(Applicable in Full)*

## *7. HSE ORGANISATION*

### 7.1 DEPLOYMENT

#### 7.1.1 Minimum Number (Availability per contract / package per Working Shift)

| 7.1.1.1 HSE Officer | 7.1.1.2 HSE Supervisor | 7.1.1.3 HSE Steward / Observer |
|---|---|---|
| 1 per 300 workers or part thereof as a minimum or as mandated by applicable legal requirements, whichever more stringent | 1 per 150 workers or part thereof | 1 per 50 workers or part thereof |

7.1.1.4 The safety officers shall be engaged directly by the sub-contractor, whereas safety supervisors and safety stewards may be from the agencies engaged by the sub-contractor.

**7.1.1.5 Deployment Plan:**

7.1.1.5.1 These shall be minimum one HSE officer along with HSE supervisor and HSE steward in the aforesaid ratio for every shift for each unit of Boiler/ESP/Power House & TG/ Chimney/ Whole of Cooling Tower.

7.1.1.5.2 For Civil works and other BOP items, deployment shall be broadly as specified in the above table. But BHEL shall finally approve the deployment based on nature and volume of jobs, Risks and hazards associated etc.

7.1.1.5.3 The deployment plan of Safety manpower at various locations shall be submitted to BHEL for approval by subcontractor

BHEL reserves the right to demand more safety personnel than what is stipulated here and change the deployment pattern

### 7.1.2 QUALIFICATION & EXPERIENCE

**All Degrees/ Diplomas shall be recognized by State Council for Technical Education & Vocational Training (SCTE & VT) / All India Council for Technical Education (AICTE) / University**

| 7.1.2.1 HSE Officer | 7.1.2.2 HSE Supervisor | 7.1.2.3 HSE Steward / Observer |
|---|---|---|
| **A.**<br>i. Recognized degree in any branch of Engg. or Tech. or Architecture with practical experience of working in a building or other construction work in supervisory capacity for a period of not less than two years,<br>or<br>Recognized diploma in any branch of Engg. or Tech with practical experience of working in a building or other construction work in supervisory capacity for a period of not less than five years.<br>ii. Recognized degree or diploma in Industrial safety<br>ii. (Preferably) have adequate knowledge of the language spoken by majority of the workers at the construction site.<br>**Alternatively:**<br>**B.**<br>Graduation Degree in Science with Physics & Chemistry and degree or diploma in Industrial Safety (from any Indian institutes recognized by AICTE or State Council of Tech. Education of any Indian State) with practical experience of working in a building, plant or other construction works (as Safety Officer, in line with Indian Factories Act, 1958) for a period of not less than five years. | As a minimum, (s)he shall possess:<br><br>A recognized graduation Degree in Science (with Physics & Chemistry) or a recognized diploma in Engg. or Tech. with:<br><br>a. Minimum Two years of practical experience in construction work environment and<br><br>b. Should possess requisite skills to deal with construction safety & fire related day-to-day issues. | As a minimum, (s)he shall possess:<br>1. Class XII pass certificate and<br>2. Trained in fire-fighting as well as in safety / occupational health related subjects, with:<br>a. Minimum two year of practical experience in construction work environment and<br><br>b. Should have adequate knowledge of the local language spoken by majority of the workers at the construction site. |

### 7.1.3 HSE IN-CHARGE

In case there are more than one HSE Officers with any subcontractor, one of them, who is senior most by experience (in HSE discipline), may be designated a s HSE In-Charge. Duties & responsibilities of such person shall be commensurate with that of relevant statute and primarily to coordinate with top management of Client and subcontractors.

### 7.1.4 AVAILABILITY AND PENALTY FOR NON-DEPLOYMENT:

Subcontractor shall ensure physical availability of safety personnel at the place of specific work location including where Height Work Permit is required/granted. No work shall be started in any area until above safety personnel & concerned Site Engineer of subcontractor are physically deployed at site.
The Subcontractor shall prepare an organization chart identifying the areas of operations, responsibilities and reporting structure of all safety personnel and submit the same to BHEL.

The subcontractor shall deploy sufficient safety officers, supervisors and safety-stewards, as per numbers & qualifications mandated in this Section since mobilization of first batch of manpower and add more in proportion to the added strength in work force. Any delay in deployment will attract a penalty at following rates:

| | | |
|---|---|---|
| Non-deployment of HSE Officer | – | **Rs 50000 per man-month** |
| Non-deployment of HSE Supervisor | – | **Rs 30000 per man-month** |
| Non-deployment of HSE Steward | – | **Rs 20000 per man-month** |

Penalty shall be collected for the period of non-availability of safety personnel after allowing a grace period of 15 days for finding a replacement.

### 7.1.5 QUALIFICATION OF CRANE & WINCH OPERATORS, DRIVERS etc.:

The Crane and Winch Operators, Drivers, Riggers and other professionals deployed shall be qualified and experienced, and have valid license for the class of vehicle / machinery as applicable. The sub-contractor shall certify competence of these persons.in writing as and when they join.
Crane/Winch operator should have certificate on subject course or owner experience certificate in letterhead.

7.1.6 In case the statutory requirements i.e. State or Central Acts and / or Rules as applicable like the Building and Other Construction Workers' Regulation of Employment and Conditions of Service- Act,1996 or State Rules (wherever notified), the Factories Act, 1948 or Rules (wherever notified), etc. are more stringent than above clarifications, the same shall be followed.

7.1.7 **BILLING:** Deployment of Safety manpower as per this clause **shall be** a billable item.

7.1.8 The Subcontractor shall verify & authenticate credentials of the HSE personnel detailed in this Section and furnish Bio-Data/Resume / Curriculum Vitae of the safety personnel as above for BHEL / Owner's approval, at least 1 month before the mobilization. The Subcontractor, whenever required, shall arrange submission of original testimonials / certificates of their Safety personnel, to BHEL / Owner (for verification/scrutiny, etc.)

7.1.9 Prior approval of CVs by BHEL for Safety Officer and Safety Supervisor is mandatory, however BHEL has right to check suitability of Safety Stewards as well.

## 7.2 HSE RESPONSIBILITIES

The subcontractors shall communicate the HSE responsibilities as indicated in this section to relevant employees in written Form and ensure awareness of the same

### 7.2.1 ALL EMPLOYEES

1. To be aware of, get involved in and ensure implementation of all HSE related Systems and Procedures including but not limited to:

    a) BHEL HSE Management System including HSE Procedures and OCPs
    b) Work Permit System
    c) Emergency Preparedness Response Plans
    d) Contractual HSE requirements
    e) Legal Requirements
    f) Penalty System
    g) Training requirements
2. To ensure that the persons engaged in respective area follow the safety rules like using appropriate PPEs.
3. To keep track of repetitive minor or major incident observation/ report and submit to BHEL.
4. To prepare HIRA / JSA as required and submit to BHEL for verification.
5. To record all incidents including near miss and report to BHEL.
6. To adopt safe working practices at all times and act as role model for Safety
7. To take immediate corrective action actions in case any non-conformity is observed on product / process / system with respect to Occupational Health, Safety and Environment.
8. In case any particular activity / work has extremely high consequential risk or high environmental impact, same shall be brought to the notice of BHEL Package In-charge before starting the work.
9. To interfere/ stop work as & when identified unsafe.
10. To maintain & promote improved level of house-keeping all the time at site.
11. To support/co-operate with audit team members as & when safety audits are carried out.
12. To involve in investigation, if any incident occurs in his work area.
13. To participate in safety promotional programmes.
14. To attend the safety committee meeting, if member/ invitee
15. To ensure that only fit T&Ps and qualified persons are engaged for all activities.
16. Shall ensure that person working above 2.0 meter should use Safety Harness tied to a life line/stable structure.
17. Shall ensure that materials are not thrown from height. Cautions to be exercised to

prevent fall of material from height.

18. Shall ensure that all T&Ps engaged are tested for fitness and have valid certificates from competent authorities.

### 7.2.2 SITE IN –CHARGE & PACKAGE IN-CHARGES OF SUBCONTRACTOR

1. All requirements as per 7.2.1
2. **Shall ensure fulfillment of HSE requirements of BHEL contract as given in this document.**
3. Shall engage qualified safety manpower as per this document at all times.
4. Shall adhere to the rules and regulations mentioned in this document, practice very strictly in his area of work in consultation with his concerned engineer and the safety coordinator.
5. Shall screen all workmen for health and competence requirement before engaging for the job and periodically thereafter as required.
6. Shall ensure that all the workers are engaged after undergoing induction training.
7. Shall arrange for all necessary PPEs like safety helmets, belts, full body harness, shoes, face shield, hand gloves etc. before starting the job. Shall ensure that no working men /women carry excessive weight more than stipulated in Factory Rule Regulation R57.
8. Shall ensure that provisions stipulated in contract Labor Regulation Act 1970, Chapter V C.9, canteen, rest rooms/washing facilities to contracted employees at site.
9. Shall report all incidents (Fatal/Major/Minor/Near Miss) to the Site engineer /HSE officer of BHEL.
10. Shall conduct Safety Walks and safety inspections, and act as a role model for Safety.
11. Shall ensure that Horseplay is strictly forbidden.
12. Shall ensure that adequate illumination is arranged during night work.
13. Shall ensure that all personnel working under subcontractor are working safely and do not create any Hazard to self and to others.
14. Shall ensure display of adequate signage/posters on HSE.
15. Shall ensure that mobile phone is not used by workers while working.
16. Shall ensure conductance of HSE audit, mock drill, medical camps, induction training and training on HSE at site.
17. Shall ensure full co-operation during Client/External /Customer HSE audits.
18. Shall ensure submission of look-ahead plan for procurement of HSE equipment’s and PPEs as per work schedule.
19. Shall ensure adequate valid fire extinguishers are provided at the work site.
20. Shall ensure availability of sufficient number of toilets /restrooms and adequate drinking water at work site and labor colony.
21. Shall ensure adequate emergency preparedness
22. Site In-charge also involve in the induction training so as to share knowledge of some incident and guide the worker to perform work safely.
23. Shall ensure power source for hand lamps shall be maximum of 24 v.
24. Shall ensure temporary fencing should be done for open edges if Hand – railings and Toe-

guards are not available.

25. Shall be responsible for the periodic testing of T&Ps (winches / crane /hydra/tools/equipment so on.) and Pressure Vessels as per applicable codes and submit report to BHEL
26. Shall be member of site HSE committee and attend all meetings of the committee

### 7.2.3 HSE OFFICER OF SUBCONTRACTOR

1. All requirements as per 7.2.1
2. Carry out safety inspection of Work Area, Work Method, Men, Machine & Material, P&M and other tools and tackles.
3. Facilitate HIRA and Aspect/Impact Study in the area and ensure control measures.
4. Highlight the requirements of safety through Tool-box / other meetings.
5. Help concerned HOS to prepare Job Specific instructions for critical jobs.
6. Maintain record and conduct investigation of all incident/dangerous occurrences & recommend appropriate safety measures.
7. Advice & co-ordinate for implementation of HSE permit systems, OCPs & MPs.
8. Convene HSE meeting & minute the proceeding for circulation & follow-up action.
9. Plan procurement of PPE & Safety devices and inspect their healthiness.
10. Report to BHEL on all matters pertaining to status of safety and promotional programmes at site level.
11. Encourage raising Near Miss Report on safety along with, improvement initiatives on safety.
12. Facilitate administration of First Aid
13. Facilitate screening of workmen and safety induction.
14. Conduct fire Drill and facilitate emergency preparedness
15. Design campaigns, competitions & other special programs to promote safety in the workplace.
16. Notify non-conformance to safety norms observed during site visits / site inspections.
17. Recommend to Site In-charge, immediate discontinuance of work until rectification, of such situations warranting immediate action in view of imminent danger to life or property or environment.
18. To decline acceptance of such PPE / safety equipment that do not conform to specified requirements.

### 7.2.4 HSE SUPERVISOR OF SUBCONTRACTOR

1. All requirements as per 7.2.1
2. To assist Safety officer

### 7.2.5 HSE STEWARD / OBSERVER OF SUBCONTRACTOR

1. All requirements as per 7.2.1
2. To monitor allotted area for Safety violations, take required action and inform the concerned Safety Supervisor / Officer

3. To assist Safety Officer and Safety Supervisor

### 7.2.6 HSE DOCUMENTS, SYSTEMS & PROCEDURES:

BHEL shall provide the subcontractor soft copies of all applicable HSE Procedures, Work Permits, Operational Control Procedures, Formats and any other instructions required for the implementation of HSE Management System before commencing operations at site. Subcontractor shall ensure the availability of the same.

### 7.2.7 IMPORTANT SITE EHS RULES RESULTING IN POSSIBLE EXPULSION FROM SITE

- Pre-employment Medical fitness is compulsory for all workers.
- EHS induction in mandatory for all new workers, supervisor and engineers, subcontractor managers etc.
- No visitors are allowed for site visit without safety induction.
- **Mandatory PPEs are**
  - ✓ *Safety helmet,*
  - ✓ *Hard toe safety shoes,*
  - ✓ *Safety glasses*
  - ✓ *Reflective vest*
  - ✓ *Full/half sleeve (at least 4-inch-long) shirt*
  - ✓ *Full length pant/trousers for male and preferably Salwar Kameez for female*
- **Zero Tolerance Safety Rules**
  - Violation of Fall protection / not anchoring & wearing safety harness above 6 feet,
  - Work without PTW
  - Child labor at site
- Restricted Use of cell phone in the working zone, operating vehicle/crane and at height. Encourage the people not to bring mobile phones inside the project premises.
- All vehicle being used at site to be in good condition in all respect.
- All electrical installations should have individual 30 mA ELCBs
- **Fighting**: Fighting anywhere on the Project site, including in parking areas, is strictly forbidden; violators will be barred from site and possibly subjected to legal action by local authorities.
- **Horseplay**: Running, pushing, practical jokes, and other horseplay are forbidden on the project site, including in parking areas.
- **Gambling**: Gambling on the Project site is not permitted
- **Alcohol & Drugs**: Intoxication or possession of alcohol or illegal drugs is strictly forbidden.
- **Weapons**: Possession of weapons on the Project site is strictly prohibited
- **Asbestos Material**: No asbestos material is allowed to use in Project Site
- **Hair**: Anyone working on site property with scalp hair longer than the top of his/her shoulders must tie-up and restrains the hair within the hard hat or coveralls, shirt or jacket collar.
- **Jewelry**: Loose necklaces, dangling earrings and bracelets shall not be worn when working on the Project site.

- **Contact Lens**: While the site does not prohibit the wearing of contact lens, BHEL Project does not recommend their use.

- **Use of Empty Drums**: Use of empty drums to climb up and work is banned. Proper stool/ ladder/ stage required to be used if intended to work at height.
- Projects must comply in full with all applicable EHS local and national legislation. In circumstances where there is a conflict between local or national legislation and client requirements, the higher (more protective) requirement must prevail.
- All persons working on suspended scaffolds/cradles/gondolas must wear and use appropriate fall prevention equipment so as to protect them effectively at all times when they are at risk from any failure of any part of the scaffold/cradle/gondola, including its suspension system

- **Construction Trucks/Vehicles**

  - ✓ Vehicles must be equipped with proper seat belts for driver and passengers. All persons riding in vehicles must be advised of the requirement that seat belts are to be used whenever the vehicles are being operated.
  - ✓ The subcontractor is responsible for assuring the overall safe condition of vehicles assigned to its projects.
  - ✓ The speed limit on the project site is a maximum of 20 Km/hr.
  - ✓ Any person found operating or driving in a reckless or careless manner without regard for the safety of other employees or the general public will be immediately removed for the equipment they were operating and permanently prohibited from operating or driving any equipment on the project.
  - ✓ Any mobile equipment found to be unsafe or defective must be immediately removed from service and sent for repair or replacement. The subcontractor must ensure that the proper repairs have been made prior to putting the equipment back into service.

- **Construction Material Handling Heavy Equipment**

  - ✓ No equipment may be modified without equipment manufacturer's authorization.
  - ✓ Rollover Protective Structures must be provided for all equipment as required.
  - ✓ Seat belts must be provided and used by operators of all equipment that has a Rollover Protective Structure.
  - ✓ All bi-directional equipment must be equipped with an operable horn that must be used as needed when the machinery is moving in either direction.
  - ✓ All bi-directional equipment must also have an operable alarm in addition to the horn.
  - ✓ All equipment must be provided with a multi-purpose (class A, B, and C) fire extinguisher mounted in an easily accessible location.
  - ✓ Braking systems, controls, safety devices must be maintained in effective operating condition.
  - ✓ The operator must inspect the equipment at the beginning of the shift and test for acceptable

- ✓ operation as per the equipment's manufacturer's instructions. Inspections must be documented and filed.
- ✓ Only qualified personnel must be allowed to operate equipment. Qualification must be documented and filed.

In case any worker violates any of the EHS rules identified by BHEL as above, following punitive action shall be taken:

| First Offence | Second Offence | Third Offence | Fourth Offence |
|---|---|---|---|
| *Oral warning* | *Gate Pass Punched* | *Gate pass punched (second)* | *Gate Pass Punched(third) and person sent out of the gate*<br><br>*Photo of concerned worker to be displayed on Notice boards and prominent locations.* |

BHEL has the right to send out such person even earlier than fourth offence after considering the severity of the offence and/or the persons track record related to following general/EHS rules.

BHEL reserves right to expel even concerned supervisor or engineer as well in case of repeat of such cases of indiscipline.

**Note:**
The appellate authority in this case shall be the BHEL Site In-charge whose decision shall be final on the matter and binding on all parties.

## *8. PLANNING FOR HSE*

### A. Identifying Hazards / Risks & Aspects / Impacts and implementing control measures

1. Subcontractor shall identify all OHS Hazards and Risks applicable to all activities in scope as per *HSEP01: HSE Procedure for OHS Hazards and Risks*, and plan & implement the required control measures.

2. Subcontractor shall identify all Environmental Aspects and Impacts applicable to all activities in scope as per *HSEP02: HSE Procedure for Environmental Aspects and Impacts*, and plan & implement the control measures.

### B. Register of Regulations:

Subcontractor shall prepare a register of applicable rules and regulations in the scope as per

*HSEP03: HSE Procedure for Register of Regulations* and plan to ensure compliance.

The detailed plans and registers in A and B to be submitted to BHEL for review and approval within 60 days of start of work at site.

**Note:** The plans above are dynamic and shall be periodically reviewed as per BHEL requirement.

## 8.1 MOBILISATION OF MACHINERY / EQUIPMENT / TOOLS

1. Subcontractor shall furnish to BHEL, the Test Certificates issued by the jurisdictional competent persons of machinery, equipment and other T&Ps to be deployed at site, before deployment. BHEL reserves the right to disallow the same if found non-conforming to HSE / legal requirements

2. As a further measure to ensure that machinery, equipment and tools being mobilized to the construction site are fit for purpose and are maintained in safe operating condition and comply with legislative and owner requirement, inspection shall be arranged by in-house expert / competent authority (preferable) for acceptance. (**Report Format: HSEP:14-F15)**

3. **The equipment considered for this purpose shall include all those in the T&P list in the tender document. Conventional Hydra crane with carriage in front shall not be permitted. Other models like FX or TRX series of Escorts or equivalent shall be permitted.**

4. In the course of work, the subcontractor shall notify the BHEL Engineer, of his intention to bring on to site any equipment or any container, with liquid or gaseous fuel or other substance which may create a hazard.

5. The Engineer shall have the right to prescribe the condition under which such equipment or container may be handled and used during the performance of the works and the subcontractor shall strictly adhere to such instructions.

6. The Engineer shall have the right to inspect any construction tool and to forbid its use, if in his opinion it is unsafe. No claim due to such prohibition will be entertained.

7. Following items should be only ISO certified and not more than 2 yr. of purchase
    i. Chain pulley block
    ii. Wire rope slings
    iii. Grinding machine and wheel and buffing wheel
    iv. Gas cutting equipment
8. Following equipment should not be more than 5 Yr. old
    1. Welding machine
    2. Vibrator Machine
    3. Concrete cutter
    4. DB/Electrical panel
9. **Office Infrastructure** - subcontractor shall arrange a computer / Laptop with Network

connection, chair and table for HSE Staff to facilitate HSE reporting and recordkeeping.

## 8.2 MOBILISATION OF MANPOWER

1. As a measure to ensure that manpower being mobilized to the construction site is fit and competent for safe working, screening arrangement shall be made by the sub-contractor to ensure fulfillment of contractual as well as legislative requirement by:

i. Ensuring the required qualification/ training/ certification/ license and experience for the job as per Section 7 of this document & applicable legal requirements

ii. **Medical Checkup:** Examination of medical fitness shall be conducted through qualified medical professional for all workers to be deployed. (Record: Format No. HSEP14:F02)**.** For height workers, height phobia test to be carried out as qualification criteria.

iii. **Induction Training:** Induction training of all workers to be ensured as per clause 9.1 and HSEP04: *HSE Procedure for Training & Awareness (Record:* Format No. HSEP14:F03)

Only on successfully meeting above criteria, permanent gate passes to be issued.

2. The subcontractor shall strictly adhere to the maximum daily working hours and other requirements as per applicable laws and shall not engage any employee below 18 years of age.
3. The subcontractor shall take special care of the employees affected with occupational diseases under rule 230 and schedule II of BOCW Rules. The employees not meeting the fitness requirement should not be engaged for such job.
4. Ensure that the regulatory requirements of excessive weight limit (to carry / lift / move weights beyond prescribed limits) for male and female workers are complied with.
5. System for Issue of Gate Passes to authorized personnel only shall be ensured at site
6. The subcontractor shall keep accurate and updated records of all manpower preferably in soft form
7. The subcontractor shall ensure appropriate infrastructure for workers as per Clause 8.4.

## 8.3 PROVISION OF PPEs

1. Adequate numbers of Personnel Protective Equipment (PPEs), will be made available at site & their effectiveness and regular use by all will be ensured

2. The PPEs shall conform to the relevant standards as listed in Annexure 02, and bear ISI mark.

3. The following matrix recommends usage of minimum PPEs against the respective job. For details, the respective OCPs to be referred.

| Sl. No | Type of work | Suggested PPEs |
|---|---|---|
| 1 | Work at height | Double lanyard full body harness with rope grab (as applicable), retractable Fall arrestor (specific cases), Safety nets (single / double) |
| 2 | Concrete and asphalt mixing | Nose mask, hand glove, apron, gum boot, goggles |
| 3 | Welders/ Grinders/ Gas cutters | Welding/face screen, apron, hand gloves, nose mask and ear muffs if noise level exceeds 90dB. Helmet fitted with welding shield is preferred for welders, safety goggles |
| 4 | Stone/ concrete breakers | Ear muffs, safety goggles, hand gloves |
| 5 | Electrical Work | Rubber hand glove, Electrical Resistance shoes, Arc-flash resistant suit. |
| 6 | Insulation Work | Respiratory mask, Hand gloves, safety goggles |
| 7 | Grit/Sand blasting | Blast suit, blast helmet, respirator, leather gloves, safety goggles |
| 8 | Painting | Plastic gloves, Respirators (particularly for Spray painting) |
| 9 | Radiography | As per BARC guidelines |
| 10 | General | Helmets, Safety Shoes Reflective vests, ear plugs, nose masks, safety goggles |

4. The exact PPEs required for a particular task shall be chosen to ensure there are multiple lines of defense against accident or injury. All applicable safety precautions for a job shall be ensured notwithstanding the duration or perceived importance of the task.
5. Additionally, the BHEL safety officer may demand additional PPEs based on specific requirement
6. The applicability of PPEs shall be as per the concept of Hierarchy of controls, i.e.: Elimination->Substitution->EngineeringControls->AdministrativeControls-PPEs
7. Relying solely on PPEs without other applicable controls to be strictly avoided.
8. The issuing agency shall maintain register for issue and receipt of PPEs (Format No. HSEP: 14-F06A). All the PPEs shall be checked for quality before issue and the shall be periodically re-checked. The users shall be advised to check the PPEs themselves for any defect before putting on. The defective ones shall be replaced.
9. The body harnesses shall be serial numbered.
10. All worker should wear reflecting Jacket during both shift Day/Night.
11. Where workers are employed in sewers and manholes, which are in use, the subcontractor shall ensure that the manhole covers are opened and ventilated at least for an hour before the workers are allowed to get into manhole, and the manholes so opened shall be cordoned off with suitable railing and provided with warning signals or boards to prevent incident to the public
12. Besides the PPEs mentioned above, the persons shall use helmet, safety shoe and reflective vest at all times. The visitors shall use Helmet and any other PPEs as

deemed appropriate for the area of work.

13. Following color scheme for Helmets to be maintained:
    a. Workmen: Yellow
    b. Safety staff: Green or white with green band
    c. Electrician: Red
    d. Others including visitors: White
14. The Helmets shall have logo or name (abbreviation of agency name permitted) affixed or printed on the front along with the person's gate pass no. & blood group. An awarded worker shall have reflective logo

## 8.4 ARRANGEMENT OF INFRASTRUCTURE

The subcontractor is responsible for ensuring and maintaining the required HSE infrastructure at site as described in this Section

### 8.4.1 DRINKING WATER

1. Drinking Water Storage Tanks shall be provided and maintained at suitable places at different elevations / locations to ensure easy accessibility. The tank/container shall be kept on a platform at an elevation of at least 2 feet and should be covered:

2. **Construction and Quantity:** The design of Drinking Water Storage Tank (DWST) shall be submitted to BHEL for approval prior to initiating construction. Provision of 5 liter water daily for each worker to be maintained.
3. **Labelling:** DWST should be labeled as "Drinking Water". Date of last cleaning, next due date shall be indicated on the container besides Date of source testing as per IS 10500.
4. Cleaning of the DWST shall be ensured at least once in a week. Mild cleaning detergents as used for cleaning vessels shall be applied and scrubbers (3M or equivalent) shall be used for removing scales and deposits on the inside surface. The tank shall be thoroughly cleaned with potable water only before it is refilled.
5. Suitability of the water source should be tested as per IS10500.
6. For all tanks containing water unsuitable for drinking, prominent "Do Not Drink" signage shall be pasted in English, Hindi and local language.
7. In Hot Work and other critical areas, drinking water shall be made available near the activity
8. Provision of supplying drinking water to height workers and those working in difficult to reach

areas shall be made available through dedicated personnel.

8.4.2 **PROVISION OF LATRINES AND URINALS AT SITE** (Ref: Interstate Migrant Workmen (Regulation & Employment and Act, 1979) read with The Inter-State Migrant Workmen (Regulation of employment and conditions of service) central rules, 1980 (PI refer rule no. 42)

**LATRINES**

1. Latrines shall be provided in every establishment on the following scale, namely: -

   a. Where females are employed, there shall be at least one latrine for every 25 females;
   b. Where males are employed, there shall be at least one latrine for every 25 males:

   Provided that where the number of males or females exceeds 190, it shall be sufficient if there is one latrine for 25 males or females, as the case may be, up to the first 100, and one for every 30 thereafter

2. Every latrine shall be under cover and so partitioned off as to secure privacy, and shall have a proper door and fastenings.
3. Where workers of both sexes are employed there shall be displayed outside each block of latrine and urinal a notice in the language understood by the majority of the workers **'For Men Only'**, or **For Women Ónly'**, as the case may be.
4. The notice shall also bear the figure of a man or of a woman, as the case may be.

**URINALS**

5. There shall be at least one urinal for male workers up to fifty and one for female up to fifty employed at a time:
6. Provided that where the number of male or female workmen, as the case may be, exceeds 500 it shall be sufficient if there is one urinal for every fifty females up to the first 500 and one for every 100 or part thereof thereafter.
7. The urinals shall be designed and located so as to ensure privacy.
8. In case a structure encompasses multiple floors, urinals shall be provided suitably for quick access
9. The latrines and urinals shall be conveniently situated and accessible to workers at all times at the establishment.
10. The latrines and urinals shall be adequately lighted and shall be maintained in a clean and sanitary condition at all times.
11. Latrines and urinals other than those connected with a flush sewage system shall comply with the requirements of the public health authorities.
12. Water shall be provided by the means of tap or otherwise so as to be conveniently accessible in or near the latrines and urinals.

### 8.4.3 WASHING FACILITIES

1. In every workplace, adequate and suitable facilities for washing shall be provided and maintained.
2. Separate and adequate cleaning facilities shall be provided for the use of male and female workers. Such facilities shall be conveniently accessible and shall be kept in clean and hygienic

condition and dully illuminated for night use.

3. Overalls shall be supplied by the subcontractor to the workmen and adequate facilities shall be provided to enable the painters and other workers to wash during the cessation of work.

### 8.4.4 PROVISION OF REST SHELTER FOR WOKERS

Proper Sheds & Shelters big enough to accommodate all possible workers shall be provided for workers to rest during break. Taking rest at height, in activity area and other hazardous locations shall not be allowed.

The drawing of such sheds shall be submitted to BHEL for approval before construction.

### 8.4.5 MEDICAL FACILITIES

**Refer Section B for applicability of requirements pertaining to Clause 8.4.5.1**

8.4.5.1 MEDICAL CUM FIRST-AID CENTER

a) A medical center shall be setup at site with basic facilities for handling medical emergencies. The medical center shall be developed independently by BHEL/an agency as specified in the contract and run jointly by all agencies on proportionate sharing basis as stipulated in the contract.
b) A qualified medical professional, not less than MBBS, shall be deployed at medical center as stipulated in the contract.(Part-time or full time as decided at the site).
c) There shall be a full-time trained first aider and a nurse. Depending upon the working hours at the site, First-aider shall be deployed accordingly.
d) The center shall have all articles as per Schedule IV of BOCW(Central) Rules'1998. In addition,, one Stokes basket stretcher shall be available.
e) An ambulance shall be deployed for every 1000 persons along with trained driver and accessories as per schedule V of Central BOCW Rules'1998. Depending upon the working hours at the site, First-aider shall be deployed accordingly.
f) The center shall be adequately equipped for Resuscitation, Immobilisation, Dressing, dealing with poisoning cases including snake and insect-bites and sufficient stock of emergency medicines as prescribed by the qualified medical professional as per point (b)

### 8.4.5.2 IMPORTANT

g) If there is no specific mention of responsibility of deployment or setting up of any of the above facilities and operating expenses thereof, BHEL site management shall have the liberty to give this responsibility to any of the contractors on cost sharing basis.
h) Medical waste shall be disposed as per prevailing legislation (Bio-Medical Waste –Management and Handling Rules, 1998)
i) Every injury shall be treated, recorded and reported.
j) All First Aid injuries shall be recorded as per Format No. HSEP:14-F17
k) List of qualified first aiders and their contact numbers to be displayed at conspicuous places.

### 8.4.5.3 FIRST AID

**A. In addition to 8.4.5.1 &2, The subcontractor with Boiler&ESP, TG, Civil shall:**

1. Provide necessary first aid facilities for every work place.
2. Ensure availability of qualified First-aider throughout the working hours.
3. Every injury shall be treated, recorded and reported.
4. Refresher course on first aid shall be conducted as necessary.
5. List of qualified first aiders and their contact numbers to be displayed at conspicuous places.
6. All First Aid injuries shall be recorded as per Format No. HSEP:14-F17

**B. FIRST AID BOX**

1. The first aid box shall be maintained by first aider who shall always be readily available during the working hours of the work place.
2. **Details of First Aid Box:**
   a) Details of contents of first aid box is given in **Annexure 03.** A slip of contents shall be pasted on the First Aid Box with following details:

      **Name, Quantity, Expiry Date, Checked by…**
   b) First Aider's name and contact no to be displayed on the box.
   c) The first aid box shall be distinctly marked with a Green Cross on white background.
   d) The box shall be properly secured with lock & key to avoid misuse
7. The first aid boxes should be placed at various locations so as to make them available within easy reach of hazardous activities and at the quickest possible time.
8. The subcontractor shall ensure that the Supervisors and Engineers are adequately trained for attending to any emergency.
9. Monthly inspection of First Aid Box to be conducted by the subcontractor as per Format no. HSEP:14-F01

### 8.4.5.4 HEALTH CHECK UP

The persons engaged at the site shall undergo health checkup as per the **Format no. HSEP:14-F02** before induction. The persons engaged in the following works shall additionally undergo regular health checkup using same Format at least once in a year:

| | | |
|---|---|---|
| Height workers | Drivers/crane operators/riggers | Confined space workers |
| Shot/sand blaster | Welding and NDE personnel | Any person referred by BHEL |

### 8.4.5.4.1 HEIGHT PHOBIA TEST

1. The persons engaged in working at heights (above 2 meters) to be assessed for Height Phobia and associated conditions.
2. Such workers are to be allowed only on successful completion of this test, otherwise they shall be allocated ground based jobs. IDs / Height passes shall be issued to such workers.

### 8.4.6 PROVISION OF CANTEEN FACILITY

**Minimum or better facilities to be ensured as per BOCW (Rule 244) / Factories Act, specially taking care of the following:**

1. Canteen facilities shall be provided for the workmen of the subcontractor inside the project site.
2. Proper cleaning and hygienic condition shall be maintained.
3. Proper care should be taken to prevent biological contamination.
4. Adequate drinking water should be available at canteen.
5. Fire extinguisher shall be provided inside canteen.
6. Regular health check-up and medication to the canteen workers shall be ensured.
7. Canteen waste to be disposed of in compliance with law
8. Domestic LPG cylinder shall not be used
9. Canteen should be periodically inspected using standard checklist finalized along with BHEL

### 8.4.7 PROVISION OF ACCOMMODATION / LABOR COLONY

1. The subcontractor shall provide to every workman (within fifteen days of the commencement of the employment of migrant workmen):

a) In case he is accompanied by any other member of his family, a suitable barrack so as to accommodate one room having at least a floor area of 10 square meters, a verandah and adequate additional covered space for cooking food as well as one common sanitary latrine, one common bathroom for every three such quarters; and

b) In case he is unaccompanied by any other member of his family, a suitable barrack so as to accommodate not more than ten such migrant workmen, having at least a floor area of not less than 6.5 square meters for each such migrant workman making use of the barrack, a verandah and adequate additional covered space for cooking food as well as one common sanitary latrine and one common bathroom for every ten such migrant workmen

2. Every quarter and the barrack shall be so constructed as to afford adequate ventilation, protection against heat, wind, rain and shall have smooth, hard and impervious floor surface.
3. The quarters or the barracks, as the case may be, shall be at a convenient distance from the establishment and shall have adequate supply of wholesome drinking water.
4. The area in which the quarters and/or barracks are located as well as the latrines and bathrooms provided therein shall be kept in a clean and sanitary condition at all times.
5. Regular housekeeping of the labor colony shall be ensured.
6. Availability of Bathing/ washing bay to be ensured

7. Room ventilation and safe electrification to be ensured
8. MSDS of LPG shall be put up prominently and shall be included in the induction training also.
9. The labor colony shall be secure so that only authorized persons have access to it.
10. Availability of local market to be ensured by the Sub-contractor
11. A "Suggestion Register" shall be made available at the labor colony for workers. The feedback shall be reviewed on weekly basis and acted upon.
12. Labor colony shall be inspected fortnightly by Subcontractor Safety Officer & HR executive, and report submitted to BHEL as per Format No. HSEP:4-F16
13. **Facility of Crèches –** to be provided wherein more than fifty female workers are deployed
14. Provisions of Clause 8.4.1, 8.4.2 and 8.4.3 shall be applicable on labor colony as well

### 8.4.8 PROVISION OF EMERGENCY VEHICLE

Dedicated emergency vehicle shall be made available at workplace by subcontractor for evacuation of victim from site.
However, Ambulance shall be used exclusively for transporting victim to hospital

### 8.4.9 PEST CONTROL

Regular pest control should be carried out at all offices, mainly laboratories, canteen, labor colony and stores by the subcontractor.

### 8.4.10 SCRAPYARD

1. Scrapyard shall be developed by subcontractor to store metal scrap, wooden scrap, waste, hazardous waste.
2. Scrap/Waste shall be segregated as Bio-degradable and non-bio-degradable and stored separately.

### 8.4.11 ILLUMINATION

1. The subcontractor shall provide adequate lighting facilities e.g. flood lighting, hand lamps, area lights etc. to ensure adequate lighting at all work places & their approaches including passage ways as per IS: 3646 (Part-II) at all times. Indicative recommended values are given below:

| S. No. | Location | Lux Level |
|---|---|---|
| A. | **Construction Site** | |
| 1 | Outdoor areas like store yards, entrance and exit roads | **20** |
| 2 | Platforms | **50** |
| 3 | Entrances, corridors and stairs | **100** |
| 4 | General illumination of work area | **150** |
| 5 | Rough work like fabrication, assembly of major items | **150** |

| | | |
|---|---|---|
| 6 | Medium work like assembly of small machined parts | **300** |
| 7 | Fine work like precision assembly, precision measurements etc. | **700** |
| 8 | Sheet metal works | **200** |
| 9 | Electrical and instrument labs | **450** |
| B. | **Office** | |
| 1 | Outdoor area like entrance and exit roads | **20** |
| 2 | Entrance halls | **150** |
| 3 | Corridors and lift cars | **70** |
| 4 | Lift landing | **150** |
| 5 | Stairs | **100** |
| 6 | Office rooms, conference rooms, library reading tables | **300** |
| 7 | Drawing table | **450** |
| 8 | Manual telephone exchange | **200** |

In case any area is not mentioned above, the applicable illumination for the same shall be specified by BHEL based on applicable standards and international norms

1. Level of illumination shall be checked periodically using a calibrated lux meter and recorded for each work area on minimum weekly basis as per Format No. HSEP:14-F21
2. Lamp (hand held) shall not be powered by mains supply but either by 24V or dry cells.
3. Lamps shall be protected by suitable guards where necessary to prevent danger, in case of breakage of lamp.
4. Emergency lighting provision for night work shall be made to minimize danger in case of main supply failure.

## *9. HSE TRAINING & AWARENESS*

### 9.1 HSE INDUCTION TRAINING

1. All persons entering into project site shall be given HSE induction training before being assigned to work, which shall be imparted through audio-visual medium and shall be of minimum 2-hour duration.

2. Any single trainee batch size should not exceed 40.

3. Proper safety wear & gear must be issued to all the workers being registered for the induction (i.e., Shoes/Helmets/Goggles/Leg guard/Apron etc.)

i. They must arrive fully dressed in safety wear & gear to attend the induction.
ii. Any one failing to conform to this safety wear& gear requirement shall not qualify to attend.

4. In-house induction training subjects shall include but not limited to:

i. Briefing of the Project details and importance of employee for the project and for the nation.
ii. Safety related cardinal rules, objectives and targets.
iii. Site HSE rules.
iv. Site HSE hazards and aspects.
v. First aid facility.
vi. Emergency Contact No. and procedures
vii. Details of Fire prevention and emergency response systems & procedures at site.
viii. Requirement of incident / near miss reporting by all.
ix. Accident case studies
x. Rules to be followed in the labor colony (if applicable)

5. Evaluation to be carried out after training and induction training to be repeated in case of failure of participant in evaluation

6. On completing subcontractor's in-house HSE induction, each employee shall sign an induction training form (format no. HSEP: 14-F03) to declare that he had understood the content and shall abide to follow and comply with safe work practices. They may only then be qualified to be issued with a personal I.D. card, for access to the work site (provided Health Checkup is over).

## 9.2 HSE TOOLBOX TALK

1. HSE Tool Box talk shall be conducted by frontline foreman/supervisor of subcontractor to specific work groups daily prior to the start of work. The agenda shall consist of the following:

   i. Visual checkup of workers regarding health, any signs of fatigue, intoxication etc.
   ii. Details of the job being intended for immediate execution.
   iii. The relevant hazards and risks involved in executing the job and their control measures.
   iv. Specific site condition to be considered while executing the job like high temperature, humidity, unfavorable weather etc.
   v. Recent non-compliances observed.
   vi. Appreciation of good work and warning for any unsafe acts done by any person.
   vii. Any doubt clearing session at the end

**2.** Record of Tool box talk shall be maintained as per Format no. HSEP:14-F04

## 9.3 TRAINING ON HEIGHT WORK

Due to the large percentage of fall from height in incidents, training of minimum 2-hour duration on height work shall be imparted to all height workers by in- house / external faculty for every batch of new inductees. The training shall include following topics:

1. Inspection of work area, access and egress w.r.t height hazards
2. Use of PPEs; use of fall arrester, retractable fall arrester, life line, safety nets etc.
3. Safe climbing through monkey ladders.
4. Inspection of PPEs.
5. Medical fitness requirements.
6. Mock drill on rescue at height.
7. Dos & Don'ts during height work.

8. Accident case studies

In case, above is organized by BHEL, proportionate cost shall be borne by subcontractors

### 9.4 HSE TRAINING DURING PROJECT EXECUTION

1. HSE training shall be arranged by subcontractor as per the need of the project execution and recommendation of BHEL.
2. The topics of the HSE training shall be as follows but not limited to:

i. Hazards identification and risk analysis & Identification of Environmental Aspects / Impacts
ii. Work Permit System
iii. Learning from past incidents
iv. First aid, Firefighting & Fire-warden training
v. EMS and OHSMS
vi. T & Ps fitness and operation
vii. Electrical & Chemical safety
viii. Welding, NDE & Radiological safety
ix. Material handling.

3. Safety awareness and on-the-job training programmes shall be carried out at site for all workers periodically. Periodicity to be decided by BHEL but shall be minimum once in six months
4. Penalty Training – In case of any incident, the involved person, group or agency shall undergo a penalty HSE training for a minimum period of 2 hrs or as decided by BHEL.
5. In case it is not possible to provide training to all workers at once, same shall be imparted in Batch-wise manner so as to cover all workers with specified periodicity.
6. An up-to-date record to be maintained with attendance of participants and trainers preferably in soft copy as per Format No. HSEP:14-F03.
7. Every employee of agency should be provided at least 2 hr. safety training in every month.

In case, above is organized by BHEL, proportionate cost shall be borne by subcontractors

## *10. HSE PROMOTION: SIGNAGE, POSTERS, COMPETITION, AWARDS ETC*

### 10.1 DISPLAY OF HSE POSTERS AND BANNERS

Site shall arrange appropriate posters, banners, slogans in local/Hindi/English languages at work place.

### 10.2 DISPLAY OF HSE SIGNAGE

Appropriate HSE signage shall be displayed at the work area to enhance awareness of HSE workmen and passersby about the work going on and do's and don'ts to be followed.

### 10.3 COMPETITIONS ON HSE, AWARDS & REWARDS

1. Subcontractor shall arrange competitions (slogan, poster, essay etc.) on HSE for workers and employees from time to time (Safety day, World Environment Day etc. minimum one such function each month) and winners will be suitably awarded during the functions.

2. Subcontractor shall identify workers following good HSE practices and reward them from time to time as encouragement to follow good HSE practices.

3. Alternatively, if a common monthly function is organized at site, subcontractor shall participate in the same so that a minimum frequency of one such function per month is maintained.

### 10.4 HSE AWARENESS PROGRAMMES

Subcontractor shall arrange HSE awareness programmes periodically on different topics including medical awareness for all personnel working at site from time to time including officials involved in execution.

## *11. HSE COMMUNICATION AND PARTICIPATION*

### 11.1 MONTHLY HSE REPORTING

1. HSE activities shall be reported to BHEL monthly as per Format no. HSEP: 14-F05. The reporting medium can be hard/soft as per BHEL requirement.

2. The period of reporting shall be 25$^{th}$ of the preceding month to 24$^{th}$ of the present month and report shall be submitted by the end of the calendar month or as conveyed by BHEL.

3. BHEL can modify the reporting requirements as per requirement

### 11.2 HSE EVENT REPORTING

1. Important HSE events like HSE Training, Mock / Fire/Rescue Drills, Medical camp etc. organized by subcontractor shall be reported to BHEL in detail with photographs

2. Celebration of important days like National Safety Day, World Environment Day etc. shall also be reported likewise.

### 11.3 HSE INCIDENT REPORTING

All incidents (near misses, property damage, first-aid cases, minor, major and fatal incidents) shall be reported to BHEL as they happen through SMS and Hard/Soft copy as per Format No. HSEP: 14-F22

### 11.4 HSE SUGGESTIONS

All workers and employees to be encouraged to provide suggestions for improvement in

Health, Safety & Environment at site. The suggestions to be recorded in a "Suggestions Register". Suggestions to be reviewed and those having potential of significant beneficial effects are to be implemented, and recognition / award to be given to the individual.

### 11.5 CLIENT COMMUNICATON

All HSE related communication from BHEL, customer / external statutory and regulatory agencies to be handled on priority. The relevant issues to be resolved in expeditious manner

### 11.6 RECORDS OF COMMUNICATON

Records of all communication and their responses as detailed above shall be maintained by subcontractor in hard / soft copy and produced when required.

## *12. INCIDENT REPORTING, INVESTIGATION & CORRECTIVE ACTION*

1. A conducive environment for reporting of near misses and other incidents shall be developed at site through system of rewards etc.
2. Priority to be given to ensure medical treatment of the victim. Victim to be given immediate First Aid and transported to Medical Facility in a well-equipped Ambulance
3. All incidents, as they happen, shall be reported to BHEL immediately over phone/SMS/Whatsapp/mail and then in Format No. HSEP:14-F22 within 24 hrs. of occurrence. Immediate SMS shall be sent to concerned Package In-charge with following Details:
    a. Project & Customer Name:
    b. Subcontractor Name & Scope:
    c. Incident Area:
    d. Number of Injured / Fatalities:
    e. Date & Time of Accident:
    f. Incident Description in few lines:

    No incident shall be hidden
4. Records of all incidents shall be maintained in hard / soft copy as per Format No. HSEP:14-F23.
5. For all incidents:
    a. The incident area, equipment / tools involved, documents & records etc. shall be maintained as-it-is pending investigation
    b. Root Cause Analysis (RCA) to be conducted and corresponding Corrective / Preventive Action (CAPA) ensured
    c. Responsibility shall be assigned and action to be taken against the erring individual
    d. In case presence of manufacturer of the equipment involved is required, subcontractor will arrange the same

e. All expenses pertaining to the RCA / CAPA shall be borne by the subcontractor

6. RCA and CAPA reports of all near misses and minor injuries shall be identified and report submitted to BHEL within 7 days of occurrence.
7. For incidents, where worker does not resume duty within 48 hours of occurrence, Joint investigation along with BHEL shall be conducted within 7 days, and CAPA ensured.
8. Corrective action shall be immediately implemented at the work place. Work shall be put on hold in the area till corrective actions are verified by BHEL
9. All incidents, their Root Cause Analyses and Corrective actions shall be recorded, and analyzed so as to identify weak areas and actions to be taken to reduce the incident trend.

## *13. SAFETY DURING WORK EXECUTION*

### 13.1 HSE SYSTEMS AND PROCEDURES

BHEL Power Sector HSE Management System (HSEMS) shall be referred for controlling hazards, aspects, and carrying out HSE activities at site. Subcontractor shall get familiar with and follow the HSEMS documents provided by BHEL which include the follows:

#### 13.1.1 HSE PROCEDURES:

All HSE Procedures defined in HSEMS, as referred in various sub-clauses of this Section as given in Annexure 01

#### 13.1.2 PERMIT TO WORK (PTW) SYSTEM

1. The following activities shall be carried out by the subcontractor strictly after obtaining Permit to Work (PTW) from BHEL

   i. General Work Permit (**Format No. HSEP14-FP01)**
   ii. Height working (**Format No. HSEP14-FP02)**
   iii. Hot working (**Format No. HSEP14-FP03)**
   iv. Confined space Work (**Format No. HSEP14-FP04)**
   v. Excavation more than 2-meter depth (**Format No. HSEP14-FP05)**
   vi. Radiography / Radiation Work (**Format No. HSEP14-FP06)**
   vii. Heavy / Complex / Critical Lifting Activity (**Format No. HSEP14-FP07)**
   viii. Night / Holiday Work (**Format No. HSEP14-FP08)**
   ix. Material Loading / Unloading Permit (**Format No. HSEP14-FP09)**
   x. Grating / Safety Net / Safety Facility Removal Permit (**Format No. HSEP14-FP10)**
   xi. Live Electrical Maintenance etc. - Lockout / Tag (**Format No. HSEP14-FP07)**

2. The above list is not exhaustive. BHEL reserves right to introduce additional Permits or modify requirements for usage of existing Permits. The conditions for using the Permit are specified in the Format (General Requirements).

3. Where customer is having separate Work Permit System the same shall be followed in conjunction to ensure all activities and checks are covered in all systems.

4. Permit applicant shall apply for work permit of particular work activity at particular location before starting of the work along with Job Hazard Analysis.

5. All Permit signatories shall physically visit the work area and check that all the safety control measures necessary for the activity are in place. Only then the permit shall be issued.
   a. Signatory shall physically visit the area of work and ensure all required safeguards before signing the Permit
   b. Signatory shall periodically visit the area to confirm the availability of required safeguards throughout the currency of the permit
   c. In case any Permit requirement is not available, work will be stopped till it is made available

6. Permit holder shall implement and maintain all control measures during the period of permit. The permit will be closed after completion of the work and submitted to BHEL.

### 13.1.3 Operational Control Procedures

1. All applicable OCPs (Operational Control Procedures) as identified from outcomes of HIRA, Aspect / Impact studies and BHEL inputs will be followed by subcontractor. This will be done as part of normal scope of work.
2. Illustrative list of such OCPs is given in Table 13.1 and same will be made available to subcontractor by BHEL during work execution at site.
3. In case any other OCPs are required or existing ones need to be modified in order to control the risks / impacts associated with any activity during the execution of work subcontractor shall prepare / update and follow the same with information to BHEL.

***Table 13.1 - LIST of Reference OCPs***

| No. | Topic | No. | Topic | No. | Topic |
|---|---|---|---|---|---|
| 0 | General Safety | 20 | Oil flushing | 40 | Gas distribution test |
| 1 | Handling of chemicals | 21 | Alkali boil out | 41 | Cleaning of Hotwell / Deaerator |
| 2 | Electrical safety | 22 | Steam blowing | 42 | Electrical maintenance |
| 3 | Energy conservation | 23 | Working in confined area | 43 | O&M of control of AC plant & system |
| 4 | Welding and gas cutting operation | 24 | Operation of passenger lift, material hoists & cages | 44 | Material preservation |
| 5 | Fire safety | 25 | Vehicle/ Crane maintenance | 45 | Electro-resistance heating |
| 6 | Use of hand tools | 26 | Radiography | 46 | Blasting |
| 7 | First aid | 27 | Waste disposal | 47 | Transformer charging |

| | | | | | |
|---|---|---|---|---|---|
| 8 | Food safety at canteen | 28 | Handling & storage of mineral wool | 48 | Handling of battery system |
| 9 | Use of cranes | 29 | Working at night | 49 | DG set |
| 10 | Storage and handling of gas cylinders | 30 | Computer operation | 50 | Sanitary maintenance |
| 11 | Manual arc welding | 31 | Storage in open yard | 51 | Piling rig operation |
| 12 | Use of helmets | 32 | Drilling, reaming and grinding(machining) | 52 | Passivation |
| 13 | Good house keeping | 33 | Stress relieving | 53 | EDTA Cleaning |
| 14 | Safe excavation | 34 | Hydraulic test | 54 | Chemical cleaning of Pre boiler system |
| 15 | Working at height | 35 | Trial run of rotary equipment | 55 | Boiler Light up |
| 16 | Filling of hydrogen in cylinder | 36 | Batching | 56 | Rolling and Synchronization |
| 17 | Illumination | 37 | Cable laying/tray work | 57 | Loading of Unit |
| 18 | Handling and erection of heavy metals | 38 | Spray insulation | 58 | Air compressor |
| 19 | Acid cleaning | 39 | Compressor operation | 59 | Hydra Operation |

## 13.2 ACTIVITY SPECIFIC REQUIREMENTS FOR SAFETY:

All Work shall be commenced only after taking the respective Work Permits (as applicable) and precautions as per relevant codes, systems and OCPs in order to ensure safe conditions throughout the duration of work. Additionally, activity specific safeguards as per this section shall be followed.

### 13.2.1 WORK AT HEIGHT:

1. All work at height above 2 meter above ground level without complete platforms, handrails and other related fall protection shall require a work permit in the prescribed form. This shall require approval by the competent authority. The HSE officer of sub-contractors shall follow the checklist religiously by physically verifying the condition of the work area before recommending for approval.

2. Prior to the start of work at elevation, the HSE Officer involved with the work must meet the work supervisor to review the scope of work, and must review all the possible fall hazards and effective safety responses. The evaluation / analysis must be documented and kept on file and on site by the HSE Officer.

3. Whenever a fall hazard or other exposure exists for working at heights more than 2.0m/6ft, the nature and scope of work will be evaluated for conditions and environmental factors before selecting the appropriate fall protection system (active, passive or a combination of measures, as appropriate).

4. All Engineering and Administrative Controls including barricading, safe platform, Safety Nets etc. shall be made available at work location. Under no circumstances, there shall be total reliance on PPEs only

5. **Safety Nets**

   a. Contractor shall maintain sufficient stock of Safety Nets for deployment
   b. Safety Nets as per IS: 11057:1984 should be used extensively for prevention / arrest men and materials falling from height.
   c. The safety nets shall be fire resistant, duly tested and shall be of ISI marked.
   d. Safety Nets shall be deployed below all platforms where height work is envisaged. Duration of work, delay shall be no excuses for non-installation of Safety Net

6. Reaching beyond barricaded area without lifeline support, moving with support of bracings, walking on beams without support, jumping from one level to another, throwing objects and taking shortcut must be discouraged.
7. Monkey Ladder shall be fitted with cages. Rope ladder should be discouraged.
8. In case of pipe-rack, persons should not walk on pipes and walk on platforms only.
9. In case of roof work, walking ladder/ platform should be provided along with lifeline and/ or fall arrestor.
10. For chimney or structure painting, both hanging platform and men should be anchored separately to a firm structure along with separate fall arrestor.
11. The procedures for the safety response to identified fall hazards developed and rescue plans must be reviewed with all individuals exposed to the hazards.
12. The HSE Officer must establish an inspection process of fall protection systems. Some equipment requires documented inspections by its manufacture on a regular schedule. Such equipment must have evidence of the inspection and re-certification process on it. This information must be reviewed before the equipment is actually used. Individuals must visually inspect the fall protection equipment before each use. Failure to complete this inspection process could result in serious injury or death.
13. Immediately remove from service any fall protection equipment that is identified as defective, damaged, or has been subjected to an impact. Damaged fall protective equipment must be destroyed to prevent re-use and not be discarded into trash containers, as the worn or damaged equipment could be unintentionally re-used.
14. Aerial lifting devices, excluding scissor lifts require the use of full body harnesses and lanyards in any elevated position.

**13.2.1.1 Personnel fall protection system must include:**

**a. Safety Harness**

All height workers must use Safety harness with double lanyards. The primary lanyard is never unhooked until the secondary lanyard is secure. The design of the working platform should be such that u**nder no circumstances, worker should have both lanyards unhooked while at height.**

**b. Lanyard**

i. The type of work and the environment conditions determine lanyard and lifeline selection. If welding, chemical cleaning that may damage lanyards, connectors or lifelines, sandblasting, etc., either protect the components or use more appropriate type of system.

ii. Lanyards and lifelines must incorporate, or be used with, an appropriate deceleration (shock absorbing) device. Deceleration devices include rope grabs, rip-stitch lanyards, specially woven lanyards, tearing, or deforming lanyards, automatic self-retracting lifelines and lanyards which dissipate or limit the energy imposed on the employee during fall arrest.

iii. Once in use, the system's effectiveness is to be monitored. In some cases, a program for cleaning and maintaining the system may be necessary. Lanyard and lifelines must use locking snap hooks only and under no circumstances must two lanyard snap hooks be connected.

**c. Lifeline**

All lifelines in general are to be made of min 8mm dia steel rope (plastic coated) and tied to columns with 3 clamps at each end. Wherever columns are not available to tie the lifelines, the vertical posts as per the design below are to be provided after carrying out drop load test initially. A load of 240kg to be dropped off the mid-point of lifeline in this test.

**d. Lifeline Post**

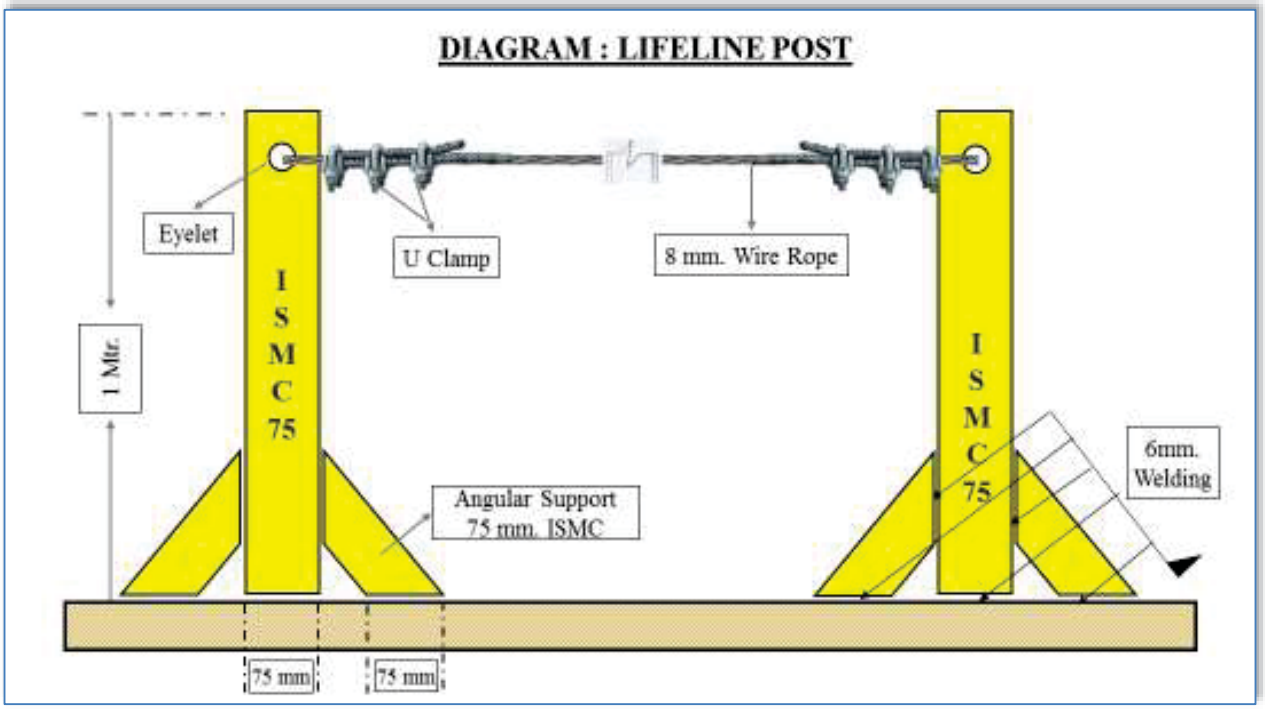

**Fig. 13.2.1.1 Lifeline Post**

i. The support at vertical post shall be fixed at end-to-end. The maximum length of one end to another end shall be 18 meters
ii. If the length of a lifeline is more than 18 meters, then intermediate vertical post(s) are to be used. Such intermediate post(s) will act as supports and the lifeline rope should simply pass through the eyelets (holes) of such supports without being anchored
iii. The lifeline need not be wrapped / clamped to any intermediate post
iv. Such intermediate posts must be used at an interval of every 18 meters
v. The post(s) in which the original lifeline is to be installed should be capable of sustaining a tensile stress of 2268 Kgs
vi. In a horizontal lifeline installation, maximum allowable sagging is 500-600 mm
vii. For a single spun lifeline, no more than 2 persons are allowed to work; for more than two workers, another lifeline should be installed
viii. Horizontal lifeline should be so installed that it does not impede safe movement of workers
ix. All the installation work must be carried out by competent person with adequate knowledge

### 13.2.1.2 Working Platform

1. Working platforms, gangways and stairways shall be so constructed that they do not sag unduly or unequally and if the height of the platform gangways provided is more than 3.6 m above ground level or floor level, they shall be closely boarded and shall have adequate width, which shall not be less than 750 mm and be suitably fenced.

**2. Precautions against the fall of Materials, Persons and Collapse of Structures**

i. Every opening in the floor or a building or in a working platform shall be suitably barricaded to prevent the fall of persons by providing suitable fencing or railing whose minimum height shall be 90 cm.

ii. Adequate precautions should be taken such as the provision of fencing, or barriers to protect any person who might be injured by the fall of materials, or tools or equipment being raised or lowered. Cradle may be used for lifting materials - however this shall be made of MS angles and flats only and duly certified by the HSE officer. Operators may also use designed containers for lifting small tools.

iii. Guardrails (including scaffolding) erected over/adjacent working areas must have the guardrails screened (opening < 0.5), to prevent material from falling outside the platform/decking.

iv. Guardrails must be able to withstand a 200-pound force exerted in any one direction.

v. Where necessary to prevent danger, guys, stays or supports should be used or other effective precautions should be taken to prevent the collapse of structures or parts of structures that are being erected, maintained, repaired, dismantled or demolished.

vi. All openings through which workers are liable to fall should be kept effectively covered or fenced and indicated in the most appropriate manner.

vii. Guardrails and toe-board/barricades and sound platform conforming to IS: 4912-1978 and other Indian laws and regulations as depicted below should be provided.

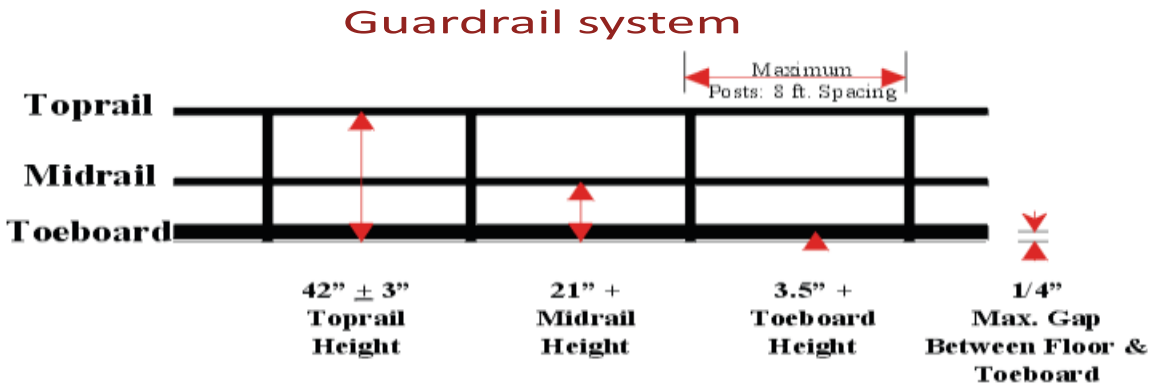

**Fig. 13.2.1.2 Guard Rail System**

viii. Guardrails shall be provided to protect workers from falling from elevated work places. The rails are generally made of MS pipes of suitable dia. Rebar shall not be used for any handrails, ladder or cover purpose. Wherever the guard-rails and toe-boards cannot be provided:

a. adequate safety nets or safety sheets shall be erected and maintained; or
b. adequate safety harnesses shall be provided and used and / or
c. adequate fall arrestor shall be provided and used.

As mentioned under PPE clause, all these PPEs shall be defect free and regularly inspected for any defect. The full body safety harness shall have double lanyard only with max 1.8m length.

ix. The monkey ladders shall have sufficient fall arrestors. Adequate lifelines of 8mm steel wire

rope shall be provided across the work area.

x. The HSE officer shall recommend appropriate PPEs after analyzing hazards and risks involved.

### 13.2.1.3 Scaffolding

All scaffolds shall be conformant to the relevant standards including IS 3696 and IS 4014 as applicable. A sketch of the scaffolds proposed to be used shall be prepared and approval of the BHEL Engineer obtained prior to construction / use.

**General**

1. The scaffolding work must be carried out by a competent person, who shall train the scaffold users on safety aspects
2. All scaffolds shall be erected / dismantled by scaffolding crew under direct supervision of competent scaffolding supervisors.
3. All scaffolds shall be capable of supporting 4 times maximum intended load and erected on sound, rigid footing, capable of carrying the maximum intended load without settling or displacement. Bamboo scaffolding is not permitted for use on site.
4. Each employee on the scaffold shall use an approved safety harness attached to an independent lifeline. The lifeline is to be securely attached to substantial members of the structure (not the scaffold itself) or to securely rigged lines, which shall safely suspend a worker in event of a fall.
5. Guard rails and toe boards shall be installed on all open sides and ends of platforms more than (2) meters above ground or floor
6. Scaffold planks must be at least 5 cm x 25 cm (2” x 10”) full thickness lumber scaffold grade or better.
7. Scaffold planks shall not span distances greater than 2.5 meters (8 feet).
8. Scaffold planks shall extend over end supports not less than 6 inches nor more than 12 inches and be secured to the scaffold. Scaffolding and accessories with defective parts shall be immediately repaired or replaced.
9. All scaffolding must be a minimum of two planks wide. No one may work from a single plank.
10. Scaffold planks must be inspected before use. Planks that have been damaged must be removed from the site.
11. Access ladders must be provided for each scaffold. Climbing the end frames is prohibited unless the design incorporates an approved ladder.
12. Adequate mudsills or other rigid footing capable of withstanding the maximum intended load must be provided.
13. Scaffolds more the 6 meters (20 feet) in height must be tied to the building or structure at intervals which do not exceed 4 meters (13 feet) vertically and 6 meters (20 feet) horizontally.
14. Do not overload scaffolds. Material should be brought up as needed. Scaffolding must not be loaded in excess of its rated capacity.
15. Barrels, boxes, kegs, blocks or similar unstable object must never be used as work platforms or to support scaffold.
16. Where persons must work under or pass under a scaffold then a 18 gauge wire mesh screen must be installed between the toe board and guard rail.
17. Employees exposed to overhead hazards while working on a scaffold will be protected by 5 cm (2”) thick planks.
18. Wooden/bamboo ladders shall not be allowed at any cost. Ladder’s rungs shall be fitted /welded properly. Before every use the rungs should be checked for safe use.

19. Wooden scaffolds shall not be used in areas where fire / fire products are expected
20. Ropes made of jute / Plastic and other fire prone material shall not be used to tie up scaffolding components together
21. The platform should have permanent hand rail and mid rail with Toe board without fail.
22. All platforms are to be tightly planked for the full width of the scaffold, except as may be necessary for entrance openings. Platforms shall be secured in place.
23. On suspension scaffolds designed for a working load of 500 pounds, no more than two workers are permitted to work on the scaffold simultaneously. On suspension scaffolds with a working load of 750 pounds, no more than three workers are permitted on the scaffold simultaneously.

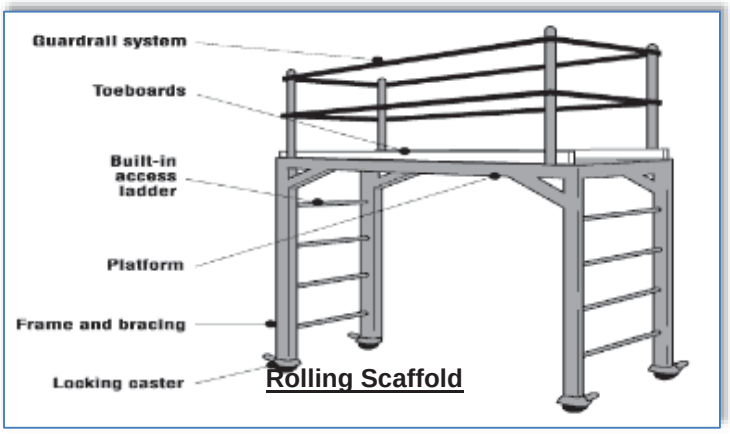
**24. Requirements for different types of Scaffolds:**

**A. Suspended Scaffold**

i. Suspended scaffolds are platforms suspended by ropes, or other non-rigid means, from an overhead structure.
ii. Requirements for use are to be preapproved by HSE Head, under a specific Permit to Work.

**B. Rolling Scaffolds**

i. The height of rolling scaffolds shall not exceed three times the minimum base dimension.
ii. The minimum base dimension of rolling scaffold will be 1.25 meters (4 feet).
iii. Adequate help must be provided when moving a rolling scaffold.
iv. Secure or remove all loose materials, equipment and tools before moving a rolling scaffold.
v. No one is permitted to ride a rolling scaffold when it is being moved. Castor brakes must be locked-on when the scaffold is not being moved.



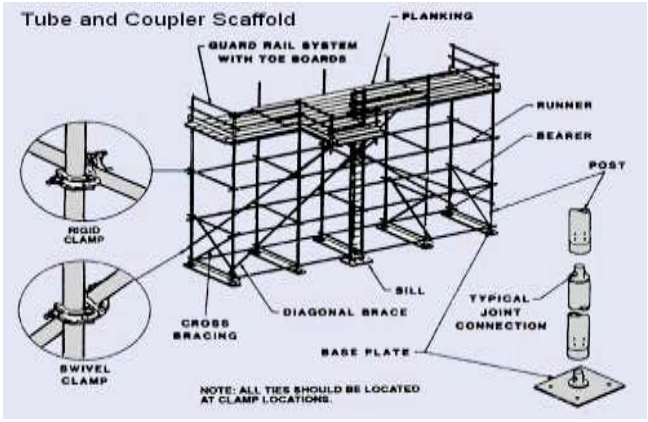


**Fig. 13.2.1.3 Types of Scaffolds**

**25. Scaffold Tagging**

Scaffolds being erected, modified or dismantled must be tagged as suitable for use. The scaffolds can only be accessed by those involved with the process.

**GREEN** scaffold tag- shall be fixed when scaffold is complete and safe for use, signed and dated by

the scaffolding competent person daily.

**RED** scaffold tag – to be fixed if scaffold is in some way defective and cannot be used or is still under erection.

Examples of scaffold tags:

**Fig. 13.2.1.4 Scaffold Tagging**

### 13.2.1.4 Ladder Safety

A sketch of the ladders proposed to be used shall be prepared and approval of the BHEL Engineer obtained prior to construction / use

**Safe Use of Ladders:**

1. Fall protection is required when working on a ladder above 2 meters and when climbing above nearby guardrails.
2. Ladders must be inspected prior to use and by a competent person quarterly, with documentation.
3. Use portable ladders for height up to 4 M only
4. Provide fixed ladders for height above 4 M
5. Place the ladder at an angle of 75 degrees (approx.) from the horizontal (1:4)
6. Extend ladder at least 1 M above the top landing
7. Secure top and bottom of the ladder firmly to prevent displacement- anti skid lining at the bottom
8. Ensure that the width of the ladder is not less than 300 mm and distance between rungs is not more than 300 mm
9. Provide landings of minimum size 600 x 600 mm at intervals not more than 6 M for fixed ladders. Check the ladders daily for any defects
10. Ensure that the areas around base and top of the ladder are clear. Getting on and off the ladder is more hazardous than using it. Use a mudsill if the ladder is to rest on soft, lose or rough soil
11. Do not use ladders of conducting material near power lines, and only use ladders near power

line or other energize system with exposed parts if they are confirmed locked-out and de-energized.

12. Stand no higher than the fourth rung from the top for carrying out any job standing on a ladder.
13. Never reach out from a ladder to perform work where your belt buckle protrudes past the ladder rung.
14. Always face the ladder while climbing up or down
15. Maintain three-point contact while climbing up or down a ladder i.e. two hands and one foot or two feet and one hand on the ladder at all the times.
16. Avoid climbing up or down a ladder while carrying anything in hands. Lift tools, equipment and materials with a rope.
17. Work from portable and extension ladders near guardrail where fall expose exists over the guardrail regardless of height, and above 2.0 mtr. heights from the working/walking surface will require the use of personal fall arrest equipment

### 13.2.2 EXCAVATION & CIVIL WORKS

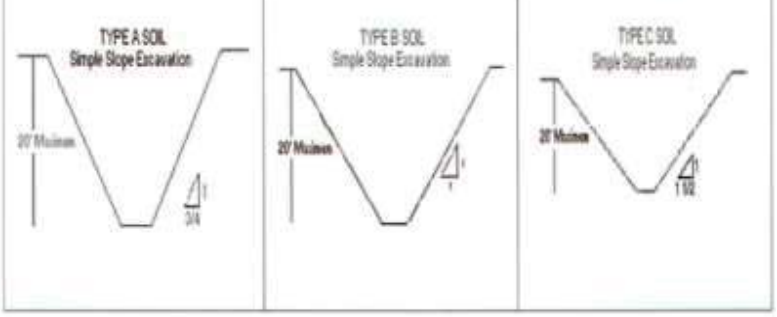
All safety precautions shall be taken for foundation and other excavation marks as per IS-3764.

#### 13.2.2.1 Excavation

The following safety measures are to be ensured before and during excavation:

1. All Excavation activities more than with depth of 1.22 meter or more shall require and Excavation Work Permit
2. Check for underground utilities like electrical / telephone cables, sewage, water lines and proper care has to be exercised to protect and prevent damage to it
3. Proper and adequate slope is maintained while excavating
4. Adequate shoring or sheeting is done wherever require to prevent soil sliding
5. Safe access through ladder or steps for exit & entry to excavation
6. No material /excavated soil is kept within one meter from the edge
7. Safe way is planned and provided for movement of HEM /transport equipment near excavation
8. Safety helmet and shoes/gum boots are provided and worn by the workmen at excavation works
9. Dewatering arrangement is made where water seepage is prevailed.
10. Stop blocks are provided to avoid vehicles reversing into the excavated trenches
11. Danger signs /Caution boards are displayed at work spot
12. Barricading is provided at excavated pits

| Soil Type | Height/Depth ratio | Slope Angle |
|---|---|---|
| Stable Rock | Vertical | 90 deg. |
| Type A | ¾ : 1 | 53 deg. |
| Type B | 1 : 1 | 45 deg. |
| Type C | 1½ : 1 | 34 deg. |



**Determining Soil Type**

| Type | Description | Examples |
|---|---|---|
| A | Cohesive soils with an unconfined compressive strength of 1.5 tons per square foot or greater. | Clay, silty clay, sandy clay, clay loam and in some cases: silty clay loam and sandy clay loam. |
| B | Cohesive soils with unconfined compressive strength greater than 0.5 tsf but less than 1.5 tsf. | Angular gravel (similar to crushed rock), silt, silt loam, sandy loam and, in some cases silty clay loam and sandy clay loam. |
| C | Cohesive soils with unconfined compressive strength greater than 0.5 tsf or less. | Granular soils such as gravel, sand and loamy sand; submerged soil or soil from which water is freely seeping; submerged rock that is not stable. |

**Fig. 13.2.2.1 Excavation Reference**

### 13.2.2.2 Piling

Ensure the following precautionary measures before starting piling works:

1. Inspection of piling equipment by responsible person for its condition before initiating piling operation.
2. Checklist and OCP for piling to be prepared using manufacturer's instructions and used
3. Testing and its certification wire ropes, slings, D-shackles, chain pulley blocks using in the process of piling work by competent person
4. Adequate support and secured foundation of the piling equipment to avoid toppling
5. Hoses should be lashed and adequately secured
6. Proper work platform is to be provided on piling frame
7. Safe work procedures and close supervision to prevent unsafe acts of operators/any unsafe conditions that may arise
8. Only experienced and trained operators are engaged for the piling operation
9. Provision of Personal Protective Equipment (PPE) like safety shoes/gumshoes/safety helmet/safety belt etc. and its use by their workmen.
10. Special care and precautions If work is near electrical live cables/ electrical equipment
11. Cordoning of work area to prevent un authorized entry
12. Guarding of revolving parts
13. Specific measures to prevent over turning of pile driver/missing of hammer/ hammer movement out of range

### 13.2.2.3 Batching

**Following Safety considerations for batching plant are to be ensured:**

1. Modern type batching plant should be used in which all the moving parts are protected and emergency and safety features are incorporated.

2. Installation of external Electric moto-vibrators in the feeding hopper of all batching plants to reduce human intervention.
3. Installation of safety devices like pull-chord on both the sides of conveyor for stopping the conveyor in emergency
4. Workers carrying cement / sand to be given appropriate PPEs like respiratory masks & gloves.
5. Conveyor belt/rotating parts must be guarded properly.
6. Safety awareness shall be inculcated in workmen about the risk involved in rotating parts.
7. The agency shall ensure to erect the batching plant as per drawing including installation of all safety devices as provided by manufacturer and witnessed by BHEL Engineer in charge before starting of machine in future.
8. Safety audit to also focus on Batching plant.
9. The site shall impose penalty on the agency who has violated the safety norms as per contract.

#### 13.2.2.4 Mobile Plant

Mobile plant includes tractors, trailers, dumpers, excavators, bulldozers, road rollers etc. for earthmoving purpose and concrete mixers, concrete transit mixtures, concrete pumps etc for concreting purpose. Due to the very nature of their function and movement in difficult terrains, congested areas, working in tandem with manual work and other operations the danger is inherent. Reverse horn is compulsory for all earth moving machineries.

**Following Safety measures to be ensured for Mobile Plant:**

1. Where movement around site is involved, routes should be planned, obstruction free and well maintained
2. Observe specified speed limits
3. Operating personnel should be aware of associated risks and its preventive measures
4. Only experienced, trained and authorized persons with valid license (wherever applicable) should operate the mobile equipment/vehicles
5. Provide and use Warning lights and reverse horn for cautioning the people around
6. Operation should be on level and stable ground with adequate working clearance.
7. Loading of out riggers/stabilizers should be well within safe ground bearing capacity
8. No person should be on equipment or vehicle during loading and unloading of material
9. Operators should be protected by warning barriers or switching off power when working in close proximity of overhead power lines
10. The equipment /vehicles should be well maintained and provided with effective brake system and other safety devices (wherever require)
11. Rotating parts of equipment should be adequately guarded
12. Provide necessary personal protective appliances and ensure its use by the operating personnel Ensure effective measures at source to control harmful emissions, dust, fumes contaminating atmosphere and cause health hazards to the operators and people in the vicinity.
13. No overloading/over stressing of vehicles/plant is allowed
14. Hoses, pipes, receivers, gauges and valves involved in carrying out hydraulic fluid/ compressed air should be checked for leaks and tested prior to operation.
15. Adequate safe clearance for swing and movement is to be judged during operation of Concrete mixer
16. Setting of machine on firm and level ground with wheel locked to prevent movement of machine
17. Proper instructions and Special precautions are to be ensured to prevent entry in to the danger zone of projectile of bucket while dropping bucket

18. Operator leaving work spot should ensure that the equipment/vehicle is kept in neutral position and place on firm and level ground.
19. The hand brake should be kept in position and block road wheels as additional safety measure
20. Blades/buckets should be kept low while moving
21. The dozer blades should not be used as brakes except in emergency
22. The ground should be examined for its bearing capacity and general safety especially when operating road roller at the edges of slopes, embankments.
23. The roller should not be moved downhill with the engine out of gear
24. If operating near excavations the following precautionary measures are to be ensured
25. Barricading, edge protection to prevent fall of persons/vehicles over running while reversing etc.
26. Suitable support system and adequate allowance to avoid the danger of side collapsing
27. Experienced signaler /attendant should be always accompanied with operator/driver for proper direction /signal and also to caution others in the working Zone during operation of mobile plant

#### 13.2.2.5 Concrete Vibrators

1. Revolving parts/belt drives should be adequately guarded and Vibrating unit shall be completely enclosed and have suitable overload relays and effectively earthed
2. Ensure sufficient length of cable to the Vibrator.
3. Ensure electric starters and other accessories are firmly fixed adequately supported
4. Ensure locking of needle load while inserting needle in to the vibrator,
5. Ensure periodical lubrication and maintenance

#### 13.2.2.6 Concrete Mixers

1. Setting of machine on firm and level ground with wheel locked to prevent movement of machine
2. Proper instructions and Special precautions are to be ensured to prevent entry in to the danger zone of projectile of bucket while dropping bucket

### 13.2.3 WELDING & GAS CUTTING SAFETY (HOT WORK)

1. All Hot Work shall require a Hot Work Permit
2. There shall be flash-back arrestors conforming to IS-11006 at both cylinder and burner ends. Damaged tube and regulators must be immediately replaced.
3. All safety precautions shall be taken for welding and cutting operations as per IS-818.
4. When possible, items to be welded, cut, heated, etc. shall be moved to a safe location free of combustible or flammable material. If this is not possible, then all combustibles/ flammables that can be removed from the area shall be removed within a 35-foot circumference and a positive means of confining arcs and sparks generated by the process shall be ensured and additional person(s) shall be stationed as fire-watch for the area(s)still exposed, along with obtaining the Hot Work Permit as applicable.
5. Appropriate fire-fighting equipment is to be available in close proximity of any welding and gas cutting operations at all times suitable for the type of Fire.
6. Drums, tanks, and similar containers that have contained flammable or toxic material shall not be welded, cut, or heated until they have been made safe by water filling, thorough cleansing or similar accepted practices. The container shall also be ventilated during the welding, cutting, or heating process.
7. Proper ventilation is required for any welding or torch operations performed in a confined space.
8. Any welding or gas cutting operations performed on metals of toxic compounds or coating such as zinc, stainless steel, lead, cadmium, chromium, and beryllium shall be properly ventilated

and/or proper respiratory protection shall be worn by any person that could be exposed to fumes, vapors, and gasses created by the welding and gas cutting processes.

9. Wherever it is practical, all arc welding operations shall be shielded to prevent direct light rays or sparks from contacting persons in the vicinity or from reaching areas normally used to travel through or into the vicinity. Where this is not practical, persons who shall be in the area are to use proper eye and skin protection. Other persons who are not participating in the welding or gas cutting operations are not to be allowed into the hazard zone.
10. Welders and other employees who are exposed to arc welding radiation shall wear suitable clothing and protective apparel to prevent burns and other types of ultraviolet radiation damage to the skin.
11. Arc welding machines shall be shut down when being moved or when they are not in continuous use. Electrode holders left unattended shall have electrodes removed and shall not be left where they might contact employees or conducting objects.
12. Arc welding power supply cable shall be of proper rating and material, e.g. copper.
13. Welders shall guard against allowing materials adjacent to or behind them to reflect radiation back toward them or towards others in the area. Reflected radiation can cause skin burns and eye flash burns.
14. Valve caps shall be in place when cylinders are not in use. Valve caps shall never be used for lifting the cylinder vertically.
15. Torches shall only be lit by approved strikers; never with matches, cigarette lighters, or hot-work.

16. **Splatter / Slag Collector**

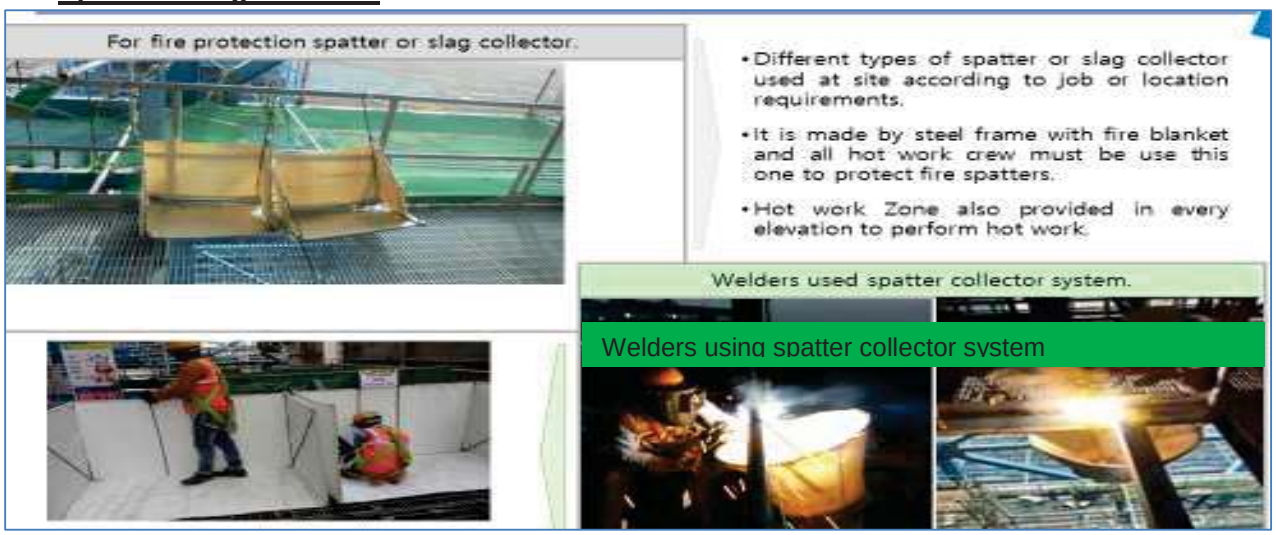


**Fig. 13.2.3.1 Splatter / Slag Collector**

While carrying out job at height, the sparks or molten slag shall be prevented from falling down by putting a fire-resistant (non-asbestos) sheet or patter/ slag collector or even MS Sheet. The passage of falling sparks or molten slag shall be barricaded till ground floor and any cable/ tubes/ any other objects interfering in the passages hall either be removed or covered with Fire-resistant sheet or MS

Sheet.

### 13.2.3.1 COMPRESSED GAS

1. All cylinder valves shall be closed when any work is finished and when any Cylinders are empty or being moved. Valve protection caps shall be placed and secured properly before gas cylinders are transported, moved or stored.
1. Compressed gas cylinders shall be secured in an upright position with chain or appropriate means during storage & use. However, a trolley shall be used for transportation.
2. Compressed gas cylinders shall always be secured from tipping or falling, whether in use, in storage or in transit. The cylinders shall always be secured upright, except during times when actually being hoisted or carried.
3. When cylinders are transported by powered vehicle they shall be secured in a vertical position.
4. Regulators shall be removed when cylinders are not in use or are in transit, unless the cylinder is firmly secured on a special carrier designed for this purpose.
5. Gas cylinders are not allowed to be used in man-basket when occupied.
6. Cylinders containing oxygen or fuel gasses shall not be taken into confined spaces.
7. Oxygen cylinders shall be stored a minimum of 6 meters from fuel gas cylinders or shall have an approved firewall between them.
2. All cylinders shall be kept at a safe distance from welding or cutting operations or shielded from arc/ sparks / slag.
3. All cylinders shall be placed where they cannot become part of the electrical circuit.
4. Oxygen and acetylene shall not be stored together. Oxygen must be separated from acetylene (or ANY fuel gas) or combustible material by at least 20ft or a barrier with a 30 minute fire resistance rating.
5. All Cylinders should be stored upright in a designated area with labels for the type of gas. All applicable precautions to be ensured during storage
6. Oxygen and fuel gas regulators, hoses and associated equipment shall not be altered and shall be in proper working order while in use.
7. Compressed air can be extremely dangerous if allowed to penetrate the skin. As such, the use of compressed air to clean off yourself or other workers shall be strictly prohibited.
8. All gas cylinders shall be stored in upright position. Suitable trolley shall be used for cylinder movement, the design of which shall be submitted to BHEL Engineer for approval.
9. No of cylinders shall not exceed the specified quantity as per OCP
10. Cylinders shall be moved by tilting and rolling them on their bottom edges. They shall not be intentionally dragged, struck or permitted to strike each other violently.
11. All cylinder should be kept only in cylinder trolley.
12. Cylinder shall be transported in upright vertical position by suitable mean.

### 13.2.4 LIFTING & RIGGING SAFETY

1. All Heavy / Complex Lifting operations as defined in Clause 6.12 shall require a Lifting Work Permit.
2. All the cranes and lifting tools & tackles shall be inspected on daily / weekly basis as well as monthly by expert as per applicable formats.
3. In addition, inspection / certification as mandated by law shall be carried out wherein these shall be tested and certificates of fitness shall be obtained from 3rd party State Govt. approved competent agency before deploying at site and later periodically. BHEL shall be given advance intimation of any such inspections
4. The last date of Third Party Inspection and the next Due date shall be conspicuously displayed on all cranes. A copy of certificate shall be pasted on operator's cabin of all the lifting equipment.
5. Following requirements shall be mandatorily followed, wherever applicable:
   a. The manufacturer's instruction for maintenance shall also be followed. All safety measures shall be followed.
   b. All tools tackles, lifting appliances; material-handling equipment etc. used by the subcontractor shall be of safe design and construction.
   c. The operators, slingers and signalers shall be qualified as per IS 13367 (part-1):2003 "Safe use of cranes- code of practices".
   d. There shall be a person responsible for co-ordination among cranes where multiple cranes are used, and lifting over 75% of the crane capacity to be avoided.
   e. Mobile phone should be banned for crane operator and lifting operation. Only walki talki shall be allowed in rigging/Lifting purpose.

#### 13.2.4.1 Personnel Lifts (Man-Basket / Jhoola):

The design of personnel man basket shall be submitted to BHEL Engineer for approval before use. Relevant permit (Height work & others as applicable) shall be completed prior to lifting any people, along with a rigging plan.

a. A separate Lifeline / Fall arrestor anchored to a fixed structure outside of Jhoola shall be provided for the workers inside the basket. All occupants of the basket shall have Safety Harnesses equipped with rope grabs, which are to be hooked to the vertical lifeline.
b. Man-basket shall be used where access through ladders or scaffolding is not feasible.
c. Man-baskets shall be designed and engineered by a manufacturer (job made man-baskets are not allowed, unless designed and tested by a certified engineer), and built robust with MS Angles and flats or plates or channels only.
d. Guard rails top and mid, must be in place and screened-in to avoid material from falling out of basket. The factor of safety shall be 200%.
e. It shall have a door with double latches and shall open inside. Anchor points shall be identified within the man-basket.
f. The man-basket shall be thoroughly inspected and load tested and a trial run performed without personnel before being put to job.
g. It shall be treated as a lifting tool (T&P Item) and shall undergo same certification cycle and

inspection as other lifting equipment.

h. An additional sling of required lifting capacity shall be fixed the man-basket main lifting point and attached to the crane above the ball or block.
i. While lifting man-basket, the crane shall maintain a uniform speed of lift without any swing.
j. Once man-basket reaches the destination, the lift brakes shall be locked as long as the basket remains at that point. The same care shall be taken in its descent.
k. As for hanging man-basket, the same shall be hung off a rigid structure with help U-shaped handle welded to man-basket. This shall be tested once in a year by a competent person.
l. Use of Rebar steel for making and monkey-ladder must be avoided.

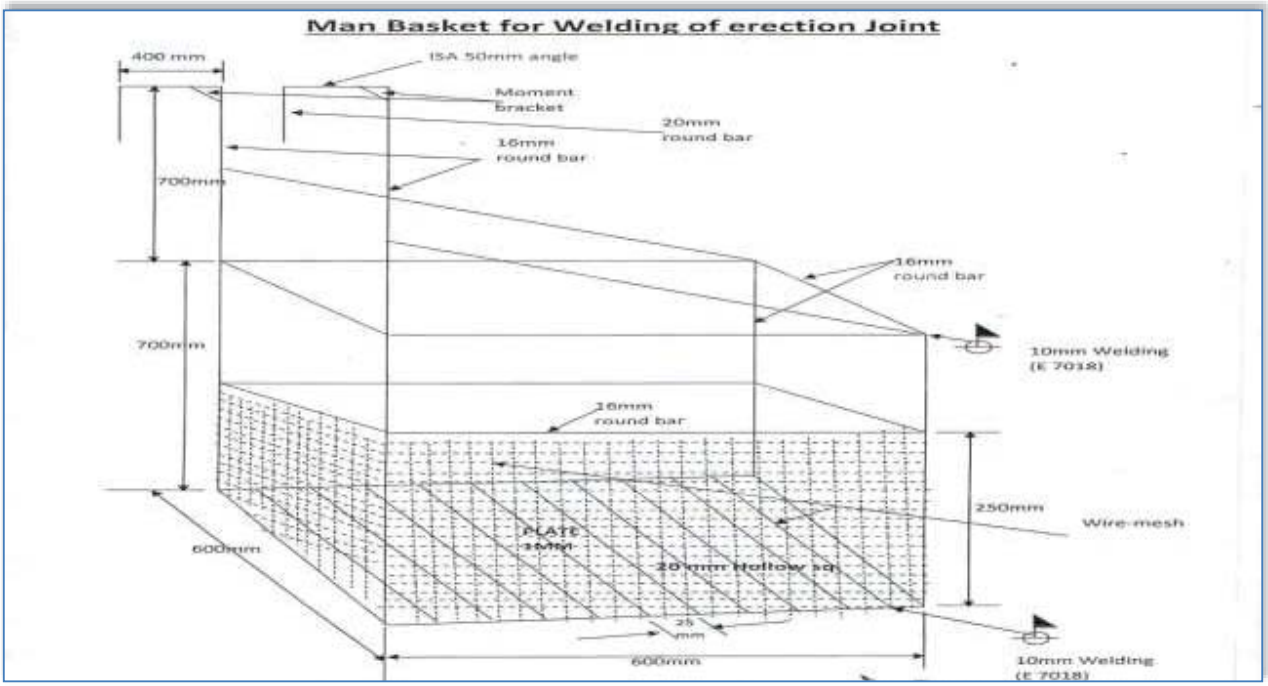

**Fig. 13.2.4.1 Man Basket for Welding Erection Joint**

13.2.4.2 **Cranes & Hoisting Equipment:**

This section provides the guidelines to ensure proper rigging and lifting activities are accomplished safely and in accordance with applicable specifications, codes, and regulations.

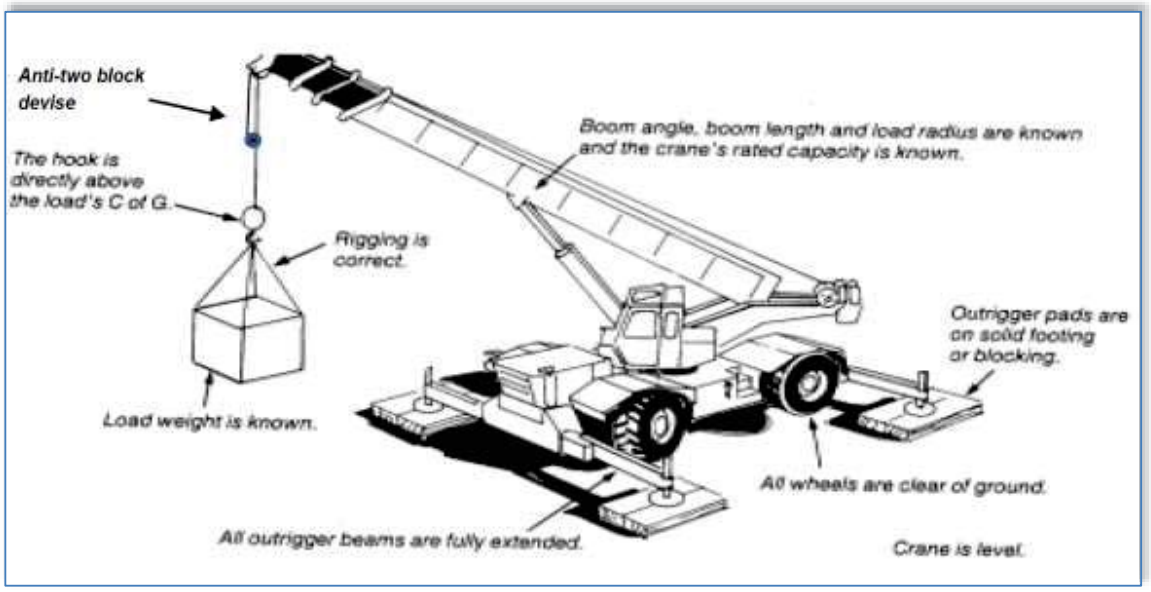

**Fig. 13.2.4.2 Proper Crane Setup**

a. On every crane or piece of hoisting equipment notices of all rated load capacities, recommended operating speeds, and any hazard warnings or special instructions shall be conspicuously posted. All instructions and warning shall be visible from the equipment operator ‘s station.
b. Cranes shall have an Anti-Two-block safety device installed
c. All mobile cranes shall have overload and backup alarms, load angle indicators and limit switches
d. All areas within swing radius of cranes that are potentially accessible by pedestrian, vehicular, or equipment movement shall be barricaded to prevent anyone or any vehicle or equipment from being struck by the crane or hoisting equipment, or its load(s).
e. No part of the lifting equipment or its load shall be within the distance as specified in the Indian Electricity Act from an energized power line
f. Cranes shall have annual certified third party inspection and be inspected before use by the operator. Any defects shall be corrected before use. Logs of crane inspection shall be kept with the crane.
g. Make certain that the rigging personnel, material, and equipment have the necessary capabilities for the job and are in safe condition.
h. Communicate with person(s) directly responsible for accomplishing the work and / or work area to establish requirements/responsibilities and make certain that all preparatory work is complete.
i. Mats/Pads must be used on all lifting equipment, equipped with out riggers.
j. Pick and carry must have the load secured to the rig in front.
k. Only BHEL Approved Plate Lifting Spreader Beam configuration shall be used (Sample in Fig. 13.2.4.2)

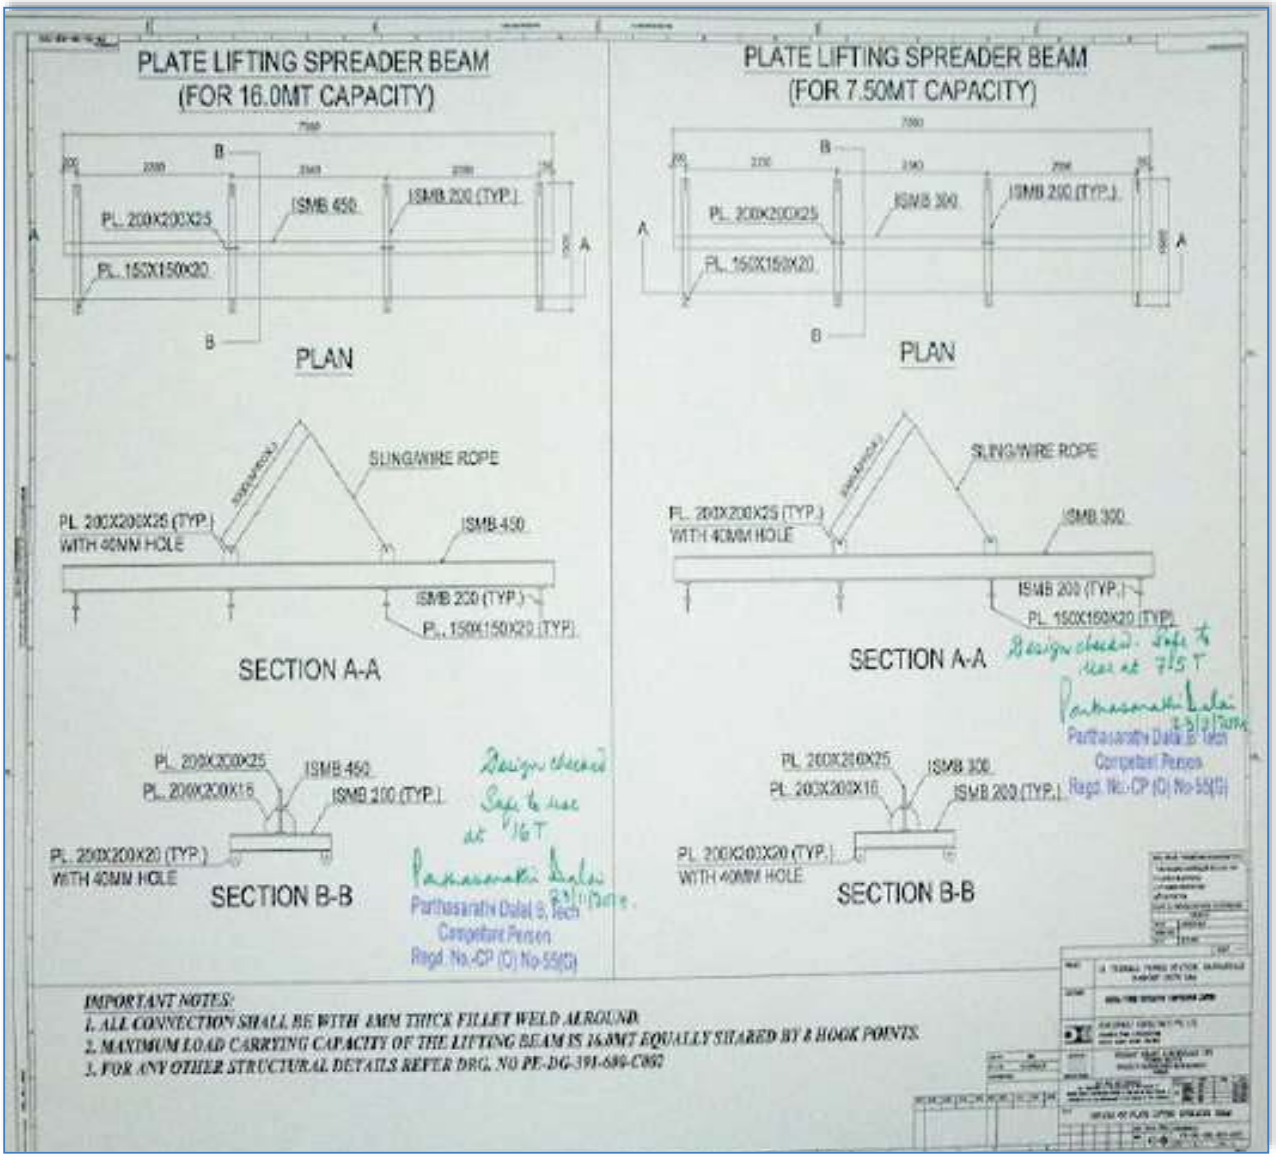

**Fig. 13.2.4.3 Typical Plate Lifting Spreader Beam Configuration for 7.5 MT and 15 MT Loads**

**I. Crane operators must follow the following:**

1. Pass an annual Operator's Physical examination
2. Carry a valid training certification card at all time while operating issued by the Govt. or other recognized institute.

### 13.2.4.3 SAFE RIGGING PRACTICES

13.2.4.4

a. Review the planned operation and requirements with the operator and rigging crew.
b. Ensure a pre-lift meeting is conducted with crane operator, tagline operator, signal personnel, and Safety Manager.
c. Designate a qualified person from the rigging crew to observe clearance of the equipment and give timely warning for all operations where it is difficult for the operator to maintain the desire clearance by visual means.
d. Clear the lift area of all unnecessary personnel.
e. Hydras shall only be allowed for loading & unloading works & shall not be allowed to move with load

#### 13.2.4.4.1 RULES FOR SAFE RIGGING

1. Use loops, thimbles and corner pads to prevent damage to slings when used around corners or on cutting edges.
2. Never allow wire rope to lie on the ground for any length of time or on rusty steel or near solvents, chemicals or corrosive substances.
3. Slings must not be pulled from between or under loads with load resting on the sling.
4. Keep all rope away from flame cutting or welding operations.
5. Never use rope as sling material.
6. Never wrap a wire rope completely around a hook.
7. Do not bend wire rope near any attached fitting.
8. The sling must be selected to suite the most heavily loaded leg rather than the total weight when using multi-legged sling to lift loads in which one end is heavier than the other.
9. When using 3 and 4 legged sling configurations, any two legs must be capable of supporting the entire load.
10. Where possible, wire rope choker hitches must include a shackle with the eye around the shackle pin to prevent breaking wires of the choke. The choker hitch must be “snugged down” prior to lifting, not after tension is applied.
11. Unless authorized by the hook manufacturer when more than two rope eyes are placed over a hook, install a shackle, pin resting in the hook, and place the rope eyes in the bowl of the shackle.
12. Properly rig all loads to prevent dislodgment of any part.
13. Use guide ropes or tag lines to prevent the rotation or uncontrolled motion of the load when necessary.
14. Loads must be safely landed and properly blocked before being unhooked and unslung. Tag lines must not be used in situations that jeopardize the safety of the lift.
15. Lifting beams must be plainly marked with their weight and designed working load and must only be used in the manner for which they were designed.

16. The hoist rope or chain must never be wrapped around the load. The load must be attached to the hook by slings or other rigging devices that are adequate for the load being lifted.
17. Multiple part lines must not be twisted around each other.
18. The hook must be brought over the center of gravity of load before the lift is started.
19. If there has been a slack rope condition, determine that the rope is properly seated on the drum and in the sheaves prior to lifting.
20. Keep hands away from pinch points as the slack is being taken up.
21. Leather gloves are recommended when handling wire rope.
22. Avoid impact loading caused by sudden jerking when lifting or lowering. Lift the load gradually until the slack is eliminated.
23. Never ride on a load that is suspended.
24. Avoid allowing the load to be carried over the heads of any personnel.
25. Never work under a suspended load until the load has been adequately supported from the floor and all conditions have been approved by the supervisor in charge of the operation.
26. Never leave a load suspended unless emergency evacuation is required.
27. Never make temporary repairs to sling.
28. The capacity of a sling is determined by its angle, construction, type of hitch and size.
29. Never lift loads with one leg of a multi-leg sling until the unused legs are made secure.
30. Never point load a hook unless it is especially designed and rated for such use.
31. Make certain that the load is broken free before lifting and that all legs are taking the load.
32. When using two or more slings on a load make certain all slings are made from the same materials.
33. Lower the loads on to adequate blocking to prevent damage to the slings.
34. Materials and equipment being hoisted must be loaded and secured to prevent any movement which could create a hazard in transit.
35. The weight of the hook, load block and any material handling devices must be included when determining crane capacity.
36. Calculated weights cannot exceed 75% of the chart without written approval.
37. Personnel must be completely clear of loads being picked up or set down by crane. Tag lines will be used to control the loads. Loads must not be touched by hand while placing/ moving.

#### 13.2.4.4.2 SLINGS

### a. Synthetic Slings

The following are rules for safe use of synthetic slings:

i. Synthetic slings must be marked to show the rated capacity for each type of hitch and type of web material.
ii. Nylon web slings must not be used where fumes, vapors, sprays or mists or liquids of acids or phenolic are present. Web slings with aluminum fittings must apply in this category.
**iii. Synthetic web slings must be removed from service and destroyed if any of the following conditions are present:**

a. Acid or caustic burns
b. Melting or charring of any part of the sling surface
c. Snags, punctures, tears or cuts
d. Broken stitches
e. Distortion of fittings
f. Synthetic web slings of polyester or nylon must not be used at or come in contact with temperatures in excess of 82°C
g. Polypropylene web slings must not be used at or come in contact with temperatures in excess of 93°C
h. Insulated hooks must be tested yearly to insure insulation integrity to at least manufacturer's specifications.

**iv. Wire Rope Slings must be removed from service and destroyed if any of the following conditions are present:**

a. In (10) randomly distributed wires broken in one (1) rope lay, or five (5) broken wires in one (1) strand in one (1) rope lay.
b. Wear or scraping of one-third the original diameter of outside wires.
c. Kinking, crushing, bird caging or any other damage resulting in distortion of the wire rope structure such as:
d. Evidence of heat damage.
e. End attachments that are cracked, deformed worn.
f. Corrosion of the rope or end attachments.

**v. Metal mesh slings must be immediately removed from service if any of the following conditions are present:**

a. A broken weld or broken brazed joint along the sling edge.
b. Reduction in wire diameter of 25 percent due to abrasion or 15 percent due to corrosion.
c. Lack of flexibility due to distortion or corrosion.

**vi. Synthetic web slings must be removed from service and destroyed if any of the following conditions are present:**

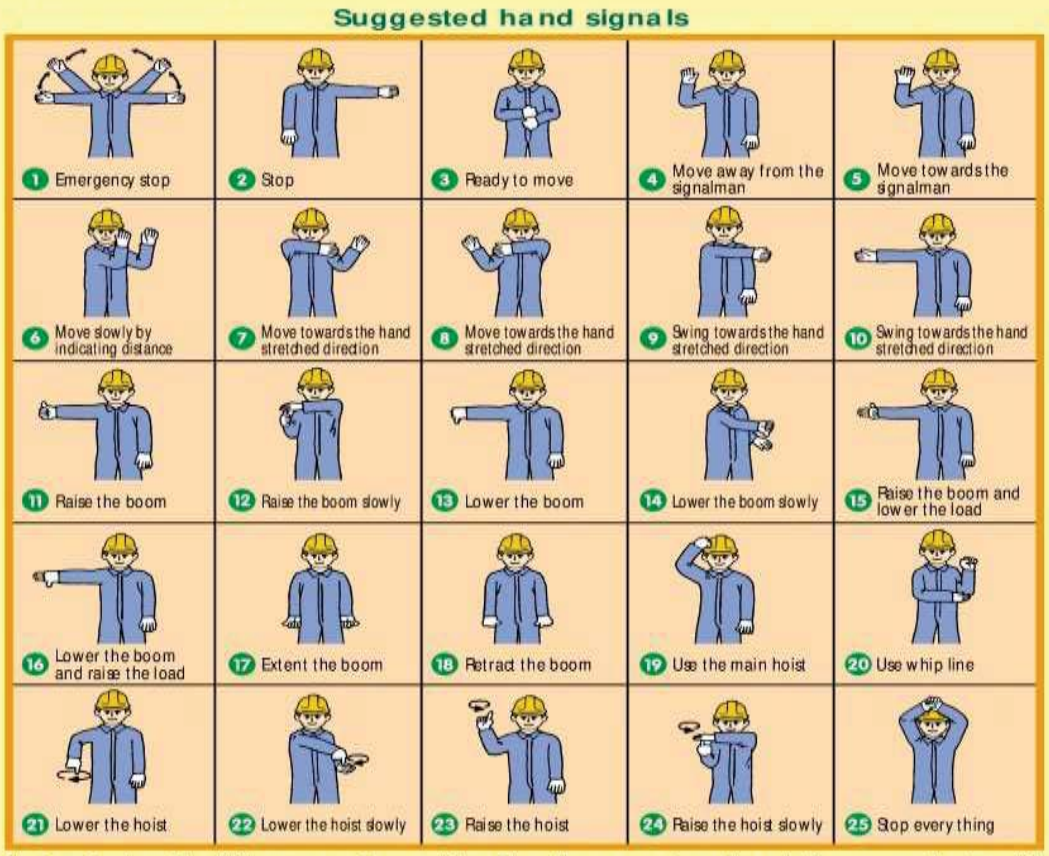
a. Acid or caustic burns
b. Melting or charring of any part of the sling service
c. Snags, punctures, tears or cuts
d. Broken stitches
e. Distortion of fittings

### b. Requirements of Plate Clamps:

1. The rated load of the plate clamp must be marked on the main structure.
2. Care must be taken to make certain the load is correctly distributed for the plate clamp being used.
3. Do not allow load or plate clamp to come into contact with any obstruction.
4. The plate clamp must not be used for side pulls or sliding the load.
5. When lifting stainless steel or special alloys, ensure plate clamp is designed for use on the specific metal.

### 13.2.4.4.3 SIGNALING PRACTICES:

- The "slinger" is responsible for attaching and detaching the load to and from the crane. He shall:
  - have received appropriate training on general safe lifting operations;
  - be capable of selectings lifting gears suitable for the loads;
  - liaise with the operator and direct the movement of the crane safely.
- The "signaller" is responsible for relaying the signal from the slinger to the crane operator. He shall:
  - have received appropriate training on general safe lifting operations;
  - be able to direct the movement of the crane and loads.



**Note: During the lifting operation, either the slinger or signaller shall communicate with the operator. Other communication methods (e.g., wireless walkie-talkies, telephones, etc.) may also be used.**

**Fig. 13.2.4.4 Recommended Signalling Practices**

### 13.2.5 DEMOLITION WORK

Before any demolition work is commenced and also during the process of the work the following shall be ensured, besides using the Work Permit:

1. All roads and open areas adjacent to the work site shall either be closed, suitably protected or restricted for movement
2. No electric cable or apparatus which is liable to be a source of danger nor a cable or an apparatus used by the operator shall remain electrically charged.
3. All practical steps shall be taken to prevent danger to persons employed from the risks of fire or explosion or flooding. No floor, roof or other part of the building shall be so overloaded with debris or materials as to render them unsafe.

### 13.2.6 T&Ps General

1. All T&Ps/ MMEs should be of reputed brand/appropriate quality & must have valid test /calibration certificates bearing endorsement from competent authority of BHEL.

2. Subcontractor to also submit monthly reports of T&Ps deployed and validity test certificates to BHEL safety Officer as per the format/procedure of BHEL.

3. Tagging and punching in all lifting tool is compulsory with SWL, sr. no. and due date.

4. All T&Ps shall be inspected by authorized Third Party agency as per applicable frequency. BHEL shall be kept informed of any such scheduled inspection

5. All T&Ps shall be internally inspected in each quarter and colour coded as below.

### 13.2.6.1 T&P Color Coding Procedure:

Inspections and tests shall be documented by means of color coding which shall verify that inspections or testing are current and that all receptacles, portable Power tools, Lifting Tools & Tackles have been inspected and tested as required. The color codes used on the project shall be:

| GREEN | BLUE | YELLOW | RED |
|---|---|---|---|
| January<br>February<br>March | April<br>May<br>June | July<br>August<br>September | October<br>November<br>December |

**Table. 13.2.6.1 T&P Color Coding Procedure**

i. The cycle of colors shall be Quarterly as a minimum or as decided by BHEL. The color code tape / Sticker shall be clearly visible to designate the period for which the inspections and tests were conducted.

ii. Following the initial inspection, the equipment must be color-coded quarterly as per color-coding instructions that will be issued by the subcontractor.

iii. Fire extinguisher with the current month color-coding inspection sticker must be provided and secured in the platform.

iv. All slings shall be regularly inspected in accordance with the requirement of the project for frequent and periodic inspections and discard immediately if they fail to meet the minimum requirements of the project.

v. The Subcontractor's Safety Officer shall ensure that all PPE is inspected prior to its issue. He is to ensure all subcontractor personnel are using safe and proper PPE equipment. Regular inspections on the PPE shall be carried out and personnel not adhering to those inspections shall be removed immediately from the site.

vi. A five (10) day interval period shall be given into each monthly color code change. During this five (10) day period either color shall be acceptable.

### 13.2.7 CHEMICAL HANDLING

1. Displaying safe handling procedures & MSDS for all chemicals such as lube oil, acid, alkali, sealing compounds etc, at work place.
2. Where it is necessary to provide and/or store petroleum products or petroleum mixture & explosives, the subcontractor shall be responsible for carrying out such provision / storage in accordance with the rules & regulations laid down in the relevant petroleum act, explosive act and petroleum and carbide of calcium manual, published by the chief inspector of explosives of India. All such storage shall have prior approval if necessary from the chief inspector of explosives or any other statutory authority. The subcontractor shall be responsible for obtaining the same.
3. The used containers of chemicals shall be segregated and disposed off suitably
4. In case the used containers need to be re-used, all traces of the chemical to be removed by thorough cleaning with detergents etc. under trained supervision

### 13.2.8 ELECTRICAL SAFETY

1. Only electricians licensed by appropriate statutory authority shall be employed by the subcontractor to carry out all types of electrical works. The subcontractor shall maintain adequate number of qualified electricians to maintain his temporary electrical installations.
2. Power supply to all equipment at site to be routed through MCBs of appropriate rating. A 'Power Supply Distribution Plan' shall be prepared and submitted to BHEL Engineer for approval

3. All power supplies through cables shall be underground or overhead with height > 3mtrs.
4. All distribution boxes shall be locked and the key controlled by site management of concerned subcontractor.
5. All individual equipment & tools at site shall be powered through Earth Leakage Circuit Breakers of 30 mA sensitivity.
6. These MCBs and ELCBs shall be regularly tested as per Clause 14
7. All fuses and fuse wires shall be of standard size and rating.
8. All electrical appliances used in the work shall be in good working condition and shall be properly double earthed other that armour earthling.
9. All extension boards shall have separate switches for all sockets / connections
10. All portable electric tools used by the subcontractor shall have safe plugging system to source of power and be appropriately earthed.
11. Providing adequate no. of 24 V sources and ensure that no hand lamps are operating at voltage level above 24 Volts especially in confined spaces like inside water boxes, turbine casings, condensers etc.
12. Electrical appliance shall have proper earthing and for appliances equal to & more than 415V shall have two separate earthing (as per IS-3043-1987)
13. Details of earth resource ad their test date to be given to BHEL safety officer as per the prescribed formats of BHEL
14. The subcontractor shall use only properly insulated and armoured cables and conform to the requirement of Indian Electricity Act and Rules for all wiring, electrical applications at site.
15. BHEL reserves the right to replace any unsafe electrical installations, wiring, cabling etc. at the risk & cost of the subcontractor.
16. No maintenance work shall be carried out on live equipment
17. Adequate precautions shall be taken to prevent danger for electrical equipment. No materials on any of the sites of work shall be so stacked or placed as to cause danger or inconvenience to any person or the public
18. The subcontractor shall carefully follow the safety requirement of BHEL/ the purchaser with the regard to voltages used in critical areas.
19. Wiring and Branch Circuits Must be protected by a proper amperage over-current device such as a HRC fuse or circuit breaker. Such installations must be located so as to prevent physical damage to the wire conductors & panels.

**20. Portable Electric Lights**

a. Portable electric lights used in wet or potentially wet locations must be either low voltage type (24 volts or less) or protected by a GFI (ground fault interrupter).
b. They must be visually checked before each use and periodically while in use to assure their original integrity is maintained.
c. Cords with cuts, breaks, deep abrasions, etc. shall be taken out of service immediately.
d. Repairs to extension cords shall only be performed by qualified/ licensed electricians.
e. Must not be allowed to lie in wet or potentially wet areas.

**21. Underground Cables:**

a. Every electric line or cable of unknown origin that is discovered or exposed during a digging, drilling, probing, or similar operation is to be considered as energized and life threatening.
b. The senior company employee on the site will ensure that all necessary safety precautions are taken in order to isolate the line from all workers and the public.
c. Such precautions may include halting the operation if appropriate.
d. The senior company employee on the site is to then contact the proper authorities to have the line identified and either confirmed to be abandoned and/or made safe for continuing the work.
e. Any and all underground lines that are discovered or become severed must be considered energized on both sides, and be treated accordingly.

22. In general, equipment or machinery being moved or transported must maintain minimum clearances of 25 ft. to all power lines.
23. TAG IN/ TAG OUT must be in force in Switch Room and all Distribution Boxes for live power line. The authorized person's name and contact no shall be displayed
24. Ensure "double insulated" three - core cables and three pin connectors are used and are properly ground "all insulated" types, all electrical tools and appliances must be manufactured for industrial use.
25. All connections shall be electrically and mechanically sound and properly insulated. Taped joints are not permitted. Connections to socket outlets must be made with proper plugs.
26. Splices in electrical cords are not permitted. Repairs must be made at the socket connection and retain the same mechanical and dielectric condition of the original connection.
27. Damaged or defective electric tools, equipment and extension cords, etc. must not be used and shall be tagged out of service, removed from the work area and taken back to stores.
28. Only licensed electricians are authorized to repair and work on electrical equipment. Tampering with electric tools or equipment by others could result in termination.
29. Temporary electric cabling should be elevated 2.2 meters above the floor/ground or covered for protection. It must be kept clear of walkways and other locations where it may be exposed to damage or create a tripping hazard.
30. Energized wiring in junction boxes, circuit breaker panels and similar places must be covered and locked at all times.
31. Areas with live high voltage wires or terminals must be barricaded against entry and warning signs posted Danger – High Voltage and Authorized Personnel Only.
32. Personnel should never work on energized equipment, de-energizing (lockout/tag out) the equipment is always the first requirement.
33. The lockout and tag out procedure will be used when testing or working on, or around, energized installation.
34. Working around energized equipment should never be done alone. A second electrician must always be available for assistance.

35. If lockout/tag out of the work is infeasible (must be demonstrated), work on energized electrical circuits must be approved by the Site In-charge. All safety precautions necessary must be taken, PPE use must be evaluated per the exposure and used, i.e high/low voltage gloves, insulated shoes, overcoats/aprons, face shields, and other protective equipment like insulated tools, blankets, mats, etc. must be used.
36. The welding machines earth leads shall be properly fixed without loose contacts. The earth cable only has to be used. No steel members shall be used as earth leads.
37. Electrical crews must be qualified for the equipment and tools they work on, including being trained in Cardio-Pulmonary Resuscitation (CPR) methods and First Aid for rendering help in the event of electric shock.

**38. Qualified Persons for Electrical Works**

One who is trained and wiremen licensed to Govt of State and familiar with the construction, operation and safety hazards of the equipment upon which they are permitted to work.

i. Qualified persons are intended to be only those who are well acquainted/experienced with and thoroughly conversant in the electric equipment and electrical hazards involved with work being performed.
ii. Only qualified persons may be permitted to work on or near exposed energized parts. Such persons are required to have been trained in three specific areas:
iii. Qualified persons must be capable of working safely on energized circuits;
iv. Must be familiar with the proper use of special precautionary techniques and procedures bases on equipment and exposure; and
v. Must be familiar with required personal protective equipment, insulating and shielding materials, and insulated tools.
vi. Qualified persons are expected to be able to evaluate unknown situations and adjust their activities in such a way that only safe work practices are used. Such behavior is the responsibility of the qualified person.
vii. It is possible and likely for an individual to be 'qualified' with regard to certain equipment in the work place, and unqualified on other equipment they must know their limitation and stop work if not qualified on what equipment they were to work on.
viii. An employee who is undergoing on-the-job training, who, in the course of such training, has demonstrated an ability to perform duties safely at his or her level of training, and who is under the direct supervision of a qualified person is considered to be a qualified person for the performance of those duties. The process must be documented as proof.

## 13.2.9 USE OF HAND TOOLS AND POWER-OPERATED TOOLS

### 13.2.9.1 General Provisions

a. All hands and power tools and similar equipment, shall be maintained in safe condition.
b. When power operated tools are designed to accommodate guards, they shall be equipped
c. with such guards, when in use;
d. Belts, gears, shafts, pulleys, sprockets, spindles, drums, fly wheels, chains and other reciprocating, rotating or moving parts of the equipment shall be similarly guarded;
e. Personnel using hand and power tools and exposed to the hazard of falling, flying, abrasive, and splashing objects, or exposed to harmful dusts, fumes, mists, vapors, or gases shall be

provided with the particular personal protective equipment necessary to protect them from the hazards;

f. All hand-held powered platen sanders, grinders, grinders with wheels of 5 cm or less, routers, planers, laminate trimmers, nibblers, shears, scroll saws and jigsaws with blade shanks of 0.5 cm wide or less shall be equipped with only a positive on-off control.
g. All hand-held powered drills, tappers, fastener drivers, horizontal, vertical or angle grinders with wheels greater than 5 cm in diameter, disc sanders, belt sanders, reciprocating saws, saber saws and other operating powered tools shall be equipped with a momentary contact on control provided that turnoff can be accomplished by a single motion of the same finger or fingers that turn it on.

### 13.2.9.2 Hand Tools

a. The subcontractor shall not issue or permit the use of unsafe hand tools;
b. Wrenches including adjustable pipe end and socket wrenches shall not be used when saws are sprung to the point that slippage occurs;
c. Impact tools such as drift pins, wedges and chisels shall be kept free of mushroomed heads;
d. The wooden handles of tools shall be kept free of splinters or cracks and shall be kept tight on the tools.

### 13.2.9.3 Power Operated Tools

a. Electric power operated tools shall be either of the approved double-insulated type or shall be grounded;
b. The use of electric cords for hoisting or lowering loads shall not be permitted;
c. Pneumatic power tools shall be secured to the hose or whip by some positive means to prevent the tool from becoming incidentally disconnected;
d. Safety clips or retainers shall be securely installed or maintained on pneumatic impact (percussion) tools to prevent attachments from being incidentally expelled;
e. All pneumatically riveting machine staplers and other similar equipment provided with automatic fastener feed, which operate at more than 7 kg/cm2 pressure at the tool a safety device on the muzzle to prevent the tool from ejecting the fasteners unless the muzzle is in contact with the work surface;
f. Compressed air shall not be used for cleaning purposes except when the pressure is reduced to less than 2 kg/cm2 and that too with effective chip guarding. The 2 kg/cm2 pressure requirement does not apply to concrete form, mill scale and similar cleaning purposes;
g. The manufacturer's safe operating for hoses, pipes, valves, filters and other fittings shall not be exceeded;
h. Only personnel who has been trained in the operation of the particular tool shall be allowed to operate power-actuated tools;
i. The tool shall be tested each day before loading to see that the safety devices are in proper working condition. The method of testing shall be accordance with the manufacturer's

recommended procedure;

j. Any tool found not in proper working order, or that which develops a defect during use, shall be immediately removed from service and not used until properly repaired;
k. Tools shall not be loaded until just prior to the intended firing time. Neither loaded nor empty tools are to be pointed at any other person. Hands shall be kept clear of the open barrel end;
l. Loaded tools shall not be left unattended;
m. Fasteners shall not be driven into very hard or brittle materials including, but not limited to, cast iron, glazed tiles, surface hardened steel, glass block, live rock, face brick or hollow tiles;
n. Driving into materials that can be easily penetrated shall be avoided unless backed by a
o. substance that will prevent the pin or fastener from passing completely through and creating a flying missile hazard on the other side;
p. No fastener shall be driven into a palled area caused by an unsatisfactory fastening;
q. Only non-sparking tools shall be used in an explosive or flammable atmosphere;
r. All tools shall be used with the correct shield, guard or attachment as recommended by the manufacturer.

### 13.2.9.4 Abrasive Wheels and Tools

a. All grinding wheel must be ISO certified only.
b. All grinding machines shall be supplied with sufficient power to maintain the spindle speed at safe levels under all conditions of normal operation;
c. Grinding machines shall be equipped with suitable safety guards;
d. The maximum angular exposure of the grinding wheel periphery and sides shall not be more than 900, except that when the work requires contact with the wheel below the horizontal plane of the spindle, the angular exposure shall not exceed 1200. In either case, the exposure shall begin not more than 8.650 above the horizontal plane of the spindle. Safety guards shall be strong enough to withstand the bursting of the wheel;
e. Floor and bench-mounted grinders shall be work-rests, which shall be rigidly supported and readily adjustable. Such work-rests shall be kept at a distance not to exceed 5 mm from the surface of the wheel;
f. Cup type wheels used for external grinding shall be protected by either revolving cup guard or a band type guard;
g. When safety guards are required, they shall be mounted as to maintain proper alignment with the wheel and the guard and the guard and its fastening shall be adequate strength to retain the fragments of the wheel in case of incidental breakage. The maximum angular exposure of the grinding wheel periphery and sides shall not exceed 1800;
h. Portable abrasive wheel used for internal grinding shall be provided with suitable safety flanges;
i. When safety flanges are required, they shall be used only with wheels designed to fit the flanges. Only safety flanges, of a type and design and properly assembled so as to ensure that the pieces of the wheel will be retained in case of incidental breakage, shall be used;
j. All abrasive wheels shall be closely inspected and ring tested before mounting to ensure that

they are free from cracks or defects;

k. Grinding wheels shall fit freely on the spindle and shall not be forced on. The spindle nut shall be tightened only enough to hold the wheel in place;
l. All employees using abrasive wheels shall be protected by suitable eye protection equipment.

### 13.2.9.5 Wood Working Tools

a. All fixed power driven woodworking tools shall be provided with a disconnect switch that can either be locked or tagged in the off-position;
b. The operating speed shall be attached or otherwise permanently marked on all circular saws over 0.5 m in diameter or operating at over 3000 peripheral rpm. Any saw so marked shall not be operated at a speed other than that marked on the blade. When a marked saw is re-tensioned for a different speed, the marking shall be corrected to show the new speed;
c. Automatic feeding devices shall be installed on machines wherever the nature of the work will permit. Feeder attachments shall have the feed rolls or other moving parts covered or guarded so as to protect the operator from hazardous points;
d. All portable power driven circular saws shall be equipped with guards above and below the base plate or shoe. The upper guard shall cover the saw to the depth of the teeth, except for the minimum arc required to permit the base to be tilted for bevel cuts. The lower guard shall cover the saw to the depth of the teeth, except for the minimum arc required to allow proper retraction and contact with the work. When the tool is withdrawn from the work, the lower guard shall automatically and instantly return to the covering position.

### 13.2.10 START UP, COMMISSIONING AND TESTING:

There are various activities involved prior to commissioning- the major ones are -Hydraulic Test, Steam Blowing, Transformers Charging, Boiler Light Up, Rolling and Synchronisation and Full loading of unit.

a. These activities shall be personally supervised by the site executive along with the commissioning engineer.
b. Appropriate Work Permits shall be taken as applicable
c. The readiness of upstream and downstream system shall be ensured before taking up.
d. These shall be handled strictly by the authorized persons only and the team shall be suitably briefed about the activity including hazards & risks involved and control plan by the concerned executive-in-charge before start.
e. Entry of persons to the area of activity shall be suitably restricted and the emergency functions like Ambulance, first aid center and Fire station shall be intimated about the plan well in advance.
f. Tag-in/ Tag-out shall be in place while charging transformer and whenever necessary.
g. Electricians with valid wiremen license only shall be permitted to work on power lines.
h. The area and the passage shall be adequately illuminated.

### 13.2.11 FIRE SAFETY

Numbers and types of Fire Extinguishers shall be ensured as follows:

| Sl. No | Type of Fire Risk (Class of Fire) | Extinguishing Medium & Relevant Indian Standard | Scale of Equipment (Minimum recommended) |
|---|---|---|---|
| 1. | **CLASS 'A'**<br>Fires involving ordinary combustible materials like wood, paper, textiles, rubber etc. (Ordinary hazard or low fire load) | WATER Soda acid type, water type (gas pressure) and water type (constant air pressure)<br>IS: 934 -1976; IS: 940 -1976; IS: 6234 -1971 | For every 600 square meter floor area or part, one 9-litre capacity. Minimum 4 numbers per floor or room; should not be required to travel more than 15 meter to reach any extinguisher. |
| 2. | **CLASS 'A'**<br>(Extra hazard & high fire load) | -do | -do –<br>(Also, consult local fire authority). |
| 3. | **CLASS 'A'**<br><br>(Special hazards) | -do | -do –<br>Extra provision<br>For every 100 square meter floor area or part, one 4.5 Kg. CO2; minimum 2 numbers per room; should not be required to travel more than 10 meter to reach any extinguisher. |
| 4. | **CLASS 'B'**<br>(Fires in flammable liquids like oils, solvents, petroleum, products, varnishes, paints, etc. where blanketing effect is essential) (Storage and handling in small quantities) | FOAM / CARBON DIOXIDE / DRY CHEMICAL POWDER IS: 933 -1976; IS: 2878 1976; IS: 2171 1976; IS: 4308 -1982 | For every 50 square meter floor area or part, 2 numbers 9 -liters foam or 5 kg dry powder; should not be required to travel more than 10 m in the area of storage to reach any extinguisher. |
| 5. | **CLASS 'B'** (Bulk storage other than in tank form) | -do - | -do-<br>(but minimum 3 numbers per room) |
| 6. | **CLASS 'C'**<br>(Fires involving gaseous substances under pressure where it is necessary to dilute the burning gas at a very fast rate with an inert gas or powder) (locations of storage and handling of gas cylinders) | CARBON DIOXIDE / DRY CHEM. POWDER. The best way to extinguish such fire is by stopping the flow of fuel gas to the fire. Container is kept cool with water spray. IS: 2878 1976; IS: 2171 -1976; IS: 4308 -1982 | For every 100 square meter floor area or part; 2 numbers, 10 kg powder extinguisher or 6 kg C02; minimum 3 nos. per room; should not be required to travel more than 10 meter to reach any extinguisher. |
| 7. | **CLASS 'D'**<br>Fires involving metals like magnesium, aluminum, zinc, potassium etc. where the burning metal is reactive to water and which require special extinguishing media or technique | SPECIAL DAY POWDER IS: 2171 -1976 IS: 4861 -1968 | For every 50 square meter floor area or part, 2 nos. 5 kg special dry powder; minimum 3 nos. per room; should not be required to travel more than 10 meter to reach any extinguisher. |
| 8. | **MIXED OCCUPANCY**<br>(electrical); Generators; Transformers; etc. | CARBON DIOXIDE DRY POWDER, IS: 2878 -1976; IS: 2171 -1976 | For every 100 square meter floor area or part one 10 kg C02. Minimum 2 numbers for every location should not be required to travel more than 10 meter to reach an extinguisher. |
| **Note**: Due to peculiarities of the power plant construction sites, there would be locations in the construction areas of Boiler, Turbine, Generator, Transformer, etc. where different types of fire risk (classes of fire) may co-exist. Special | | | |

care shall be taken while selecting and installing portable fire extinguishers for such locations so that all types of fire risk that may co-exist, are adequately covered. Similar special care shall be taken for storage areas.

1. All Electrical welding booths shall be equipped with appropriate Fire Extinguisher
2. Appropriate Fire Extinguishers shall be made within easy reach of all welding operations
3. Fire extinguishers shall be regularly tested and last checked date to be indicated on each.
4. Providing appropriate firefighting equipment at designated work place and nominate a fire officer/warden adequately trained for his job.
5. Subcontractor shall provide enough fire protecting equipment of the types and numbers at his office, stores, temporary structure in labour colony etc. Such fire protection equipment shall be easy and kept open at all times.
6. The fire extinguishers shall be properly refilled and kept ready which should be certified at periodic intervals. The date of changing should be marked on the Cylinders.
7. All other fire safety measures as laid down in the “codes for fire safety at construction site” issued by safety coordinator of BHEL shall be followed.
8. Non-compliance of the above requirement under fire protection shall in no way relieve the subcontractor of any of his responsibility and liabilities to fire incident occurring either to his materials or equipment or those of others.
9. Emergency contacts nos. must be displayed at prominent locations
10. Tarpaulin being inflammable should not be used (instead, only non-infusible covering materials shall be used) as protective cover while preheating, welding, stress relieving etc. at site.

### 13.2.12 HSE PREPAREDNESS FOR ADVERSE CLIMATES AND WEATHER

Subcontractor to remain updated on possible adverse weather conditions through reliable sources and all precautions taken accordingly.

#### 13.2.12.1 SUMMER

1. The Working Time and Lunch Hour will be as per instruction of Statutory Authorities (no work between 11am to 3:30pm). However, in case temp comes down due to rain/cloudy weather work will continue as per normal routine.
2. During long lunch break, worker will be allowed to go back home for rest. Those who will like to stay back will avail at the facility of rest shed or other designed area.
3. They will be allowed to take small break during work as per their need.
4. Water sprinkling will be done on roads to reduce dust concentration.
5. Workers will be provided with adequate cool drinking water and Butter milk/Lemon water etc.
6. Adequate ORS stock will be made available at the work location in the First-Aid Box for use as needed and at First-aid Center for emergency need.
7. Fire prevention shall be on high alert, with removal of dry grass and bushes, etc, inside and outside the surrounding work areas. No smoking, and control of open flame/sparks shall be maintained and monitored.
8. Worker will be informed about the Do’s and Don’ts to be followed during summer in the Pre Job Brief.

**Do's & Don'ts**

9. Drink plenty of cool water and other non-alcoholic fluid and keep body well hydrated.
10. Eat salt in food to replenish loss of salt through sweating.
11. Avoid over physical exercise.
12. Have adequate sleep at night.
13. Eat light and less spicy food
14. Avoid eating food which was cooked long time ago.
15. Nobody should use small water bodies such as pits, running rain water through crevices etc. for drinking and cleaning purpose as it may be unhygienic.

**Emergency Handling**

In case of emergency due to heat disorder:

16. Rescue the victim from workplace and place under shed.
17. If to be rescued from height, use stoke basket or rescue kit.
18. Inform Ambulance immediately.
19. If nearby any air conditioned room/shed is available, place him inside the room/shed.
20. Administer First aid by trained First aider for Heat Disorder
21. If conscious, give him ORS solution to drink.
22. If required send the victim hospital immediately.

**13.2.12.2 Monsoon**

**A. Height Work & Structural Safety:**

1. Ensure that all height work platforms are barricaded and avoid any highly hazardous
2. height work.
3. Ensure that all personnel have good quality and intact safety shoes
4. Stop all dangerous height work during rain
5. Explain Do's and Don'ts to workers during Tool Box Meetings
6. Ensure that there are no weak structures, boards etc. that can fall during high winds
7. Do not allow any loose material (e.g. GI sheet, Ply board, empty cement bag, aluminum foil, foam sheets etc.) on roof sheds or top of structures.
8. Do not permit any one to ride up or come down scaffolds frame work during heavy wind or rain.
9. Provide "anchor" of adequate strength to scaffolds and other high-rise structures.
10. All rest sheds and GI sheds will be anchored into the round and wall and roof panels will be secured with J hook to prevent shed from blowing over or parts/pieces becoming airborne. Proper earthing per IS standard is also to be installed.
11. Do not go alone nor permit anyone to stay at tower-tops, roof-tops, high structures or on electrical poles during the course of stormy weather or heavy rain.

## B. Electrical:

1. All electrical connections / loads have to be routed through ELCB / RCCB (residual current circuit breaker) whose rating should be 30mA.
2. RCCB operational checks need to be done DAILY / WEEKLY during monsoon season.
3. Avoid joints on power cables which need to be laid over-head or under-ground, better not to have any joint at all. In case joints become essential, such cables must be housed rigidly and insulation must be provided as per approved standard. The joint shall be suitable for outdoor use.
4. All electrical distribution board shall be properly covered at top and sides to protect from rain water. Extension boards shall be protected from rain water.
5. Ensure proper “earthing” for each and every electrical appliance.
6. Double earthing need to be provided for 3-phase power supply and for voltage more than 220V.
7. Provide lightening arrestors at the top of Boiler 3 and boiler 4 and rest sheds which are not covered by existing lightening arrestor of other installation.

## C. Others:

1. Maintain smooth flow on open drains. i.e. no obstruction or blockade shall be made on storm water drains. If required, make temporary drains.
2. Arrange back-filling of excavated pits on war-footing basis.
3. Arrange bringing down booms of all cranes, hydra machines during stormy weather (wind speed 40-50 kmph)
4. Confirm that all gantry cranes are effectively choked to prevent rolling and toppling.
5. Do not forget to deep ready a dew battery operated lights at site-offices during rainy season.
6. Avoid using wet damp clothes.
7. Barricade excavated zone filled with water.
8. Engage diesel operated water pump to dewater work area. For electrically operated water pump, the starter shall be protected from rain water. All rotating parts shall be guarded. Ensure availability of sufficient water pumps.

## D. Health and hygiene:

1. Monsoon reduces the immunity of our body and makes us vulnerable to many diseases which are commonly associated with this season. It is time for us to keep our body challenging against disease by boosting our immunity and taking safety measures against these diseases.

2. The diseases associated with monsoon are Malaria, Jaundice, Gastro-intestinal infections, like typhoid, cholera etc. apart from these viral infections like cold and cough also make their presence felt. Majority of above said diseases are on account of:
3. Puddle of water formed due to rain become breeding grounds for mosquitoes which spread disease like, malaria and dengue fever. As a precautionary measure against mosquito-bite disease one can use mosquito net around the end which is better choice to mosquito repellants like mats and coils.
4. Pollution of drinking water during monsoon is very common. It is very necessary to drink clean and pure water when water-borne monsoon diseases like diarrhea and gastro-intestinal infections threaten us.
5. Walking in dirty water during rainy season leads of numerous fungal infection which affect toes and nails. Diabetic patients have to take a special care about their feet. Keeping feet always dry and clean is very necessary. Avoid walking in dirty water. Keep shoes socks and raincoats dry and clean.

### E. Workmen will be made aware of following Do's and Don'ts:

1. Do not sleep in daytime.
2. Avoid over physical exertion.
3. During lightning and thunder storm, do not take shelter under tree. Take shelter inside rest shed or store room.
4. Wash vegetables with clean water and steam them well to kill germs.
5. Avoid eating un-cooked foods and salads should be washed properly before consumption.
6. Drink plenty of water and keep body well-hydrated.
7. Always keep the surrounding area dry and clean. Don't allow to get water accumulated around.
8. Keep body warm as viruses attack immediately when body temperature goes down.
9. Do not enter air conditioned room with wet hair and damp cloths.
10. Dry your feet and webs with soft dry cloth whenever they are wet.
11. Eat light and less spicy food.
12. Avoid eating food which was cooked long time ago.
13. Eat salt in food to replenish loss of salt through sweating.

## 13.2.12.3 Emergency Weather Conditions

### A. Cyclone/Severe thunder storm

In the event of Cyclone/Severe thunder storm, alert will be issued by subcontractor on notification received by Govt. authorities/Metrological departments Customer or BHEL.

**The actions required during cyclone/rough weather:**

1. Check and advice subcontractors to cleanup work area. Pick up all loose and unused material of respective supervisor's area.
2. Tie to secure all gas cylinders to avoid displacement and unsafe conditions which could be due to wind pressure.

3. Secure portable electricity generating sets and other equipment, pumps, hoses etc.
4. Make preparation for removal of water logging.
5. Take review of work activity and make preparation for removal of equipment and material from vulnerable areas.
6. Isolate/turn off all electrical power form the main panel/switches. Secure and anchor panels properly.
7. Recheck anchorage/tie of all temporary structures/sheds, tall objects, cranes, rigs, scaffolds etc. to avoid toppling due to wind force.
8. Cranes boom shall be secured, either locked or lowered the booms as reasonably and practicably possible and rigs to safe position for the safety point of view.
9. Group up all trash barrels, wooden pallets, forms; wooden decks etc. and anchor properly.
10. Welding machines, air compressors and such equipment are to be grouped together and secured to the stable objects. Welding leads, electrical cables, hoses are to be rolled up and secured properly.
11. Set on site vehicles on high ground in the site area with brakes set firmly.
12. Anchor all tanks, vessels, gas cylinders that may be moved by high wind and water.
13. Evacuate job site.

**Personnel Evacuation:**

14. Personnel Evacuation will be required if predicted wind speed and storm surge heights are beyond acceptable limits as per the instructions from Govt. Authorities/ Metrological departments or Customer.
15. Once the warning is received for personnel evacuation, an emergency response team shall be formed. The team will work with local authorities and other agencies formed/deployed to evacuate and transport all personnel involved in the project to the cyclone shelter.
16. Cyclone may be followed by the calm “EYE”, be aware of it. If the wind suddenly drops, don’t assume the cyclone is over. Violent wind may resume from the opposite side direction. Wait for the official “All clear Signal”.
17. After the cyclone, do not go outside until officially communicated about safe situation outside. Use recommended routes for returning. Do not panic or rush while returning.
18. Checking of gas leaks and well being of electrical appliances is essential before leaving the site.
19. Follow local communications for official warning and advice. The construction Manager shall also obtain updates from customer/metrological departments and communicate to the personnel on project site.

#### 13.2.12.4 Preparedness for Other Adverse Climates and Weather Conditions

All Preventive and Precautionary measures to ensure Health & Safety of workers in all possible adverse weather conditions based on the analysis of the local area conditions to be taken by the subcontractor

### 13.3 ENVIRONMENTAL CONTROL

1. Environment protection has always been given prime importance by BHEL. Environmental

damage is a major concern of the principal subcontractor and every effort shall be made, to have effective control measures in place to avoid pollution of Air, Water and Land and associated life.

2. Subcontractor shall list out all applicable environmental aspects and impacts, and ensure control measures to manage the same.
3. Chlorofluorocarbons such as carbon tetrachloride and trichloroethylene shall not be used.
4. Waste disposal shall be done in accordance with the guidelines laid down in the project specification.
5. Any chemical including solvents and paints, required for construction shall be stored in designated bonded areas around the site as per MSDS.
6. In the event of any spillage, the principle is to recover as much material as possible before it enters drainage system and to take all possible action to prevent spilled materials from running off the site. Subcontractor shall use appropriate MSDS for clean-up technique. Subcontractor shall be responsible for the cleanliness of their own areas.
7. Subcontractor shall ensure that noise levels generated by plant or machinery are as low as reasonably practicable. Where the subcontractor anticipates the generation of excessive noise levels from his operations the subcontractor shall inform BHEL accordingly so that reasonable & practicable precautions can be taken to protect other persons who may be affected.
8. It is imperative on the part of the subcontractor to join and effectively contribute to environmental protection measures such as tree plantation and towards social causes and maintaining good relations with local populace.
9. The subcontractor shall carry out periodic air and water quality check and illumination level checking in respective area of work place and take suitable control measure to maintain the same as per applicable laws / standards

### 13.3.1 WASTE MANAGEMENT

1. Subcontractor shall take suitable measures for waste management and fulfilling requirements of environment related laws/legislation as a part of normal construction activities.
2. Compliance with the legal requirements on storage/ disposal of paint drums (including the empty ones), Lubricant containers, Chemical Containers, and transportation and storage of hazardous chemicals will be strictly maintained.
3. Details of E-Waste, Hazardous Waste, shall be submitted to BHEL as per Format No. HSEP: 14-F18 and HSEP: 14-F19 respectively

#### 13.3.1.1 BINS AT WORK PLACE

1. Sufficient rubbish bins shall be provided close to workplaces.
2. Bins should be painted yellow and numbered.
3. Sufficient nos. of drip trays shall be provided to collect oil and grease.
4. Sufficient qty. of broomsticks with handle shall be provided.
5. Adequate strength of employees should be deployed to ensure daily monitoring and service for waste management.

#### 13.3.1.2 STORAGE AND COLLECTION

1. Different types of rubbish/waste should be collected and stored separately.

2. Paper, oily rags, smoking material, flammable, metal pieces should be collected in separate bins with close fitting lids.
3. Rubbish should not be left or allowed to accumulate on construction and other work places.
4. Do not burn construction rubbish near working site.

#### 13.3.1.3 SEGREGATION

1. Earmark the scrap area for different types of waste.
2. Store wastes away from building.
3. Oil spill absorbed by non-combustible absorbent should be kept in separate bin.
4. Clinical and first aid waste stored and incinerated separately.

#### 13.3.1.4 DISPOSAL

1. Sufficient containers and scrap disposal area should be allocated.
2. All scrap bin and containers should be conveniently located.
3. Provide self-closing containers for flammable/spontaneously combustible material.
4. Keep drainage channels free from choking.
5. Make schedule for collection and disposal of waste.

#### 13.3.1.5 WARNING AND SIGNS

1. Appropriate signage to be displayed at scrap storage area
2. No toxic, corrosive or flammable substance to be discarded into public sewage system.
3. Waste disposal shall be in accordance with best practice.
4. Comply with all the requirements of Pollution Control Board (PCB) for storage and disposal of hazardous waste.

### 13.4 HOUSEKEEPING

1. Keeping the work area clean/ free from debris, removing unused scaffoldings, scraps, insulation/ sheeting wastage /cut pieces temporary structures, packing woods etc. will be in the scope of the subcontractor.
2. Such cleaning has to be done by subcontractor within quoted rate, on daily basis by dedicated identified groups equipped with all require PPEs and training. The details of housekeeping group shall be provided to BHEL.
3. If such activity is not carried out by subcontractor / BHEL is not satisfied, then BHEL may get it done by other agency and actual cost along with BHEL overheads will be deducted from subcontractor's bill. Such decisions of BHEL shall be binding on the subcontractor.
4. Pests, such as beehives etc. shall be periodically removed in a humane fashion
5. **Following are to be taken care of on daily basis.**

i. All surplus earth and debris are removed/disposed of from the working areas to identified locations.
ii. Unused/Surplus cables, steel items and steel scrap lying scattered at different places /elevation within the working areas are removed to identify locations.
iii. All wooden scrap, empty wooden cable drums and other combustible packing materials, shall

be removed from workplace to identified locations. Sufficient waste bins shall be provided at different work places for easy collection of scrap/waste. Scrap chute shall be installed to remove scrap from high locations

iv. Access and egress (stair case, gangways, ladders etc.) path should be free from all scrap and other hindrances.
v. Workmen shall be educated through tool box talk about the importance of housekeeping and encourage not to litter.
vi. Labor camp area shall be kept clear and materials like pipes, steel, sand, concrete, chips and bricks, etc. shall not be allowed in the camp to obstruct free movement of men and machineries.
vii. Fabricated steel structures, pipes & piping materials shall be stacked properly.
viii. No parking of trucks/trolleys, cranes and trailers etc. shall be allowed in the camp, which may obstruct the traffic movement as well as below LT/HT power line.
ix. Utmost care shall be taken to ensure over all cleanliness and proper upkeep of the working areas

## 13.5 TRAFFIC MANAGEMENT

### 13.5.1 SAFE WORKPLACE TRANSPORT SYSTEM

1. Traffic routes in a work place shall be suitable for the persons or vehicles using them.
2. Traffic routes for pedestrians and vehicles shall be clearly demarcated and indicated
3. Traffic routes shall never intersect the area of work and shall not endanger the site personnel
4. For internal traffic, lines marked on roads / access routes and between buildings shall clearly indicate where vehicles are to pass.
5. Temporary obstacles shall be brought to the attention of drivers by warning signs / hazard cones.
6. Power cables shall be maintained at a minimum height above ground as specified in Indian Electricity Act & Rules.
7. Sensible speed limits shall set and clearly displayed. Painted Speed ramps preceded by a warning signs or marker are necessary for stretches of roads exceeding 50 meters.
8. The traffic route should be wide enough to allow vehicles to pass and re-pass oncoming or parked traffic and it may be advisable to introduce on-way system or parking restrictions.
9. Safest route shall be provided between places where vehicles have to call or deliver.
10. Avoid vulnerable areas/items such as fuel or chemicals tanks or pipes, open or unprotected edges and structures likely to collapse
11. Safe areas shall be provided for loading and unloading of material. Loading / Unloading Permit shall be taken from BHEL prior to any significant loading / unloading activity
12. Avoid sharp or blind bends. If this is not possible hazards should be indicated e.g. blind corner.
13. Ensure road crossings are minimum and clearly signed.
14. Entrance and gateways shall be wide enough to accommodate a second vehicle without causing obstruction.
15. Forklift trucks shall not pass over road hump unless of a type capable of doing so.

16. Overhead electric cable, pipes containing flammable hazardous chemical shall be shielded by using goal posts height gauge posts or barriers.
17. The height of Power cables above areas of movement shall conform to Indian Electricity Rules
18. Road traffic signs shall be provided on prominent locations for prevention of accidents and hazards and for quick guidance and warning to employees and public.
19. Safety signs shall be displayed as per the project working requirement and guideline of the state in which project is done.
20. Vehicles hired or used shall not be parked within the 15m radius of any working area. Any vehicle, that is required to be at the immediate/near the vicinity, shall be approved by the person in-charge of the site.

### 13.5.2 TRAFFIC ROUTE FOR PEDESTRIANS

1. Where traffic routes are used by both pedestrians and vehicles road shall be wide enough to allow vehicles and pedestrians safely.
2. Separate routes shall be provided for pedestrians to keep them away from vehicles. Provide suitable barriers/guard at entrances/exit and the corners or buildings.
3. Where pedestrian and vehicle routes cross, appropriate crossing shall be provided.
4. Where crowd is likely to use roadway e.g. at the end of shift, stop vehicles from using them at such times.
5. Provide high visibility clothing for people permitted in delivery area.

### 13.5.3 WORK VEHICLES

Work vehicles shall be as safe stable efficient and roadworthy as private vehicles on public roads. Subcontractors shall ensure that drivers are suitably trained and have valid license and experience for the designated class of vehicle. All vehicle e.g. heavy motor vehicle forklift trucks dump trucks mobile cranes shall ensure that the work equipment conforms to the following:

1. A high level of stability.
2. A safe means of access/egress.
3. Suitable and effective service and parking brakes.
4. Windscreens with wipers and external mirrors giving optimum all round visibility.
5. Provision of horn, vehicle lights, reflectors, reversing lights, reversing alarms.
6. Provision of seat belts.
7. Guards on dangerous parts.
8. Driver protection - to prevent injury from overturning and from falling objects/materials.
9. Driver protection from adverse weather.
10. No vehicle shall be parked below HT/LT power lines in conformance to Indian Electricity Act & Rules.
11. Valid Pollution Under Control certification for all vehicles

### 13.5.4 DAILY CHECKS BY DRIVER

There should also be daily safety checks containing below mentioned points by the driver before the vehicle is used. Subcontractors should ensure that drivers carry out these checks as a minimum.

| | | |
|---|---|---|
| Brakes | Mirrors | Warning signals |
| Tires | Windscreen waters | Specific safety system i.e. control interlocks |
| Steering | Wipers | |

### 13.5.5 TRANSPORTATION OF PERSONNEL AND MATERIALS BY VEHICLES

1. All drivers shall hold a valid driving License for the class of vehicle to be driven and be registered as an authorized BHEL driver with the Administration Department.
2. Securing of the load shall be by established and approved methods, i.e. chains with patented tightening equipment for steel/heavy loads. Sharp corners on loads shall be avoided when employing ropes for securing.
3. All overhangs shall be made clearly visible and restricted to acceptable limits
4. Load shall be checked before moving off and after traveling a suitable distance.
5. On no account is construction site to be blocked by parked vehicles Drivers of vehicles shall only stop or park in the areas designate by the stringing foreman.
6. Warning signs shall be displayed during transportation of material.
7. All vehicles used by Subcontractor shall be in worthy condition and in conformance to the Land Transport requirement

### 13.5.6 MAINTENANCE

All Vehicles used for transportation of man and material shall undergo scheduled inspections on frequent intervals to secure safe operation. Such inspections shall be conducted in particular for steering, brakes, lights, horn, doors etc. Site management shall ensure that work equipment is maintained in an efficient, working order and in good repair. Inspections and services carried out at regular intervals of time and or mileage. No maintenance shall be carried below HT/LT power lines.

## 13.6 EMERGENCY PREPAREDNESS AND RESPONSE

1. Subcontractor shall develop Emergency preparedness and response capability and Emergency Response Team as per HSEP06: HSE Procedure for Emergency Preparedness and Response
2. Availability of adequate number of first aiders and fire warden shall be ensured
3. All the subcontractor's supervisory personnel and sufficient number of workers shall be trained for fire protection systems. Enough number of such trained personnel must be available during the tenure of contract. Subcontractor should nominate his supervisor to coordinate and implement the safety measures and communicate the same to BHEL.
4. Assembly point shall be earmarked and access to the same from different location shall be shown
5. Fire exit shall be identified and pathway shall be clear for emergency escape.
6. Appropriate type and number of fire extinguisher shall be deployed as per Clause No. 13.2.11 and validity shall be ensured periodically through inspection
7. Adequate number of first aid boxes shall be strategically placed at different work places to cater

to all emergency needs. Holder of the first aid box shall be identified on the box itself who will have the responsibility to maintain the same.

8. First aid center shall be developed at site with trained medical personnel and ambulance
9. Emergency contact numbers of the site shall be displayed at prominent locations.
10. Tie up with fire brigade shall be done in case customer is not having fire station.
11. Tie up with hospital shall be ensured in order to ensure the availability of following services to victims quickly without wasting precious time:
    a. Intensive Care Unit with Ventilator and other necessary life support systems
    b. Facility of specialized Orthopedic Surgery – in case of fracture / amputation
    c. Facility of specialized brain / neuro surgery – in case of head trauma
    d. Facility of specialized burn unit / ward – in case of Fire / burn injury
    e. and other facilities as per requirement at site location

    In case tie up with multiple hospitals is required to cover all possible accidents, same shall be done. The list of facilities to be regularly checked and updated.
12. A detailed emergency services (Fire / Medical etc.) tie up plan shall be submitted to BHEL in monthly report Format No. HSEP:14-F05
13. Mock drill shall be conducted on different emergencies periodically to find out gaps in emergency preparedness and taking necessary corrective action

## *14 HSE INSPECTION*

Inspection on HSE for different activities being carried out at site shall be done to ensure compliance to HSEMS requirements. The subcontractor shall maintain necessary safety equipment as applicable, to enable inspection personnel/agency perform Inspection. If any test equipment is found not complying with proper safety requirements then the Inspection Agency may withhold inspection, till such time the desired safety requirements are met.

The requirements of respective work permits are to be ensured by respective supervisors, safety personnel and area in-charges. In addition, the formats & checklists as per Clause 21 of this document provided by BHEL shall be used for inspection by Safety personnel (as a minimum), and records of inspection to be maintained. BHEL shall reserve the right to modify any Format in this document or introduce additional checklists / formats to ensure regular inspection of all equipment as per requirement.

### 14.1 DAILY HSE CHECKS

Both the Site Supervisors and HSE Supervisors are to conduct daily site Safety inspection around work activities and premises to ensure that work methods and the sites are maintained to an acceptable standard. The following are to form the common subjects of a daily safety inspection:

1. **Height Work:**
   a. Safe, barricaded platform
   b. PPEs
   c. Proper method
   d. Awareness
2. Personal Safety wears & gear compliance.
3. Complying with site safety rules and permit-to-work (PTW).
4. Positions and postures of workers.
5. Use of tools and equipment etc. by the workers.
6. The inspection shall be carried out just when work starts in beginning of the day, during peak activities period of the day and just before the day's work ends.

### 14.2 INSPECTION OF HEIGHT WORKING

1. Any kind of height work (above 2 meters) shall not be carried out without active physical supervision by concerned supervisor or safety personnel. All non-conformances related to height work shall be handled on priority and closed immediately after halting the work.
2. A roster of personnel deployed for inspection of height work and other critical activities shall be prepared and submitted to BHEL in monthly report Format No. HSEP:14-F05, in order to ensure effective supervision at all times
3. Inspection on height working shall be conducted **daily** by supervisors before start of work to ensure safe working condition including provision of:

| | | |
|---|---|---|
| a. Fall arrestor<br>b. Lifelines<br>c. Safety nets | d. Fencing and barricading<br>e. Warning signage<br>f. Covering of opening | g. Proper scaffolding with valid Tags, access and egress.<br>h. Illumination |

4. Inspection on height working shall be conducted once in a week by HSE officer as per
5. Format no. HSEP: 14-F10.
6. Medical fitness, including vertigo test of height worker shall be ensured.
7. Height working shall not be allowed during adverse weather.

### 14.3 INSPECTION OF PPE

PPEs shall be inspected by HSE officer at random once in a week as per Format no. HSEP: 14-F06 for compliance to standard and provisions and any adverse observation shall be recorded in the PPE register.

### 14.4 INSPECTION OF T&Ps

1. All T& Ps being used at site shall be inspected by HSE officer once in a month as per specific Formats in this document, or (if not available) general Format no. HSEP: 14-F07 for its healthiness and maintenance.
2. A master list of T&Ps and validity of their inspection certificates shall be maintained by each agency and details shall be submitted to BHEL in monthly format no. HSEP:14-F05.
3. The T&Ps which require third party inspection shall be checked for its validity during inspection.

The third party test certificate should be accompanied with a copy of the concerned competent person's valid qualification record. BHEL shall be given advance intimation of Third Party Inspection. BHEL shall associate with Inspection as per discretion.

### 14.5 INSPECTION OF CRANES AND WINCHES

1. Cranes and winches shall be inspected by the operator through a daily checklist for its safe condition (as provided by the equipment manufacturer) before first use of the day.
2. Cranes and Winches shall be inspected by HSE officer once in a month as per Format no. HSEP: 14-F08 & F09 for healthiness, maintenance and validity of third party inspection.
3. The date of third party inspection and next due date shall be painted on cranes and winches.
4. The operators/drivers shall be authorized by sub-contractor based on their competency and experience and shall carry the I-card.
5. The operator should be above 18 years of age and should be in possession of driving license of HMV man & goods), vision test certificate and should have minimum qualification so that he can read the instructions and check list.

### 14.6 INSPECTION ON WELDING AND GAS CUTTING OPERATION

1. Supervisor shall ensure that no flammable items are available in near vicinity during welding and gas cutting activity.
2. Gas cylinders shall be kept upright.
3. Use of Flash back arrestor shall be ensured at both ends.
4. Inspection during welding and gas cutting operations shall be carried out by HSE officer once a month as per Format no. HSEP: 14-F11.
5. Use of fire blanket to be ensured to avoid falling of splatters during welding or gas cutting operation at height.
6. Availability of fire extinguisher in vicinity shall be ensured.

### 14.7 INSPECTION ON ELECTRICAL INSTALLATION / APPLIANCES

1. Ensure proper earthing in electrical installation
2. Use of ELCB at electrical booth
3. Electrical installation shall be properly covered at top where required
4. Use appropriate PPEs while working
5. Use portable electrical light < 24 V in confined space and potentially wet area.
6. Monthly inspection shall be carried out as per Format no. HSEP: 14-F12.

### 14.8 INSPECTION OF ELEVATOR

1. Elevators shall be inspected by concerned supervisors once in a week as per Format no. HSEP: 14-F13.
2. All elevators shall be inspected by competent person and validity shall be ensured.
3. The date of third party inspection and next due date shall be painted on elevator.

### 14.9 MONTHLY SITE INSPECTION

Subcontractor shall carry out monthly HSE inspection of all work areas as per Format No. HSEP:14-F20 and submit to BHEL

### 14.10 NON-CONFORMITY HANDLING:

Any serious non-conformances identified during inspection observed shall be addressed immediately.

In case immediate closure of non-conformities is not possible:

a. work to be halted in the area
b. Non-conformance to be generated and submitted to responsible person and BHEL
c. non-conformance to be resolved through responsible agency / person
   Only after closure of serious non-conformances, work to be allowed to resume.

All non-conformances & safety violations to be recorded and closed in a time bound manner.

## *15 HSE PERFORMANCE*

HSE performance of subcontractor shall be monitored as per BHEL criteria, based on which, marks will be awarded. Marks can be used to evaluate and rate the contractor as per BHEL internal systems

HSE performance of the subcontractor shall be monitored as per the following parameters: (For each contract-wise package). **Periodicity**: RA Bill period

| Sl. No. | Parameters of measurement | Ref Clauses | Weightage | Actual |
|---|---|---|---|---|
| 1 | Availability of safety officers at site – absence up to 15% permissible. Score proportionately gets reduced with higher rate of absence. Availability to be reckoned from start date of manpower mobilization | 7.1 | 10 | |
| 2 | Attendance by the safety officer and site CM (as applicable) in the meeting convened by BHEL | 20 | 5 | |
| 3 | Level of compliance w.r.t decisions taken in previous meetings/audit/inspection/as reported. | -do- | 5 | |
| 4 | Timely submission of monthly report on safety in the prescribed format | 11 | 3 | |
| 5 | Timely reporting any incident including near–miss to BHEL /Customer/statutory authority (if required) and submission of investigation report of all LTIs/ | 12 | 10 | |

| | | | | |
|---|---|---|---|---|
| | Major Property Loss incident and HSE events | | | |
| 6 | Degree of PPE compliance, Fall protection arrangements and safety net coverage | 8.3, 14 | 15 | |
| 7 | Level of compliance w.r.t safety rules | 13,14 | 25 | |
| 8 | Availability of proper first-aid facility , ambulance, hygienic labor colony and other adequate labor welfare initiatives, conducting of health check-up as per BOCW requirements | 8 | 6 | |
| 9 | Conducting induction training, skill training, tool box meeting, mock-drills, HSE Promotion, Emergency Preparedness and Response. Participation in BHEL training also counted | 9.0 | 6 | |
| 10 | Level of House-keeping, Environmental Control | 13.3, 13.5 | 10 | |
| 11 | Level of general illumination | 8.4.11 | 5 | |
| **A** | **TOTAL Obtained** | | 100 | |

Penalty score:

i. For each fatality: -10
ii. For each Major Incident: -07

NET TOTAL score will be arrived after deducting penalty score from Total score.

Subcontractor shall make available all data required for evaluation to BHEL as and when demanded.

1. If safety record of the subcontractor in execution of the awarded job is to the satisfaction of safety department of BHEL, issue of an appropriate certificate to recognize the safety performance of the subcontractor may be considered by BHEL after completion of the job.

2. 1.5% of running bill shall be cleared subject to certification of desired safety performance by BHEL

## *16 HSE PENALTIES FOR NON-COMPLIANCE*

1. Nonconformity of safety rules and safety appliances will be viewed seriously and BHEL has right to impose fines on the subcontractor for every instance of violation noticed.

2. The applicable penalties for HSE violations are given in Format No. HSEP14-F14 of this document

3. The list of non-compliances given in above format is not exhaustive. The BHEL site in-charge has liberty to impose a penalty for any other non-compliance and incidents of any nature.

4. If principal customer or statutory and regulatory bodies impose penalty on ground of statutory non-compliance or non-compliance of HSE rules by the subcontractor or any incident of any nature including fatality or permanent disability, the same shall be passed on to the subcontractor with appropriate overhead

5. The penalty amount shall be recovered from subcontractors from the RA Bill, otherwise Final bill.

## *17 COMPENSATION TO ACCIDENT VICTIMS*

1. BHEL shall recover the amount of compensation paid to victim(s) by BHEL towards loss of life / permanent disability due to an accident which is attributable to the negligence of contractor, agency or firm or any of its employees as detailed below.

b. **Victim**: Any person who suffers permanent disablement or dies in an accident as defined below.

c. **Accident:** Any death or permanent disability resulting solely and directly from any unintended and unforeseen injurious occurrence caused during the manufacturing/ operation and works incidental thereto at BHEL factories/ offices and precincts thereof, project execution, erection and commissioning, services, repairs and maintenance, trouble shooting, serving, overhaul, renovation and retrofitting, trial operation, performance guarantee testing undertaken by the company or during any works / during working at BHEL Units/ Offices/ townships and premises! Project Sites.

**d. Compensation in respect of each of the victims:**

i. In the event of death or permanent disability resulting from Loss of both limbs: Rs. 10,00,000/- (Rs. Ten Lakh)

ii. (ii) In the event of other permanent disability: Rs. 7,00,0001- (Rs. Seven Lakh)

e. **Permanent Disability**: A disablement that is classified as a permanent total disablement under the proviso to Section 2 (I) of the Employee's Compensation Act, 1923. "

2. In addition to above, contractor shall provide appropriate compensation to victims of major and fatal incidents as per Employee Compensation Act, 1923, ESIC Act, 1948 or as per any existing Acts and guidelines

## *18 INTERNAL & EXTERNAL HSE AUDITS*

1. Subcontractor shall extend full co-operation and maintain necessary documents & records as required by Internal & External HSE Audit carried out by BHEL. / Third Party
2. All non-conformities and observations on HSE shall be disposed of-by subcontractor in a time bound manner as detailed in Audit Report.
3. All required corrective actions shall be taken by the subcontractor in order to avoid recurrence

## *19 OTHER REQUIREMENTS*

1. In case of any delay in completion of a job due to mishaps attributable to lapses by the subcontractor, BHEL shall have the right to recover cost of such delay from the payments due to the subcontractor, after holding an appropriate enquiry and notifying the subcontractor suitably.

2. **RISK & COST:**

   If the subcontractor fails to improve the standards of safety in its operation to the satisfaction of BHEL after being given reasonable opportunity to do so and/or if the subcontractor fails to take appropriate safety precautions or to provide necessary safety devices and equipment or to carry out instruction regarding safety as per contractual requirements, BHEL shall have the right to take corrective steps at the risk and cost of the subcontractor after giving a notice of not less than 7 days indicating the steps that would be taken by BHEL.

3. If the subcontractor succeeds in carrying out its job in time without any fatal or disabling injury incident and without any damage to property BHEL may, at its sole discretion, favourably consider to reward the subcontractor suitably for the performance.

4. The subcontractor shall take all measures at all the sites of work to protect all persons from incidents and shall be bound to bear the expenses of every suit, action or other proceeding of law that may be brought by any persons for injury sustained, death or damage to environment

owing to neglect of the HSE precautions by the subcontractor; and shall be liable to pay any such persons such compensation, should such claim proceeding be filed against BHEL.

The subcontractor hereby agrees to indemnify BHEL against the same.

## *20 HSE REVIEW*

BHEL shall hold HSE review meeting every month or as per requirement in order to discuss and resolve HSE issues of site and improve HSE performance. It will also discuss the incidents occurred since previous meeting, its root cause and Corrective action. The indicative agenda is given below:

1. Implementation of earlier MOM
2. HSE performance review
3. HSE inspection review w.r.t non-conformances observed and their status
4. HSE audit and CAPA
5. HSE training conducted and requirement
6. Health check-up camp
7. HSE planning for the erection and commissioning and installation activities in the coming month
8. HSE reward and promotional activities
9. HSE data analysis and improvement – Data analyzed will include non-conformances closed and pending, incident data, training data etc.

Subcontractor shall ensure presence of site in-charge, all package in-charges and safety officers, as communicated by BHEL in the meeting.
Subcontractor shall take requisite actions as per record notes and as decided in the meeting, in a time bound manner and submit compliance report to BHEL.

## 21 FORMATS USED

This is minimum list of Formats to be used for reporting by the subcontractor. Other Formats are indicated in respective HSE Procedures, Work Permits, OCPs or as specified by BHEL. The medium of reporting can be hard / soft as indicated by BHEL.
BHEL can modify these Formats or introduce new Formats to the extent necessary to get the desired performance data of all HSE activities.

| SN | Format Name | Format No. | Frequency of check | Rev |
|---|---|---|---|---|
| 1 | Work at Height Permit | HSEP:14-FP01 | Before start of work and regularly thereafter as per Permit conditions | 00 |
| 2 | Hot Work Permit | HSEP:14-FP02 | | 00 |
| 3 | Confined Space Work Permit | HSEP:14-FP03 | | 00 |
| 4 | Excavation Work Permit | HSEP:14-FP04 | | 00 |
| 5 | Radiation Work Permit | HSEP:14-FP05 | | 00 |
| 6 | Lifting Activity Work Permit | HSEP:14-FP06 | | 00 |
| 7 | Lockout-Tagout Work Permit | HSEP:14-FP07 | | 00 |
| 8 | Inspection of First Aid Box | HSEP:14-F01 | Weekly | 00 |
| 9 | Health Check Up | HSEP:14-F02 | With new Induction & as per requirement thereafter | 00 |
| 10 | HSE Induction / Regular / On-the-Job Training | HSEP:14-F03 | With new Induction & as per requirement thereafter | 00 |
| 11 | Tool Box Talk | HSEP:14-F04 | Daily before job start | 00 |
| 12 | Site HSE Report | HSEP:14-F05 | Monthly | 00 |
| 13 | PPE Inspection | HSEP:14-F06 | Weekly | 00 |
| 14 | PPE Issue and Receipt | HSEP:14-F06A | With new Induction | |
| 15 | Inspection of T&Ps (General) | HSEP:14-F07 | Monthly / As per requirement | 00 |
| 16 | Inspection of Cranes | HSEP:14-F08 | Monthly / As per requirement | 00 |
| 17 | Inspection of Winches | HSEP:14-F09 | Monthly / As per requirement | 00 |
| 18 | Inspection of Height Working | HSEP:14-F10 | Daily / As per requirement | 00 |
| 19 | Inspection on Welding & Gas Cutting | HSEP:14-F11 | Weekly / As per requirement | 00 |
| 20 | Inspection on Electrical Installation | HSEP:14-F12 | Weekly / As per requirement | 00 |
| 21 | Inspection on Elevator | HSEP:14-F13 | Weekly / As per requirement | 00 |
| 22 | HSE Penalty | HSEP:14-F14 | - | 00 |
| 23 | Initial Verification of PPE's & Lifting Tools & Tackles | HSEP:14-F15 | As and when new PPEs and T&Ps are received | 00 |
| 24 | Inspection of Labor Colony | HSEP:14-F16 | Monthly / as per requirement | 00 |
| 25 | Recording of First Aid Injuries | HSEP:14-F17 | As and when such injuries occur | 00 |
| 26 | E-waste Handled / Generated | HSEP:14-F18 | Half Yearly | 00 |
| 27 | Hazardous Waste at the Facility | HSEP:14-F19 | Half Yearly | 00 |
| 28 | HSE Checklist-cum-Compliance Report | HSEP:14-F20 | As per Audit Calendar | 00 |
| 29 | Illumination Levels | HSEP:14-F21 | Weekly / As per requirement | 00 |
| 30 | Incident Reporting | HSEP:14-F22 | - | 00 |
| 31 | Incident Recording | HSEP:14-F23 | - | 00 |

| | Inspection of Height Working | |

| | |
|---|---|
| **Name of Site :** | |
| **Name of Sub-Contractor :** | |
| **Inspected by :** | |
| **Date of Inspection:** | |

| Sl. No. | Descriptions | Observation (Yes/No) | Remarks |
|---|---|---|---|
| | A. General | | |
| 1 | All the workers have been explained safe work method? | | |
| 2 | Adequate illumination has been ensured. | | |
| 3 | Work area inspected prior to the start of the work. | | |
| 4 | Is the work area barricaded to prevent fall and platforms are of adequate strength (bamboo, jute / plastic ropes not to be used). | | |
| 5 | The temporary work platforms & structures for height work including those used in Boiler structures, water walls, ESP, Powerhouse are fully barricaded with railings (as per **IS 3696**) | | |
| 6 | Fabricated makeshift arrangements are checked for quality and type of material welding, anchoring etc. | | |
| 7 | Are floor gaps, permanently covered and barricaded | | |
| 8 | Area below the work place barricaded, particularly below hot work. | | |
| 9 | Workers provided with bags /box to carry bolts, nuts and hand tools | | |
| 10 | Arrangement for fastening hand tools made. | | |
| 11 | All work platforms ensured to be of adequate strength and ergonomically suitable. | | |
| 12 | Work at more than one elevation at the same segment is restricted. | | |
| 13 | An established communication system has been established and explained to the workers. | | |
| | B. **Access/Egress** | | |
| 1 | Walkways provided with handrail, mid-rail and toe guard? | | |
| 2 | All checkered plates, gratings properly welded/ bolted? | | |
| 3 | Are ladders inspected and they are in good condition? | | |
| 4 | Are ladders spliced? | | |
| 5 | Are ladders properly secured to prevent slipping, sliding or falling? | | |
| 6 | Stairs erected above and below 1 tier column for safe access? | | |
| 7 | Do side rails extend 36” above top landing? | | |

| Sl. No. | Descriptions | Observation (Yes/No) | Remarks |
|---|---|---|---|
| 8 | Are built up ladders constructed of sound materials? | | |
| 9 | Are rugs and cleats not over 12" on center? | | |
| 10 | Metal ladders not used around electrical hazards. | | |
| 11 | Proper maintenance and storage. | | |
| 12 | Ladders placed at right slope. | | |
| 13 | Ladders / staircases welded/ bolted properly. | | |
| 14 | Any obstruction in the stairs. | | |
| 15 | Are landing provided with handrails, knee rails, toe boards etc.? | | |
| 16 | Whether ramp is provided with proper slope. | | |
| 17 | Proper hand rails / guards provided in ramps. | | |
| C. **Housekeeping** | | | |
| 1 | Walkways, aisles & all overhead workplaces cleared of loose material. | | |
| 2 | Is any nut bolt/scrap left on beam/column? | | |
| 3 | Flammable materials, if any, are cleared. | | |
| 4 | All the de shuttering materials are removed after de shuttering is done. | | |
| 5 | Platforms and walkways free from oil/grease or other slippery material. | | |
| 6 | Collected scrap are brought down or lowered down and not dropped from height. | | |
| D. **PPE And Safety Devices** | | | |
| 1 | Use of safety helmet, safety belts ensured for all workers | | |
| 2 | Anchoring points provided at all places of work. | | |
| 3 | Common lifeline provided wherever linear movement at height is required. | | |
| 4 | Safety nets are use wherever required. | | |
| 5 | Proper fall arrest system is deployed at critical workplaces. | | |
| 6 | Crawler boards/Safety system or works on fragile roof are used. | | |
| 7 | Is man-lift being used for personnel lifting? | | |
| 8 | Does man basket / personnel lift system has an independent lifeline and all occupants safety harnesses connected to it with rope grab? | | |

**Sub: MEMO for Penalty for non-compliances in Safety and Fabrication Quality requirement**

Following lapse (tick marked) was observed and penalty is imposed as stated at the bottom of this memo. It is requested that such occurrences may please be avoided in future.

| S. No | Nature of Non - Compliance | Penalty (in Rs.) | Remarks |
|---|---|---|---|
| | **A. PPEs** | | |
| 1. | Not wearing safety helmet / wearing without chin straps | 500 | Per Person/ day |
| 2. | Not Wearing safety shoes | 500 | Per Person/ day |
| 3. | Not wearing gloves, nose masks where required | 350 | Per Person/ day |
| 4. | Not using grinding goggles while doing grinding operations | 500 | Per Person/ day |
| | **B. Height Work** | | |
| 1. | Not providing Lifelines for height work | 1000 | Per location per day |
| 2. | Not ensuring barricading of working platforms | 1000 | Per location per day |
| 3. | Not using temporary platform during work at height | 1000 | Per case per day |
| 4. | Not wearing safety belt while working at height (> 2 meters) or not anchoring to lifeline | 2000 | Per Person/ day |
| 5. | Not providing proper barricades (caution tape at 2 elevations) | 500 | Per location per day |
| | Use of mobile phones by Height worker / Crane / Hydra Operator | 1000 | Per case per day |
| | **C. Electrical** | | |
| 1. | Not using 24 V supply for lighting in confined spaces | 500 | Per case per day |
| 2. | Lack of Electrical Earthing | 2000 | Per case per day |
| 3. | Improper earthing of welding & Other electrical Machines. Earth resistance not OK | 500 | Per Machine per incidence |
| 4. | Electrical plug not used for connection/ hand machines | 500 | Per connection per incidence |
| 5. | Unsafe electrical practice like not installing ELCB/ RCCB | 500 | Per case per day |
| 6. | Using frayed/ broken welding cables | 500 | Per machine per week |
| | **D. Lifting** | | |
| 1. | Use of lifting equipment without having valid Third Party Test certificate | 5000 | Per equipment per seven days |
| 2. | Lifting hooks without latches | 500 | Per hook per day |
| 3. | Using damaged slings or not slinging properly | 2000 | Per event Per T&P |
| 4. | Lifting cylinders without cage or rolling of cylinders | 500 | Per Event per incidence |
| 5. | Non removal of scrap from platforms | 1000 | **Per Event Per location per 7 days** |
| | **E. Hot Work / Cylinder Handling** | | |
| 20. | Gas cutting without flash back arrestor | 2000 | Per machine per incidence |
| 21. | Gas cutting at height without sheet below | 500 | Per event |
| 22. | Not keeping gas cylinders vertically / in trolley on ground | 500 | Per event |
| 23. | Gas cutting with damaged hose pipes | 500 | Per event |
| | Not covering welding cylinder with top cover | 500 | Per event |
| | **F. Construction Vehicles** | | |
| 24. | Not having valid driving license for the type of vehicle/ T&P | 2000 | Per driver per event |
| 25. | Two wheeler entry in construction area | 500 | Per vehicle |
| 26. | Using Hydra for material movement at site in unsafe manner | 1000 | Per case |
| 27. | Using Two Hydra in Tandem for material movement | 2000 | Per case |
| 28. | Vehicles, Hydras, Cranes, Dumpers and Earth Movers not having automatic back horns linked to gear | 1000 | Per Equipment per day |
| 29. | Not using guide rope while moving material using Hydra or Crane | 1000 | Per event |
| 30. | Violating speed limit during vehicle movement | 1000 | Per event |

| | Nature of Non - Compliance | Penalty in Rs.) | Remarks |
|---|---|---|---|
| **Engineering / Administrative Controls / General** | | | |
| 31. | Major Accident – Victim not reporting for work within 48 hours – resulting in partial loss in earning capacity & termination / demotion in employment | 200000 | |
| 32. | Fatal Accident/Accidents Resulting in total Loss in Earning Capacity # | 500000 | Per victim# |
| 33. | Unsafe Act in violation of standards / clauses of this document | 500-5000 | Per case |
| 34. | Activity carried out without safety work permit where applicable | 2000 | Per person per event |
| 35. | Using untrained / unqualified personnel for hazardous work | 2000 | Per event |
| 36. | Not maintaining proper hygiene in canteen as per BOCW | 1000 | Per event |

**# or as deducted by customer, whichever is higher.**

For repeated **major and** fatal incidents under the same subcontractor for the same package in the same Unit, the subcontractor will pay 2 times the penalty compared to previously paid

Details (if any) related to non- compliance (Name of persons, Nature of deficiency, etc.)

Penalty imposed: _____

1, Rate as per above chart_____

2. No. of Persons/ machine/ event/ labor_____

| ***HANDLING & STORAGE OF MATERIALS*** | | | | |
| Properly stored or stacked | | | | |
| Passageways clear | | | | |
| Other | | | | |
| ***FLAMMABLE GASES AND LIQUIDS*** | | | | |
| Containers clearly identified | | | | |
| Proper storage | | | | |
| Fire extinguisher nearby | | | | |
| Other | | | | |

| | | | | |
|---|---|---|---|---|
| ***WORKING AT HEIGHT*** | | | | |
| Safety nets | | | | |
| Safety belts | | | | |
| Safety helmets | | | | |
| Anchoring of safety belt to the life line rope | | | | |
| ***ENVIRONMENT*** | | | | |
| Lubricant waste/engine oils properly dispose. | | | | |
| Waste from Canteen, offices, sanitation etc. disposed properly. | | | | |
| Disposal of surplus earth, stripping materials, expired batteries, oily rags and combustible materials done properly. | | | | |
| ***HEALTH CHECKS*** | | | | |
| Hygienic conditions at labor camps O.K. | | | | |
| Availability of first-aid facilities | | | | |
| Proper sanitation at site, office & labor camps. | | | | |
| Arrangement of medical facilities. | | | | |
| Measures for dealing with illness. | | | | |
| Availability of potable drinking water for workmen & staff. | | | | |
| Provision of crèches for children. | | | | |

# SECTION-B

## Special Requirements

(Applicable to this Contract Only)

1. **Establishment of Common Facilities for whole Project –** cost to be borne in full by subcontractor.

**Table 1.1**

| S. No. | Item | Details as per Clause No. of this Section | Applicable / Not Applicable with Remarks | Package |
|---|---|---|---|---|
| 1 | Construction of Medical Centre | a | Applicable | Civil |
| 2 | Construction of Worker Training Centre (A part of safety park) | b | Applicable | Civil |
| 3 | Construction of Vertigo Test Structure (A part of safety park) | c | Applicable | Civil |
| 4 | Deployment of Specialists | d | Applicable | By concerned agencies |
| 5 | HSE Equipment | e | Applicable | By concerned agencies |
| 6 | HSE measurement devices | f | Applicable | By concerned agencies |
| 7 | Urinals in under-construction structures | g | Applicable | By concerned agencies |
| 8 | Safety Park | h | Applicable | Civil |

**a. MEDICAL CENTRE**

i. A medical center shall be setup at site with basic facilities for handling medical emergencies

ii. Deployment of Medical Professional:

1. **A qualified medical professional shall be deployed at site at all times.**
2. **When total employee & worker strength at site crosses 500, medical professional with MBBS Degree from recognized institute shall necessarily be deployed**

iii. Ambulance shall be deployed along with a trained driver and accessories as per Schedule V of BOCW Central Rules, 1998. Ambulance shall be utilized exclusively for transporting the accident victim. Ambulance drivers shall be regularly trained in First Aid.

iv. Non deployment of Ambulance and First Aider as above shall invite a penalty of Rs. 30000 pm and Rs10000 PM respectively

**v.** Medical waste shall be disposed as per prevailing legislation (Bio-Medical Waste – Management and Handling Rules, 1998).

vi. Above are bare minimum requirements. Any legal requirements over and above these specifications shall supersede the above requirements

**b. WORKER TRAINING CENTRE**

i. Indoor Worker Training Center to be developed at site with seating capacity of at least 50 trainees

ii. Projector with following minimum specifications:

| | |
|---|---|
| Native Resolution | XGA, 1024x768 |
| Brightness (ANSI lumens) | 3300 |
| Contrast Ratio | 13000:1 |
| Display Color | 30 Bits |
| Aspect Ratio | 4:3 |

iii. A Laptop or Desktop PC with following minimum specifications:

| | |
|---|---|
| Processor | Intel Celeron Dual Core |
| Memory (RAM) | 2 GB |
| Graphics Card | 2GB Video Memory |
| Hard Disk Capacity | 60 GB |
| Monitor Size | 14 inches |
| Keyboard | |
| Mouse | |

iv. Stereo speakers with minimum 50W RMS sound output

v. PA system for Addressing Workers

vi. Seating arrangement

**c. Development of Vertigo Test Structure:**

Vertigo test Structure to be developed as per **Annexure 04**

**d. Specialists:**

Following specialists shall be deployed by the subcontractor, who shall cater to whole project as per BHEL requirements / instructions

I. **Qualified T&P Inspector: subcontractor** shall engage one qualified T&P inspector having undergone a certification course in the discipline.

II. **Qualified Scaffolding Erector and Inspector:** Subcontractor shall deploy one qualified Scaffolding Supervisor and Inspector having undergone a certification course in the discipline

e. **Tools & Equipment:** Following equipment conforming to relevant IS Codes for the job shall be ensured by subcontractor:

| S. No. | Item |
|---|---|
| 1 | Lifelines |
| 2 | Retractable Fall Arrestors |
| 3 | Safety Nets (10m X 5m) |
| 4 | Sky Climbers |
| 5 | Fire Blanket |
| 6 | Honey Bee Removal Suit & Kit |
| 7 | Flashback Arrestors |
| 8 | Barricading Tape |
| 9 | Binoculars |
| 10 | Walkie-Talkies |
| 11 | LOTO kit |
| 12 | 24-Volt light |
| 13 | Sand Buckets |
| 14 | Hard barricading planks |
| 15 | Standby Fire kits |
| | |

| S. No. | Item | Type of Job / Purpose | Remarks |
|---|---|---|---|
| 1 | Lifelines (Steel Rope) and posts | Height work | |
| 2 | Retractable Fall Arrestors | Height Work | |
| 3 | Safety Nets (for fall protection; railings also to be covered) | Height Work | |
| 4 | Sky Climbers | Height Work | |
| 5 | Fire Blanket, Spark/ slag collector | Hot Work | |
| 6 | Honey Bee Removal Suit & Kit | General | |
| 7 | Flashback Arrestors | Hot work | |
| 8 | Barricading –Hard ( Scaffolding Pipes & Clamps or fabricated using structural/round | Height Work, Excavation, General Barricading | |
| 9 | Binoculars | HSE Inspection | |
| 10 | Walkie-Talkies | Lifting | |
| 11 | LOTO kit | Working on charged line | |
| 12 | 24-Volt light | Confined Space/ temp work | |
| 13 | Sand and Water Buckets | Hot work/Electrical work | |
| 15 | Standby Fire kits Fire extinguisher stands | Hot work/Electrical work | |

Above equipment are bare minimum to be essentially maintained at all times. Additional numbers to be deployed as and when required in order to ensure fulfillment of all Safety requirements

**f. HSE Measurement Equipment & Tools**

| S. No | Device |
|---|---|
| 1 | ELCB Tester |
| 2 | Multi meter (Light cables) |
| 3 | Earth Resistance Meter |
| 4 | Lux Meter |
| 5 | Decibel Meter |
| 6 | Anemometer |
| 7 | Breath Analyzer (Alcohol) |
| 8 | Multi-gas analyzer |
| 9 | Gas leakage detector / alarm |
| 10 | Gas monitor (confined space) |
| 11 | Radiation meter & Badges |
| 12 | Blood pressure monitor |
| 13 | Fire detectors |
| 14 | Dust Particle Detector |

**g. Urinals in Under-construction structures:**

Urinals for in under-construction structures for easy access eg. In case of Boiler elevations etc.

2. **Shared Facilities –** where part of operating cost is borne by subcontractor in proportion to contract value

The subcontractor shall bear running expenses of above facilities on a 'proportional to contract value sharing basis as finalized by BHEL.

| S. No. | Facility |
|---|---|
| 1. | Operation of Ambulance, Nurses, Medical Consumables |
| 2. | Construction, Maintenance & Upkeep of Latrines and Urinals in Common spaces |
| 3. | Drinking Water Provision in Common Spaces |
| 4. | Dust Control / Water Sprinkling, Pest Control, Fumigation at Site |

**As per Contract Labor (Regulation & Abolition Act), Central Rules, 1971,**

(1) The first-aid box shall be distinctively marked with a Red Cross on a white background and shall contain the following items, namely:

**(a) For establishments in which the number of contract laborers employed does not exceed fifty, each first aid box shall contain the following equipment:**

| | |
|---|---|
| (i) | 6 small sterilized dressings |
| (ii) | 3 medium size sterilized dressings |
| (iii) | 3 large size sterilized dressings |
| (iv) | 6 pieces of sterilized eye pads in separate sealed packets. |
| (v) | 6 roller bandages 10 cm wide. |
| (vi) | 6 roller bandages 5 cm wide. |
| (vii) | One tourniquet |
| (viii) | A supply of suitable splints |
| (ix) | Three packets of safety pins. |
| (x) | Kidney tray. |
| (xi) | 3 large sterilized burn dressings. |
| (xii) | 1 (30ml) bottle containing a two percent alcoholic solution of iodine |
| (xiii) | 1 (30 ml) bottle containing Sal volatile having the dose and mode of administration indicated on the label |
| (xiv) | 1 snake bite lancet |
| (xv) | 1 (30gms) bottle of potassium permanganate crystals. |
| (xvi) | 1 pair scissors |
| (xvii) | 1 copy of the First-Aid leaflet issued by the Director General, Factory Advice Service and Labor Institutes, Government of India. |
| (xviii) | A bottle containing 100 tablets (each of 5 grains) of aspirin |
| (xix) | Ointment for burns |
| (xx) | A bottle of suitable surgical anti-septic solution |

**(b) For establishment in which the number of contract laborers exceeds fifty each first-aid box shall contain the following equipment:**

| | |
|---|---|
| (i) | 12 small sterilized dressings |
| (ii) | 6 medium size sterilized dressings |
| (iii) | 6 large size sterilized dressings. |
| (iv) | 6 large size sterilized burn dressings |
| (v) | 6 (15 grams) packets sterilized cotton wool |
| (vi) | 12 pieces of sterilized eye pads in separate sealed packets. |
| (vii) | 12 roller bandages 10 cm wide. |
| (viii) | 12 roller bandages 5 cm wide. |
| (ix) | One tourniquet. |
| (x) | A supply of suitable splints. |
| (xi) | Three packets of safety pins. |
| (xii) | Kidney tray. |
| (xiii) | Sufficient number of eye washes bottles filled with distilled water or suitable liquid clearly indicated by a distinctive sign which shall be visible at all times. |
| (xiv) | 4 per cent Xylocaine eye drops, and boric acid eye drops and soda by carbonate eye drops. |
| (xv) | 1 (60ml) bottle containing a two percent alcoholic solution of iodine |
| (xvi) | One (two hundred ml) bottle of mercurochrome (2 per cent) solution in water. |
| (xvii) | 1 (120ml) bottle containing Sal volatile having the dose and mode of administration indicated on the label. |
| (xviii) | 1 roll of adhesive plaster (6 cmX1 meter) |
| (xix) | 2 rolls of adhesive plaster (2 cmX1 meter) |
| (xx) | A snake bite lancet. |
| (xxi) | 1 (30 grams) bottle of potassium permanganate crystals. |
| (xxii) | 1 pair scissors |
| (xxiii) | 1 copy of the First-Aid leaflet issued by the Director-General, Factory Advice service and labor Institutes, Government of India. |
| (xxiv) | a bottle containing 100 tablets (each of 5 grains) of aspirin |
| (xxv) | Ointment for burns |
| (xxvi) | A bottle of a suitable surgical anti septic solution. |

(2) Adequate arrangement shall be made for immediate recoupment of the equipment when necessary.

## A. Test Procedure / Guidelines

Fear of height may be physiological or psychological. Therefore, to rule out any possibility of physiological factor, detailed medical check-up of workers is carried out before vertigo test. Medical check-up of workers includes the following:
history of past illnesses (like epilepsy, drug allergy, diabetics/ hypertension, unconsciousness etc.), general physical examination (like height, weight, BMI, build and nourishment etc.), measurement of pulse rate, Blood Pressure, respiratory rate.
After this check-up, those who are found suitable for height work by examining doctor, are allowed to undergo vertigo test.
During this health check-up, psychology of workers is also studied. If any worker finds it extremely difficult/ frightening to climb the monkey ladder & walk on the beam, during/after performing vertigo test or even before performing, then he is treated as disqualified.
As per standard, during vertigo test, worker is allowed to climb on a foundation through monkey ladder, walk on a beam, then steps down at the other end of beam, through monkey ladder. Height of the beam should be at least six feet from ground level. All necessary safety precautions are taken during this test. Worker has to wear full body harness with double lanyard. A horizontal lifeline is run parallel to the beam and worker has to put his lanyards into the lifeline. Additionally, a safety net is also put below the beam for rescue of the victim in case of a fall from beam.
Following activities are generally carried during testing:

1. **Walking Bench Training:**
   a. Person should walk over the channel. He should maintain balance & walk without much problem.
   b. If the person has problem to balances himself on repeated chances, he may be having flat foot or some other problem. So, he may not be fit for height work.
2. **Rope Climb Training:**
   Person should be able to climb the rope up to the top channel for ensuring that in case of fall, a person hanging on the safety harness, will be able to safely climb back to the platform within minimum time period before the safety harness start breaking down under the load.
3. **Height Work Training:**
   Person should walk freely on the middle channel while holding the top channel with the help of safety harness.
4. **Ladder for Vertical fall arrestor Training:**
   Vertical fall arrestor rope is fixed from top to bottom of the ladder. It will ensure:
   - Usage of vertical fall arrestor.
   - Usage of two lanyards of a safety harness.
   - Ensure 3-point contact on the ladder while climb.
5. **Chair for work at height Training:**
   - Climb though vertical ladder with two lanyard ropes.
   - Hooking of two lanyard ropes to life line. With this safe arrangement, he can walk to chair.
   - Sits in the chair safely, comes out & walks back to the vertical ladder & come down from vertical ladder. After completion of vertigo test, blood pressure of worker is again measured. If it is not within acceptable limits for any worker, concerned worker is denied height pass.

   Only those who pass the above training are fit for height work.

**PROFORMA OF BANK GUARANTEE (in lieu of SECURITY DEPOSIT)**

In consideration of the Bharat Heavy Electricals Limited (hereinafter referred to as the 'Employer' which expression shall unless repugnant to the context or meaning thereof, include its successors and permitted assigns) incorporated under the Companies Act, 1956 and having its registered office at BHEL House, Siri Fort, Asiad, New Delhi – 110049 through its Unit at Bharat Heavy Electricals Limited, Power Sector Eastern Region, BHEL Bhawan, Plot No 9/1, DJ Block, Sector-II, Salt lake City, Kolkata – 700091 having agreed to exempt ( Name of the Vendor / Contractor / Supplier) having its registered office at_____ [1] (hereinafter called the said Contractor which term includes supplier), from demand under the terms and conditions of the Contract reference No._____ [2] dated _____[2] valued at Rs……[2] ( Rupees ----------)[2] for <Nature of the Work>[3] (hereinafter called the said Contract) of Security Deposit for the due fulfilment by the said contractor of the terms and conditions contained in the said Contract, on production of a Bank Guarantee for Rs._____ [4] (Rupees _____ only), we ____(indicate the name and address of the Bank) having its Head Office at _____(address of the head Office) (hereinafter referred to as the Bank) at the request of _____ [Name of Contractor(s)] do hereby undertake to pay to the Employer an amount not exceeding Rs._____ in the event of any breach by the said Contractor(s) of any of the terms and conditions contained in the said Contract.

We, _____(indicate the name of the Bank), do hereby undertake to pay the amounts due and payable under this guarantee without any demur, merely on a demand from the Employer. Any such demand made on the bank, shall be conclusive as regards the amount due and payable by the Bank under this guarantee. However, our liability under this guarantee shall be restricted to an amount not exceeding Rs._____.

We undertake to pay to the Employer any money so demanded notwithstanding any dispute or disputes raised by the Contractor(s) in any suit or proceeding pending before any Court or Tribunal relating thereto our liability under this present being absolute and unequivocal.

The payment so made by us under this guarantee shall be a valid discharge of our liability for payment hereunder and the Contractor(s) shall have no claim against us for making such payment.

We, further agree that the guarantee herein contained shall remain in full force and effect during the period that would be taken for the performance of the said Contract and that it shall continue to be enforceable till all the dues of the Employer under or by virtue of the said Contract have been fully paid and its claim satisfied or discharged or till _____ [5] or till the office/Department/Division of Bharat Heavy Electricals Limited certifies that the terms and conditions of the said Contract have been fully and properly carried out by the said contractor(s) and also including the satisfactory performance of the equipment during guarantee period and accordingly discharges this guarantee. Unless a demand or claim under this guarantee is made on us in writing on or before the _____[6], (3 months more than the present date of validity of Bank Guarantee) we shall be discharged from all the liability under this guarantee thereafter.

We, ____(indicate the name of the Bank)_____further agree with the Employer that the Employer shall have the fullest liberty without our consent and without affecting in any manner our obligations hereunder to vary any of the terms and conditions of the said Contract or to extend time of performance by the said contractor(s) from time to time or to postpone for any time or from time to time any of the powers exercisable by the Employer against the said contractor(s) and to forbear or enforce any of the terms and conditions relating to the said Contract and we shall not be relieved from our liability by any reason of any such variation or extension being granted to the said contractor(s) or for any forbearance, act or omission on the part of the Employer or any indulgence by the Employer to the said contractor(s) or by any such matter or thing whatsoever which under the law relating to sureties would but for this provision have effect of so relieving us.

This guarantee will not be discharged due to the change in the constitution of the Bank or the Contractor(s).

We,……. BANK lastly undertake not to revoke this guarantee during its currency except with the previous consent of the Employer in writing.

Notwithstanding anything to the contrary contained hereinabove:

a) The liability of the Bank under this Guarantee shall not exceed…… [7]

b) This Guarantee shall be valid up to ……[8]

c) Unless the Bank is served a written claim or demand on or before _____[9] (3 months more than the present date of validity of Bank Guarantee) all rights under this guarantee shall be forfeited and the Bank shall be relieved and discharged from all liabilities under this guarantee irrespective of whether or not the original bank guarantee is returned to the Bank.

We, ____(indicate the name of the Bank)____ lastly undertake not to revoke this guarantee during its currency except with the previous consent of the Employer in writing.

Any claim or dispute arising under the terms of this document shall only be enforced or settled in the courts of at Kolkata only.

Date _____ Day of _____

(Signature of Authorised signatory)

[1] *NAME AND ADDRESS OF THE VENDOR /CONTRACTOR / SUPPLIER .*

[2] *DETAILS ABOUT THE NOTICE OF AWARD/CONTRACT REFERENCE*

[3] *PROJECT/SUPPLY DETAILS*

[4] *BG AMOUNT IN FIGURES AND WORDS*

[5] *VALIDITY DATE*

[6] *DATE OF EXPIRY OF CLAIM PERIOD*

[7] *BG AMOUNT IN FIGURES AND WORDS.*

[8] *VALIDITY DATE*

[9] *DATE OF EXPIRY OF CLAIM PERIOD*

**Note:**

1. **Units are advised that expiry of claim period may be kept 2/3 months after validity date.**
2. **In Case of Bank Guarantees submitted by Foreign Vendors-**
   - **a.** **From Nationalized/Public Sector / Private Sector/ Foreign Banks (BG issued by Branches in India)** can be accepted subject to the condition that the Bank Guarantee should be enforceable in the town/city or at nearest branch where the Unit is located i.e. Demand can be presented at the Branch located in the town/city or at nearest branch where the Unit is located.
   - **b.** **From Foreign Banks (wherein Foreign Vendors intend to provide BG from local branch of the Vendor country's Bank)**
   - **b.1** In such cases, in the Tender Enquiry/ Contract itself, it may be clearly specified that Bank Guarantee issued by **any of the Consortium Banks only** will be accepted by BHEL. As such, Foreign Vendor needs to make necessary arrangements for issuance of Counter-Guarantee by Foreign Bank in favour of the Indian Bank (BHEL's Consortium Bank). It is advisable that all charges for issuance of Bank Guarantee/ counter- Guarantee should be borne by the Foreign Vendor. The tender stipulation should clearly specify these requirements.

**b.2** **In case, Foreign Vendors intend to provide BG from** Overseas Branch of our Consortium Bank (e.g. if a BG is to be issued by SBI Frankfurt), the same is acceptable. However, the procedure at **sl.no. b.1** will required to be followed.

**b.3** The BG issued may preferably be subject to Uniform Rules for Demand Guarantees (URDG) 758 (as amended from time to time). In case, of Foreign Vendors, the BG Format provided to them should clearly specify the same.

**b.4** The BG should clearly specify that the demand or other document can be presented in electronic form.

**BANK GUARANTEE FOR ADVANCE**

NAME

& ADDRESSES OF THE BENEFICIARY

Dear Sirs,

In consideration of the Bharat Heavy Electricals Limited (hereinafter referred to as the 'Employer' which expression shall unless repugnant to the context or meaning thereof, include its successors and permitted assigns) incorporated under the Companies Act, 1956 and having its registered office at BHEL House, Siri Fort, Asiad, New Delhi – 110049 through its Unit at Bharat Heavy Electricals Limited, Power Sector Eastern Region, BHEL Bhawan, Plot No 9/1, DJ Block, Sector-II, Salt lake City, Kolkata – 700091 having awarded to ( Name of the Vendor / Contractor / Supplier) having its registered office at_____ [1] (hereinafter called "the Contractor" which expression shall include its successors and permitted assigns) a contract Ref No……dated ……[2]valued at Rs……( Rupees ----------) for <Nature of Work> [3](hereinafter called the 'Contract')

AND WHEREAS the Employer has agreed to advance to the Contractor, a sum of Rs…….. (Rupees…….. only), equivalent to _____% of the said value of the Contract (hereinafter called "the said Advance"), upon the condition, that the said Advance shall be secured by undertaking guarantee for Rs ---------- ( Rupees ----------)[4] from a Bank as hereinafter appearing.

We, ……, (hereinafter referred to as the Bank), having registered/Head office at ……. and a branch at …… being the Guarantor under this Guarantee, hereby irrevocably and unconditionally undertake to forthwith and immediately pay to the Employer without any demur, merely on your first demand any sum or sums upto a maximum amount but not exceeding Rs ---------- ( Rupees ----------).

Any such demand made on the Bank shall be conclusive as regards the amount due and payable by the Bank under this guarantee. However, our liability under this guarantee shall be restricted to an amount not exceeding Rs. _____

We undertake to pay to the Employer any money so demanded notwithstanding any dispute or disputes raised by the Contractor/ Supplier in any suit or proceeding pending before any Court or Tribunal relating thereto our liability under this present being absolute and unequivocal.

The payment so made by us under this Guarantee shall be a valid discharge of our liability for payment hereunder and the Contractors/Supplier shall have no claim against us for making such payment.

We the ……Bank further agree that the guarantee herein contained shall remain in full force and effect during the period that would be taken for the performance of the said Contract and that it shall continue to be enforceable till all the dues of the Employer under or by virtue of the said Contract have been fully paid and its claims satisfied or discharged.

We …….. Bank further agree that the Employer shall have the fullest liberty without our consent and without affecting in any manner our obligations hereunder to vary any of the terms and conditions of the said Contract or to extend time of performance by the said Contractor/Supplier from time to time or to postpone for any time or from time to time any of the powers exercisable by the Employer against the said Contractor/Supplier and to forbear or enforce any of the terms and conditions relating to the said Agreement and we shall not be relieved from our liability by reason of any such variation, or extension being granted to the said Contractor/Supplier or for any forbearance, act or omission on the part of the Employer or any indulgence by the Employer to the said Contractor/Supplier or by any such matter or thing whatsoever which under the law relating to sureties would but for this provision have effect of so relieving us.

The Bank also agrees that the Employer at its option shall be entitled to enforce this Guarantee against the Bank as a principal debtor, in the first instance without proceeding against the Contractor and notwithstanding any security or other guarantee that the Employer may have in relation to the Contractor's liabilities.

This Guarantee shall remain in force upto and including…….. [5] and shall be extended from time to time on the request of the Employer for such period as may be desired by the Employer.

This Guarantee shall not be determined or affected by liquidation or winding up, dissolution or change of constitution or insolvency of the Contractor/Supplier but shall in all respects and for all purposes be binding and operative until payment of all money payable to the Employer in terms hereof. However, unless a demand or claim under this Guarantee is made on us in writing on or before the ……[6] (3 months more than the present date of validity of Bank Guarantee) we shall be discharged from all liabilities under this Guarantee.

We, …… BANK lastly undertake not to revoke this guarantee during its currency except with the previous consent of the Employer in writing.

Notwithstanding anything to the contrary contained hereinabove:

a) The liability of the Bank under this Guarantee shall not exceed…… [7]
b) This Guarantee shall be valid up to ……[8]
c) Unless the Bank is served a written claim or demand on or before _____ [9] (3 months more than the present date of validity of Bank Guarantee) all rights under this guarantee shall be forfeited and the Bank shall be relieved and discharged from all liabilities under this guarantee irrespective of whether or not the original bank guarantee is returned to the Bank

We, _____ Bank, have power to issue this Guarantee under law and the undersigned as a duly authorized person has full powers to sign this Guarantee on behalf of the Bank.

Any claim or dispute arising under the terms of this document shall only be enforced or settled in the courts of at Kolkata only.

For and on behalf of
(Name of the Bank)

**PART- A: Contd…….**

Note 1: **In addition to the work planned as per Col. 'A', Contractor shall also make full efforts to minimize the 'Cumulative shortfall attributable to contractor upto the month' as mentioned in Col. 'B' by enhancing its resources, so as to achieve the completion of activities as per agreed schedule. In case contractor is not able to execute the entire shortfall, then BHEL 'Engineer in-charge', shall decide the priority of work to be executed and it shall be binding on the contractor.**

Note 2: Percentage Shortfall attributable to contractor w.r.t. **"**Plan - Shortfall attributable to BHEL**"** for the month = [(ΣE-ΣB)/(ΣA-ΣD)]x100
In case, (ΣE-ΣB) is negative, then it shall be treated as zero percent."

Note 3: Form 14 should include all items being planned in the current month, and all items against which shortfall was attributable to contractor till previous month. However, for practical reason, if it is not possible to mention some of the items in Form-14 being planned to be executed in this month, then also value of such items shall necessarily be included in calculation of Total Value.

Note 4: In case reason for shortfall attributable to contractor is w.r.t. T&P and Manpower, it should be in conformity with Part B1 and B2.

NAME

& ADDRESSES OF THE BENEFICIARY

Dear Sirs,

In consideration of the Bharat Heavy Electricals Limited (hereinafter referred to as the 'Employer' which expression shall unless repugnant to the context or meaning thereof, include its successors and permitted assigns) incorporated under the Companies Act, 1956 and having its registered office at BHEL House, Siri Fort, Asiad, New Delhi – 110049 through its Unit at Bharat Heavy Electricals Limited, Power Sector Eastern Region, BHEL Bhawan, Plot No 9/1, DJ Block, Sector-II, Salt lake City, Kolkata – 700091 having awarded to ( Name of the Vendor / Contractor / Supplier) having its registered office at_____[1] hereinafter referred to as the 'Contractor/Supplier', which expression shall unless repugnant to the context or meaning thereof, include its successors and permitted assigns), a contract Ref No……dated ……[2] valued at Rs……[2] ( Rupees ----------)for <Nature of Work>[3] (hereinafter called the 'Contract') and the Contractor having agreed to provide a Contract Performance Guarantee, equivalent to ……% (…. Percent) of the said value of the Contract to the Employer for the faithful performance of the Contract,

we, ……, (hereinafter referred to as the Bank), having registered/Head office at …….. and inter alia a branch at …… being the Guarantor under this Guarantee, hereby, irrevocably and unconditionally undertake to forthwith and immediately pay to the Employer a maximum amount Rs ---------- ( Rupees ----------)[4] without any demur, immediately on a demand from the Employer, .

Any such demand made on the Bank shall be conclusive as regards the amount due and payable by the Bank under this guarantee. However, our liability under this guarantee shall be restricted to an amount not exceeding Rs. _____ _____.

We undertake to pay to the Employer any money so demanded notwithstanding any dispute or disputes raised by the Contractor/ Supplier in any suit or proceeding pending before any Court or Tribunal relating thereto our liability under this present being absolute and unequivocal.

The payment so made by us under this Guarantee shall be a valid discharge of our liability for payment thereunder and the contractors/supplier shall have no claim against us for making such payment.

We the ……bank further agree that the guarantee herein contained shall remain in full force and effect during the period that would be taken for the performance of the said Contract and that it shall continue to be enforceable till all the dues of the Employer under or by virtue of the said Contract have been fully paid and its claims satisfied or discharged.

We …….. BANK further agree with the Employer that the Employer shall have the fullest liberty without our consent and without affecting in any manner our obligations hereunder to vary any of the terms and conditions of the said Contract or to extend time of performance by the said Contractor/Supplier from time to time or to postpone for any time or from time to time any of the powers exercisable by the Employer against the said Contractor/Supplier and to forbear or enforce any of the terms and conditions relating to the said Agreement and we shall not be relieved from our liability by reason of any such variation, or extension being granted to the said Contractor/Supplier or for any forbearance, act or omission on the part of the Employer or any indulgence by the Employer to the said Contractor/Supplier or by any such matter or thing whatsoever which under the law relating to sureties would but for this provision have effect of so relieving us.

The Bank also agrees that the Employer at its option shall be entitled to enforce this Guarantee against the Bank as a principal debtor, in the first instance without proceeding against the Contractor and notwithstanding any security or other guarantee that the Employer may have in relation to the Contractor's liabilities.

This Guarantee shall remain in force upto and including…….. [5] and shall be extended from time to time for such period as may be desired by Employer.
This Guarantee shall not be determined or affected by liquidation or winding up, dissolution or change of constitution or insolvency of the Contractor/Supplier but shall in all respects and for all purposes be binding and operative until payment of all money payable to the Employer in terms thereof.

Unless a demand or claim under this guarantee is made on us in writing on or before the ……[6] (3 months more than the present date of validity of Bank Guarantee) we shall be discharged from all liabilities under this guarantee thereafter.

We, …… BANK lastly undertake not to revoke this guarantee during its currency except with the previous consent of the Employer in writing.
Notwithstanding anything to the contrary contained hereinabove:

a) The liability of the Bank under this Guarantee shall not exceed…… [7]

b) This Guarantee shall be valid up to ……[8]

c) Unless the Bank is served a written claim or demand on or before _____[9] (3 months more than the present date of validity of Bank Guarantee) all rights under this guarantee shall be forfeited and the Bank shall be relieved and discharged from all liabilities under this guarantee irrespective of whether or not the original bank guarantee is returned to the Bank.

We, _____ Bank, have power to issue this Guarantee under law and the undersigned as a duly authorized person has full powers to sign this Guarantee on behalf of the Bank.

*Any claim or dispute arising under the terms of this document shall only be enforced or settled in the courts of at Kolkata only.*

# BANK GUARANTEE FOR SECURITY DEPOSIT CUM PERFORMANCE BANK GUARANTEE BOND

B.G. NO. Date

This deed of Guarantee made this ---------- day of ----------two thousand ----- by <Name and Address of Bank> hereinafter called the "The Guarantor" (which expression shall unless repugnant to the context or meaning thereof be deemed to include its successors and assigns) in favour of M/s Bharat Heavy Electrical Limited ( A Govt. of India Undertaking) a company incorporated under the Companies Act, 1956, having its registered office at BHEL House, Siri Fort, Asiad, New Delhi – 110049 through its unit at <**Address of Power Sector Region**[1]> hereinafter called "The Company" (which expression shall unless repugnant to the context or meaning thereof be deemed to include its successors and assigns)

WHEREAS < Contractor's Name and Address> (hereinafter referred to as the Contractor) have entered into a contract arising out of Letter of Intent no. < LOI REF & Date > (hereinafter referred to as "the contract") for < Name of Work > with the company.

AND WHEREAS the contract inter-alia provides that the contractor shall furnish to the company a sum of Rs.---------- (Rupees----------) towards security deposit for due and faithful performance of the contract in the form and manner specified therein.

AND WHEREAS the contractor has approached the Guarantor and in consideration of the arrangement arrived at between the contractor and the Guarantor, the Guarantor has agreed to give the Guarantee as hereinafter mentioned in favour of the company.

The Guarantor do hereby guarantee to the company the due and faithful performance, observance or discharge of the Contract by the contractor and further unconditionally and irrevocably undertake to pay to the Company without demur and merely on a demand, to the extent of Rs.----------(Rupees----------) against any claim by the company on them for any loss, damage, costs, charges and expenses caused to or suffered by the company by reasons of the contractor making any default in the performance, observance or discharge of the terms, conditions, stipulations or undertakings or any of them as contained in the contract.

The decision of the company whether any default has occurred or has been committed by the contractor in the performance, observance or discharge of any of the terms, conditions, stipulations or undertakings or any one of them as contained in the contract and / or as to the extent of loss, damage, costs, charges and expenses caused to or suffered by the company by reason of the contractor making any default in the performance, observance or discharge of any of the terms, conditions, stipulations or undertakings or any one of them shall be conclusive and binding on the Guarantor irrespective of the fact whether the contractor admits or denies the default or questions the correctness of any demand made by the company in any Court, Tribunal or Arbitration proceedings or before any other Authority.

The company shall have the fullest liberty without affecting in any way the liability of the Guarantor under this Guarantee, from time to time to vary any of the terms and conditions of the contract or extend time of performance by the contractor or to postpone for any time and from time to time any of the powers exercisable by it against the contractor and either enforce or forebear from enforcing any of the terms and conditions governing the contract or securities available to the company and the Guarantor shall not be released from its liability under these presents by any exercise by the company of the liberty with reference to the matters aforesaid or by reasons of time being given to the contractor or any other forbearance, act or commission on the part of the company or any indulgence by the company to the contractor or any other matter or thing whatsoever which under the law relating to sureties would, but for this provision have the effect of so releasing the Guarantor from its liability under this guarantee.

The Guarantor further agrees that the Guarantee herein contained shall remain in full force and effect during the period that would be taken for the performance of the contract and its claim satisfied or discharged and till the company certifies that the terms and conditions of the contract have been fully and properly carried out by the contractor and accordingly discharges this Guarantee, subject however, that the company shall have no claim under this Guarantee after ---------- i.e. (3 months more than the present date of validity of Bank Guarantee unless the date of validity of this Bank Guarantee is further extended from time to time, as the case may be) unless a notice of the claim under this Guarantee has been served on the Guarantor before the expiry of the said period in which case the same shall be enforceable against the Guarantor not withstanding the fact that the same is enforced after the expiry of the said period.

## BANK GUARANTEE FOR SECURITY DEPOSIT CUM PERFORMANCE BANK GUARANTEE BOND

The Guarantor undertakes not to revoke this Guarantee during the period it is in force except with the previous consent of the Company in writing and agrees that any liquidation or winding up or insolvency or dissolution or any change in the constitution of the contractor or the Guarantor shall not discharge the Guarantor's liability hereunder.

It shall not be necessary for the company to proceed against the contractor before proceeding against the Guarantor and the Guarantee herein contained shall be enforceable against them notwithstanding any security which the Company may have obtained or obtain from the Contractor shall at the time when proceedings are taken against the Guarantor hereunder be outstanding or unrealized.

Notwithstanding anything contained herein before, our liability under the Guarantee is restricted to Rs.---------- (Rupees----------). Our guarantee shall remain inforce until ----------, i.e. (the present date of validity of Bank Guarantee unless the date of validity of this Bank Guarantee is further extended from time to time) unless a claim or demand under this guarantee is made against us on or before ---------- (3 Months more than the validity date) we shall be discharged from our liabilities under this Guarantee thereafter.

Any claim or dispute arising under the terms of this documents shall only be enforced or settled in the courts of at < **Name of place[2]** > only.

The Guarantor hereby declares that it has power to execute this guarantee and the executant has full powers to do so on behalf of the Guarantor.

IN WITNESS whereof the ---------- (Bank) has hereunto set and subscribed its hand the day, month and year first, above written.

NAME

& ADDRESSES OF THE BENEFICIARY

Dear Sirs,

In consideration of the Bharat Heavy Electricals Limited [1](hereinafter referred to as the 'Employer' which expression shall unless repugnant to the context or meaning thereof, include its successors and permitted assigns) incorporated under the Companies Act, 1956 and having its registered office at BHEL House, Siri Fort, Asiad, New Delhi – 110049 through its Unit at Bharat Heavy Electricals Limited, Power Sector Eastern Region, BHEL Bhawan, Plot No 9/1, DJ Block, Sector-II, Salt lake City, Kolkata – 700091 having awarded to ( Name of the Vendor / Contractor / Supplier) incorporated under the ……..having its registered office at_____ [1](hereinafter referred to as the 'Contractor', which expression shall unless repugnant to the context or meaning thereof, include its successors and permitted assigns), a contract Ref No……dated ……..[2]valued at Rs……( Rupees ----------) for <Nature of Work>[3](hereinafter called the 'Contract')

The Contractor as per Contract should have completed the work/ supplies under the contract by……..(date). As per terms and conditions of the Contract, the Employer is entitled to levy Liquidated Damages (LD) for delays and the Employer has withheld an amount of Rs ……..by way of LD as per the Contract. Now, on the request of the Contractor, the Employer having agreed to release the amount of Rs……..withheld from the Contractor's invoices as Liquidated damages under the terms and conditions of the Contract on production of a Bank Guarantee for Rs._____ (Rupees……only) [4]

We, ……, (hereinafter referred to as the Bank), having registered/Head office at …….. and inter alia a branch at ……. being the Guarantor under this Guarantee, hereby irrevocably and unconditionally undertake to forthwith and immediately pay to the Employer a maximum amount of Rs ---------- ( Rupees ----------) without any demur, merely on a demand from the Employer

Any such demand made on the Bank shall be conclusive as regards the amount due and payable by the Bank under this guarantee. However, our liability under this guarantee shall be restricted to an amount not exceeding Rs. _____

We undertake to pay to the Employer any money so demanded notwithstanding any dispute or disputes raised by the Contractor/ Supplier in any suit or proceeding pending before any Court or Tribunal relating thereto our liability under this present being absolute and unequivocal.

The payment so made by us under this Guarantee shall be a valid discharge of our liability for payment thereunder and the contractors/supplier shall have no claim against us for making such payment.

We the ……bank further agree that the guarantee herein contained shall remain in full force and effect during the period that would be taken for the performance of the said Contract and that it shall continue to be enforceable till all the dues of the Employer under or by virtue of the said Contract have been fully paid and its claims satisfied or discharged.

We …….. BANK further agree with the Employer that the Employer shall have the fullest liberty without our consent and without affecting in any manner our obligations hereunder to vary any of the terms and conditions of the said Contract or to extend time of performance by the said Contractor/Supplier from time to time or to postpone for any time or from time to time any of the powers exercisable by the Employer against the said Contractor/Supplier and to forbear or enforce any of the terms and conditions relating to the said Agreement and we shall not be relieved from our liability by reason of any such variation, or extension being granted to the said Contractor/Supplier or for any forbearance, act or omission on the part of the Employer or any indulgence by the Employer to the said Contractor/Supplier or by any such matter or thing whatsoever which under the law relating to sureties would but for this provision have effect of so relieving us.
The Bank also agrees that the Employer at its option shall be entitled to enforce this Guarantee against the Bank as a principal debtor, in the first instance without proceeding against the Contractor and notwithstanding any security or other guarantee that the Employer may have in relation to the Contractor's/ Supplier's liabilities.

This Guarantee shall remain in force upto and including…….. [5] and shall be extended from time to time for such period as may be desired by Employer.
This Guarantee shall not be determined or affected by liquidation or winding up, dissolution or change of constitution or insolvency of the Contractor/Supplier but shall in all respects and for all purposes be binding and operative until payment of all money payable to the Employer in terms thereof.

Unless a demand or claim under this guarantee is made on us in writingon or before the ……[6] (3 months more than the present date of validity of Bank Guarantee) we shall be discharged from all liabilities under this guarantee thereafter.

We, …… BANK lastly undertake not to revoke this guarantee during its currency except with the previous consent of the Employer in writing.

Notwithstanding anything to the contrary contained hereinabove:

a) The liability of the Bank under this Guarantee shall not exceed…… [7]
b) This Guarantee shall be valid up to ……[8]
c) Unless the Bank is served a written claim or demand on or before _____[9] (3 months more than the present date of validity of Bank Guarantee) all rights under this guarantee shall be forfeited and the Bank shall be relieved and discharged from all liabilities under this guarantee irrespective of whether or not the original bank guarantee is returned to the Bank.

We, _____ Bank, have power to issue this Guarantee under law and the undersigned as a duly authorized person has full powers to sign this Guarantee on behalf of the Bank.

## PROFORMA OF BANK GUARANTEE FOR EARNEST MONEY
## (On non-Judicial paper of appropriate value)

**Bank Guarantee No…….**

**Date……..**

**To**

(Employer's Name and Address)
……..

Dear Sirs,

In accordance with the terms and conditions of your Invitation for Bids/Notice Inviting Tender No……[1](Tender Conditions) M/s. ……. having its registered office at ……[2] (hereinafter referred to as the '**Tenderer**'), is submitting its bid for the work of**…….** for……[3]. at Bharat Heavy Electricals Limited, Power Sector Eastern Region, BHEL Bhawan, Plot No 9/1, DJ Block, Sector-II, Salt lake City, Kolkata – 700091.[4](name of the Employer)
The Tender Conditions provide that the **Tenderer** shall pay a sum of Rs **…….** as Earnest Money Deposit in the form therein mentioned. The form of payment of Earnest Money Deposit includes Bank Guarantee executed by a Scheduled Bank.

In lieu of the stipulations contained in the aforesaid Tender Conditions that an irrevocable and unconditional Bank Guarantee against Earnest Money Deposit for an amount of .....[5] ..... is required to be submitted by the Tenderer as a condition precedent for participation in the said Tender and the Tenderer having approached us for giving the said Guarantee,,

we, the .....*[Name & address of the Bank]* ..... having our Head Office at ……..(hereinafter referred to as the Bank) being the Guarantor under this Guarantee, hereby irrevocably and unconditionally undertake to forthwith and immediately pay to the Employer without any demur, merely on your first demand any sum or sums of Rs. [5] .....(*).....without any reservation, protest, and recourse and without the beneficiary needing to prove or demonstrate reasons for its such demand. Any such demand made by the 'Employer' shall be

conclusive and binding on us irrespective of any dispute or difference raised by the Tenderer.

The payment so made by us under this Guarantee shall be a valid discharge of our liability for payment hereunder and the Tenderer shall have no claim against us for making such payment.

We …….. Bank further agree that the Employer shall have the fullest liberty without our consent and without affecting in any manner our obligations hereunder to vary any of the terms and conditions of the said Tender or to extend the time of submission of bids from time to time or to postpone for any time or from time to time any of the powers exercisable by the Employer against the said Tenderer and we shall not be relieved from our liability by reason of any such variation, or extension being granted to the said Tendered or for any forbearance, act or omission on the part of the Employer or any indulgence by the Employer to the said Tenderer or by any such matter or thing whatsoever which under the law relating to sureties would but for this provision have effect of so relieving us.

The Bank also agrees that the Employer at its option shall be entitled to enforce this Guarantee against the Bank as a principal debtor, in the first instance without proceeding against the Tenderer and notwithstanding any security or other guarantee that the Employer may have in relation to the Tenderer's liabilities.

This Guarantee shall be irrevocable and shall remain in force upto and including……[6] and shall be extended from time to time for such period as may be desired by the Employer.

This Guarantee shall not be determined or affected by liquidation or winding up, dissolution or change of constitution or insolvency of the Tenderer but shall in all respects and for all purposes be binding and operative until payment of all money payable to the Employer in terms hereof. However, unless a demand or claim under this Guarantee is made on us in writing on or before the ……[7] we shall be discharged from all liabilities under this Guarantee.

We, ……. Bank lastly undertake not to revoke this guarantee during its currency except with the previous consent of the Employer in writing.

Notwithstanding anything to the contrary contained hereinabove:

a) The liability of the Bank under this Guarantee shall not exceed……[5]…..

b) This Guarantee shall be valid up to ……[6]

c) Unless the Bank is served a written claim or demand on or before _____[7] all rights under this guarantee shall be forfeited and the Bank shall be relieved and discharged from all liabilities under this guarantee irrespective of whether or not the original bank guarantee is returned to the Bank

We, _____ Bank, have power to issue this Guarantee under law and the undersigned as a duly authorized person has full powers to sign this Guarantee on behalf of the Bank.

For and on behalf of

(Name of the Bank)

Date……

Place of Issue……

[1] *Details of the Invitation to Bid/Notice Inviting Tender*

[2] *Name and Address of the Tenderer*

[3] *Details of the Work*

[4] *Name and Address of BHEL Unit/Division/Region (Already filled up)*

[5] *BG Amount in words and Figures*

[6] *Validity Date*

[7] *Date of Expiry of Claim Period*

**Note:**

1. **Units are advised that expiry of claim period may be kept 2/3 months after validity date. As per Works Policy, the Bank Guarantee shall be valid for at least six months.**

2. **In Case of Bank Guarantees submitted by Foreign Vendors-**

**a.** **From Nationalized/Public Sector / Private Sector/ Foreign Banks (BG issued by Branches in India)** can be accepted subject to the condition that the Bank Guarantee should be enforceable in the town/city or at nearest branch where the Unit is located i.e. Demand can be presented at the Branch located in the town/city or at nearest branch where the Unit is located.

**b.** **From Foreign Banks (wherein Foreign Vendors intend to provide BG from local branch of the Vendor country's Bank)**

**b.1** In such cases, in the Tender Enquiry/ Contract itself, it may be clearly specified that Bank Guarantee issued by **any of the Consortium Banks only** will be accepted by BHEL. As such, Foreign Vendor needs to make necessary arrangements for issuance of Counter- Guarantee by Foreign Bank in favour of the Indian Bank (BHEL's Consortium Bank). It is advisable that all charges for issuance of Bank Guarantee/ counter-Guarantee should be borne by the Foreign Vendor. The tender stipulation should clearly specify these requirements.

**b.2** **In case, Foreign Vendors intend to provide BG from** Overseas Branch of our Consortium Bank (e.g. if a BG is to be issued by SBI Frankfurt), the same is acceptable. However, the procedure at **sl.no. b.1** will required to be followed.

**b.3** The BG issued may preferably be subject to Uniform Rules for Demand Guarantees (URDG) 758 (as amended from time to time). In case, of Foreign Vendors, the BG Format provided to them should clearly specify the same.

**b.4** The BG should clearly specify that the demand or other document can be presented in electronic form.

These Technical conditions shall be construed as part of tender document and shall be read along with General Conditions of Contract. In case of any conflict or inconsistency between the general and these technical conditions, the same shall be brought out by the bidder in writing to BHEL for clarification during pre-bid discussions; failing which most stringent interpretation / clause in favour of BHEL shall be adopted and the same shall be binding to the contractor.

| CLAUSE NO | DESCRIPTION |
|---|---|
| 1.1 | **PROJECT SYNOPSIS AND GENERAL INFORMATION** |
| | NTPC (for BHARATIYA RAIL BIJLEE COMPANY LTD.) is setting up four units of 4x250 MW Thermal Power station (coal based) at Nabinagar, District- Aurangabad, State of Bihar.<br><br>The Plant site is located at North: 24 deg. 42' 30" (N) and East: 84 deg. 05' 36" (E). Nearest Railway station is Dehri-On-Sone which is approx. 30 KM away from the project site. The nearest major town Aurangabad is located at a distance of about 50 Kms. from Project site.<br><br>Nearest Railway Station : Dehri-On-Sone Railway Station<br>( Approx. 30 KMs from the Plant)<br><br>Nearest Airport : Gaya<br>( Approx. 100 KMs from the Plant)<br><br>Nearest Highway is National Highway-2 which is 25KM away from the project site. |
| **2.0** | **SITE VISIT** |
| | The contractor should visit project site and acquire full knowledge and information about conditions prevailing at site and in & around the plant premises, together with all the statutory, obligatory, mandatory requirements of various authorities necessary for preparing the bid and entering into the contract. All costs for and associated with site visits shall be borne by the bidder. |
| **3.0** | **SCOPE OF WORK** |
| 3.1 | The work to be done under this specification comprises of construction of 150 M high reinforced concrete single steel flue chimney and other incidentals complete as detailed in the specification under Volume-II and elsewhere in the tender document, including raft foundation for Chimney for FGD system at 4 X 250 MW BRBCL Nabinagar Thermal Power Project, Aurangabad, Bihar. |
| 3.2 | The scope of work is as follows:<br><br>A. Construction of 04 numbers 150-meter-high reinforced concrete single flue steel lined chimney and other incidentals as detailed in the specification in the tender document including providing all labour, materials (except those which are specifically mentioned to be issued by BHEL as Free of Cost (FOC) Items), consumables, equipment, temporary works, temporary storage sheds, temporary colony for labour and staff, temporary site offices, construction plants, transportation/handling and all incidental items not shown or specified but reasonably implied or necessary for the completion of subject scope, all in strict accordance with the specifications including revisions and amendments thereto as may be required during the execution of work.<br><br>B. Supply including design, receipt, unloading, erection, testing and commissioning of stack elevator and electrical equipments; allied items, cabling, earthing, spares etc. are also under the scope of this work. The complete works have to be carried out by providing all labour, supervision, materials, scaffolding, power, fuel, construction equipments, tools & plants, inspection, measuring, testing instruments, supplies, transportation, storage, and all incidental items not herein specifically mentioned but reasonably or found required for the successful completion of work including contractor's and where necessary manufacturer's expert supervision in strict compliance with the requirement of this specification and approved |

| | |
|---|---|
| | construction drawing.<br><br>C. Installation of Borosilicate Glass Lining inside MS Flue Cans, including surface preparation, application of primer, adhesive etc. as per the technical specifications and approved erection procedure under the expert supervision of Borosilicate Glass Lining manufacturer /supplier. The complete works have to be carried out by providing all labour, supervision, materials, scaffolding, power, fuel, construction equipment, tools & plants, inspection, measuring, testing instruments, supplies, transportation, storage, and all incidental items not herein specifically mentioned but reasonably or found required for the successful completion of work. Borosilicate Glass Lining Materials, Primer, Adhesive (suitable fixing materials) and Expert Supervision of Manufacturer shall be provided by BHEL as Free of Cost (FOC) Items. |
| 3.3 | The bidder's scope shall include excavation in soil and rock ( if any with/without blasting as per the site conditions), dewatering, dressing to required profile, sheet piling or shoring/strutting, backfilling around completed structures and plinth filling, plinth protection, disposal of surplus earth and rock, concreting including Reinforcement and Formwork, Masonry work, Plastering, Painting, Flooring, Installation of borosilicate lining, Doors/Windows, Ventilators, Fire Proof Doors, Insulation, Roof Water Proofing, Dismantling of existing structures (below ground and above ground- RCC, Brick Works, Sheeting, Structural steel and Other facilities), RCC and Brick/ Block masonry and Steel Structures, fabrication and erection of all structural steel and miscellaneous steel (i.e. steel stair case, cable/duct/pipe supports, ladders, walkways, railing, Chequered plate/grating floor, inserts, anchor bolts, etc.), paving, Embedment, Earthing, Gravel filling, Precast covers, Expansion joints, Rain water pipe, Insulation, Gates/Valves, Water proofing of underground structures,Trenches, Final grading and site clearance before handing over to Owner and other auxiliary items of work, etc. all complete including supply of all materials (except those which are specifically mentioned to be issued by BHEL as Free of Cost (FOC) Items), consumables, labor, Tools and plants, transportation and storage, Sample Testing etc. all complete as per BOQ, specifications and drawings for proper and successful execution of the job for FGD at 4x250 MW BRBCL Nabinagar Thermal Power Project, Aurangabad, Bihar. |
| 3.4 | Ready mix cement concrete required for the tender scope (except chimney shell) shall be procured by BHEL and issued to contractor as free of cost (FOC) Item. at Batching Plant inside the plant premises. Bidder has to transport the concrete from batching plant to the location of work. Bidder to submit a receipt of concrete at batching plant based on the print out of batching. Reconciliation of quantity of concrete shall be done based on actual use of concrete at site.<br>Chimney shell concrete supply & laying is in the scope of contractor.<br>For concrete supplied by the contractor, the cement (contractor's scope) shall be as per Technical specification, applicable IS Codes and description mentioned in the respective items of BOQ.<br>Test certificates in respect of Cement for each consignment to be furnished and also to be tested as per FQP before use. The contractor shall submit the consumption statement of cement used in the works along with bill. |
| 3.5 | Reinforcement Steel required for the tender scope shall be procured by BHEL and issued to contractor as free of cost (FOC) Item except for those items wherever specifically mentioned in contractor's scope in BOQ.<br><br>However, unloading, handling / storage of Reinforcement steel procured by BHEL for this tender scope, at site, inside BHEL Stores / Contractor's Stores and further transportation from Stores to work area will be in the scope of contractor. No Extra payment shall be made for this work. |
| 3.6 | **Fabricated Structure Steel Supply:**<br>Structural Steel required for the tender scope shall be procured by BHEL and issued to contractor as free of cost (FOC) Item, except for those items wherever specifically mentioned in contractor's scope in BOQ. |

| | |
|---|---|
| | All steel structures (vendor's scope supply) shall be fabricated in factory, transported and erected at site. All factory fabricated structures shall have bolted field connections. Chimney flue liners can either be fabricated at factory in segments, transported and welded at site before erection or fabricated at site. However, BHEL will issue required material at site only. For Chimney flue liners, to prevent flue gas leakages, the applicable field joints shall necessarily be welded. Structural Steel shall be fabricated at a suitable fabrication shop, outside the plant premises.<br><br>BHEL will visit the fabrication shop of Contractor to examine its suitability for the scope of work involved. However, contractor's fabrication shop shall be adequately equipped to handle the scope of work involved within the given time schedule. Any modifications / alterations as required to carry out the works shall be done by contractor at his own cost. No claim / compensation for delay in works on this account will be admitted.<br><br>Contractor shall designate separate areas inside its fabrication shop for storage of Raw Materials as well as fabricated materials for this tender's scope and materials supplied for this work shall solely be utilized for this tender's purpose only. Safety, Watch and Ward, Insurance of the materials procured, fabricated and stored inside fabrication shop and transit insurance shall be the responsibility of the contractor. No claims / compensation on account of damage / theft of materials which is in the custody of contractor shall be permitted.<br><br>Contractor shall give due notice in advance to BHEL for Stage Inspection of the works being carried out at its fabrication shop as per the approved FQP. However, BHEL Engineer shall be entitled to visit the Contractor's Fabrication shop at any feasible time during the period of execution to examine the progress and quality of work. Contractor shall always maintain all such records and provide facilities / equipment / MMEs as required by BHEL's Engineer for inspection of works within the quoted rates. Fabricated Structural Steel shall be dispatched from the shop only after getting the due clearance from BHEL /Customer.<br><br>Transportation of fabricated structure steel / Raw Structure Steel from shop to site, Unloading, Handling / storage, at site, inside BHEL Yard / Contractor's store, will be in the scope of contractor. No extra payment for unloading / handling / transportation shall be paid to contractor. |
| 3.7 | The scope shall also include setting up by the bidder a testing room with compressive strength testing machine and other site test instruments for conducting day to day testing of concrete cubes, compaction of earth & road work, brick & other material testing. One qualified quality engineer to be deployed as necessary. |
| 3.8 | The working area shall be separated from the existing plant area by cordoning off the area by providing MS / GI sheets of suitable heights with appropriate frame work as approved by BHEL/ Customer. No extra payment shall be paid to contractor for this work. |
| 3.9 | The contractor shall also provide 1 (one) no computer operator and 1 (one) number service staff for miscellaneous service for BHEL's use at site / Kolkata for reconciliation, progress review & day-to-day planning purpose, documentation etc. These facilities are to be provided within 30 days from LOI date till completion of scheduled contract period.<br><br>Persons so deployed shall have to work in extended hours whenever required. Workmen provided as per the above provisions shall be fully trained and experienced in the nature of work for which they are deployed.<br><br>In case contractor fails to provide above-mentioned manpower as desired by BHEL, the latter shall have the right to hire such services from other agencies at the risk and cost of the contractor or BHEL will recover amount against the non-deployment period as per recovery rate mentioned under clause no 14.1.3.1 & 14.1.3.2 of TCC, |

| | |
|---|---|
| | whichever is applicable.<br><br>However, if BHEL does not utilize the man months as per above provision, fully or partly; recovery at the rate of the prevailing minimum wages at Nabinagar along with statutory expenses i.e. PF, ESI, bonus etc. (as applicable) for the categories given plus 10% will be made from the final bill of the contractor. |
| 3.10 | The Customer National Thermal Power Corporation (NTPC) may depute their representative for checking and supervision of important stages of work. The contractor shall be required to provide all facilities for inspection of works at no extra cost to BHEL. Any defect in quality of work or deviations from drawings / specifications pointed out during such inspection shall be made good by the contractor in the same way as if pointed out by the BHEL Engineer, without any cost implication to BHEL. |
| 3.11 | The work under this contract shall be carried out as per BOQ Cum Rate Schedule. In case the description / specifications as per BOQ are found to be incomplete, Indian standard specifications shall be followed. Quantities mentioned in the BOQ cum Rate schedules are approximate only and liable for variation due to change of scope of work / variation in schedule of quantities, changes in design etc. The tenderers shall undertake to execute actual quantities as per advice of BHEL Engineer and accordingly the final contract price shall be worked out on the basis of quantities actually executed at site and payments will also be regulated for the same. The quantities indicated against each item may vary to any extent and no compensation will be payable in variation of Individual quantity. |
| 3.12 | The complete works shall be carried out as per BOQ cum Rate schedule. If any work covered in the scope of contract cannot be executed using items available in BOQ, additional / extra items shall be made and rates for such items shall be worked out as per tender. However contractor shall be bound to execute all the works under the scope of the contract and decision whether an extra item is applicable or not, shall be taken by BHEL Engineer which will be binding on the contractor. |
| 3.13 | Any activity which is necessarily required for satisfactory execution of any item of BOQ in line with technical specifications shall be deemed to be included in BOQ item even if it is not described in the item description and no extra payment shall be made against such activity. |
| 3.14 | **The technical requirements for work to be executed under this specification shall be as per Specifications enclosed with this tender document.** |
| 3.15 | All quality standards, tolerances, welding standards & other technical requirements shall be strictly adhered to. The Bidder shall fully apprise himself of the prevailing conditions at the proposed site, climatic conditions including monsoon pattern, soil conditions, local conditions and site-specific parameters and shall include for all such conditions and contingent measures in the bid, including those which may not have been specifically brought out in the specifications. |
| 3.16 | Contractor’s scope also includes following: |
| 3.16.1 | Furnishing all labor, materials (except those specified in BHEL scope), supervision, construction plans, equipment, supplies, transport to and from the site, materials handling, fuel, electricity, compressed air, water, transit and storage insurance and all other incidental items and temporary works not shown or specified but reasonably implied or necessary for the proper completion, maintenance and handing over the works, in accordance with the stipulations laid down in the contract documents and additional stipulations as may be provided by BHEL Engineer during the course of works. |
| 3.16.2 | Furnishing samples of all materials required by the engineers for testing / inspection and approval for use in the works. The samples may be retained by the engineer for final incorporation in the works.<br>Furnishing test reports for the products used or intended to be used, if called for the specifications or if so desired by the engineer. |
| 3.16.3 | Giving all notices, paying all fees, taxes etc., in accordance with the general conditions of contract, that are required for all works including temporary works. |
| 3.16.4 | Arranging manufacturer’s supervision for items of work done as per manufacturer’s |

| | |
|---|---|
| | specifications when so specified. |
| 3.16.5 | The scope of work will also include such other related works although they may not be specifically mentioned in the above paragraph and all such incidental items not specified but reasonably implied and necessary for completion of the job as a whole all as desired and as directed by the engineer. |
| 3.16.6 | The scope of work covered above is not a comprehensive list of items of work involved. The detail scope of work may vary considerably depending on the actual construction requirements. |
| 3.17 | APPROVED MANUFACTURER / SUB VENDOR |
| 3.17.1 | As instructed by BHEL and as per approved FQP, Materials to be procured by the bidder must be approved by BHEL / NTPC. A tentative list of suppliers of some of the items is provided herewith this document. For suppliers other than those mentioned in the list, specific approval of BHEL / NTPC will be required. |
| 3.17.2 | **STACK ELEVATOR** |
| | Stack elevator to be supplied through BHEL / NTPC approved stack elevator manufacturer as furnished below: |
| | Alikraft Engineers Pvt Ltd- Savli, Vadodara |
| | Universal Construction Machinery- Pune |
| | Sucessful bidder can propose name of vendors other than above mentined vendors but acceptance shall be subject to approval by NTPC.Deceision of NTPC in this regard shall be final and binding to BHEL/Sucessful bidder. |
| 3.18 | **INSPECTION & JOINT VERIFICATION (AT CONTRACTOR'S WORKS)**<br>Prior to dispatch, the materials would be offered by the contractor for joint inspection at the contractor's works as detailed in this tender specifications for which the contractor would serve the advance notice of 15 days for inspection call to BHEL. |
| 3.19 | **INSPECTION & JOINT VERIFICATION (AT SITE)**<br>The contractor shall be intimated within 7 days from the date of receipt of each consignment at site to depute their representative for joint inspection and verification of the equipment / materials received at site. The contractor shall depute their representative within 7 days from receipt of such intimation failing which BHEL shall proceed with the inspection and verification of equipment / materials and BHEL's decision in this regard shall be final and binding to the contractor. |
| 3.20 | **QUALITY PLAN**<br>The bidder shall furnish the quality assurance plan along with the offer which would be approved by BHEL / Owner. |
| 3.21 | **MATERIAL DESPATCH CLEARANCE CERTIFICATE (MDCC):**<br>MDCC shall be issued by BHEL / Owner or their authorized representative prior to dispatch. In case the tests are not witnessed by BHEL / Owner / Owner's representative, the test certificates shall be submitted and MDCC will be issued thereafter. MRC shall be issued by BHEL / Owner or their authorized representative after the material is received at site in good condition. |
| **4.0** | **DEVIATIONS / CLARIFICATIONS** |
| | The bidder is required to submit with his offer in the relevant schedule / format without any ambiguity. Any assumptions, presumptions, deviations etc. indicated or implied anywhere by the bidder except those indicated in the deviation schedule / format will not be recognized and will not form a part of consideration / offer. In the absence of such filled-up schedule / format it will be understood and agreed that the bidder's offer is based on strict conformance to the specification and no negotiation would be allowed in this regard. BHEL reserve the right not to recognize any / all deviations submitted after opening of the bid. |
| **5.0** | **DEWATERING** |
| | Contractor shall ensure at all times that his work area & approach / access roads are free from accumulation of water, so that the materials are safe and the erection/ progress schedule are not affected. No separate claim in this regard shall be admitted by BHEL. No separate payments for dewatering of subsoil, surface water or catchments water, if required, at any time during execution of the work including monsoon period shall be considered by BHEL. |
| **6.0** | **LAND** |

| | |
|---|---|
| 6.1 | Availability of land within plant boundary is very limited and the contractor has to plan & use the existing land considering the use of land by other contractors and the storage of plant machineries and materials. The existing land shall be shared by all erections agencies. The same will be reviewed by BHEL and allotted to the extent available/ considered necessary free of cost. Contractor shall develop these areas for their site office, their own stores etc. Bidder must visit site to assess site condition, prior to quoting. |
| 6.2 | Levelled area for storage area for BHEL's material shall be provided as per availability free of cost. |
| 6.3 | Land for labour colony shall be arranged by successful bidder at their own. The contractor shall construct labour colony / hutment as per his requirements after obtaining approval of formalities from statutory body. Further, contractor must ensure minimum HSE norms and hyeiginic sanitary conditions in his labour colony. |
| 6.4 | The contractor will be responsible for handing back all lands, as handed over to him by BHEL/NTPC. |
| **7.0** | **WATER** |
| 7.1 | BHEL will provide single point supply for construction & drinking water inside the project premises for office free of cost within 500 Mtr. of work site. |
| 7.2 | Further necessary network for construction & drinking water system shall be done by the bidder at his own cost. |
| 7.3 | Contractor should arrange for water for labour colony of their own. |
| 7.4 | BHEL shall not be responsible for any inconvenience or delay caused due to any interruption of water supply and the contractor shall claim no compensation for delay in work for such interruption. Contractor may make standby arrangement for water at their own cost. |
| 7.5 | Contractor will have to arrange for storage of water to meet the day-to-day requirement. |
| 7.6 | The availability of water (construction as well as drinking) may be limited. Contractor shall ensure that no water is wasted. In this regard the contractor shall take all necessary measure towards preservation of water. |
| **8.0** | **ELECTRICITY** |
| 8.1 | BHEL shall provide construction power free of charge at 415V level at one point within 500 Mtr from work site. Contractor has to make their own distribution arrangement to draw electricity. Overall area illumination will be provided by BHEL. However, for night working contractor should arrange illumination as and when required by them. |
| 8.2 | The bidder shall have to provide earth leakage circuit breaker at each point wherever human operated electrical drives/ T&Ps are deployed. |
| 8.3 | The power supply will be from the available grid. BHEL shall not be responsible for any inconvenience or delay caused due to any interruption of power supply/ variation in voltage level and no compensation for delay in work can be claimed by the contractor due to such non-supply on the grounds of idle labour, machinery or any other grounds. |
| 8.4 | Bidder will have to arrange sufficient illumination at their own work areas. |
| 8.5 | The contractor should ensure that the work in critical areas is not held up in the event of power breakdown. In the event of breakdown in the electric supply, if the progress of work is hampered, it will be the responsibility of the contractor to step up the progress of work after restoration of electric supply so that overall progress of work is not affected. |
| 8.6 | The contractor shall have to make arrangement at their own cost for illumination that will be required in the working area for execution of the work & safety of workmen. |
| 8.7 | Contractor shall make arrangement of electricity of their own for labour colony. |
| **9.0** | **CONSUMABLE** |
| 9.1 | All consumables, like gas, electrodes, chemicals, lubricants etc. required for the scope of work, shall be arranged by the contractor at his cost from approved brand / make unless otherwise specifically mentioned in the contract. |
| 9.2 | All consumables to be used for the job shall have to be approved by NTPC / BHEL prior to use. |

| | |
|---|---|
| 9.3 | In the event of failure of contractor to bring necessary and sufficient consumables, BHEL may arrange for the same at the risk and cost of the contractor. The entire cost towards this along-with overhead shall be paid by the contractor or deducted from the contractor's bills. |
| **10.0** | **TEST CERTIFICATES** |
| | Necessary test certificates of all materials supplied by contractor are to be produced to BHEL prior to use of those materials. |
| **11.0** | **IMTE** |
| | The contractor shall ensure deployment of reliable and calibrated instrument, measuring, and test Equipment (IMTE). The IMTE shall have test calibration certificate from authorized / Govt approved agencies. The contractor shall also keep provision of alternate engagement for such IMTE so that the work does not suffer when a particular IMTE is sent for calibration. Re-testing/ re-calibration shall also be arranged by the contractor at their own cost at regular interval during the period of use as advised by BHEL. |
| **12.0** | **QUALITY CONTROL & QUALITY ASSURANCE** |
| 12.1 | **INSPECTION & FIELD QUALITY ASSURANCE** |
| 12.1.1 | Contractor shall carry out all activities conforming to the approved Field Quality Plan (FQP) & technical instructions as revised from time to time. 'Total Quality' shall be the watchword of the work and contractor shall strive to achieve the quality standards, procedures laid down by BHEL. He shall follow all the instructions as per BHEL drawings and quality standards. Contractor shall provide the services of quality assurance engineer as per the relevant clauses. |
| 12.1.2 | Preparation of quality assurance log sheets and protocols with customer / consultants / statutory authority, welding logs, NDE records, testing & calibration records and other quality control and quality assurance documentation as per BHEL engineer's instructions, is within the scope of work / specification. These records shall be submitted to BHEL / customer for approval from time to time. |
| 12.1.3 | The protocols between contractor and customer / BHEL shall be made for correctness of foundations, materials, procedures, at each stage of installation, generally as per the requirement of customer / BHEL. This is necessary to ensure elimination of errors and to avoid accumulation and multiplication of errors. |
| 12.1.4 | A daily log book (with proper indexing) should be maintained by every supervisor / engineer of contractor, for respective area of work, on the job for detailing and incorporating alignment/ clearance / centering / levelling readings and inspection details of various equipment, etc. This log book shall be always accessible to BHEL engineers.<br>High pressure welding (as applicable under the scope of this contract) details like serial number of weld joints, welders name, date of welding, details of repair, heat treatment etc. will be documented in welding log as per BHEL Engineer's instructions.<br>Record of radiography (as applicable under the scope of this contract) containing details like serial number of weld joints, date of radiography, repairs, if any, re-shots etc shall also be maintained as per BHEL Engineer's instructions.<br>Record of heat treatments (as applicable under the scope of this contract) performed shall be maintained as prescribed by BHEL. |
| 12.1.5 | The performance of welders (as applicable under the scope of this contract) will be reviewed from time to time as per the BHEL standards. Welders' performance record shall be furnished periodically for scrutiny of BHEL's Engineer. Corrective action as informed by BHEL shall be taken in respect of those welders not conforming to these standards. This may include removal/ discontinuance of concerned welder(s). Contractor shall arrange for the alternate welders immediately. |
| 12.1.6 | Only welders duly authorized by BHEL / customer / consultant after welder qualification test as per ASME Sec-Ix / AWS D1.1 (as applicable) shall be engaged on the work. All the welders shall carry identity cards as per the proforma prescribed by BHEL / Customer / Consultant. |
| 12.1.7 | Any re-laying or re-termination of cables / re-erection of instruments / recalibration of instruments etc. required due to contractor's mistake and found at any stage inspection shall be carried out by the contractor at no extra cost. Repair / rectification |

| | |
|---|---|
| | procedure to be adopted to make any job acceptable shall be subject to the approval of BHEL. |
| 12.1.8 | Weekly Quality Review Meeting at site shall be organised by BHEL to discuss quality issues and next week inspection plans. Site in-charge of the contractor along with QAEs of the contractor must be present in the meeting with closure report of the issues raised by BHEL in the previous meetings. |
| **12.2** | **REQUIREMENT OF ISO 9001** |
| 12.2.1 | BHEL: PSER is accredited with ISO 9001 certification and as such this work is subject to various audits to meet ISO 9001 requirements. |
| 12.2.2 | The basic philosophy of the Quality Management System under ISO 9001 is to define the organizational responsibility, work as per documented procedures, verify the output with respect to acceptance norms, identify the non-conforming product / procedure and take corrective action for removal of non-conformance specifying the steps for avoiding recurrence of such non-conformities, & maintain the relevant quality records. The non-conformities are to be identified through the conduct of periodical audit of implementation of quality systems at various locations/stages of work. Suppliers / vendors of various products / services contributing in the work are also considered as part of the quality management system. As such the contractor is expected not only to conform to the quality management system of BHEL but also it is desirable that they themselves are accredited under any quality management system standard. |
| 12.2.3 | BHEL reserves the right to carry out quarterly quality audits and quality surveillance of the systems and procedures of contractor's quality management. Contractor shall provide all necessary assistance to enable BHEL to carry out such audit & surveillance. |
| 12.2.4 | Quality audits / approval of the results of test & inspection will not prejudice the right of BHEL to reject an equipment service not giving desired performance and shall not in no way limit the liabilities and responsibilities of the contractor in earning satisfactory performances of equipment / service as per specification. |
| **12.3** | **MMEs / MMRs** |
| 12.3.1 | Contractor shall ensure deployment of reliable and calibrated MMEs (Measuring and Monitoring Equipment). The MMEs shall have test / calibration certificates from authorised / Government approved / Accredited agencies traceable to National / International Standards. Re-testing / re-calibration shall also be arranged at regular intervals during the period of use as advised by BHEL Engineer within the contract price. The contractor will also have alternate arrangements for such MMEs so that work does not suffer when the particular equipment / instrument is sent for calibration. Also if any MMEs not found fit for use, BHEL shall have the right to stop the use of such item and instruct the contractor to deploy proper item and recall i.e. repeat the readings taken by that instrument, failing which BHEL may deploy MME and retake the readings at Contractor's cost. |
| 12.3.2 | Contractor shall provide all the Measuring Monitoring Equipment (MMEs) required for completion of the work satisfactorily. These MMEs shall be of brand, quality and accuracy specified by BHEL Engineer and should have necessary calibration and other certificates as per the requirement of BHEL Engineer. Decision of BHEL Engineer regarding acceptance or otherwise of the measuring instruments / gauges / tools for the work under this specification, is final and binding on the contractor. BHEL shall give an indicative list of MMEs required for this work else where in this contract and to be made available by the contractor. The list will be reviewed by BHEL site as per the requirement of approved FQPs and the contractor shall meet any augmentation needed wherever required. |
| 12.3.3 | It is the responsibility of the contractor to prove the accuracy of the testing / measuring / calibrating equipment brought by him based on the periodicity of calibration as called for in the BHEL's quality assurance standards/BHEL Engineer's instructions. |
| 12.3.4 | Re-work necessitated on account of use of invalid MMEs shall be entirely to the contractor's account. He shall be responsible to take all corrective actions, including resource augmentation if any, as specified by BHEL to make-up for the loss of time. |
| 12.3.5 | In the courses of erection, it may become necessary to carry repeated checks of the |

| | | | | |
|---|---|---|---|---|
| | work with instruments recently calibrated, re-calibrated. BHEL may counter / finally check the measurements with their own MMEs. Contractor shall render all assistance in conduct of such counter / final measurements. | | | |
| **12.4** | **INSPECTION BY TS / FES / QA ENGINEERS OF BHEL UNITS / ENGINEERING CENTRES** | | | |
| 12.4.1 | Apart from day-to-day inspection by BHEL Engineers stationed at Site and Customer's Engineers, stage inspection of equipment under erection and commissioning at various stages may also be conducted by teams of Engineers from Field Engineering Services of BHEL's Manufacturing Units, Quality Assurance teams from Field Quality Assurance, Unit/Factory Quality Assurance and Commissioning Engineers from Technical Services etc. Contractor shall arrange all labour, tools and tackles etc along with proper access for such stage inspections free of cost. | | | |
| 12.4.2 | Any modifications suggested by BHEL FES and QA Engineers' team shall be carried out. Claims of contractor, if any, shall be dealt as per applicable clause of the contract, and provided such modifications have not arisen for reasons attributable to the contractor. | | | |
| **12.5** | **PENALTIES ON VENDORS / SUB-CONTRACTORS AGAINST NON-COMPLIANCE OF QUALITY NORMS** | | | |
| **Sl. No.** | **Nature of Non-compliance** | **Penalty for Domestic Project** | **Penalty for Export Project** | **Remarks** |
| GENERAL | | | | |
| 12.5.1 | Unavailability of QAE deployment schedule (duly approved by BHEL Site) matching with manpower requirement of approved L2 schedule | 0.10% | 0.10% | Against each RA bill |
| 12.5.2 | Unavailability of required number of QAE with proper experience & NDT certification as per the requirement of the Contract | Rs. 1,000.00 | $16.00 | Per person per day |
| 12.5.3 | Not attending quality meeting of BHEL by nominated member of vendor / sub-contractor | Rs. 2,000.00 | $32.00 | Per meeting |
| CALIBRATION | | | | |
| 12.5.4 | Use of MMEs without valid calibration certificate | Rs. 1,000.00 | $16.00 | Per equipment per instance |
| 12.5.5 | Use of NDT equipment, welding equipment without having valid calibration certificate / condition not as per requirement | Rs. 1,000.00 | $16.00 | Per equipment per instance |
| WELDING & NDT | | | | |
| 12.5.6 | Unqualified welders carrying out welding / tack welding | Rs. 1,000.00 | $16.00 | Per welder per instance. (Gatepass of the person shall be withheld) |
| 12.5.7 | Not using portable oven for welding consumables | Rs. 500.00 | $8.00 | Per welder per instance. (The consumables in the oven shall be confiscated) |

| | | | | |
|---|---|---|---|---|
| 12.5.8 | Not using electrodes pre-baked in baking oven | Rs. 500.00 | $8.00 | Per instance. (The subject consumables shall be confiscated) |
| 12.5.9 | Not using welding consumables of approved make & not using correct type of electrode as per approved EWS / Drawing / WPS | Rs. 1,000.00 | $16.00 | Per instance. (The subject consumables shall be confiscated) |
| 12.5.10 | Non-removal of welding slag and spatters after welding | Rs. 500.00 | $8.00 | Per joint |
| 12.5.11 | Not using NDT equipment as prescribed in the manual / FQP / guidelines / Contract | Rs. 1,000.00 | $16.00 | Per equipment per instance |
| 12.5.12 | Welder doing welding without valid job card | Rs. 500.00 | $8.00 | Per instance |
| 12.5.13 | Discrepancy observed in the weld joints identified by BHEL / Customer for RT vs RT film offered | Rs. 2,000.00 | $32.00 | per joint |
| MATERIAL MANAGEMENT | | | | |
| 12.5.14 | Non-maintenance of grid pillar marking | Rs. 200.00 | $3.00 | Per location week |
| 12.5.15 | Mismatch of location of material in store area w.r.t. location mentioned in stock register | Rs. 500.00 | $8.00 | Per instance |
| 12.5.16 | Non-compliance of Preservation of material as per storage & preservation manuals | Rs. 1,000.00 | $16.00 | Per equipment |
| 12.5.17 | Not offering received material for verification within stipulated time as per contract | Rs. 500.00 | $8.00 | Per instance |
| PAINTING & ALLIED WORKS | | | | |
| 12.5.18 | Not using primer / paints of approved make and as per Specifications | Rs. 1,000.00 | $16.00 | Per instance |
| 12.5.19 | Painting without proper surface preparation as per approved schedule / drawing / FQP | Rs. 500.00 | $8.00 | Per instance |
| PROTOCOLS & LOG SHEETS | | | | |
| 12.5.20 | Delay in preparation of Protocols / Logsheets as per approved FQP within 3 days of completion of checks | Rs. 200.00 | $3.00 | Per protocol per day delay |
| INSPECTION OF BOUGHT-OUT ITEMS / CONSUMABLES | | | | |
| 12.5.21 | Delay in offering inspection of Bought-out Items / Consumables / Aggregates (for items which need site | 1% of the item value of the LOT | 1% of the item value of the LOT | per item per day delay after receipt of material |

| | | | | |
|---|---|---|---|---|
| | inspection as per approved QP) within 3 days of receipt of material at site | | | |
| 12.5.22 | Delay in submission of required documents (viz. Invoice, Inspection Release Note, COC, MDCC, MTC as the case may be) of Bought-out Items (shop inspection items / consumables) with in 3 days of receipt of material at site. | 1% of the item value of the LOT | 1% of the item value of the LOT | per item per day delay after receipt of material |
| **NOTE:**<br>Any non-conformity requiring dismantling / rework, attributable to vendor / sub-contractor, shall be penalised at a rate mentioned above or cost to BHEL, which ever is higher. | | | | |
| **13.0** | **OCCUPATIONAL HEALTH, SAFETY & ENVIRONMENT MANAGEMENT** | | | |
| | Vendor has to follow HSE norms at project site during execution of entire contract period and the applicable HSE norms are noted in Tender Docurnent for HSE norms having Document Title: Health, Safety and Environment Plan for Site Operation by Subcontractors | | | |
| **14.0** | **PROJECT MANAGEMENT/ CONSTRUCTION MANAGEMENT** | | | |
| | To meet the need of construction management at site, contractor shall provide the following services within quoted/ accepted rates. | | | |
| 14.1 | PLANNING & MONITORING | | | |
| 14.1.1 | The bidder shall prepare detail construction schedule (L-3) as per completion dates given in this document. This schedule must include all milestone and key activities for each sub-system / component in the areas of engineering (wherever applicable), procurement, manufacture (wherever applicable), excavation/ construction/ erection. This network must conform to the overall project schedule. The bidder should also ensure monitoring of these activities at least weekly basis to start with and on daily basis whenever required by BHEL. | | | |
| 14.1.2 | The bidder shall also prepare progress report indicating progress on key activities, management summary for critical activities, list of actions requiring attention of BHEL. This schedule is to be preferably made in PRIMAVERA/MS PROJECTS, so that the same is compatible with BHEL's project management software. | | | |
| 14.1.3 | The bidder will have to install 1 no PC (multimedia PC work station Pentium- core-i5-650, 3.2 GHZ or above, 500 GB HDD, 6 GB RAM, 100/1000 MBPS LAN card) of HP/ DELL / HCL /LENEVO or equivalent make with window 10 (professional) 64 bit (with roll back to 32 bit O/S and required software like MS Office 2010 Professional or higher, AutoCAD 2014 or higher, PageMaker (7.0 etc), ADOBE PDF CREATOR with one no laser jet printer compatible for A4 size printing (ink/ cartridge for which to be supplied as and when required) with power backup at places, as per instruction of BHEL for exclusive use of BHEL.<br><br>These computers / printers shall remain contractor's property and they will be allowed to take out the same after completion of contract period. The contractor shall provide data / information etc in prescribed formats for periodical updating of the progress reports, material management reports, updating of network pertaining to the contractor's scope of work etc.<br><br>The contractor shall also provide 1 (one) no computer operator and 1 (one) number service staff for miscellaneous service for BHEL's use at site / Kolkata for reconciliation, progress review & day-to-day planning purpose, documentation etc. These facilities are to be provided within 30 days from LOI date till completion of scheduled contract period (Refer clause no 3.9 above).<br><br>If contractor fails to provide computer / printer / personnel as per requirement, for a | | | |

| | |
|---|---|
| | continuous period of fifteen days or more, BHEL shall have the right to deduct the amount as per following rates on prorate basis, from contractor's RA bill or any other dues. |
| 14.1.3.1 | @ Rs 20,000/- (Twenty thousand)/ month for each computer operator. Or at actuals (rate +30%) if BHEL arranges this facility, whichever is lower. |
| 14.1.3.2 | @ Rs 15,000/- (Fifteen thousand) / month for each service staff. Or at actuals (rate +30%) if BHEL arranges this facility, whichever is lower. |
| 14.1.3.3 | @ Rs 15,000/- (Fifteen thousand)/ month for each set of computer & printer. Or at actuals (rate +30%) if BHEL arranges this facility, whichever is lower. |
| 14.1.3.4 | In the event of the contract period getting extended beyond the stipulated time for reasons not attributable to you, above services may either be withdrawn or retained as per instruction of BHEL. If services are retained, you will be reimbursed at the above mentioned rate or (actual +15%), whichever is lower, if the services of operator / service staff are being used by BHEL. |
| 14.1.3.5 | The contractor's site office must have facilities of communications like Fax, E-mail, and telephone with STD facility within a month from LOI. However, if successful bidder decides not to install Fax at site then Suitable scanner may be made available for sending scanned documents through email as alternate to Fax. |
| 14.1.4 | A list contain supply of computers & printers with their workability status and details of supply of computer operators & service staff with their payment details will be quarterly submitted by the successful bidder to BHEL. |
| 14.1.5 | A list contain supply of computers & printers with their workability status and details of supply of computer operators & service staff with their payment details will be quarterly submitted by the successful bidder to BHEL. |
| 14.2 | PROGRESS REPORTING |
| 14.2.1 | The bidder shall submit daily, weekly and monthly progress reports for work force, materials reports, consumables (gases / electrodes) report and other reports as per pro-forma considered necessary by the BHEL. In case of any failure on contractor's part to comply with this, BHEL may at its discretion, consider to withhold part payment against their RA bills. |
| 14.2.2 | The progress report shall indicate the progress achieved against planned with reasons indicating delays, if any, and shall give the remedial actions which the contractor intends to take to make good the slippage or lost time, so that further works again proceed as per the original program and the slippages do not accumulate and effect the overall program. |
| 14.2.3 | The daily work force reports shall clearly indicate the work force deployed, category-wise specifying also the activities in which they are engaged. |
| 14.2.4 | Weekly progress review meetings will be held at site during which actual progress during the week vis-à-vis scheduled program shall be discussed or actions to be taken for achieving targets. For discussions, the contractor shall present program of subsequent week. The contractor shall constantly update/revise his work program to meet the overall requirement. |
| 14.2.5 | Periodic progress reviews on the entire activities of execution in respect of supply and works in scope of bidder will be held once in a month at Kolkata /site. These meetings will be attended by reasonably higher officials of the contractor and will be used as a forum for discussing all areas where progress needs to be speeded up. The contractor shall be further responsible for ensuring that suitable steps are taken to meet various targets decided upon such meetings. |
| 14.2.6 | During construction contractor shall take an average Twenty colour digital photograph / slides each month (not less than four per week) of the works during progress through email only. However, if required, bidder to submit hard copies of photographs as and when required in line with instruction by BHEL site.<br>In case of failure in providing such photograph in each month, an amount of Rs. 10,000/- per month shall be deducted from contractor's RA bill. |
| 14.2.7 | Successful bidder has to provide for electronic / computerized storing and re-production/ printing/ plotting of various data, log sheets, protocols, measurements etc. These may be stored in pen drive (as per requirement) and handed over to BHEL as per requirement. |

| | | |
|---|---|---|
| 14.3 | SITE ORGANIZATION | |
| 14.3.1 | The contractor shall maintain a site organization of adequate strength in respect of manpower, construction machinery and other implements at all time for smooth execution of the contract headed by a competent construction manager for site operations with sufficient level of authority to take site decisions. The vendor will submit organization chart (showing the name of SITE-IN-CHARGE) with individual bio-data indicating various levels of experts to be posted for supervision in the fields of supervision and execution, quality, material management, planning, safety, etc. The organization shall be reinforced from time to time, as required to make up slippage (if any) from the schedule without any commercial implication to BHEL. The organization chart is to be submitted within 10 days from the date of LOI. | |
| 14.3.2 | Following (minimum) engineering manpower with power plant construction background to be deployed at site by the successful vendor for their day to day supervision etc.as directed. | |
| 14.3.2.1 | Qualified safety officer (exclusive for safety supervision) | One no. officer (from start of work)<br>One no. assistant (from start of work) |
| 14.3.2.2 | Site supervising staff for Civil work | Minimum 2 no. engineers and 4 no. supervisors with two shift incharges during shell construction. |
| 14.3.2.3 | Site supervising staff for Structural work | One no. engineer and Minimum 2 nos. supervisors |
| 14.3.2.4 | Engineer for quality inspection. | Minimum Two nos. (one no. from start of work, 2nd as per site requirement) |
| 14.3.2.5 | Material management, site enabling | One no. |
| 14.3.2.6 | Enginner for Civil Laboratory | One no. |
| 14.3.3 | Deputation of above man-power shall be jointly decided at site in line with construction schedule. | |
| 14.3.4 | Engineer / supervisor for other functions like store & purchase, material management, planning, fin, admn etc are to be provided as per site requirement and not considered above. | |
| 14.3.5 | In the event of non deputation of engineer / supervisor by the bidder as per above agreed schedule, BHEL shall reserve the right to deduct Rs 60,000.00 per man-month for engineer and Rs 40,000.00 per man-month for the supervisor / safety officer from RA bills. Further induction of manpower, regarding site supervisor & site engineer will be decided at site as per requirement without any financial implication. | |
| 14.3.6 | BHEL reserves the right to reject or approve the list of personnel proposed by the contractor. The persons whose bio-data have been approved by BHEL will have to be posted at site and deviation in this regard will not be permitted unless specific & reasonable justification is made. | |
| 14.3.7 | In addition to above, a well experienced qualified engineer to be designated, as 'Project Co-cordinator', shall be deployed by the contractor. Such engineer shall have adequate exposure on the job and shall remain fully involved in all planning activities, guidance etc to contractor's own team during the complete execution period of contract. | |
| 14.3.8 | The contractor should also submit to BHEL for approval a list of T&Ps along with their fitness certificates. The tools & tackles shall not be removed from site without written permission of BHEL. | |
| 14.3.9 | The contractor should also submit network programs for the erection of various items. These networks shall show the NTPC / BHEL hold points, which have to be cleared by NTPC / BHEL, or their authorized representatives before further erection can take place. These programs for the erection would clearly identify responsibilities of the contractor and NTPC / BHEL. It is the responsibility of the contractor to get the Networks approved by BHEL within four weeks of the date of finalization of award of work/ placement of LOI. | |
| 14.4 | CONSTRUCTION MANAGEMENT | |
| 14.4.1 | Based on the approved program, the contractor shall submit a program of construction / erection / commissioning for the implementation. These programs would be amplified showing start of erection and subsequent activities and shall form the basis for site | |

| | |
|---|---|
| | execution and detail monitoring. The three-monthly rolling program with the first month's program being tentative based on the site condition would be prepared based on these programs. The contractor shall also be involved along with NTPC / BHEL to tie up detailed resources mobilization plan over the period of the contract matching with the performance targets. |
| 14.4.2 | The program would be jointly finalized by the site in-charge of the contractor with BHEL / NTPC's project coordinator as well as the site-planning representative. The erection program will also identify sequential events matching financial turnover. |
| 14.4.3 | Theses network / Program must confIrm to the overall requirement of the project schedule. The bidder should also ensure monitoring of these activities at least on weekly basis to start with and on daily basis whenever required by BHEL. |
| 14.4.4 | The contractor is liable to furnish all documentary evidences towards payment of Works Contract Tax as and when required by BHEL. |
| **15.0** | **TEST CERTIFICATE FOR T&P** |
| | All T&P, lifting tackles and pulling devices to be deployed by the contractor must bear valid / latest test certificates for their suitability, and the documents shall be preserved at site. |
| **16.0** | **T&P TO BE PROVIDED BY BHEL** |
| | No T&P shall be provided by BHEL. |
| **17.0** | **MATERIAL HANDLING (BHEL ISSUED MATERIAL)** |
| 17.1 | Ready Mix Concrete, Reinforcement (TMT bar), structural steel (MS plates, ISMB, ANGLE, CHANNEL, Chequred plate, Stainless Steel Plate / liner) for site fabrication only, Borosilicate Glass Blocks, required adhesives / membrance and primer for installation of Borosilicate Glass Block only will be issued free of cost by BHEL for use in the work covered in this contract. All other materials required for proper completion of job shall be provided by contractor and quoted rates shall be inclusive of this. |
| 17.2 | Consignment of steel will be directly issued to the contractor as received by BHEL, on weighment basis from its supplier, as per delivery challan of supplier. Borosilicate Glass Blocks, required adhesives / membrance and primer for installation of Borosilicate Glass Block may be issued directly as received from supplier or from BHEL Store. Ready mix Concrete will be issued as per clause 3.2 of scope of work. |
| 17.3 | Handling of all steel, Borosilicate Glass Blocks, required adhesives / membrance and primer for installation of Borosilicate Glass Block of total project will be in vendor's scope for which no separate payment will be given by BHEL. |
| 17.4 | It would be the responsibility of the contractor to keep in constant contact with BHEL / site to find out the delivery status, arrival of the consignments and arrange for escort to accompany the truck/ trailor for transportation of above materials by BHEL's supplier, as necessary. The lorry, truck way bill for the consignment as shall be received by BHEL would be handed over to the contractor immediately for unloading of materials including all arrangement for necessary gate passes etc. All arrangement for necessary gate passes etc shall be the responsibility of contractor. |
| 17.5 | Payment of all demurrages that may result due to contractor's fault/ delay would be the responsibility of the contractor. If BHEL have to make payment of demurrage together with freight, the amount so paid as demurrages for the reasons stated above, shall be recovered from the bills of the contractor. The decision of BHEL's engineer in this regard will be final and binding on the contractor. However, the contractor has to clear all such charges, if any in this regard and complete the job without waiting for BHEL's decision. |
| 17.6 | It would be the responsibility of the contractor to sign on the delivery book acknowledgement slip of supplier / transport authorities etc. |
| 17.7 | Consignments coming on Sundays and holidays are also required to be handled/ unloaded by the contractor. Since the offices and stores will probably remain closed on such days, it will be the responsibility of the contractor to contact BHEL engineers at their residence and obtain instructions. |
| 17.8 | Since the consignments are expected to arrive during any time of the day or night, contractor shall have, his workmen round the clock at site as well as other places as required to unload the materials immediately on arrival. |
| 17.9 | Unloading of materials at the covered srore, storage yard or at places designated by |

| | |
|---|---|
| | BHEL, stacking & restacking, shifting & resifting, using contractor's own cranes, trailers and other equipments with the valid road permit for their operation, unloading and stacking etc shall be responsibility of the contractor under this contract. All materials shall be stacked, stored above ground level by use of concrete or wooden sleepers. No materials shall remain on ground at any time. All concrete sleepers required for stacking the materials shall be arranged by contractor (successful bidder). All other material handling equipments like winches, d-shackles, slings of various sizes, max puller, pulley blocks, jacks, trucks, tailors etc required for such material handling of steel etc shall be arranged by contractor within quoted / accepted rates. |
| 17.10 | It will be the responsibility of the contractor to submit computerized account of all such consignments of materials received by them, daily to BHEL. |
| 17.11 | BHEL reserve the right to recover from the contractor any loss arising out of damage / theft or any other causes of the materials issued to him at any point of time. |
| 17.12 | Open land (very limited space) for storage shall be provided by BHEL on free of cost basis. Temporary barbed wire fencing of the steel storage yard, batching plant area, reinforcement bending yard area etc are to be done by the contractor as per BOQ items and is included under the scope of his work. Contractor shall also remove grass, bushes, trees etc wherever required off the land provided to him and shall make proper continuous up-keepment of the open yard/ land by removing grass, bushes trees etc and same is included under the scope of his work & no extra payment shall be made to the contractor in this regard. The bidder shall make complete arrangement of necessary security personnel, to safeguard all free issue materials in his custody. Materials issued will be used only for construction of permanent work. The contractor shall take care of material issued by BHEL and shall protect the same from theft, damage and weathering. |
| 17.13 | The contractor shall construct waterproof covered store for Borosilicate Glass Blocks, Adhesives / membrance and Primer Paint. CGI/ asbestos roofing (slope) with brick masonry wall, PCC flooring. Materials required for the same shall be provided by contractor at his own cost. Stacking of materials is to be done as per IS codes or manufacturer / supplier recommendation with proper illumination and locking arrangements. Storing of material in controlled temperature is also in successful bidder's scope within the quoted rate. |
| 17.14 | The contractor shall in no case be entitled for any compensation or damages on account of any delay in supply or non-supply thereof for all or any such material. |
| 17.15 | Rusting of steel, damage of packing of Borosilicate lining materials must be avoided. In case, due to any cause attributable to the contractor, such rusting of steel occur rendering the same unusable, damage of Borosilicate lining materials, then such cost of materials shall be recovered from the interim payment at the penal rate specified in the tender. |
| 17.16 | No material shall be issued to the contractor except as those indicated above, i.e. Ready-mix Concrete, steel, Borosilicate Glass Blocks, required adhesives / membrance and primer unless otherwise expressly provided for in the contract. Contractor will have to make his own arrangement at his own cost for procurement of any other material as required for the works and of such quality as acceptable to BHEL. |
| 17.17 | The contractor shall maintain proper store account for all the BHEL issued materials and shall give monthly computerised reconciliation statement of such account to the BHEL. |
| 17.18 | Contractor shall carry out in complete association with BHEL, material management functions and execution like day to day update of materials, issued to contractor, accounting for surplus / scrap material returned etc. These functions shall also be carried out through computerised system utilizing suitable software. Contractor shall provide experienced software personnel to associate on dedicated basis for efficient discharge of the same. |
| 17.17 | The contractor shall solely be responsible for the safety & quality of material after it is handed over and issued to contractor by BHEL. |
| 17.18 | BHEL issued materials shall not under any circumstances taken out of the project site unless otherwise permitted by BHEL. |

| | |
|---|---|
| 17.19 | All the necessary lifting tackles, cranes, hydra, tools & plants including tractors, trailers, trucks, pulley blocks, jacks, winches, wire ropes etc, of suitable capacities and other equipments incidental to carry out this work shall have to be arranged by the contractor at his cost. BHEL engineer reserves the right to inspect lifting tackles and equipment before allowing their use. Such approval however shall not relieve the responsibility of the contractor to ensure safe handling of equipment taking the precautions to avoid any accident and damage to other equipment and personnel. |
| 17.20 | No separate payment will be applicable for the above job. The contractor will quote the rate for the items inclusive of all charges for the above job. The contractor shall organise despatch & transport steel materials through supplier and unload & receive the materials as above as per requirement decided by BHEL and in this case the decision of BHEL will be final. |
| 17.21 | Bidder's scope of handling of steel under the scope of this tender includes stacking / storing of materials over concrete sleepers. Bidder scope shall include provision of concrete sleepers for this purpose and no separate payment against the same will be made by BHEL. After completion of the job bidder shall take back the sleepers. Bidder's quoted rate/ price shall be in consideration to this. |
| **18.0** | **ISSUE OF MATERIALS** |
| 18.1 | ISSUE OF READY MIX CONCRETE |
| 18.1.1 | Bidder has to give a receipt of quantity of Ready Mix Concrete at the time of taking of concrete at batching plant. For ensuring quantity, bidder may check the print out of concrete from batching plant. |
| 18.1.2 | The contractor shall submit to the engineer, a statement indicating estimated quantity of Ready Mix Concrete required at least two months in advance. In addition, the contractor shall also furnish the estimated requirement of Ready Mix Concrete during next month by the third week of the current month, failing which BHEL will not responsible to ensure supply of Ready Mix Concrete. Delay in completion if any for the same shall be in bidders account. |
| 18.2 | ISSUE OF STEEL |
| 18.2.1 | The steel shall be issued to the contractor free of cost on the following basis. |
| 18.2.1.1 | MS structural steel (MS plates, ISMB, ANGLE, CHANNEL, Chequred plate, Stainless Steel Plate/liner) materials – Weighment basis (unit – MT). |
| 18.2.1.2 | Reinforcement steel and earthing rod (MS round) – Weighment basis (unit – MT). |
| 18.2.2 | All the steel (Reinforcement, MS plates, ISMB, ANGLE, CHANNEL, Chequred plate, Stainless Steel Plate/liner) issued by BHEL shall be properly accounted for. The total quantity of steel required for the work will be calculated from the approved Bar Bending schedule, fabrication drawings, approved laps, chairs and lugs. The measurement for payment as well as for accounting shall be based on the sectional weights as indicated in the following IS specifications.<br>IS: 808-1989 - Beams, channels and angles<br>IS: 1730-1961 - Plates<br>Reinforcements - Fe-500 confirming to IS: 1786. or grade-1 of IS:432 (part-I) |
| 18.2.3 | In case any such sectional weights are not available in the above documents, the manufacturer recommendation shall be binding. |
| 18.2.4 | The steel issued to the contractor shall be mainly in standard length and sections as received from the supplier. However, the contractor shall be bound to accept the steel in length as available in the project stores no claims for extra payment because of issue of non-standard length will be entertained. |
| 18.2.5 | MS flats as required are to be arranged by the contractor as per BOQ items. |
| 18.3 | ISSUE OF BOROSILICATE GLASS BLOCK |
| | Borosilicate Glass block shall be issued as received vide challan of the transporter in sqm worked out by multiplication of block sizes by no of block. |
| 18.4 | ADHESIVES / MEMBRANCE |
| | Shall be issued in Kg / Litre as received in drum |
| 18.5 | PRIMER PAINT |
| | Shall be issued in Litre as received in drum |
| 18.6 | The contractor shall satisfy himself of the quality and quantity of the materials at the time of taking delivery from BHEL stores. No claims whatsoever will be entertained by |

| | |
|---|---|
| | BHEL because of quality or quantity after the materials are taken by contractor from BHEL stores. |
| 18.7 | The contractor shall submit to the engineer, a statement indicating estimated quantity of cement, steel, Borosilicate Glass Blocks, required adhesives / membrance and primer required at least two months in advance. In addition, the contractor shall also furnish the estimated requirement of cement and steel during a month by the third week of the previous month indicating his requirement. |
| 18.8 | Bidders to ensure that no lamination materials are taken over by them from BHEL. Fabrication wastage, if any due to above, shall not be compensated by BHEL |
| 18.9 | Bidder to note that all fasteners like MS/ HT/ HSFG bolts/ nuts, lock nuts, washers etc shall be supplied by the bidder as per applicable item of Price Schedule. |
| 18.10 | Bidder to note that cement and steel required for his enabling job like store/ site office etc shall be arranged at his own cost. |
| **19.0** | **RETURN OF MATERIALS** |
| 19.1 | RETURN OF READY MIX CONCRETE |
| 19.1.1 | Under any circumstances, Ready Mix Concrete will not be taken back. Bidder to plan accordingly for proper use of Ready Mix Concrete. |
| 19.2 | RETURN OF STEEL INCLUDING SCRAP |
| 19.2.1 | All surplus steel and all wastage materials will be taken back on weighment basis. |
| 19.2.2 | Surplus, unused and un-tampered steel shall be sorted section-wise and returned separately for a place directed by BHEL/ engineer within the project area. Return of such materials will not be entitled to any handling and incidental charges. |
| 19.2.3 | All wastage/ scrap (including wastage, unusable scrap) shall be returned to the stores on weighment basis and a receipt obtained for material accounting purposes. Return of such material will not be entitled to any additional cost due handling and transportation and incidental charge. |
| 19.2.4 | Scrap for reinforcement steel and structural steel shall be returned separately as per instruction of BHEL. |
| 19.3 | BOROSILICATE GLASS BLOCK |
| | All unused Borosilicate blocks shall be taken back by BHEL in sqm worked out by multiplication of block sizes by no. of block |
| 19.4 | ADHESIVES / MEMBRANCE |
| | All unused untampered adhesive / membrane drum shall be taken back by BHEL in Kg as received during issue. Open drum / partially used drum shall not be taken back |
| 19.5 | PRIMER PAINT |
| | All unused untampered drum containing paint shall be taken back by BHEL in litre as received during issue. Open drum / partially used drum shall not be taken back |
| **20.0** | **MATERIAL CONSUMPTION AND WASTAGE** |
| 20.1 | READY MIX CONCRETE CONSUMPTION |
| 20.1.1 | The theoretical consumption of various grade of based on approved construction drawing. Quantity shall be calculated considering the volume of concrete as per approved drawing. No extra cost shall be payable to the contractor for any deviation in quantity of Ready Mix Concrete received from the Batching Plant and actual use at site. |
| 20.2 | READY MIX CONCRETE WASTAGE |
| 20.2.1 | Allowable wastage: One point five percent (+1.5%) of the theoretical consumption shall be considered as allowable wastage. |
| 20.3 | REINFORCEMENT STEEL & EARTHING MS ROUND CONSUMPTION |
| 20.3.1 | The theoretical consumption of various diameter of reinforcement and earthing MS round shall be based on approved construction drawing and bar bending schedule. Weight shall be calculated considering the sectional weights as per Indian standards. No extra cost shall be payable to the contractor for any deviation in weights for the different procedures adopted for issue and calculation of the theoretical consumption including rolling tolerances. |
| 20.3.2 | Actual consumption = Issue – Surplus. |
| 20.3.3 | Surplus = Un-tampered and unused quantity of steel returned by the contractor to BHEL store along-with relevant documents. |

| | | | |
|---|---|---|---|
| 20.3.4 | Wastage = Actual consumption – Theoretical consumption. | | |
| 20.4 | REINFORCEMENT STEEL & EARTHING MS ROUND WASTAGE | | |
| 20.4.1 | Allowable wastage – (+3%) of the theoretical consumption shall be considered as allowable wastage. | | |
| 20.4.2 | Wastage and scrap shall be as per actual weighment basis. | | |
| 20.4.3 | Sl no | Reinforcement steel & earthing rod 40 mm ms round | Basis of issue & penal recovery |
| | R-1 | Theoretical consumption (without considering wastage and scrap or loss) | Free |
| | R-2a | Wastage limited to plus three percent (+3%) of aforesaid theoretical consumption (R-1) towards allowable wastage and return to BHEL Store. | Free |
| | R-2b | Wastage limited to plus three percent (+3%) of aforesaid theoretical consumption (R-1) towards allowable wastage but not returned to BHEL Store. | Penal rate |
| | R-3 | Wastage beyond three percent (+3%) of the theoretical consumption above (R-1). | Penal rate |
| 20.5 | STRUCTURAL STEEL CONSUMPTION | | |
| 20.5.1 | The theoretical consumption of various sections shall be based on approved drawings. Weights shall be calculated considering the sectional weights as per Indian standard as mentioned in relevant clause. No extra shall be payable to the contractor for any deviation in weights for the two different procedures adopted for issue and calculation of the theoretical consumption including rolling tolerances. | | |
| 20.5.2 | Actual consumption = Issue – Surplus. | | |
| 20.5.3 | Surplus = Untempered, unused, uncut quantity of steel returned by the contractor to BHEL store. | | |
| 20.5.4 | Wastage = Actual consumption – Theoretical consumption. | | |
| 20.6 | STRUCTURAL STEEL WASTAGE | | |
| 20.6.1 | Allowable wastage – 4 % (four percent) of the theoretical consumption shall be considered. Wastage is further classified as cut pieces and scrap measured as per actual weightment basis. Invisible wastage (loss of materials due to gas cutting, straightening of edges etc) shall be limited to 0.5 % (zero-point five percent) of theoretical consumption and shall be considered for reconciliation purposes only. But this invisible wastage shall be considered to be included in allowable wastage. | | |
| 20.6.2 | Sl no | Structural steel materials | Basis of issue & penal recovery |
| | S-1 | Theoretical consumption (without considering any wastage, scrap or loss) as per specification & drg. | Free |
| | S-2a | Wastage limited to plus three-point five percent (+3.5% excluding invisible wastage) of the aforesaid theoretical consumption (S-1) towards allowable wastage and return to BHEL Store. | Free |
| | S-2b | Wastage limited to plus three-point five percent (+3.5% excluding invisible wastage) of the aforesaid theoretical consumption (S-1) towards allowable wastage but not returned to BHEL Store. | Penal rate |
| | S-3 | Wastage beyond four percent (4%) of the aforesaid theoretical consumption (S-1). | Penal rate |
| 20.7 | All wastage reinforcement, MS round (for earthing), structural steel shall be returned to BHEL. | | |
| 20.8 | BOROSILICATE GLASS BLOCK | | |
| 20..8.1 | Wastage shall be controlled by Supplier of Borosilicate Glass Lining materials under the supervision of whom the lining work shall be carried out. Bidder to follow the instruction of Supplier. Wastage, even after compliance to instructions of supplier, if any, will not be considered under<br>successful bidder's account. However, if it is estabilished during the exectution that wastage is due to non-compliances by the successful bidder vis-a-vis instruction of supplier and due to the same BHEL has to procure the additional material then the | | |

| | | |
|---|---|---|
| | additional cost with applicable overhead including Taxes & duties shall be recovered from the Successful Bidder. | |
| 20.9 | ADHESIVES / MEMBRANCE | |
| 20.9.1 | Wastage shall be controlled by Supplier of Borosilicate Glass Lining materials under the supervision of whom the lining work shall be carried out. Bidder to follow the instruction of Supplier. Wastage, even after compliance to instructions of supplier, if any, will not be considered under successful bidder's account. However, if it is estabilished during the exectution that wastage is due to non-compliances by the successful bidder vis-a-vis instruction of supplier and due to the same BHEL has to procure the additional material then the additional cost with applicable overhead including Taxes & duties shall be recovered from the Successful Bidder. | |
| 20.10 | PRIMER PAINT | |
| 20.10.1 | Wastage shall be controlled by Supplier of Borosilicate Glass Lining materials under the supervision of whom the lining work shall be carried out. Bidder to follow the instruction of Supplier. Wastage, even after compliance to instructions of supplier, if any, will not be considered under successful bidder's account. However, if it is estabilished during the exectution that wastage is due to non-compliances by the successful bidder vis-a-vis instruction of supplier and due to the same BHEL has to procure the additional material then the additional cost with applicable overhead including Taxes & duties shall be recovered from the Successful Bidder. | |
| **21.0** | **RECONCILIATION OF BHEL ISSUED MATERIALS** | |
| 21.1 | The contractor shall submit a reconciliation statement of RMC, cement, steel, Borosilicate Glass Blocks, required adhesives / membrance and primer issued to him with each RA bill. | |
| 21.2 | At the time of submission of bills, the contractor shall properly account for the material issued to him as specified herein to the satisfaction of BHEL certifying that the balance materials are available with contractor’s custody at site. | |
| 21.3 | At the time of submission of bills by the contractor, if it is noticed by BHEL that the wastage is high and calls recovery at the penal rate, then BHEL will proceed for recovery for the excess wastage as per penal recovery rates as specified. | |
| 21.4 | The approved drawings/ bar bending schedules are to be considered for the purpose of reconciliation of materials. | |
| **22.0** | **RECOVERY OF MATERIAL** | |
| 22.1 | If wastage exceeds the specified limit, the recovery of excess wastage shall be made from monthly RA bill at the penal rate stipulated below. | |
| 22.2 | PENAL RATE OF MATERIALS | |
| | Item | Penal rate |
| 22.2.1 | Ready Mix Concrete | |
| | M - 7.5 | Rs 6,500 per Cum |
| | M - 10 | Rs 7,000 per Cum |
| | M - 15 | Rs 7,850 per Cum |
| | M - 20 | Rs 8,600 per Cum |
| | M - 25 | Rs 8,700 per Cum |
| | M – 30 | Rs 8,900 per Cum |
| | M - 35 | Rs 12,300 per Cum |
| | M - 40 | Rs 12,600 per Cum |
| 22.2.2 | Reinforcement steel and MS rod etc. | Rs 75,000/- per MT. |
| 22.2.3 | Stainless Steel Plate / Liner | Rs 400,000/- per MT |
| 22.2.4 | Structural steel materials. | Rs 80,000/- per MT. |
| **23.0** | **CONSTRUCTION OF TEMPORARY OFFICE, STORES ETC** | |
| 23.1 | The contractor shall arrange at his own cost cleaning of area allotted, construction of his temporary office, stores, cement godown etc. and also the watch and ward of all the above. Materials required for the same shall be provided by contractor at his own cost. | |
| 23.2 | BHEL contemplates to provide fabrication yard with in approx 1000 mtr from chimney. However, during execution, based on actual site conditions, requirement and layout and approaches, the above may change suitably. | |

| | | |
|---|---|---|
| **24.0** | **TOOLS & PLANTS (TO BE PROVIDED BY CONTRACTOR)** | |
| 24.1 | Tentative list of T&P to be deployed by contractor for successful completion of work is detailed below. | |
| 24.2 | It may be noted that the list is not exhaustive and is only for guidance. The contractor is required to provide all necessary T&P (other than those specified to be provided by BHEL, if any) measuring (calibrated) instruments & handing equipments to maintain work progress for timely completion of total work as per contract. In case of project requirement, some activities may have to pre-pone. In such cases the contractor have to deploy additional T&P. Quoted rate shall be inclusive of such emerging requirements. However, contractor shall submit deployment plan of all T&P after order to BHEL / SITE. | |
| 24.3 | In the event of any failure on the part of the contractor to deploy T & P to sustain desired work progress, BHEL may at his discretion also terminate the contract on this ground and take out any or whole amount of the contract from the scope of the contractor. In the event of failure of contractor to deploy necessary and sufficient T&P/ IMTEs to maintain work progress, **BHEL will arrange the same including mobilization, demobilization, hiring charge, fuel charge etc of same from any of BHEL site/ other agency & charges** as applicable plus 10% **at the risk & cost of contractor** shall be deducted from contractor's RA bill. BHEL also reserve for suitable deduction towards non-depolyment of T&P as per project requirement in line with BHEL's rate of T&P charges available at BHEL/site through corporate circular time to time. Decision of BHEL in this regard will be final & binding on contractor. | |
| 24.4 | Following Major T&Ps to be arranged by contractor within the time as indicated : | |
| | **Major T&P items** | **Mobilizing time from start date** |
| 24.4.1 | 2 Nos. Hydraulic Excavator/Poclain | Within 30 days |
| 24.4.2 | 2 Nos. Dozer | Within 20 days |
| 24.4.3 | 10 Nos. Dumper | Within 30 days |
| 24.4.4 | 2 Nos. Vibromax/Earth Compactor | As per site requirement |
| 24.4.5 | 2 Nos. Air Compressor | As per site requirement |
| 24.4.6 | 2 Nos. 18 / 20 T Crawler Crane | Within 210 days. |
| 24.4.7 | 2 Nos Hydra (10 / 12 T Cap) | within 90 days. |
| 24.4.9 | 30 Nos Welding Machine | As per requirement |
| 24.4.10 | Motorized MS plate bending machine along with angle bending device – 1 no. | Within 120 days |
| 24.4.11 | 6 Nos Transit Mixer (5 / 6 Cum capacity) | 3 Nos Within 30 days<br>Balance 3 Nos within 60 days |
| 24.4.12 | 4 No Concrete Pump (20 cum/ hr min capacity & lift 70M) | Within 75 days. |
| 24.4.13 | 5 Nos Self Priming Dewatering Pump 5 HP (diesel / electric) | Within 20 days. |
| 24.4.14 | 5 Nos Multi stage high lift water Pump (for curing) (lifting height shall be 175 metre). Two shall be working and other will be stand by. | Within 75 days. |
| 24.4.15 | 2 Nos Pneumatic Hammer. | As per site requirement |
| 24.4.16 | 6 Nos Reinforcement Bending Machine | Within 30 days |
| 24.4.17 | 4 Nos Reinforcement Cutting Machine | Within 30 days |
| 24.4.18 | 1 No Compression Testing Machine (200 T Cap) | As per site requirement |
| 24.4.19 | Civil laboratory equipments as per list attached in ANNEX `A & A1' | Within 60 days. |
| 24.4.20 | Power Winch – 3 T - 4 nos for structural erection. | As per requirement |
| 24.4.21 | Power Winch – 5 T – 2 nos for structural erection. | As per requirement |
| 24.4.22 | Power Winch – 10 T - 4 nos for structural erection | As per requirement |
| 24.4.23 | 1 No Total Station | Within 20 days. |
| 24.4.24 | 2 Nos Auto Level & Staff | Within 20 days. |
| 24.4.25 | 2 nos DG set (suitable capacity as per requirement) | 1st Within 30 days.<br>2nd Within 75 days. |
| 24.4.26 | Concrete Cube Moulds – Adequate no. | As per requirement |

| | | |
|---|---|---|
| 24.4.27 | Slip / Inter form equipment set including required winches for man & material lifting, hydraulic spare pump, minimum 10% spare jack, epoxy painted MS shutter plate, wooden planks, materials and passenger hoist with safety block (safety devices), safety ropes etc complete - 2 sets minimum. | 1st to be mobilized within 90 days<br>2nd to be mobilized within 150 days<br>Balance - As per site requirement and discussion with BHEL(if reqd) |
| 24.4.28 | Strand Jack / winches with safety device lifting capacity 15 T | As per requirement |
| 24.4.29.a | Hanging platforms with safety device (two nos.) | As per requirement |
| 24.4.29.b | 2 Nos Trailor – 20T, | Within 30 days. |
| 24.4.29.c | 2 Nos Drinking Water Tank – 1000 Lit. | Within 30 days. |
| 24.4.30 | 2 Nos Ultra-Sonography Testing Machine for structural work. | As per requirement |
| 24.4.31 | 2 Nos Radiography Source. | Whenever required |
| 24.4.32 | Radioset – 1 no (VHF/UHF.) | Within 120 days. |
| 24.4.33 | 30 Cum/Hr. capacity of Automatic Batching Plant with Printing facility with required Silo for storing of Cement to be commissioned at Site. | Within 45 days |
| 24.4.34 | 15 Cum/Hr. capacity of Automatic Batching Plant with Printing facility with required Silo for storing of Cement to be commissioned at Site. | Within 60 Days |
| 24.4.35 | Ready mix concrete Testing Lab 1 AC Lab 4.50 m x 4.50 m and 1 Non-AC Lab 4.50 m x 6.00 m with required Equipment & Instrument as per Annexure – `A & A1' (Tentative List) | Within 60 Days |
| 24.4.36 | Portable fire extinguishers as below:<br>Soda acid – 4 sets.<br>Dry chemical powder – 4 sets<br>CO2 – 2 sets.<br>Water & sand bucket<br>(4 buckets in one stand) – 3 sets.<br>Fire hose with nozzle (50 M length) – 2 sets. | Within 60 days. |
| 24.5 | T&P shown in the above mentioned list are tentative and minimum requirement based on planned progress requirement.<br>Actual Mobilisation schedule, based on front availability, drawings and material availability at site is to be reviewed and mutually agreed with BHEL site periodically from time to time & form a joint MOM for moblisiation of major T&Ps, and the same have to be adhered to and no change will be permitted without written approval of BHEL site.<br>Further requirement will be reviewed time to time at site and contractor will provide additional T&P/ equipments to ensure completion of entire work within schedule time without any financial implication to BHEL. All other T&Ps shall be provided by the contractor without any extra cost to BHEL. Vendor will give advance intimation & certification regarding capacity etc prior to dispatch of heavy equipments. | |
| 24.6 | All T&P and all IMTEs, which are required for successful and timely execution of the work covered within the scope of this tender, shall be arranged and provided by the contractor at his own cost in working condition. | |
| 24.7 | In the event of non mobilsation of any T&P by the successful bidder and as a result progress of work sufferred, BHEL reserves the right to deduct suitable amount from the dues of the bidder, with assigning reasons thereof as per the following rate given below. | |
| | **T & P** | **Recovery** |
| 24.7.1 | Hydraulic Excavator/Poclain | Rs 50000/- per week or part thereof |
| 24.7.2 | Dozer | Rs40000 /- per week or part thereof |
| 24.7.3 | Dumper | Rs 5000/- per week or part thereof |
| 24.7.4 | Vibromax/earth compactor | Rs 40000/- per week or part thereof |
| 24.7.5 | Air Compressor | Rs 2000/- per week or part thereof |

| | | |
|---|---|---|
| 24.7.6 | 18/20 T crawler crane | Rs 20000/- per week or part thereof |
| 24.7.7 | Hydra (10/ 12 T cap) | Rs 15000/- per week or part thereof |
| 24.7.9 | Welding Rectifier | Rs 1000/- per week or part thereof |
| 24.7.10 | Motorized MS plate bending machine along with angle bending device | Rs 5000/- per week or part thereof |
| 24.7.11 | Transit mixer (5 / 6 M3 capacity) | Rs 7000/- per week or part thereof |
| 24.7.12 | Concrete Pump (20 cum/ hr min capacity & lift 70M) | Rs 20000/- per week or part thereof |
| 24.7.13 | Self Priming Dewatering Pump 5 HP (diesel/ electric) | Rs 2000/- per week or part thereof |
| 24.7.14 | Multi stage high lift water Pump (for curing) (lifting height shall be 175 metre). One shall be working and other will be stand by. | Rs 2000/- per week or part thereof |
| 24.7.15 | Pneumatic Hammer. | Rs 500/- per week or part thereof |
| 24.7.16 | Reinforcement Bending Machine | Rs 5000/- per week or part thereof |
| 24.7.17 | Reinforcement Cutting Machine | Rs 5000/- per week or part thereof |
| 24.7.18 | Compression Testing Machine (200 T Cap) | Rs 4000/- per week or part thereof |
| 24.7.19 | Civil laboratory equipments as per list attached in ANNEX `A` | Rs 500/- per week or part thereof |
| 24.7.20 | Power Winch – 3 T | Rs 2000/- per week or part thereof |
| 24.7.21 | Power Winch – 5 T | Rs 3000/- per week or part thereof |
| 24.7.22 | Power Winch – 10 T | Rs 5000/- per week or part thereof |
| 24.7.23 | Total Station | Rs 5000/- per week or part thereof |
| 24.7.24 | Auto Level & Staff | Rs 5000/- per week or part thereof |
| 24.7.25 | 2 nos DG set (suitable capacity as per requirement) | Rs 20000/- per week or part thereof |
| 24.7.26 | Slip / Inter form equipment set including required winches for man & material lifting, hydraulic spare pump, 10% spare jack, epoxy painted MS shutter plate, materials and passenger hoist with safety block (safety devices), safety ropes etc complete. | Rs 200000/- per week or part thereof per set. |
| 24.7.27 | Strand Jack / winches with safety device lifting capacity 15 T | Rs 10000/- per week or part thereof |
| 24.7.28 | Hanging platforms with safety device | Rs 15000/- per week or part thereof |
| 24.7.29.a | Trailor – 20T, | Rs 10000/- per week or part thereof |
| 24.7.29.b | Drinking Water Tank – 3000 Lit. | Rs 5000/- per week or part thereof |
| 24.7.29.c | Ultra-Sonography Testing Machine For Structural Work. | Rs 5000/- per week or part thereof |
| 24.7.30 | Radiography Source. | Rs 500/- per week or part thereof |
| 24.7.31 | Radioset – 1 no (VHF/UHF.) | Rs 500/- per week or part thereof |
| 24.7.32 | Any other equipment/T &P | As per discretion of engineer |
| 24.8 | After completion of major quantum of work, vendor may be permitted to take out any of his T&P progressively, if deemed fit by BHEL Site as per balance work program. The same will be jointly agreed and recorded. BHEL decision in this regard will be final and binding on the vendor. | |
| 24.9 | It is not obligatory on the part of BHEL to provide any tools and tackles or other materials other than those specifically agreed to do so by BHEL. However, depending upon the availability, BHEL / BHEL's Customer handling equipment and other plants may be made available to the contractor on payment of higher charges as fixed, subject to the conditions laid down by BHEL/Customer from time to time. Unless paid in advance, such hire charges, if applicable shall be recovered from contractor's bill / security deposit or any other payment in one installment. | |
| **25.0** | **CIVIL LABORATORY** | |

| | | | |
|---|---|---|---|
| | Contractor shall establish and maintain civil laboratory Room with necessary equipment for conducting relevant site tests, as required. Tentative list of Lab equipments to be deployed / arranged by the contractor are given in Annexure-A. | | |
| **26.0** | **CONSTRUCTION SCHEDULE** | | |
| 26.1 | **INITIAL MOBILIZATION:**<br>After receipt of LOI, Contractor shall discuss with Project Manager / Construction Manager regarding initial mobilization. Contractor shall mobilize necessary resources within 15 days of issue of letter of intent or as per the directive of Project Manager / Construction Manager.Such resources shall be progressively augmented to match the schedule of milestones as directed by BHEL Engineer | | |
| 26.2 | Entire work shall be carried out in accordance with the broad construction / Milestone schedule, within the stipulated completion period. Within 30 days of LOI, the contractor shall discuss with BHEL site engineer & furnish detail construction schedule (L-3/ L-4) indicating all milestones on the basis of major activities and get it approved from BHEL engineer. This schedule will undergo review and based on progress vis-à-vis project requirement, contractor shall have to submit revised schedule for approval of BHEL. | | |
| 26.3 | **START DATE / ZERO DATE**<br>The schedule date of start of work shall be the date after 15 days of issue of LOI; The Actual Date of Start of Contract Period (Zero Date) shall be date of handing over of site to contractor for work and shall be certified by the BHEL Engineer. | | |
| 26.4 | **Sl. No.** | **Activity** | **Completion time** |
| | **A** | **SERVICE PART** | |
| | 1 | Completion of Raft foundations of Chimney for 1st Unit | 3 months |
| | 2 | Completion of RCC Wind Shield for 1st Unit | 7 months |
| | 3 | Completion of Steel Flue for 1st Unit | 9 months |
| | 4 | Completion of Borosilicate Lining work for 1st Unit | 11 months |
| | 5 | Completion of all work for 1st Unit | 12 months |
| | **B** | **SUPPLY PART** | |
| | 1 | Design & drawing Approval | 4 months |
| | 2 | Manufactuing Quality Plan Approval | 5 months |
| | 3 | Supply of Elevator for 1st Unit | 7 months |
| | 4 | Supply of Electrical Items for 1st Unit | 9 months |
| | **C. Phase gap between each unit shall be 3 Months. Hence total Completion time for all four units is 21 Months.** | | |
| 26.5 | Contractor shall submit structural fabricaton drawings within 15 days from the release of engineering drawings by BHEL.<br>Vendor to ensure checking of detail drawing and obtaining approval from PEM through the approved agency within 15 days from detail drawing fabrication submission date. Vendor has to ensure availability of approved drawing at site immediately after the approval.<br>List of the agency for structural drawing detailing and checking are attached in Annexure-B. This list is indicative and for tender purpose only. Vendor has to ensure approval of such agency from BHEL-PEM within 45 days from the date of LOI. | | |
| 26.6 | Contractor shall submit daily work program based on above construction schedule. Defferement of above schedule is not acceptable. Contractor will adhere to schedule and resource planning to be augmented to ensure completion as per schedule. | | |
| 26.7 | Above schedule is indicative. The contractor shall plan his work in such a manner so as to meet the overall project schedule, in consultation with BHEL/NTPC Engineer. In order to meet above schedule in general, and any other intermediate targets set, to meet customer/ project schedule requirements, contractor shall arrange & augment all necessary resources from time to time on the instructions of BHEL without any extra cost to BHEL. | | |
| 26.8 | In case due to reasons not attributable to the contractor, the work gets delayed and scheduled completion gets extended, time extension will be granted by BHEL as per clause no. 2.11 of GCC. | | |

| | |
|---|---|
| 26.9 | It may be noted that in the event, delay in completion is attributable to the contractor; BHEL will impose LD on the contractor as per clause no. 33.0 of TCC. |
| **27.0** | **COMPLETION PERIOD** |
| | The entire work under this scope shall be successfully completed within 21 (twenty one) months from the date of Start of work.<br><br>Mobilisation period is 15 days from the date of LOI / intimation by Construction Manager BHEL, Nabinagar Site whichever is later. |
| **28.0** | **CERTIFICATE TOWARDS COMPLETION** |
| | The work under the scope of the contractor shall be deemed to have been completed in all respects only when so certified by CM, BHEL / NTPC. The decision of BHEL in this regard shall be final and binding on the contractor. |
| **29.0** | **EXTENSION OF TIME FOR COMPLETION** |
| 29.1 | If the completion of work as detailed in the scope of work gets delayed beyond the contract / completion period, the contractor shall request for an extension of the contract and BHEL at its discretion may extend the contract. |
| 29.2 | Based on the reviews jointly signed, the works balance at the end of original contract period less the backlog attributable to the contractor shall be quantified, and the number of months of 'Time extension' required for completion of the same shall be jointly worked out. Within this period of 'Time extension', the contractor is bound to complete the portion of backlog attributable to the contractor. Any further 'Time extension' or 'Time extensions' at the end of the previous extension shall be worked out similarly. |
| 29.3 | However, if any 'Time extension' is granted to the contractor to facilitate continuation of work and completion of contract, due to backlog attributable to the contractor alone, then it shall be without prejudice to the rights of BHEL to impose penalty/ LD for the delays attributable to the contractor, in addition to any other actions BHEL may wish to take at the risk and cost of contractor. |
| 29.4 | A joint programme shall be drawn for the balance amount of work to be completed during the period of 'Time Extension', along with matching resources to be deployed by the contractor as per specified format. Review of the programme and record of shortfall shall be done. |
| 29.5 | During the period of 'Time extension', contractor shall maintain their resources as per mutually agreed program. |
| 29.6 | At the end of total work completion as certified by BHEL engineer, and upon analysis of the total delay, the portion of time extensions attributable to (i) Contractor, (ii) Force majeure conditions, and (iii) BHEL, shall be worked out and shall be considered to be exhausted in the same order. The total period of time extensions shall be the sum of (i), (ii) and (iii) above and shall be equal to period between the scheduled date of completion and the actual date of completion of contract. LD shall be imposed/ levied for the portion of time extensions attributable to contractor and recoverable from the dues payable to the contractor. |
| **30.0** | **MOBILIZATION ADVANCE/ INTEREST BEARING RECOVERABLE ADVANCE** |
| | Not applicable. |
| **31.0** | **SECURITY DEPOSIT & PERFORMANCE BOND** |
| 31.1 | Security deposit shall be applicable as per relevant clause of GCC (Volume-IB). |
| 31.2 | Performance bond is applicable for Part-1B (SCH-3-SERVICE PART) and SCH-4-SUPPLY PART of price schedule, value as per following terms. |
| 31.2.1 | In addition to the security deposit, the contractor shall provide to BHEL bank guarantee from an approved nationalized bank for an amount equal to 5% of the stated price as performance bond (under the terms of a bond) within 30 days from the date of LOI and the terms of the said bond shall be such as shall be approved by BHEL. The bond shall remain valid until 6 months after the expiry of warranty/ guarantee period. The obtaining of such guarantee and the cost of bond to be so entered into shall be at the expense in all respects to the contractor. |
| 31.2.2 | BHEL reserve the right of forfeiture of the above bond in addition to other claims and penalties in the event of the contractor's failure to fulfil any of the contractual obligations or in the event of termination of contract as per terms and conditions of |

| | |
|---|---|
| | contract. BHEL reserve the right to set off this bond against any claim of any other contract with BHEL. |
| **32.0** | **REVISION ON ACCEPTED CONTRACT RATE** |
| | Not applicable in this tender. |
| **33.0** | **LIQUIDATED DAMAGE/ PENALTY** |
| **33.1** | **Intermediate Milestones (Applicable for each unit separately)** |
| 33.1.1 | In case delay in achieving the Milestone as mentioned in Clause 26.4.A.2 above in each unit , is solely attributable to the contractor, 0.25% per week of executable Contract Value, limited to maximum 1% of executable Contract Value, will be withheld. |
| 33.1.2 | In case delay in achieving the Milestone as mentioned in Clause 26.4.A.4 above in each unit , is solely attributable to the contractor, 0.25% per week of executable Contract Value, limited to maximum 1.25% of executable Contract Value, will be withheld. |
| 33.1.3 | Amount already withheld, if any against slippage of clause 26.4.A.2 & 26.4.A.4 above in each unit, shall be released only if there is no delay attributable to contractor in achievement of Milestone as mentioned in clause 26.4.A.5 of respective unit. |
| 33.1.4 | Amount to be withheld on account of slippage of identified intermediate milestone(s) shall be withheld out of respective milestone payment and balance amount (if any) shall be withheld @10% of RA Bill amount from subsequent RA bills. |
| 33.1.5 | In case of termination of contract due to any reason attributable to contractor before completion of work, the amount already withheld against slippage of intermediate milestones shall not be released and be converted into recovery. |
| 33.2 | Final Completion(Applicable for each unit separately) |
| 33.2.1 | Final deduction towards LD (if applicable), on account of delay attributable to contractor shall be based on final delay analysis on completion / closure of contract of each unit separately. Withheld amount, if any due to slippage of identified intermediate milestone(s) of respective unit shall be adjusted against LD or released as the case may be. |
| 33.2.2 | If the completion of work of the unit is delayed beyond the completion period (Refer clause 26.4.A.5 & 26.4.C above) due to reasons attributable to the contractor, they shall pay to BHEL as penalty a sum @ 0.5% of Contract Value per week of delay or part thereof. For Unit # 1, overall LD including LD against intermediate milestones shall be limited to maximum 2.5% of contract value. For Unit # 2, overall LD including LD against intermediate milestones shall be limited to maximum 2.5% of contract value. For Unit # 3, overall LD including LD against intermediate milestones shall be limited to maximum 2.5% of contract value and for Unit # 4, overall LD including LD against intermediate milestones shall be limited to maximum 2.5% of contract value Thus maximum LD considering four units shall be limited to 10% of contract value. |
| 33.2.3 | All other terms shall be as per the provision of GCC in this regard. |
| 33.3 | In case of LD recovery, the applicable GST shall also be recovered from the contractor. |
| **NOTE:-** | Executable Contract Value – Value of work for which inputs/ fronts were made available to contractor and were scheduled for execution till the date of achievement of the Milestone. |
| **34.0** | **CONTRACT PRICE** |
| 34.1 | The bidder shall quote their rates strictly in accordance with prescribed Price schedule of Volume-III (Latest revision). |
| 34.2 | The quantities of the various items mentioned in the respective Price schedules, Volume-III are approximate, based on very preliminary information and may vary to any extent or to be deleted altogether. The quoted rates of each item will remain firm throughout the period of execution including extension, for reasons whatsoever, as long as variation in the total value of the work executed under any part of this contract including extra items, if any, but excluding any price variation, remains within +/- 15 % (plus/minus fifteen percent) of the awarded price (as per LOI / WO). |
| 34.3 | The unit rate quoted for various items of BOQ shall include all the stipulation mentioned in the tender documents and nothing extra over BOQ rates shall be payable. |
| 34.4 | However, the contractor shall inform BHEL in case quantity variation of any item |

| | |
|---|---|
| | crosses + 50% (plus fifty percent) limit during execution and obtain approval/consent of CM, BHEL for execution of further quantity for this item. |
| 34.5 | Total price (Supply & service parts together) will be considered for evaluation. |
| 34.6 | Price schedule is split into 2 parts, service part & supply part, total of which shall be taken into account for evaluation and awarding. Contractor shall supply all material covered under supply part of price schedule. Unless otherwise specified in price schedule, contractor shall obtain prior approval from BHEL / owner regarding manufacturer / make of all items under contractor's scope of supply (under service part or supply part of price schedule). |
| **35.0** | **TAXES AND DUTIES** |
| 35.1 | All taxes excluding GST & BOCW Cess (as specified elsewhere in the tender) but including, Charges, Royalties, any State or Central Levy and other taxes for materials if any obtained for the work and for execution of the contract shall be borne by successful bidder and shall not be payable extra by BHEL. Any increase of above at any stage during execution of contract, including extension of the contract, shall have to be borne by successful bidder contractor. Bidder's quoted/ accepted rates/ price shall be inclusive of all such requirements. |
| 35.2 | GST along with Cess (as applicable) legally leviable & payable by successful bidder as per GST Law shall be paid by BHEL, extra. Hence, bidder shall not include GST along with Cess (as applicable) in their quoted rates/ price. |
| 35.3 | Successful bidder shall furnish proof of GST registration with GSTN Portal covering the services under this contract. Registration should also bear endorsement for the premises from where the billing shall be done by successful bidder on BHEL for this project / work. |
| 35.4 | Since GST on output will be paid by BHEL separately as enumerated above, bidder's your quoted rates / price should be after considering the Input Credit under GST law at bidder's end. |
| 35.5 | TDS under Income Tax shall be deducted at prevailing rates on gross invoice value from the running bills (RA bills) unless exemption certificate from the appropriate authority / authorities is furnished. |
| 35.6 | TDS under GST shall be deducted at applicable rates on gross invoice value from the running bills (RA bills). |
| 35.7 | Bidder shall note that GST Tax Invoice complying with GST Invoice Rules (Section 31 of GST Act & Rules referred thereunder) wherein the 'Bill To' details shall encompass following. BHEL GSTN – Refer attached GSTN code table of BHEL. Name - BHARAT HEAVY ELECTRICALS LIMITED Address - Shall be intimated later. Specific details of BHEL GSTN, Name and Address as stated above, have been specified elsewhere in the tender. |
| 35.8 | Successful bidder to intimate immediately on the day of removal of goods (in case of any supply of goods) to BHEL along with all relevant details and send a scanned copy of Tax Invoice to BHEL through following communication mode for enabling BHEL to meet its GST related compliances. Portal address. and Email address – Shall be intimated later. Specific details of above shall be intimated to successful bidder by BHEL at appropriate juncture. |
| 35.9 | In case of delay in submission of above-mentioned documents on the date of despatch, BHEL may incur penalty / interest for not adhering to Invoicing Rules under GST Law. The same will be liable to be recovered from successful bidder, in case such delay is not attributable to BHEL. |
| 35.10 | In case of raising any Supplementary Tax Invoice (Debit / Credit Note), successful bidder shall issue the same containing all the details as referred to in Section 34 read with Section 31 of GST Act & Rules referred there under. |
| 35.11 | Successful bidder shall comply with the Time Limit prescribed under the GST Law and rules thereof for raising of the Tax Invoice. If any supply of goods is applicable, successful bidder shall also ensure prompt delivery of goods after despatch. |
| 35.12 | Bidder shall note that in case GST credit is delayed / denied to BHEL due to delayed / non receipt of goods and / or Tax Invoice or expiry of the timeline prescribed in GST Law for availing such ITC, or any other reasons, not attributable to BHEL, GST amount shall be recoverable from successful bidder along with interest levied/ leviable |

| | |
|---|---|
| | on BHEL, as the case may be. |
| 35.13 | Successful bidder shall upload the invoices raised on BHEL in GSTR-1 within the prescribed time as given in the GST Act. Bidder shall note that in case of delay in declaring such invoice in your return and GST credit availed by BHEL is denied or reversed subsequently as per GST Law, GST amount paid by BHEL towards such ITC reversal as per GST law shall be recoverable from the successful bidder along with interest levied / leviable on BHEL. |
| 35.14 | Way Bill: Successful bidder to arrange for way bill / e-waybill for any transfer of goods for the execution of the contract. Successful bidder has to make their own arrangement at their cost for completing the formalities, if required, with Issuing Authorities, for bringing materials, plants & machinery at site for execution of the works under this contract, Road Permit / Way Bill, if required, shall be arranged by successful bidder and BHEL will not supply any Road Permit/ Way Bill for this purpose. |
| 35.15 | Any new taxes & duties, if imposed subsequent to due date of offer submission as per NIT & TCN, by statutory authority during contract period (including extension, if the same is not attributable to you), shall be reimbursed by BHEL on production of relevant supporting document to the satisfaction of BHEL. However, you shall obtain prior approval from BHEL before depositing new taxes and duties. |
| 35.16 | Benefits and / or abolition of all existing taxes must be passed on to BHEL against new taxes, if any, proposed to be introduced at a later date. |
| **36.0** | **INTERIM PAYMENTS** |
| **36.1** | **SERVICE PART (SCH-3 OF PRICE SCHEDULE, VOL-III)** |
| 36.1.1 | For all items of works, as per the Price schedule, Vol-III, billing shall be on item rate basis. However, Interim Payment shall be limited to 95% of gross bill amount. |
| 36.1.2 | All admissible recovered/ adjustments etc. shall be made from the interim payable amount. |
| 36.1.3 | Balance 5 % retained from each RA bill will be released on completion of guarantee period. However, this 5 % payment can be released against submission of bank guarantee valid for the guarantee period as stated above in Proforma / Format of performance bank guarantee, subject to receipt of certificate that all works are completed in all respects. Submission of bank guarantee towards retention is separate and other bank guarantee(s) cannot be utilized for this purpose. This retention bank guarantee will be refunded after guarantee period. |
| 36.1.4 | 1.5 % of gross bill amount shall be paid in the following manner on certification by BHEL engineer after compliance of each of following activity in each month. In case of non-fulfilment of respective activity by vendor in each month, no payment shall be made by BHEL against corresponding activity and no claim of bidder at a later date, whatsoever, in this regard shall be entertained by BHEL. |
| 36.1.4.1 | 0.7 % shall be paid on compliance of housekeeping of vendor's working area and store/ office areas. |
| 36.1.4.2 | 0.3 % shall be paid on compliance of general illumination of vendor's working area and stores, office area. |
| 36.1.4.3 | 0.2 % shall be paid on compliance of applicable OHSAS requirement as per guidelines of BHEL/ PSER and as specified in the tender. |
| 36.1.4.4 | 0.3 % shall be paid on compliance of applicable safety requirement as per guidelines of BHEL/ PSER and as specified in the tender. |
| 36.1.5 | Contractor's RA bill, complete & correct in all respects, certified by BHEL engineer, shall be paid after 45 days of receipt of bill with all supporting documents. |
| 36.1.6 | BHEL site at its discretion, may further split up the above percentages of break up and effect payment to suit the site condition, cash flow requirement, according to the progress of work. |
| 36.1.7 | Such payment as above shall be affected only on certification by BHEL against completion of each stage. |
| 36.1.8 | Applicable GST, which can be claimed at any point, shall be released to you upon compliance of following: |
| 36.1.8.1 | You declaring such Invoice in his GSTR-1 |
| 36.1.8.2 | Receipt of Goods / services and Tax Invoice by BHEL |

| | |
|---|---|
| 36.1.8.3 | Confirmation of payment of GST thereon by you on GSTN Portal |
| **36.2** | **SUPPLY PART (SCH-4 OF PRICE SCHEDULE, VOL-III)** |
| 36.2.1 | Payment shall be made by BHEL site office after 45 days of receipt of invoice subject to its completeness in all respects as per BHEL's procedure. All admissible recovered / adjustments etc shall be made from the interim payable amount. BHEL may release payment through electronic mode, for which bidder shall comply with necessary requirement. |
| 36.2.2 | For all items of work as per rate schedule of main supply, payment shall be made as per following break-up of contract price. |
| 36.2.2.1 | 5 % of basic price of materials on submission and approval of all basic design documents such as data sheets/ drawings, quality plans etc as per tender. |
| 36.2.2.2 | 65 % of basic price of materials supplied along with 100 % GST (as applicable) against dispatch document on pro-rata dispatch of material to site as per approved billing schedule. Documents (required sets) required, as applicable, for such payment are as follows. |
| 36.2.2.2.1 | GST invoice in original. |
| 36.2.2.2.2 | LR / RR (consignee copy). |
| 36.2.2.2.3 | Packing list. |
| 36.2.2.2.4 | BHEL / customer MDCC enclosing QS note, inspection & test certificate, wherever applicable. |
| 36.2.2.2.5 | Copy of letter, addressed to insurance company intimating dispatch. |
| 36.2.2.3 | 10 % of basic price of materials received along with 100% freight & others, against Material Receipt Certificate (MRC) issued after receipt of materials and its physical verification at site on pro-rata basis. Collection of MRC from the site and its submission for claiming the payment shall be bidder's responsibility. |
| 36.2.2.4 | 10 % of the basic price shall be released against completion of erection of the equipments supplied. |
| 36.2.2.5 | 10 % of basic price shall be released against (i) Trial run of the system / package ii) Successful completion of PG (Performance guarantee) test / demonstration test of the system / package, as applicable, (iii) Submission of final documents, e.g. as-built drawings, O&M manual etc and (iv) Handing over of the system / package to the NTPC.<br>In case of delay in completion of PG Test / demonstration test for the reasons not attributable to the vendor, this amount can be paid on submission of BG of equivalent amount, valid initially for 6 months & to be revalidated till completion of trial run or PG test / demonstration test or handing over of the system / package, whichever is later.<br>However, vendor has to complete all other activities and fulfill all formalities for final billing / contract closing prior to drawing this payment. |
| 36.2.3 | Detail billing schedule shall be submitted by the successful vendor to BHEL for approval within 60-days of LOI or otherwise specified by BHEL after placement of LOI. |
| 36.2.4 | BHEL site, at discretion, may further split up the above percentages and effect payment to suit the site condition, cash flow requirement, according to the progress of work. |
| **37.0** | **PRICE VARIATION CLAUSE(PVC)** |
| | Not applicable for this tender. |
| **38.0** | **OVER RUN CHARGES(ORC)** |
| | Not applicable for this tender. |
| **39.0** | **METHOD OF MEASUREMENT** |
| | Mode of measurement shall be as per relevant clauses of technical specification of this tender. In case the same is not available the relevant IS 1200 in conjunction of IS code 3385 shall be adopted. In case the same is also not available, the standard procedure adopted in CPWD shall be adopted. In case the same is also not available in CPWD, the measurement of the work done will be based on the mutual agreement between BHEL and contractor. In all the above cases, the interpretation of BHEL will be final and binding to the contractor. |
| **40.0** | **EXTRA/ ADDITIONAL ITEMS OF WORK** |

| | |
|---|---|
| | It shall be as per relevant clause no. 2.15 of GCC.However DSR-2018 to be referred for cl. no. 2.15.7-b. |
| **41.0** | **DESIGN OFFICE AND FABRICATION DRAWING** |
| 41.1 | Based on design drawings of structures, to be issued to the contractor from time to time by BHEL, contractor will prepare & submit within 15 days of receipt, the detail fabrication / shop drawing including tabulated form of bill of materials (BOM), joint calculations, for comments / approval of BHEL at the office of BHEL / PEM, Noida. BHEL reserves the right to assess the capability of the agency to be deployed by contractor for preparation of such fabrication drawing, and prior approval from BHEL Engineering office at Noida, is required for appointment of such agency. |
| 41.2 | Since time is the essence of the contract, the contractor must indicate the location of their design office where from such detailed activities will be made operative. It is preferred that the contractor have establishment / liason office at Delhi / Noida with a co-ordinator for better co-ordination with BHEL-PEM. |
| 41.3 | Contractor shall submit progress report pertaining to fabrication drawing, by 7$^{th}$ of each month, drawing-wise, section-wise cumulative bill of materials for which engineering drawing has been issued to them and status of fabrication drawing. |
| 41.4 | Based on specification vendor has to design the electrical drawing & aviation lights for chimney within the time schedule mentioned in relevant clause. Based on approval from BHEL / NTPC, vendor has to procure & supply the materials at site. |
| 41.5 | As per specification, vendor has to submit the design, MQP & drawing for elevator. On approval of the same, vendor has to take further action for supplying the Elevator to site. |
| **42.0** | **FABRICATION** |
| 42.1 | All the fabrication of structural steel items (**except work done at qualified shop(s) out side the project premises as per BOQ cum Price schedule**) shall be done in fabrication yard inside project premises. Quality plan for structural works will be issued during execution stage upon approval of customer<br>Bidders to note that all fasteners like MS / HT / HSFG bolts, nuts, lock nuts, washers etc shall be supplied by bidder as per technical specification / drawings. |
| 42.2 | Bidder, at his own cost, shall supply electrodes required for fabrication, erection of structural steel as per specification and approval of BHEL. |
| | Above mentioned clauses pertaining to consumption and wastage of structural steel applies to those materials issued by BHEL for site fabrication. |
| **43.0** | **INSURANCE** |
| 43.1 | BHEL shall arrange comprehensive MCE (marine cum erection) Insurance Policy for total project supply & services including balance of plant package covering transit risks & loss, destruction or damage during handling at Site, Storage, civil works ,erection, testing and commissioning up to trial operation completion of unit including theft, sabotage, fire, lightning and other natural calamities. |
| 43.2 | Contractor shall report to BHEL in writing any damages to equipment/components on receipt, storing, and during withdrawal of the materials from stores, in transit to site and unloading at place of work and during erection and commissioning till trial operation completion including handing over. The above report shall be as prescribed by BHEL site management. Any consequential loss arising out of non-compliance of this stipulation will be borne by contractor. |
| 43.3 | The contractor will take necessary precautions/ due care to protect the material at Project site, while in his custody from any damage/ loss till the same is handed over to BHEL / customer at Project site. For lodging/ processing of insurance claim the contractor will submit necessary documents. BHEL will reserve the right to recover the loss from the contractor as detailed below in case the damage/loss is due to negligence/ carelessness on the part of the contractor. In case of theft of material under contractor's custody, the same shall be reported to police by the contractor immediately and copy of FIR and subsequently police investigation report shall be submitted to BHEL / customer for taking up with insurance. However, this will not relieve the contractor of his contractual obligation for the materials in his custody. |
| 43.4 | In case the damage/loss/theft of materials are attributable to negligence/failure in discharging the duties and obligations of the contractor, the expenses incurred for |

| | |
|---|---|
| | repair/replacement of such components in excess of the amount realized from the underwriters, limited to Normal Excess (Deductible Franchise) shall be recovered from the contractor. |
| 43.5 | Other conditions of Insurance shall be as per relevant clause of GCC/SCC. |
| **44.0** | **GUARANTEE** |
| 44.1 | The works shall be completed to the entire satisfaction of the Engineer and in accordance with the completion schedule as specified in the Contract, and all unused stores and materials, tools, plant, equipment, temporary buildings, site office, labor hutments and other things shall be removed and the site and work cleared of rubbish and all waste materials and delivered up clean and tidy to the satisfaction of then Engineer at the Contractor's expenses. |
| 44.2 | The Engineer shall certify to the contractor the date on which the work is completed and the date thereof for commencement of Guarantee Period. |
| 44.3 | Guarantee period shall be 12 months from the date of start of guarantee period as per relevant clause of GCC. |
| **45.0** | **OTHER TERMS** |
| 45.1 | While bidder's scope include deployment of all resources, like T&P, materials, consumables, manpower including supervision etc for proper completion of the subject job and no sub-contracting for execution of the job is allowed by BHEL, depending on project's requirement and on prior acceptance of BHEL, bidder may associate agencies for deployment of skilled / unskileld manpower only for site execution. Bidder should arrange all resources, like T&P, materials, consumables, supervision etc directly for the subject job. |
| 45.2 | Drawing showing enough details for the construction as per the specification shall be furnished to the contractor in a phased manner as far as possible. |
| 45.3 | The records / log-books / registers like Site Order Book, Hindrance Register, RMC / Steel Supply and Consumption Register, etc. are to be maintained properly by the vendor duly signed by BHEL representative. |
| 45.4 | All other term & conditions of this specification shall be governed by the pertinent provisions of SCC & GCC as applicable. |

## ANNEXURE- A
## LIST OF EQUIPMENTS FOR CIVIL SITE LABORATORY

| | CONCRETE TESTING EQUIPMENT | | | |
|---|---|---|---|---|
| **SL NO.** | **NAME OF TEST** | **NAME OF EQUIPMENT** | **SIZE OF EQIPMENT** | **IS REF.** |
| 1 | Concrete Compressive test | Digital Compressive Testing Machine with 2000 KN capacity. | 2000KN capacity | IS 2505 |
| 2 | Concrete Cube casting | Concrete Cube Mould | 150x150x150mm, minimum 50 sets desired considering Raft/Shell concereting activity. | IS 10086 |
| 3 | Workability of concrete | Slump cone | Standard, atleast 04 nos | IS 456 |

| | **Soil Testing Equipment (Levelling & Grading)** | | | |
|---|---|---|---|---|
| 1 | Liquid limit test | Liquid limit apparatus | Standard | IS 2720 |
| 2 | Core Cutter test | core cutter apparatus | Rammer, 4 nos of standard core cutter mould, dolly | IS 2720 |
| 3 | Proctor density test | Std proctor Compaction apparatus | Standard | IS 2720 |
| 4 | Moisture Content | Rapid moisture meter | Standard, atleast 04 nos | IS 2720 |

| | **Process Control Accessories** | | | |
|---|---|---|---|---|
| 1 | Hot air oven | Temperature range 50° C to 300° C | 600x600x600mm (min. size) | |
| 2 | Electronic balance | 1 no. | 1Kg x 0.001g | |
| 3 | Physical balance | 5 kg capacity | Weights upto 5 kg | |
| 4 | Thermometer | Temperature range 0° C to 150° C | Digital | |
| 5 | GI tray | 03 nos | 600x450x50mm, 450x300x40mm, 300x250x40mm | |
| 6 | Measuring jars | 2 nos set of each size | 100ml, 200ml, 500ml & 1000 ml | |
| 7 | Gauging trowlers | 2 nos | 100mm & 200 mm with wooden handle | |
| 8 | Spatula | 2 nos each size | 100mm & 200 mm with long blade wooden handle | |
| 9 | Stainless steel scoop | 2 nos each | 1 kg and 2 kg | |
| 10 | | | | |
| 11 | Digital pH meter | 01 nos | .01 mm least count | |
| 12 | Digital paint thickness meter for steel | 02 nos | 500-micron Range | |
| 13 | Digital paint thickness meter for masanory/concrete painting measurement | 02 nos | 150-micron range | |

## ANNEXURE- A1

## LIST OF EQUIPMENTS FOR CIVIL SITE LABORATORY

| SL NO. | NAME OF TEST | NAME OF EQUIPMENT | SIZE OF EQIPMENT | IS REF. |
|---|---|---|---|---|
| 1 | Initial & final setting time, Consistency of cement | Vicat Apparatus with desk pot | Standard | IS 5513 |
| 2 | Abrasion value test | Los Angles Abrasion testing machine | Standard | IS 2386 |
| 3 | Aggregate Impact value test | Aggregate Impact value testing machine. | Standard | IS 9377 |
| 4 | Aggregate crushing value test | Crushing value apparatus | Standard | IS 2386 |

## PREAMBLE

Standard technical details as indicated in specification shall be agreed upon between BHEL & Bidder.

Technical requirements are stipulated in this Volume which comprises of

Section C : This section indicates the technical requirements specific to the contract not covered in Section D

Section D : This section comprises of technical specification(s)

The requirements mentioned in the Section C shall prevail and govern in case of conflict between the same and the corresponding requirements mentioned in the Section D in the specification. In case on any conflict between technical specification and BOQ, BOQ shall prevail.

# INDEX

**SECTION** **DESCRIPTION**

**Section-C** **SPECIFIC TECHNICAL REQUIREMENTS**

i) CIVIL
ii) ELECTRICAL
iii) Chimney Elevator

**Section-D** **SPECIFICATION FOR CIVIL, STRUCTURAL AND ARCHITECTURAL WORKS**

Sub-section D1: Earthwork in excavation and backfilling

Sub-section D2: Cement concrete (Plain and reinforced) and formwork

Sub-section D3: Carpentry and joinery

Sub-section D4: Roof and underground structures water proofing, insulation and allied works

Sub-section D5: Metal doors, windows, ventilators, louvers etc.

Sub-section D6: Glass and glazing.

Sub-section D7: Rolling Steel Shutter and Grills

Sub-section D8: Miscellaneous Metal

Sub-section D9: Masonry and allied works

Sub-section D10: Finish to masonry and concrete

Sub-section D11: Painting, Whitewashing, polishing

Sub-section D12: Floor finish and allied works

Sub-section D13: Sheet work in roof and siding

Sub-section D14: Suspended ceiling

Sub-section D15: Water supply, drainage & sanitation

Sub-section D16: Road and drainage

Sub-section D17: Fabrication of structural steelwork

Sub-section D18: Erection of structural steelwork

Sub-section D19: Roof decking

# PROJECT INFORMATION- NABINAGAR 4X250 MW

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|

**1.00.00 BACKGROUND**

**Details of proposed Stage / Units**

| | | |
|---|---|---|
| Project name | : | Nabinagar TPP |
| No. of Units x capacity | : | 4 x 250 MW |
| Project setting up by | : | NTPC(FOR BHARTIYA RAIL BIJLEE COMPANY LTD.) |

The SG with ESP package and TG package of the subject project is being executed by M/s. BHEL.

**1.01.00 LOCATION AND APPROACH**

| | | |
|---|---|---|
| Project Location | : | (i) Place : Nabinagar |
| | : | (ii) District : Aurangabad |
| | : | (iii) State : Bihar |
| Latitude and Longitude of project location | : | North : 24 deg. 42' 30" (N)<br>East : 84 deg. 05' 36" (E) |
| Nearest Railway station | : | Dehri-On-Sone |
| Distance of project location from the Railway station | : | 30 KM (Approx.) |
| Nearest MajorTown | : | Aurangabad |
| Distance of the town from the Project site | : | 50 KM |
| Nearest CommercialAirport | : | Gaya |
| Distance of airport from the project site | : | 100 KM |
| Nearest Highway | : | National Highway-2 |
| Distance from nearest highway point to the site | : | 25 KM |
| Vicinity plan | : | Vicinity plan of the project enclosed at Annexure-I. |
| Any other information | : | Further to the information given in this sub-section, Bidders are advised to visit the project site and collect data on local site conditions. |

| CLAUSE NO. | PROJECT INFORMATION | |
|---|---|---|
| **1.02.00** | **LAND REQUIREMENT** | |
| | Total area of land acquired for the project | : 1700 Acres |
| | Any other information | : Approximately 1700 acres of land has been identified near Dhundhua village for the Plant, Township and Ash Disposal Area. In principle commitment for the availability of land for Plant, Township and Ash Disposal Area has been obtained from Revenue Department, Govt. of Bihar vide letter dated 29.3.2003. Further, Central Coalfields Ltd., (CCL) vide their letter dated 29.05.03 have indicated that Central Mine Planning & Design Institute Ltd (CMPDI) have confirmed that plant location along with its other allied infrastructure are not coming on coal bearing area. |
| **1.03.00** | **WATER** | |
| | Nearest Water Source | : The project site is located near the river Sone which is the only source of water for the project. Therefore, the make up water requirement for the project is proposed to be drawn from the pondage created by Indrapuri Barrage, which is about 3 kms from the proposed site. |
| | Proposed water requirement for the Stage | : 60 Cusec |
| | Proposed source / arrangement to the meet the water requirement | : The project site is located near the river Sone which is the only source of water for the project. Therefore, the make up water requirement for the project is proposed to be drawn from the pondage created by Indrapuri Barrage, which is about 3 kms. from the proposed site.<br><br>The make up water requirement for the project operating on cooling towers is about 4300 cubic m/hr with ash water recirculation system and about 5900 cubic m/hr. with once through ash water system.<br><br>Water Resource Department, Govt. of Bihar, accorded in-principle clearance of 60 cusecs of consumptive water from upstream of Indrapuri Barrage vide their letter dated 06.03.03. |

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|
| **1.04.00** | **COAL and WATER, Utility details:**<br>(i) Coal Quality Parameters and Fuel Oil Characteristics<br>Source:Pachra and Pachra south blocks in North Karanpura coalfields<br>Requirement: 5 MTPA<br>The Coal quality parameters and Fuel Oil Characteristics are enclosed at Table-1, & Table-2A & 2B of this Sub-Section.<br>**Water data**<br>(ii) Process water:<br>Process water quality based on COC in Table-3.<br>(iii) Clarified water:<br>Clarified water quality is indicated in Table-3.<br>(iv) DM water for Equipment cooling water system.<br>DM water quality is indicated in Table-4. |
| 1.05.00 | **Steam Generator and ESP data:** refer Table-5 |
| 1.06.00 | Drawings are enclosed as per Table-6 for initial overview to the Bidder. |
| 2.00.00 | NOT USED |
| **3.00.00** | **RAILWAY SIDING**<br>For bringing the equipment and material to the power house through rail, railway siding is proposed to be constructed from nearest railway station. |
| **4.00.00** | **METEOROLOGICAL DATA**<br>Meteorological data of the nearest observatory Dehri station is enclosed as Annexure-II to this subsection. |
| **5.00.00** | **CRITERIA FOR EARTHQUAKE RESISTANT DESIGN OF STRUCTURES AND EQUIPMENT**<br>All structures and equipment shall be designed for seismic forces adopting the site specific seismic information provided in this document and using the other provisions in accordance with IS:1893 (Part 1 to Part 4). Pending finalization of Part 5 of IS:1893, provisions of part 1 shall be read along with the relevant clauses of IS:1893:1984, for embankments.<br>A site specific seismic study has been conducted for the project site. The peak ground horizontal acceleration for the project site, the site specific acceleration spectral coefficients (in units of gravity acceleration 'g') in the horizontal direction for |

the various damping values and the multiplying factor (to be used over the spectral coefficients) for evaluating the design acceleration spectra are as given at Appendix-I.

Vertical acceleration spectral values shall be taken as 2/3rd of the corresponding horizontal values.

The site specific design acceleration spectra shall be used in place of the response acceleration spectra, given at figure-2 in IS:1893 (Part 1) and Annex B of IS:1893 (Part 4). The site specific acceleration spectra along with multiplying factors specified in Appendix-I includes the effect of the seismic environment of the site, the importance factor related to the structures and the response reduction factor. Hence, the design spectra do not require any further consideration of the zone factor (Z), the importance factor (I) and response reduction factor (R) as used in the IS:1893 (Part 1 to Part 4).

**Damping in Structures**

The damping factor (as a percentage of critical damping) to be adopted shall not be more than as indicated below for:

| | |
|---|---|
| Steel structures | 2% |
| Reinforced Concrete structures | 5% |
| Reinforced Concrete Stacks | 3% |
| Steel stacks | 2% |

**Method of Analysis**

Since most structures in a power plant are irregular in shape and have irregular distribution of mass and stiffness, dynamic analysis for obtaining the design seismic forces shall be carried out using the response spectrum method. The number of vibration modes used in the analysis should be such that the sum total of modal masses of all modes considered is at least 90 percent of the total seismic mass and shall also meet requirements of IS:1893 (Part 1). Modal combination of the peak response quantities shall be performed as per Complete Quadratic Combination (CQC) method or by an acceptable alternative as per IS:1893 (Part 1).

In general, seismic analysis shall be performed for the three orthogonal (two principal horizontal and one vertical) components of earthquake motion. The seismic response from the three components shall be combined as specified in IS:1893 (Part 1).

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|

The spectral acceleration coefficient shall get restricted to the peak spectral value if the fundamental natural period of the structure falls to the left of the peak in the spectral acceleration curve.

For buildings, if the design base shear ($V_B$) obtained from modal combination is less than the base shear ( $\bar{V}_B$) computed using the approximate fundamental period ($T_a$) given in IS:1893:Part 1 and using site specific acceleration spectra with appropriate multiplying factor, the response quantities (e.g. member forces, displacements, storey forces, storey shears and base reactions) shall be enhanced in the ratio of $\bar{V}_B / V_B$. However, no reduction is permitted if $\bar{V}_B$ is less than $V_B$.

For regular buildings less than 12m in height, design seismic base shear and its distribution to different floor levels along the height of the building may be carried out as specified under clause 7.5, 7.6 & 7.7 of IS:1893 (Part 1) and using site specific design acceleration spectra. The design horizontal acceleration spectrum value (Ah) shall be computed for the fundamental natural period as per clause 7.6 of IS:1893 (Part 1) using site specific spectral acceleration coefficients with appropriate multiplying factor given in Appendix-I.

**Design/Detailing for Ductility for Structures**

The site specific design acceleration spectra is a reduced spectra and has an in-built allowance for ductility. Structures shall be engineered and detailed in accordance with relevant Indian/International standards to achieve ductility.

| CLAUSE NO. | PROJECT INFORMATION | एनटीपीसी NTPC |
|---|---|---|

**APPENDIX – I**

## SITE SPECIFIC SEISMIC PARAMETERS FOR DESIGN OF STRUCTURES AND EQUIPMENT

The various site specific seismic parameters for the project site shall be as follows:

1) Peak ground horizontal acceleration : 0.16g

2) Multiplying factor to be applied to the site specific horizontal acceleration spectral coefficients (in units of gravity acceleration 'g') to obtain the design acceleration spectra

   a) for ordinary moment resisting steel frames designed and detailed as per IS:800 : 0.04

   b) for braced steel frames designed and detailed as per IS:800 : 0.03

   c) For special moment resisting RC frames designed and detailed as per IS:456 and IS:13920 : 0.024

   d) for RCC chimney : 0.08
   e) for Liquid retaining tanks : 0.048
   f) for Steel chimney, Absorber tower : 0.06

   g) for design of structures not covered under 2 (a) to 2 (f) above and under 3 below : 0.04

3) Multiplying factor to be applied to the site specific horizontal acceleration spectral coefficients (in units of gravity acceleration 'g') for design of equipment and structures where inelastic action is not relevant or not permitted : 0.08

Note: g = Acceleration due to gravity

The horizontal seismic acceleration spectral coefficients are furnished in subsequent pages.

**APPENDIX – I**

**HORIZONTAL SEISMIC ACCELERATION SPECTRAL COEFFICIENTS**
**In units of 'g' for New Nabinagar project**

| Time Period | Damping Factor (as a percentage of critical damping) | | |

**6.00.00** **CRITERIA FOR WIND RESISTANT DESIGN OF STRUCTURES AND EQUIPMENT**

All structures shall be designed for wind forces in accordance with IS:875 (Part-3) and as specified in this document. See Annexure – B for site specific information.

Along wind forces shall generally be computed by the Peak (i.e. 3 second gust) Wind Speed method as defined in the standard.

Along wind forces on slender and wind sensitive structures and structural elements shall also be computed, for dynamic effects, using the Gust Factor or Gust Effectiveness Factor Method as defined in the standard. The structures shall be designed for the higher of the forces obtained from Gust Factor method and the Peak Wind Speed method.

Analysis for dynamic effects of wind must be undertaken for any structure which has a height to minimum lateral dimension ratio greater than “5” and/or if the fundamental frequency of the structure is less than 1 Hz.

Susceptibility of structures to across-wind forces, galloping, flutter, ovalling etc. should be examined and designed/detailed accordingly following the recommendations of IS:875(Part-3) and other relevant Indian standards.

It should be estimated if size and relative position of other structures are likely to enhance the wind loading on the structure under consideration. Enhancement factor, if necessary, shall suitably be estimated and applied to the wind loading to account for the interference effects.

**Damping in Structures**

The damping factor (as a percentage of critical damping) to be adopted shall not be more than as indicated below for:

a) Welded steel structures : 1.0%

b) Bolted steel structures : 2.0%

c) Reinforced concrete structures : 1.6%

d) Steel stacks : As per IS:6533 & CICIND Model Code whichever is more critical.

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|

**ANNEXURE-B**

## SITE SPECIFIC DESIGN PARAMETERS

The various design parameters, as defined in IS: 875 (Part-3), to be adopted for the project site shall be as follows:

a) The basic wind speed "$V_b$" at ten metres above the mean ground level : 47 metres/second

b) The risk coefficient "$K_1$" : 1.07

c) Category of terrain : Category-2

**7.00.0 FOUNDATION SYSTEM AND GEOTECHNICAL DATA**

7.00.01 Geotechnical data and foundation system for the respective project are enclosed at annexure-III. The corresponding bore logs are enclosed at annexure-IV.

7.00.02 The available soil data is of vicinity of proposed structures, therefore, bidder shall carryout his own detailed soil investigation for facilities under this package and shall be as per the scheme approved by owner**.**The scheme for geotechnical investigation shall be as given at Clause 7.07.00 and shall be approved by owner before execution.Geotechnical investigation work shall got executed by the Contractor through the agencies as mentioned in Clause No. 7.07.03. However, no time extension shall be given on account of soil investigation carried out by the Bidder. The geotechnical investigation report shall be prepared with detailed recommendations regarding type of foundation and allowable bearing pressure for various structures/ facilities and other soil parameters. The report shall be submitted for Owner's approval prior to commencement of design of foundation.

7.00.03 The Bidder should note that nothing extra whatsoever on account of variation between soil data collected by Owner and that found by the Bidder during geotechnical investigation by him or during execution of works, shall be payable.

7.00.04 Tank Foundations

a) The tanks shall rest on flexible tank pad foundation, resting on sand with concrete ring wall to retain sand. Base of the concrete ring wall shall not rest on the expansive soil, if any.

b) Entire loose/ soft soil inside the concrete ring wall shall be removed and shall be filled with sand. Sand for filling shall be clean and well graded conforming to IS 383 with grading Zone I to III.

c) Sand shall be spread in layers not exceeding 30cm compacted thickness over the area. Each layer shall be uniformly compacted by mechanical means like plate vibrators, small vibratory rollers,etc to achieve a relative density of not less than 80%.

d) Other requirements of tank foundations shall be as per IS 803 and as specified elsewhere in the specifications.

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|

7.02.00 **Foundation System**

The requirements for the foundation system to be adopted are as given in subsequent clauses. Depending upon the depth of competent strata/stratum, type of structures, functional requirement of facility, extent of cutting / filling, suitable foundation, open or pile shall be adopted with approval of owner.

**7.02.01 General Requirements**

a) All structures/equipment shall be supported either on suitable open foundations (isolated, combined, raft) or pile foundations depending on type of structures/facilities, sub-strata, topography etc.

b) The roads, ground floor slabs, trenches, pipe pedestals, channels/drains and staircase foundation with foundation loading intensity less than 4 T / M2 may be supported on open / shallow foundations resting on virgin / controlled compacted filled up soil.

c) No other foundation (other than as mentioned in (b) above) shall rest on the filled up ground / soil.

d) No foundation shall rest on the black cotton soil.

e) Before execution of work the bidder shall ensure that there is no obstruction to underground/overground facilities like sewer lines, pipe lines etc. Any such damage and remedial/ rectification measures shall be at the contractors cost.

f) Bidder shall also ensure that there is no damage to existing nearby foundations and the foundations pertaining to this package are not placed at shallower depth than the nearby foundations. If required depth of foundation is deeper than the existing foundations, proper protection shall be provided to existing foundations.

g) All foundations shall be designed in accordance with relevant parts of the latest revisions of Indian Standards.

h) The water table for design purpose shall be considered at Finished Ground Level.

i) A combination of open and pile foundations shall not be permitted under the same equipment / structure / building.

j) Foundation for equipments on ground floor

For equipments of static weight upto 1.5 T, the equipment may be supported on the ground floor slab by locally thickening the slab. Thickening of the ground floor slab shall be done upto an extent of about 0.6 m beyond the plan area of the equipment on all the sides. Further, the load intensity below the equipment shall be limited to 4T/m2. Other requirements of floor slab and compaction below the floor slab shall be adhered, as specified elsewhere in the specifications.

For equipment of static weight more than 1.5 T, the equipment foundation shall be taken to the founding level or shall be built up with PCC from the level as mentioned in the Table 1. The pedestal of equipment foundation or the foundation Block shall be isolated from the adjoining floor slab by providing bitumen impregnated fiber board of minimum 50 mm thick, conforming to IS: 1838 all around the equipment pedestal for the full depth of the floor slab.

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|

**7.02.02** **Open Foundations**

In case open foundations are adopted, following shall be adhered to.

a) The minimum width of foundation shall be 1.0 m.

b) Minimum depth of foundation shall be 1.0m below Ground Level.

c) It shall be ensured that all foundations of a particular structure/ buildings/ facility shall rest on one bearing stratum.

d) Wherever the intended bearing sub-strata is virgin soil stratum but the actual stratum encountered during foundation excavation consists of filled up soil at founding level, under such cases either the foundation shall be lowered completely into the virgin stratum or the filled up soil upto the virgin layers shall be removed and built up through PCC (1:4:8) up to designed foundation level.

7.02.03 Pile Foundations –

(a.) In case piles are adopted, following shall be adhered to :

i) The pile foundation shall be of RCC, Cast-in-situ bored piles as per IS:2911. Pile boring shall be done using Rotary Hydraulic Rigs/conventional tripod rig. Two stage flushing of pile bore shall be ensured by airlift technique duly approved by the Employer.

If required, temporary or permanent MS liner may be provided for piling.

ii) The minimum diameter of pile shall be 600 mm. The allowable load capacity of the pile in different modes (vertical compression, lateral and pullout) shall be as per approved geotechnical report & as enclosed in relevant annexure:

iii) Only straight shaft piles shall be used. Minimum cast length of pile above cutoff level shall be 1.0 m.

iv) The contractor shall furnish design of piles (in terms of rated capacity, length, diameter, termination criteria to locate the founding level for construction of pile in terms of measurable parameter, reinforcement for job as well as test piles, pile load test arrangement, locations of initial test piles etc.) for Engineer's approval.

v) The piling work shall be carried out in accordance with IS:2911 (Relevant part) and accepted construction methodology. The construction methodology shall be submitted by the Contractor for Engineer's approval.

vi) Number of initial load tests to be performed for each diameter and rated capacity of pile shall be subject to minimum as under.

Vertical

Lateral Minimum of 2 Nos. in each mode.

Uplift

vii) The initial pile load test shall be conducted with test load upto three times the estimated pile capacity. In case of vertical compression test (initial test) the method of loading shall be cyclic as per IS:2911 (relevant part).

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|

viii) Load test shall be conducted at pile Cut-off Level (COL). If the water table is above the COL the test pit shall be kept dry throughout the test period by suitable de-watering methods. Alternatively the vertical load test may be conducted at a level higher than COL. In such a case, an annular space shall be created to remove the effect of skin friction above COL by providing an outer casing of suitable diameter larger than the pile diameter.

ix) Number of routine pile load tests to be performed for each diameter/allowable capacity of pile shall be as under :

i) Vertical : 0.5% of the total number of piles provided.

ii) Lateral : 0.5% of the total number of piles provided.

x) The routine tests on piles shall be conducted upto test load of one and half times the allowable pile capacity. Piles for routine load tests shall be approved by the Employer.

xi) In case, routine pile load test shows that the pile has not achieved the desired capacity or pile(s) have been rejected due to any other reason, then the Contractor shall install additional pile(s) as required and the pile cap design shall accordingly be reviewed and modified, if required.

xii) Testing of piles and interpretation of pile load test results shall be carried out as per IS:2911 (Part-4). Contractor shall ensure that all the measuring equipment and instruments are properly calibrated at a reputed laboratory / institute prior to their use. Settlement / movement of the pile top shall be made by Linear Variable Differential Transducers (LVDT) having a least count of 0.01mm.

xiii) The test load on initial test piles shall be applied by means of reaction from anchor piles / rock anchors alone or combination of anchor piles / rock anchors and kentledge with concrete blocks.

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|

xiv) Low Strain Pile Integrity test shall be conducted on all test piles and job piles. This test shall be used to identify the routine load test and not intended to replace the use of static load test. This test is limited to assess the imperfection of the pile shaft and shall be undertaken by an independent specialist agency to be approved by Engineering department of Owner. The test equipment shall be of TNO or PDI make or equivalent. The process shall confirm to ASTM.

xv) High Strain Dynamic Load Test may be carried out for routine load testing of working piles. However, at least two numbers of static routine vertical load tests shall be carried out on pile on which high strain dynamic load test has already been carried out for establishing the correlation between the two tests. In case of discrepancy if any between dynamic and static vertical load tests, then additional static routine vertical load tests shall be conducted as decided by the Engineer and the results of static routine vertical load shall prevail. Number of routine vertical pile load tests as per clause 7.02.03 (ix) shall be total of static routine vertical load test and high strain dynamic load tests.

The procedure to carryout the test shall be submitted to the Engineer.The test and equipment shall conform to ASTM D4945-00. The test shall be conducted by an experienced independent test agency approved by the owner.Field data shall be submitted to the site engineer and shall include force velocity curves, pile capacity, simulated static load test curve, net and total pile displacement, pile integrity. A (Case pile wave analysis) CAPWAP or equivalent software analysis shall be conducted on the field data for correct capacity estimation and to evaluate end bearing and skin friction components of the pile.

xvi) From load considerations, single pile may be used under a column/tower. In that case, pile shall be connected with tie beams at pile cut off level in both directions.

xvii) Contribution of frictional resistance of filled up soil if any, shall not be considered for computation of frictional resistance of piles.

xviii) Reinforcement for job piles shall be designed as following:

(a) Compression + bending piles: For these piles, the allowable safe pile capacities in compression and bending shall be considered.

(b) Tension + bending piles: For these piles, the actual pile forces to be considered. However, maximum 3 types of combinations for varying percentage of tension capacity + bending case may be designed & adopted by contractor for the entire scope of work under this package.

**7.03.00 Special Requirements**

7.03.01 Details of treatment for foundations / underground structures required to counteract soil / water chemical environment shall be as per detailed geotechnical investigation to be carried

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|
| | out by contractor.Contractor shall carry out chemical analysis during detailed geotechnical investigation and required treatment shall be provided accordingly. |
| **7.04.00** | **Excavation, Filling and Dewatering** |
| 7.04.01 | For excavation works, comprehensive dewatering with well point or deep wells arrangement, if required, shall be adopted. Scheme for dewatering and design with all computations and back up data for dewatering shall be submitted for the owner's information. The water table shall be maintained at 0.5m below the founding depth. |
| 7.04.02 | Excavation for shallow foundations shall be covered with PCC immediately after reaching the founding level. In case of any local loosening of soil or any loose pockets are encountered at founding level during excavation the same shall be removed and compensated by PCC M7.5. The final layer of about 300 mm thickness above the founding level shall be excavated by suitable means, so as to avoid disturbance to founding stratum. |
| 7.04.03 | Backfilling around foundations, pipes, trenches, sumps, pits, plinths, etc. shall be carried out with approved material in layers not exceeding 300 mm compacted thickness (higher thickness of layers upto 500mm with heavy mechanical compacting equipment) and each layer shall be compacted to 90% of standard proctor density for cohesive soils and to 80% of relative density for non-cohesive soils<br><br>Rock pieces having size less than 150 mm and interstices filled with soil may be used for backfilling around foundation, plinths etc. and shall be compacted to minimum of 85% of original stack of material after filling the interstices. |
| 7.04.04 | Founding level for trenches/channels shall be decided as per functional requirement. The bottom of excavation shall be properly compacted prior to casting of bottom slab of trenches / channels. |
| 7.04.05 | CBR tests for pavement/road design shall be carried out by the Contractor after earth filling (if applicable) has been completed upto the formation level. |
| 7.04.06 | The contractor shall take all necessary measures during excavation to prevent the hazards of falling or sliding of material or article from any bank or side of such excavation which is more than one and a half meter above the footing by providing adequate piling, shoring, bracing etc. against such bank or sides.<br>Adequate and suitable warning signs shall be put up at conspicuous places at the excavation work to prevent any persons or vehicles falling into the excavation trench. No worker should be allowed to work where he may be stuck or endangered by excavation machinery or collapse of excavations or trenches. |
| **7.05.00** | **EXCAVATION IN ROCK**<br><br>Excavation in rock shall be carried out by mechanical means and if blasting is required for founding of some of the structures under this package, control blasting only shall be carried out. |
| 7.05.01 | Controlled blasting shall be done by a specialised agency duly approved by Engineer. All controlled blasting shall be done by using time delay detonators (i.e. excel type). |
| 7.05.02 | a) Contractor shall engage an agency expert in blasting such as, NIRM (National Institute of Rock Mechanics), CMPDIL, Central Institute of Mining and Fuel Research Dhanbad, Dept. of Mining of Govt. Institutions etc. to design detailed blasting scheme and get the same approved from Engineer before carrying out the blasting |

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|

operation. All blasting shall be done as per the approved blasting scheme & initial blasting operations shall be done under the supervision & guidance of the representative of the blasting expert.

b) All the statutory laws, (Explosives Act etc.) rules, regulations, Indian Standards, etc. pertaining to the acquisition, transport, storage, handling and use of explosives, etc. shall be strictly followed.

c) The Contractor shall obtain Licenses from Competent Authorities for undertaking blasting work as well as for procuring, transporting to site and storing the explosives as per explosives act. The Contractor shall be responsible for the safe transport, use, custody and proper accounting of the explosive Materials.

d) The Contractor shall be responsible and liable for any accident and injury / damage which may occur to any person or property of the project or public on account of any operations connected with the storage, transportation, handling or use of explosive and blasting operations.

**7.06.00 Sheeting & Shoring**

The contractor shall ascertain for himself the nature of materials to be excavated and difficulties, if any, likely to be encountered in excavation while executing the work. Sheet piling, sheeting and shoring, bracing and maintaining suitable slopes, drainage, etc. shall be provided and installed by the Contractor, to the satisfaction of the Engineer.

**7.07.00 Geotechnical Investigation**

The Contractor shall carry out detailed geotechnical investigation in the areas under his scope for establishing the sub-surface conditions and to decide type of foundations for the structures envisaged, construction methods, any special requirements/treatment called for remedial measures for sub-soil/ foundations etc. in view of soft sub-soils, aggressive sub-soils and water, expansive/swelling soils etc. prior to commencement of detailed design/drawings. The Contractor shall obtain the approval for the field testing scheme proposed by him from the Owner before undertaking the geotechnical investigation work.

7.07.01.00 **Scheme of geotechnical Investigation**

7.07.02.01 Field test shall include but not be limited to the following:

Boreholes, Standard Penetration Test (SPT), Dynamic Cone Penetration Test (DCPT), collection of disturbed samples (DS) and undisturbed soil samples (UDS), Trial Pits (TP), Plate Load Tests (PLT), Electrical Resistivity Test (ERT), In situ field permeability tests, collection of water samples, etc.

7.07.02.02 The diameter of borehole shall be minimum 150 mm in soil and 76 mm in rock. The diameter of UDS sampler shall be 100 mm minimum. Core drilling in rock shall be done by using hydraulically feed rotary drill & double tube core barrel with diamond bit.

7.07.02.03 The minimum tests are indicated in Clause No. 7.08.00. Adequate number of tests shall be conducted up to sufficient depth for complete determination of subsoil conditions. The depth of boreholes shall be as specified in Appendix A. SPT shall be carried out in all types of soil deposits and in all rock formations with core recovery up to 20%, met within a borehole. This test shall be conducted at every 3.0 m interval or at change of strata, up to the final depth. SPT 'N' of 100 and above shall be referred as refusal. UDS shall be collected at every 3.0 m interval or at change of strata up to depth of borehole. UDS may be replaced by additional SPT, if SPT'N' value in the strata is above 50.

7.07.02.04 Laboratory tests shall be done as per relevant IS codes. The laboratory tests, not be limited to the following shall be conducted on disturbed and undisturbed soil samples, rock samples & water samples collected during field investigations in sufficient numbers.

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|

**Laboratory Tests on Soil Samples**

Laboratory tests shall be carried out on disturbed and undisturbed soil samples for Grain Size Analysis, Hydrometer Analysis, Atterberg Limits, Triaxial Shear Tests (UU), Natural Moisture Content, Specific Gravity and Bulk Unit Weight, Consolidation Tests, Unconfined Compression Test, Free swell Index, Shrinkage Limit, Swell Pressure Test, Chemical Analysis test on soil and water samples to determine the carbonates, sulphates, chlorides, nitrates, pH, organic matter and any other chemicals harmful to concrete and reinforcement/ steel.

**Laboratory Tests on Rock Samples**

Moisture content, porosity & density, Specific Gravity, Hardness, Soundness, Slake durability index, Unconfined compression test (Both at saturated and in-situ water content), Point load strength index and deformability test (Both at saturated and in-situ water content) shall be carried out on rock samples.

7.07.02.05 Geotechnical investigation (field & laboratory) shall be carried out in accordance with the provisions of relevant Indian Standards.

On completion of all field & laboratory work, geotechnical investigation report shall be submitted for Owner's review/approval. The Geotechnical investigation report shall contain geological information of the region, procedure adopted for investigation, field & laboratory observations/ data/ records, analysis of results & recommendations on type of foundation for different type of structures envisaged for all areas of work with supporting calculations. Recommendations on treatment for soil, foundation, based on subsoil characteristics, soft soils, aggressive chemicals, expansive soils, etc.

Recommendations on foundation system and the net allowable bearing pressures and pile capacity shall be based on the conservative values of geotechnical investigation data.

7.07.03.00 Geotechnical investigation work shall be got executed by the Contractor through the following agencies.

1. C.E.TESTING COMPANY Pvt. Ltd, Kolkata
2. CengrsGeotechnica Pvt. Ltd, New Delhi
3. M.K. Soil Testing Laboratory, Ahemdabad
4. SECON Pvt Ltd, Bangalore
5. Soil Engineering Consultants, New Delhi
6. Orbital Infrastructure Consultancy & Research Pvt. Ltd. Cuttack
7. KCT Consultancy Services, Ahemdabad
8. ARKITECHNO Consultants (India) Pvt. Ltd. Bhubaneswar

**7.08.00 Geotechnical Investigation Scheme**

a) **Boreholes (Minimum)**

| S.N | Structure | Spacing/Number of borehole | Depth of borehole | Remarks |
|---|---|---|---|---|
| 1 | FGD | Minimum 14 Nos. | Depth of boreholes shall be 25m to 35m. | Depth of |

| | | | | |
|---|---|---|---|---|
| 2 | Crusher House | Minimum 2 Nos. | Depth of boreholes shall be 25m to 35m. | boreholes shall be as mentioned in column "Depth of Borehole" or 5m continuous in rock with RQD > 25% whichever is earlier. |
| 3 | Gypsum and Lime storage area | Minimum 10 Nos. | Depth of boreholes shall be 15m to 25m | |
| 4 | Other Structure/Facility | Minimum 2 Nos. boreholes under each area / facility | 15 to 20 m | |
| 5 | Chimney | Minimum 2 Nos. | 30 to 35m | |

**b) Other Field Tests (Minimum)**

| | | | | |
|---|---|---|---|---|
| 1 | Cyclic Plate Load Test (CPLT) | 3nos | Test Depth from 2 to 4 m | |
| 2 | Trial Pit (TP) | 5 Nos. | Depth - 3 m | |
| 3 | In Situ Permeability Test In Boreholes | In minimum 3 Nos. of boreholes | Tests shall be conducted at depths of 1.0m, 3.0m, 5.0m, 8.0m and 12.0m. | |
| 4 | ERT | Minimum 10 Nos. | | |

- Depth and location of Boreholes and other field tests (PLT, ERT, field permeability tests etc.) shall be approved by Owner before execution of geotechnical investigation work.
- Investigation in any other building / structure / facilities / trestleswhich are not mentioned above shall also be carried out, if required, by the bidder for the facilities under his scope.

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|

**Annexure-III**

## SOIL DATA AND FOUNDATION SYSTEM

Employer has carried out geotechnical investigation in the areas near to this package. Logs of representative boreholes to be used for bidder's information in the vicinity of proposed area are enclosed with this Annexure-II. The bidder is required to carry out geotechnical investigation as per the clause no. 7.07.00 and ascertain the pile capacity and bearing capacity. The onus of correct assessment / interpretation and understanding of the existing subsoil condition / data is on the Bidder. Ground water table is encountered at a depth of about 11.0 to 13.0m below natural ground level (NGL) at the time of investigation. Fluctuation may occur in ground water table due to seasonal variation. The natural ground level is varying as per enclosed contour/spot level drawing.

a) The foundation system to be adopted for different structures shall be as given in Table – i below

**Table – i: Net Allowable Bearing Pressure**

| STRUCTURE | TYPE OF FOUNDATION TO BE ADOPTED |
|---|---|
| FGD and related structures | Open/Piles |

b) During design the Allowable Bearing Pressure shall be as furnished in Table-ii. Bidder is required to carry out geotechnical investigation in this area. The allowable bearing pressure shall be adopted after approval of geotechnical investigation report by owner. However, the maximum allowable bearing pressure shall be as per the approved geotechnical report and shall be limited to the values as furnished in Table-ii.

**Table – ii: Net Allowable Bearing Pressure**

| Structure | Founding Level in RL | Net Allowable Bearing Pressure $T/m^2$ | | |
|---|---|---|---|---|
| | | Isolated / Strip | | Rafts (width > 6m) for 75mm settlement |
| | | width upto 6 m for 25mm settlement | Width upto 6m for 40mm settlement | |
| FGD and related structures | 2.5 m below NGL | 8.0 | 9.0 | 10.0 |
| | 3.5 m | 10.0 | 12.0 | 14.0 |

| | | | | |
|---|---|---|---|---|
| | below NGL | | | |
| | 4.5 m below NGL | 12.0 | 15.0 | 17.0 |

The net allowable bearing pressure higher than above mentioned values shall not be permitted. At intermediate levels the bearing capacity shall be same as the net allowable bearing pressure corresponding to the immediate shallower level mentioned above.

c) Permissible Settlement of Foundations:

For open foundations, the total permissible settlement and differential settlement shall be governed by IS: 1904 and from functional requirements whichever is more stringent. However, total settlement shall be restricted to the following:

| | |
|---|---|
| Isolated, Strip & Raft (Mill foundations/machine foundation) | 25 mm |
| Isolated & Strip (Other than Mill foundations/machine foundation) | 40 mm |
| Raft (widths greater than 6 m) (Other than Mill foundations/machine foundation) | 75 mm |

In case the total permissible settlement is to be restricted to less than as above specified from functional requirements, then the net allowable bearing pressure shall be reduced after review in consultation with Engineer.

d) The diameter of pile, minimum length and maximum allowable capacity of piles shall be as given below:

| Area/ Location | Pile Diameter (mm) | Minimum Length of Bored Pile Below Cut-off Level (m) | Safe Load Capacity in | | |
|---|---|---|---|---|---|
| | | | Vertical Comp. (MT) | Pullout (MT) | Lateral (MT) |
| FGD and related structures | 600 | 18.0 | 140.0 | 45.0 | 7.0 |
| | 760 | 19.0 | 250 | 75.0 | 12.5 |

- Cut off Level (COL) is assumed at 3.0 m below FGL (RL(+) 127.0m). If the COL is shallower than the assumed COL, then the length of the pile shall be increased accordingly.

| CLAUSE NO. | PROJECT INFORMATION |
|---|---|

e) The criteria for Pile Termination (founding level) shall be as given below:

The termination level of the pile shall be decided based on the following criterion

i) Minimum length of the pile below COL (cut off level) shall be as specified above

ii) The minimum pile length for each group of piles shall be determined based on the nearest borelog. Pile shall be socketed into yellowish weathered sand stone. A socketing length of four (4) times the diameter of the pile into rock with rock core recovery ≥ 20% shall be ensured for 600 mm & 760 mm dia piles. For pile termination, SPT 'N' values shall be used from the nearby borelog data. The boreholes are in the bidder's scope and shall be conducted as per the enclosed scheme.

iii) However, in no case the length of pile shall be less than the minimum length determined as in (i) or (ii) above whichever is longer, for that pile group.

g) Special Requirements:

i) Chemicals in ground water and subsoil, as observed during investigation are:

| Chemical | $SO_3$ | Chlorides | pH |
|---|---|---|---|
| Ground Water | 18 to 30 ppm | 50-82 ppm | 7.26 – 7.44 |
| Sub-soil | 0.011 to 0.023 % | 0.02 to 0.064 % | 7.3 – 7.62 |

ii) In view of the above, the following shall be adopted.

| | |
|---|---|
| Cement Type | As specified elsewhere in the specifications |
| Concrete Grade | As specified elsewhere in the specifications |
| Type of Reinforcement | As specified elsewhere in the specifications |
| Cover to Reinforcement | As specified elsewhere in the specifications |

|---|---|

**1.00.00** **INTENT OF SPECIFICATION**

1.01.00 **Scope of the proposal**

The scope of the proposal for Engineering, Supply, Construction, Erection, Testing & Commissioning works for each project of Flue Gas Desulphurisation (FGD) System Package for Lot 1A Projects shall be on the basis of a single point responsibility, completely covering the following activities and services in respect of all the equipment specified and covered under the specifications and read in conjunction with "Scope of Supply & Services", Sub-section-III, Part-A, Section – VI of Technical Specification.

a) Basic Engineering of the plant including preparation of Plant Definition Manuals for the Project;

b) Detailed design of all the equipment and system(s) including civil, structure steel works included in bidder's scope for the Project.

c) Providing engineering drawings, equipment sizing & performance data, instruction manuals, as built drawings and other information;

d) Compliance with statutory requirements and obtaining clearances from statutory authorities, wherever required;

e) Complete manufacturing including shop testing/type testing;

f) Complete Civil, Structural and Architectural works, including survey, providing construction offices, field laboratory and construction equipments;

g) Packing and transportation from the manufacturer's works to the site including customs clearance & port clearance, port charges, if any.

h) Receipt, storage, preservation, handling and conservation of equipment at the site;

i) Fabrication, pre-assembly, if any, erection, testing, commissioning and completion of facilities including putting into satisfactory operation all the equipment including successful completion of initial operation;

j) Reliability tests, performance and guarantee tests after successful completion of facilities;

k) Furnishing of spares on FOR site basis;

l) Reconciliation with customs authorities, as required.

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|

m) Satisfactory conclusion of the contract.

n) Insurance and other requirements for the complete FGD package in accordance with the provisions of general conditions of contract (Section-IV) of the bidding document.

1.02.00 The requirements, conditions, appendices etc. given in Technical Specifications (Section-VI, Parts A, B, C, D, E & F and shall apply to and shall be considered as a part of this volume as completely as if bound here with. The work to be carried out as per the above scope shall be all in accordance with the requirements, conditions, appendices, etc., stated in Section GCC, which shall be considered as a part of the Technical Specification (Section VI ) as completely as if bound herewith. The Contractor shall be responsible for providing all material, equipment and service, which are required to fulfill the intent of ensuring operability, maintainability, reliability and complete safety of the complete work covered under this specification, irrespective of whether it has been specifically listed herein or not. It is not the intent to specify completely herein, all aspects of design and construction of equipment, nevertheless, the equipment shall conform in all aspects to high standards of engineering, design and workmanship and shall be capable of performing in continuous commercial operation, in a manner acceptable to the Employer, who will interpret the meaning of the specification, drawings and shall have a right to reject or accept any work or material which in his assessment is not complete to meet the requirements of this specification and/or applicable international standards mentioned elsewhere in the specification.

Bidders are requested to carefully examine and understand the specifications and seek clarifications, if required, to ensure that they have understood the specification. Before, submitting their offer, Bidder is required to visit the Project site for assessing the feasibility & layout for FGD System. The Bidder's offer should not carry any sections like clarifications, interpretations and/or assumptions. In the event of conflict between the Technical Specifications and the Conditions of Contract, the requirements as indicated in the technical specification shall govern, unless confirmed otherwise by the Employer in writing before the award of this contract, based on a written request from the Bidder for such a clarification. However, if the Bidder feels that, in his opinion, certain features brought out in his offer are superior to what has been specified, these may be highlighted separately.

The Bidder may also make alternate offers provided, such offers are superior in his opinion, to the requirements of these specifications in which case, adequate technical information, operating feed back, etc., are to be enclosed with the offer, to enable the Employer to assess the superiority and reliability of the alternatives offered. In case of each alternative offer, its implications on the performance, guaranteed efficiency, auxiliary power consumption etc., shall be clearly brought out for the Employer to make an overall assessment. In any case, the base offer shall necessarily be in line with the specifications. Under no circumstances the specified equipment and services shall be brought out as an alternative offer.

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|
| | In case, all the above requirements are not complied with, the offer may be considered as incomplete and would become liable for rejection. |
| 1.03.00 | **The following are the equipment's covered in this specification:** |
| 1.03.01 | Wet limestone based Flue gas desulphurization (FGD) for the project, capable of reducing to the specified limits the emissions of Sulphur Dioxide in flue gas produced by specified coal being fired in boiler, complete with all accessories and auxiliary equipment's as per specification requirements including Booster Fans for each unit, Absorber for each unit with Slurry re-circulation pumps & Oxidation blowers, common Limestone Grinding & slurry preparation system, common Gypsum dewatering system, Limestone handling and storage system, Gypsum handling and storage system. |
| 1.03.02 | One (1) number of elevator for each absorber and One (1) numbers of elevator for Limestone Grinding System building. |
| 1.03.03 | Buildings for Slurry re-circulation pumps/Oxidation blowers, Limestone Grinding System, Gypsum dewatering system & FGD control Room. |
| 1.03.04 | All motors, HT & LT Switchgears, DC System, Transformers, Electrical Actuators, HT & LT power & control cables, DG set (if applicable), cabling, lighting etc. |
| 1.03.05 | ZERO LIQUID DISCHARGE (ZLD) SYSTEM for FGD waste water for Barh-I (3X660 MW) & Nabinagar (4x250 MW). |
| 1.03.06 | Low Height Wet Chimney(s) for the project. |
| 1.03.07 | Associated Control & Instrumentation (C&I) equipments. |
| 1.03.08 | Associated Civil, Structural and Architectural works including foundation as specified in Technical Specification. |
| 1.04.00 | Wherever a material or article is specified or described by the name of a particular brand, manufacturer or vendor, the specific items mentioned shall be understood to be descriptive only and not restrictive. Such description indicates the equipment type, function and quality desired. Other manufacturer's products may be considered provided sufficient information so as to enable the Employer to determine that the products proposed are equivalent to those named. |
| **2.00.00** | **Additional Requirements** |
| | (a) Before submitting his bid, the Bidder should inspect and examine the site and its surroundings and should satisfy himself as to the nature of the ground and subsoil, the quantities and nature of work, materials necessary for completion of the work and their availability, means of access to site and in general shall himself obtain all necessary information as to risks, contingencies and other |

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|

circumstances which may influence or affect his offer. No consequent extra claims on any misunderstanding or otherwise shall be allowed by the Employer.

(b) Bidder shall take all necessary precautions to protect all the existing equipment, structures, facilities and buildings etc. from damage. In case any damage occurs due to the activities of the contractor on account of negligence, ignorance, accidental or any other reason whatsoever, the damage shall be immediately made good by the contractor at his own cost to the satisfaction of the Employer. The contractor shall also take all necessary safety measures with specific reference to excavation in rock, at his own cost, to avoid any harm or injury to his workers and staff from the equipment and facilities of the power plant.

(c) For his site office and covered store buildings, the contractor shall adopt pre-engineered / pre-fabricated constructions made of steel with single / double skin, insulated or uninsulated roof and wall coverings (fabricated out of permanently color coated metal sheets). Alternatively, contractor can adopt readymade 'Porta cabin' or similar construction. Contractor shall ensure that all such constructions are well engineered, neatly constructed and overall present a pleasing look.

(d) In line with Gazette Notification on Ash Utilization issued by MOEF and its amendment thereafter, contractor shall use ash and ash based products in works as specified in these specifications, drawings and as per instructions of the Engineer. He shall also use ash and ash based products in construction of his offices, stores, staff quarters and labour huts etc. He shall furnish a compliance report along with all details of use of ash and ash based products along with each bill.

(e) Contractor shall establish/set up at site suitable repair facilities for construction plant, equipment and machinery (like piling rigs, cranes batching plant, dewatering pumps etc.) In case of piling rigs, cranes, batching plant etc. he will also make arrangements / tie up with equipment manufacturers / suppliers for periodic overhaul/maintenance and for major breakdown, if any. He shall also keep adequate stock of spares at site for various plant, equipment and machinery to meet day to day requirements as recommended by the equipment manufacturer/suppliers or as instructed by the Engineer. Contractor shall deploy dedicated qualified, full time mechanical/electrical foreman/supervisors for manning the repair facilities as specified above.

**3.00.00 APPLICABLE DRAWINGS**

The drawings listed below and forming part of the specification (Refer Part-E) shall supplement the requirements specified herein. The scope and terminal points of the equipment to be furnished under this steam generator package shall be as identified in these drawings and read in conjunction with text of the specification:

**(C) ELECTRICAL**

(1) Electrical single line diagram for FGD Package : Drg No. 0011-109-POE-J-001/A-E

**Note :** All the above drawings are indicative of Employer's requirements to enable the Bidder to make a suitable offer. All variations/alternations shall be clearly brought out in the technical deviation schedule with implications, if any. Such variations may be acceptable, after assessment of its implication and shall be subjected to the Employer's approval. However, the flexibility of operation and maintenance desired by the schemes and layouts shall be binding.

Electrical drawings (except Electrical single line diagram) are attached with respective Electrical Chapters in Part b, Section VI.

**4.00.00 QUALIFYING REQUIREMENTS FOR EQUIPMENTS/SYSTEMS**

4.01.00 **Provenness criteria for critical equipment, auxiliaries, systems and bought out items:**

The Bidder / Bidder's sub-vendor(s) is required to meet the provenness criteria and/or qualification requirement for critical equipment, auxiliaries, system and bought out items as per criteria stipulated below:

4.01.01 Booster Fans, Slurry Recirculation Pumps, Oxidation Blowers, Wet Limestone Grinding Mills, Slurry Pumps, Agitators & Vacuum Belt Filters for the Wet Limestone based Flue Gas Desulphurisation (FGD) System offered by the Bidder shall be only from such manufacturer(s) who has previously designed (either by itself or under collaboration / licensing agreement), manufactured / got manufactured the respective equipment(s) of the type, application and minimum equipment rating as stipulated below such that the respective equipment(s) should have been in successful operation in at least one (1) plant for a period not less than one(1) year reckoned as on the date of consideration for approval but not later than six months to award date of contract to the Main bidder:

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|

**Type and Rating for Qualification**

| Sl. No. | Name of Equipment | Type of Equipment | Application | Equipment Rating |
|---|---|---|---|---|
| (a) | Booster Fans | Axial type with variable pitch control | Coal fired power plant | 80% of the flow & 100% of the head of the offered Booster Fan with Fan Speed 900 rpm (maximum) |
| (b) | Slurry Recirculation Pumps | Centrifugal type | Wet Limestone based FGD application in Coal fired power plant | 80% of the flow & 100% of the head of the offered Slurry Recirculation Pump |
| (c) | Oxidation Blowers | Centrifugal/ positive displacement type blower | Wet Limestone based FGD application in Coal fired power plant | 80% of the flow & 100% of the head of the offered Oxidation Blower |
| (d) | Wet limestone Grinding mills | Horizontal Wet Ball mill | Wet Limestone based FGD application in Coal fired power plant | 80% of the offered Ball mill capacity with pulverizing fineness not less than 90% thru 325 mesh |
| (e) | Slurry Pumps | Centrifugal type | Wet Limestone based FGD application or ash slurry application in Coal fired power plant | 80% of the flow & 100% of the head of the offered Slurry Pump(s) |
| (f) | Agitators | Vertical/Horizontal | Wet Limestone based FGD application in Coal fired power plant | Agitator rating not less than that supplied for 500 MW or higher size unit for similar application |
| (g) | Vacuum Belt filters | Belt type | Wet Limestone based FGD application in Coal fired power plant | 80% of the offered Vacuum Belt filter capacity |

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|
| | Bidder shall offer and supply only the type of the above equipment(s) for which he himself or the manufacturer proposed by the bidder for the above equipment(s) is qualified.<br><br>The provenness criteria for equipment (Booster Fans) stipulated at Sl. No. 4.01.01 (a) above shall also be considered acceptable provided the rating parameters (i.e., flow, head and rated rpm) is covered within the operating regime of the respective fan performance curve of the reference plant equipment. |
| 4.01.02 | In case the Bidder or the proposed sub-vendor is not manufacturer of proven Booster Fans as per clause 4.01.01 (a) above but is a manufacturer of such equipment for units of at least 500 MW rating, the Bidder or the proposed sub vendor can manufacture such equipment for 660 MW units also, provided it has collaboration or valid licensing agreement for design, engineering, manufacturing, supply of such equipment in India with such manufacturer who meet the requirements stipulated at clause 4.01.01 (a) above for the Booster Fans. |
| 4.01.03 | A JV / Subsidiary Company formed for manufacturing and supply of equipment(s) as listed at clause no. 4.01.01 above in India, can also manufacture such equipment(s), provided that it has a valid collaboration or licensing agreement for design, engineering, manufacturing of such equipment(s) in India with a qualified equipment manufacturer who meets the requirements stipulated at clause 4.01.01 above (or the technology provider of the qualified equipment manufacturer) for the respective equipment(s). Before taking up the manufacturing of such equipment(s), the bidder/ his sub-vendor(s) must create /have created manufacturing facilities at his works as per collaborator's/licenser's design, manufacturing and quality control system for such equipment(s).<br><br>Further, in such a case, such qualified equipment manufacturers should have, directly or indirectly through its holding company/ subsidiary company, at least 26% equity participation in the Indian Joint Venture Company/ Subsidiary Company, which shall be maintained for a lock-in period of seven (7) years from the date of incorporation of such Joint Venture/ Subsidiary or upto the end of defect liability period of the contract, whichever is later. |
| 4.01.04 | In case the Bidder or the proposed sub-vendor is not manufacturer of proven Oxidation Blowers as per clause 4.01.01 (c) above but is a manufacturer of Blowers/compressors for minimum 50 $NM^3$/min capacity, the Bidder or the proposed sub-vendor can also manufacture Oxidation Blowers, provided it has collaboration or valid licensing agreement for design, engineering, manufacturing, supply of such Oxidation Blowers in India with such manufacturer who meet the requirements stipulated at clause 4.01.01 (c) above for the Oxidation Blowers. Before taking up the manufacturing of such equipment, the bidder/ his sub-vendor must create /have created manufacturing facilities at his works as per collaborator's /licenser's design, manufacturing and quality control system for such equipments. |
| 4.01.05 | **(i)** In case the Bidder or the proposed sub-vendor is not manufacturer of proven Wet limestone Grinding mills as per clause 4.01.01 (d) above but is a manufacturer |

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|

of dry Grinding mills for power or cement industry of minimum 20 T/h capacity, the Bidder or the proposed sub-vendor can also manufacture Wet limestone Grinding mills, provided it has collaboration or valid licensing agreement for design, engineering, manufacturing, supply of such Wet limestone Grinding mills in India with such manufacturer who meet the requirements stipulated at clause 4.01.01 (d) above for the Wet limestone Grinding mills. Before taking up the manufacturing of such equipment, the bidder/ his sub-vendor must create /have created manufacturing facilities at his works as per collaborator's /licenser's design, manufacturing and quality control system for such equipments.

In addition, the Bidder along with the qualified equipment manufacturer shall furnish DJU in which executant of the DJU shall be jointly and severally liable for the successful performance of the equipment as per the format enclosed in the bidding document. The DJU shall be submitted prior to the placement of order on the approved sub-vendor for Wet limestone Grinding mills. In case of award, each executant of the DJU except the Bidder shall be required to furnish an on demand bank guarantee for INR 10 Million (Indian Rupees Ten Million only) for each project.

**OR**

**(ii)** In case, the bidder or proposed sub vendor is not a manufacturer of proven Wet Limestone Grinding Mills as per clause 4.01.01 (d) above, but have designed, manufactured & supplied dry Grinding Ball Tube mills for at least 500 MW pulverized coal fired power plant, the Bidder or the proposed sub-vendor can also manufacture Wet limestone Grinding Mills provided it has a licensing agreement with a Wet limestone Grinding mills manufacturer who meet the requirements stipulated at clause 4.01.01 (d) above for the Wet limestone Grinding mills and provides extended warranty of three (3) years for the Wet Limestone Grinding Mills. In such a case Bidder shall provide an additional on demand bank guarantee for INR 10 Million (Indian Rupees Ten Million only) for each project.

4.01.06 In case the Bidder or the proposed sub-vendor is not manufacturer of proven Agitators as per clause 4.01.01 (f) above but is a manufacturer of Agitators for similar process/duty application in petrochemical or metals and mining industry, the Bidder or the proposed sub-vendor can also manufacture Agitators, provided it has collaboration or valid licensing agreement for design, engineering, manufacturing, supply of such Agitators in India with such manufacturer who meet the requirements stipulated at clause 4.01.01 (f) above for the Agitators. Before taking up the manufacturing of such equipment, the bidder/ his sub-vendor must create /have created manufacturing facilities at his works as per collaborator's /licenser's design, manufacturing and quality control system for such equipments.

4.01.07 In case the Bidder or the proposed sub-vendor is a manufacturer of Slurry Pumps who meets the requirements stipulated at clause 4.01.01 (e) above, the Bidder or the proposed sub-vendor can also manufacture Slurry Recirculation Pumps,

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|
| | provided it has collaboration or valid licensing agreement for design, engineering, manufacturing, supply of such equipment in India with such manufacturer who meet the requirements stipulated at clause 4.01.01 (e) above for the Slurry Recirculation Pumps. **Before** taking up the manufacturing of such equipment, the bidder/ his sub-vendor must create /have created manufacturing facilities at his works as per collaborator's /licenser's design, manufacturing and quality control system for such equipment. |
| 4.01.08 | Before taking up the manufacturing of such equipment(s) as per clause 4.01.02, 4.01.03, 4.01.04, 4.01.05(i), 4.01.06 & 4.01.07 above, the Bidder / its sub vendor(s) must create (or should have created) manufacturing and testing facilities at its works as per Collaborator / licenser's design, manufacturing and quality control system for such equipments duly certified by the Collaborator / licensor. Further, the Collaborator / Licenser shall provide (or should have provided) all design, design calculation, manufacturing drawings and must provide (or should have provided) technical and quality surveillance assistance and supervision during manufacturing, erection, testing, commissioning of equipments. |
| 4.01.09 | Bidder shall offer and supply only the type of the above equipment(s) for which it, itself or the manufacturer / Collaborator(s) / Licenser(s) proposed by the Bidder for the above equipment(s) is qualified. |
| 4.01.10 | The Employer reserves the right to fully satisfy himself regarding capability and capacity of Bidder / its sub-vendor(s) and the proposed arrangement and may prescribe additional requirement before allowing manufacture of the equipment listed above for this contract. |
| | **Note to clause 4.01.01**<br>(1) Whenever the term 'coal fired' is appearing above, "Coal" shall be deemed to also include bituminous coal/brown coal/Anthracite Coal/lignite. |
| 4.02.00 | **Sub QR for Civil Works:** |
| 4.02.01 | Bidder or its agency should have in past executed civil and structural works for 500 MW or higher capacity coal based/Lignite based power plant including earthwork in filling involving mechanical compaction and cutting in hard rock, foundations, Bulk material handling plant involving underground storage hopper and underground tunnels. |
| 4.02.02 | Bidder can engage more than one agency, in case the Bidder itself is not able to meet the requirement at 4.02.01. The agency being engaged for a particular work should have in the past executed such works of 500 MW or higher capacity plant. |

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|
| 4.02.03 | For Chimney, Bidder or its agency should have in the past built at least one (1) reinforced concrete chimney of minimum 100m height. |
| 4.02.04 | In case Bidder or its agency do not meet the requirements at 4.02.01and the Bidder proposes to engage agency (ies) for civil & structural works on work volume basis (except for Chimney), Bidder or its agency (ies) should have executed such works in the past and the annual rate of execution in the reference works should not be less than eighty percent (80%) of the asking rate of such works, (structural steel fabrication & erection, RCC, earthwork in filling involving mechanical compaction and cutting in hard rock, RCC in underground storage hopper and underground tunnels ) for which it is being engaged.<br><br>Successful Bidder shall finalize the agency (ies) for each work in consultation with Engineer-in-charge at site before engaging them. |
| | **Design agency for Civil & Steel Structural Works:** |
| 4.02.05 | Bidder or its agency (ies) should have carried out the design and detailed engineering of following works:<br>(i) Civil & Structural works associated with at least one bulk material handling plant for 500 MW or higher capacity coal based/Lignite based power plant.<br>(ii) For Chimney, Bidder or its design agency (ies) should have carried out design & detailed engineering of at least one reinforced concrete chimney with steel flues, of minimum 100m height.<br>(iii) Machine foundations such as Mill foundations/ Block foundations. |
| 4.02.06 | Bidder can engage more than one agency (of repute), in case the Bidder itself is not able to meet the requirement at 4.02.05.<br><br>The design agency (ies) proposed by the Bidder shall be subject to Employer's approval. |
| **4.03.00** | **PROVENNESS CRITERIA FOR ELECTRICAL EQUIPMENTS** |
| **4.03.01** | **HT MOTORS** |
| 4.03.01.01 | **BOOSTER FAN MOTOR**<br><br>The offered Squirrel cage Induction motor shall be from such a Manufacturer who has manufactured and supplied motor of 4MW or above rating, which should have been in successful operation for at least one (1) plant for a period not less than one (1) year reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|
| **4.03.02** | **LT SWITCHGEAR** |
| **4.03.02.01** | **ROUTE 1** |
| 4.03.02.01 | (i) Bidder/ Sub Vendor should have manufactured and supplied at least a total of four hundred & fifty (450) nos. draw out type Air Circuit Breaker Panels and / or draw out type Motor Control Centre Panels with fault rating of at least 45kA for 1 second and 105kA peak under a single order and these panels should have been in successful operation for a period of not less than two (2) years reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |
| 4.03.02.01 | (ii) Bidder/ Sub Vendor should have manufactured and supplied at least one hundred & fifty (150) nos. of Air Circuit Breakers having fault rating of at least 105kA MAKING and 45kA BREAKING, and their associated draw out type Air circuit breaker panels having fault rating of at least 45kA for 1 Second and 105kA peak, which should have been in successful operation for a period of not less than two (2) years reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |
| **4.03.02.02** | **ROUTE 2** |
| 4.03.02.02 | (i) Bidder/Sub-vendor should have manufactured and supplied at least a total of two hundred & twenty five (225) nos. draw out type Air Circuit Breaker Panels and / or draw out type Motor Control Centre Panels with fault rating of at least 45kA for 1 second and 105kA peak under a single order and these panels should have been in successful operation for a period of not less than two (2) years reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |
| 4.03.02.02 | (ii) Bidder/Sub-vendor should have manufactured and supplied at least seventy five (75) nos. of draw out type Air Circuit Breaker panels having fault rating of at least 45kA for 1 second and 105kA peak, which should have been in successful operation for a period of not less than two (2) years reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |
| 4.03.02.02 | (iii) Bidder/Sub-vendor shall Associate/Collaborate with a manufacturer who meets the requirements stipulated in Route 1. In such a case, Bidder/Sub-vendor should furnish a Deed of Joint Undertaking executed by Bidder/Sub-vendor and its Associate/Collaborator as per the format enclosed in the bidding document in which the Bidder/Sub-vendor and its Associate/Collaborator are jointly and severally liable to the Employer for successful performance of the LT Switchgears under this package. This Deed of Joint Undertaking should be submitted prior to the placement of order on approved Sub Vendor. In case of award, the Associate or Collaborator of the Bidder / Sub Vendor (as applicable) will be required to |

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|
| | furnish an on-demand Bank Guarantee for INR 1 Million (Indian Rupees One Million only) **per project.**<br><br>**Note:** Each Single Front Panel shall be counted as one (1) Panel, Double Front Panel as one (1) Panel and Air Circuit Breaker Panel as one (1) Panel. |
| **4.03.03** | **11 KV / 3.3 KV SWITCHGEARS**<br><br>**Route 1** |
| 4.03.03.01 | The Bidder/ Sub Vendor should have manufactured and supplied on an average one hundred (100) numbers of 11kV and /or 6.6kV Switchgear panels per annum during the last three years reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |
| 4.03.03.02 | The Bidder/ Sub Vendor should have designed, manufactured and supplied at least one hundred (100) numbers of 11kV and /or 6.6kV Switchgear panels complete in all respects with fault rating of at least 40kA for one (1) second and 100kA (peak), which should have been in successful operation for a period of at least two (2) years reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |
| 4.03.03.03 | The Bidder/ Sub Vendor should have manufactured and supplied at least one hundred (100) numbers of Vacuum Circuit Breakers for 11kV and /or 6.6kV panels with a rating of 40kA rms BREAKING, 100kA peak MAKING and 40kA withstand for one (1) second, which should have been in successful operation in 6.6kV or higher voltage application for a period of at least two (2) years reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder.<br><br>**Route 2**<br><br>Bidder/ Sub Vendor based on technological support of its Associate or Collaborator, can also participate provided |
| 4.03.03.04 | The Bidder/ Sub Vendor should have manufactured and supplied on an average one hundred (100) numbers of 11kV and /or 6.6kV Switchgear panels per annum during the last three years reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |
| 4.03.03.05 | The Bidder/ Sub Vendor should have manufactured and supplied at least one hundred (100) numbers of 11kV and /or 6.6kV Switchgear panels complete in all respects with fault rating of at least 40kA for one (1) second and 100kA (peak). The Bidder/ Sub Vendor should have type tested the offered type of panels as specified. |

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|
| 4.03.03.06 | The Bidder/ Sub Vendor should have manufactured and supplied at least one hundred (100) numbers of Vacuum Circuit Breakers for 11kV and /or 6.6kV panels with a rating of 40kA rms BREAKING, 100kA peak MAKING and 40kA withstand for one (1) second, reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |
| 4.03.03.07 | Bidder's/ Sub Vendor's Associate or Collaborator meets the qualifying requirement stipulated at 4.03.03.02 & 4.03.03.03 stipulated under Route 1. |
| 4.03.03.08 | Bidder/ Sub Vendor furnishes a Deed of Joint Undertaking jointly executed by it and its Associate/ Collaborator as per format enclosed in the bidding document in which the Bidder/ Sub Vendor and its Associate/ Collaborator are jointly and severally liable to the Employer for successful performance of the MV Switchgears. This Deed of Joint Undertaking should be submitted prior to the placement of order on approved Sub Vendor. In case of award, the Associate or Collaborator of the Bidder / Sub Vendor (as applicable) will be required to furnish an on-demand Bank Guarantee for INR 1 Million (Indian Rupees One Million only) **per project.**<br>**Note:** Equipment designed by the Bidder itself or through its Collaborator/Associate for reference plant, shall also be considered meeting the requirement of design. |
| **4.03.04** | **NUMERICAL RELAYS & NETWORKING** |
| 4.03.04.01 | Numerical Relays shall be offered from a Manufacturer who has manufactured and supplied and successfully configured at least 100 No's of Numerical Relays with IEC 61850 used for application in Feeder Protections/Transformer Protections/Motor Protections. These relays should have been in successful operation for at least one (1) year reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |
| 4.03.04.02 | The Numerical Relay Network system shall be offered from an Integrator /Manufacturer who has designed and successfully done FAT for a network on IEC 61850 with at least 100 no's of Communicable Numerical Relays reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |
| **4.03.05** | **AUXILIARY OIL FILLED TRANSFORMERS** |
| 4.03.05.01 | The Bidder/ Sub-Vendor should have manufactured & supplied at least two numbers (one each at two different installations) of 16 MVA, 11KV or higher rating oil filled transformers which should have been in successful operation for a period of at least two (2) years reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|
| | **And** |
| 4.03.05.02 | Bidder/ Sub-Vendor should have his own facilities for conducting all routine and type tests as per IS: 2026 (except short circuit test). |
| | **And** |
| 4.03.05.03 | 16 MVA, 11 KV Class or higher rated oil filled transformer manufactured by Bidder/ Sub-Vendor should have been successfully short circuit tested.<br>**Note**:<br>i) Two different installations mean two different project sites or two different contracts.<br>ii) Equipment designed by the Bidder/Sub-vendor by itself or through its Collaborator/Associate for reference plant, shall also be considered meeting the requirement of design. |
| **4.04.00** | **FGD WASTE WATER TREATMENT SYSTEM FOR ZERO LIQUID DISCHARGE (ZLD)** |
| **4.04.01** | **Route-1** |
| 4.04.01.01 | Bidder/Bidder's Sub vendor should have designed, supplied, erected/supervised erection and commissioned/supervised commissioning at least one (1) number of FGD Waste Water Treatment System (essentially comprising of Evaporator (Brine Concentrator) and/or Crystalliser, Vapour Compressor) operating in Coal fired unit(s) of power plant, having inlet feed as FGD waste water of TDS not less than 30,000 ppm and treatment capacity of not less than 10 $m^3$/hr. The above FGD Waste Water Treatment System should have been in successful operation for a period not less than one (1) year reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |
| **4.04.02** | **Route-2** |
| 4.04.02.01 | The Bidder/its Sub-vendor who do not meet the qualification requirements stipulated at 4.04.01.01 above, may also participate provided the Bidder/its Sub vendor is a contractor who have designed, supplied, erected/supervised erection and commissioned/supervised commissioning at least one (1) number of Waste Water Treatment System (essentially comprising of Evaporator (Brine Concentrator) and/or Crystalliser) operating in an Industrial unit which should have been in successful operation for a period not less than one (1) year reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder and associates/collaborates with an Associate/Collaborator who in turn fully meets the requirements stipulated at 4.04.01.01 above. |
| 4.04.02.02 | Bidder/its sub vendor should also have a valid ongoing collaboration and technology transfer agreement with an Associate/Collaborator meeting requirements of clause 4.04.01.01 above, valid minimum up to the end of the defect liability period of the |

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|

contract. In such a case Bidder/Sub vendor can either source the FGD Waste Water Treatment System from such system provider or can itself manufacture/get manufactured, supply and install the FGD Waste Water Treatment System as per the design, manufacturing and installation drawings released by such Associate/Collaborator.

4.04.02.03 The Bidder shall furnish a Deed of Joint Undertaking (DJU) executed by it, its Sub vendor (if applicable) and the Collaborator/Associate and each executant of DJU shall be jointly and severally liable to the Employer for successful performance of FGD waste water treatment system.

The Deed of Joint Undertaking(s) (DJU) should be submitted at the time of placement of order on approved Sub vendor. In case of award, the Associate or Collaborator of the Bidder/Sub-vendor (as applicable) shall be required to furnish an on demand bank guarantee for INR 20 Million (Rupees Twenty Million) for each project.

**4.05.00 Provenness criteria for critical equipment, auxiliaries, systems and bought out items for FGD waste water system:**

**4.05.01** The Bidder/Bidder's sub-vendor(s) is required to meet the provenness criteria and/or qualification requirement for critical equipment, auxiliaries, system and bought out items as per criteria stipulated below:

Evaporator/Brine Concentrator, Crystallizer, Mechanical Vapour Compressor, Evaporator feed Heat exchanger, Crystalliser Heat exchanger for FGD Waste Water System for ZLD offered by the Bidder shall be only from such manufacturer(s) who has previously designed (either by itself or under collaboration/licensing agreement), manufactured/got manufactured the respective equipment(s) of the type, application and minimum equipment rating not less than that supplied in FGD waste water application and such equipment(s) should have been in successful operation in at least one (1) coal fired power station for a period not less than one (1) year reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder.

| Sl. No. | Name of Equipment | Type of Equipment | Application | Equipment Rating |
|---|---|---|---|---|
| a) | Evaporator/ Brine concentrator | Falling Film | FGD application in Coal fired power plant | Evaporator/Brine concentrator of a FGD Waste water treatment system of capacity not less than 10 $m^3$/hr. |
| b) | Crystallizer | Forced circulation | FGD application in Coal fired power plant | Crystallizer of a FGD Waste water treatment system of capacity not less than 10 $m^3$/hr. |
| c) | Mechanical Vapour Compressor | Centrifugal | FGD application in Coal fired power plant | Mechanical Vapour Compressor of a FGD Waste water treatment system of capacity not less than 10 $m^3$/hr. |

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|

| Sl. No. | Name of Equipment | Type of Equipment | Application | Equipment Rating |
|---|---|---|---|---|
| d) | Evaporator feed Heat Exchanger | Plate type /Tube & Shell type | FGD application in Coal fired power plant | Evaporator feed Heat Exchanger of a FGD Waste water treatment system of capacity not less than 10 $m^3$/hr. |
| e) | Crystallizer Heat Exchanger | Plate type/Tube & Shell type | FGD application in Coal fired power plant | Crystallizer Heat Exchanger of a FGD Waste water treatment system of capacity not less than 10 $m^3$/hr. |

Bidder shall offer and supply only the type of the above equipment(s) for which he himself or the manufacturer proposed by the Bidder for the above equipment(s) is qualified.

**4.05.02** A JV / Subsidiary Company formed for manufacturing and supply of equipment(s) as listed at clause no. 4.05.01 above in India can also manufacture such equipment(s), provided that it has a valid collaboration or licensing agreement for design, engineering, manufacturing of such equipment(s) in India with a qualified equipment manufacturer who meets the requirements stipulated at clause 4.05.01 above (or the technology provider of the qualified equipment manufacturer) for the respective equipment(s). Before taking up the manufacturing of such equipment(s), the bidder/his sub-vendor(s) must create/have created manufacturing facilities at his works as per collaborator's/licenser's design, manufacturing and quality control system for such equipment(s).

Further, in such a case, such qualified equipment manufacturers should have, directly or indirectly through its Holding company/Subsidiary company, at least 26% equity participation in the Indian Joint Venture Company/Subsidiary Company, which shall be maintained for a lock-in period of seven (7) years from the date of incorporation of such Joint Venture/Subsidiary or upto the end of defect liability period of the contract, whichever is later.

**4.05.03** In case the Bidder or the proposed sub-vendor is not manufacturer of proven Evaporator/Brine concentrator as per clause 4.05.01 (a) above but is a manufacturer of Evaporator/Brine concentrator for any Industrial unit, the Bidder or the proposed sub-vendor can also manufacture Evaporator/Brine concentrator, provided it has collaboration or valid licensing agreement for design, engineering, manufacturing, supply of such Evaporator/Brine concentrator in India with such manufacturer who meet the requirements stipulated at clause 4.05.01 (a) above for the Evaporator/Brine concentrator. Before taking up the manufacturing of such equipment, the bidder/ his sub-vendor must create /have created manufacturing facilities at his works as per collaborator's /licenser's design, manufacturing and quality control system for such equipment.

**4.05.04** In case the Bidder or the proposed sub-vendor is not manufacturer of proven Crystallizer as per clause 4.05.01 (b) above but is a manufacturer of Crystallizer for any Industrial unit, the Bidder or the proposed sub-vendor can also manufacture Crystallizer, provided it has collaboration or valid licensing agreement for design, engineering, manufacturing, supply of such Crystallizer in India with such

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|
| | manufacturer who meet the requirements stipulated at clause 4.05.01 (a) above for the Crystallizer. Before taking up the manufacturing of such equipment, the bidder/ his sub-vendor must create /have created manufacturing facilities at his works as per collaborator's /licenser's design, manufacturing and quality control system for such equipment. |
| **4.05.05** | In case the Bidder or the proposed sub-vendor is not manufacturer of proven Mechanical Vapour Compressor as per clause 4.05.01 (c) above but is a manufacturer of Compressor, the Bidder or the proposed sub-vendor can also manufacture Mechanical Vapour Compressor, provided it has collaboration or valid licensing agreement for design, engineering, manufacturing, supply of such Mechanical Vapour Compressor in India with such manufacturer who meet the requirements stipulated at clause 4.05.01 (c) above for the Mechanical Vapour Compressor. Before taking up the manufacturing of such equipment, the bidder/ his sub-vendor must create /have created manufacturing facilities at his works as per collaborator's /licenser's design, manufacturing and quality control system for such equipment. |
| **4.05.06** | In case the Bidder or the proposed sub-vendor is not manufacturer of proven Evaporator feed Heat Exchanger as per clause 4.05.01 (d) above but is a manufacturer of Heat exchanger, the Bidder or the proposed sub-vendor can also manufacture Evaporator feed Heat Exchanger, provided it has collaboration or valid licensing agreement for design, engineering, manufacturing, supply of such Evaporator feed Heat Exchanger in India with such manufacturer who meet the requirements stipulated at clause 4.05.01 (d) above for the Evaporator feed Heat Exchanger. Before taking up the manufacturing of such equipment, the bidder/ his sub-vendor must create /have created manufacturing facilities at his works as per collaborator's /licenser's design, manufacturing and quality control system for such equipment. |
| **4.05.07** | In case the Bidder or the proposed sub-vendor is not manufacturer of proven Crystallizer Heat Exchanger as per clause 4.05.01 (e) above but is a manufacturer of Heat exchanger, the Bidder or the proposed sub-vendor can also manufacture Crystallizer Heat Exchanger, provided it has collaboration or valid licensing agreement for design, engineering, manufacturing, supply of such Crystallizer Heat Exchanger in India with such manufacturer who meet the requirements stipulated at clause 4.05.01 (e) above for the Crystallizer Heat Exchanger. Before taking up the manufacturing of such equipment, the bidder/ his sub-vendor must create /have created manufacturing facilities at his works as per collaborator's /licenser's design, manufacturing and quality control system for such equipment. |
| **4.05.08** | Before taking up the manufacturing of such equipment(s) as per clause 4.05.03, 4.05.04, 4.05.05, 4.05.06, 4.05.07 above, the Bidder/its sub vendor(s) must create (or should have created) manufacturing and testing facilities at its works as per Collaborator/licenser's design, manufacturing and quality control system for such equipments duly certified by the Collaborator/licensor. Further, the Collaborator / Licenser shall provide (or should have provided) all design, design calculation, manufacturing drawings and must provide (or should have provided) technical and quality surveillance assistance and supervision during manufacturing, erection, testing, commissioning of equipments. |

| CLAUSE NO. | INTENT OF SPECIFICATION |
|---|---|
| **4.05.09** | Bidder shall offer and supply only the type of the above equipment(s) for which it, itself or the manufacturer / Collaborator(s) / Licenser(s) proposed by the Bidder for the above equipment(s) is qualified. |
| **4.05.10** | The Employer reserves the right to fully satisfy himself regarding capability and capacity of Bidder / its sub-vendor(s) and the proposed arrangement and may prescribe additional requirement before allowing manufacture of the equipment listed above for this contract. |
| | **Note to clause 4.04.00 & 4.05.00**<br>Whenever the term 'coal fired' is appearing above, "Coal" shall be deemed to also include bituminous coal/brown coal/Anthracite Coal/lignite. |
| **4.06.00** | **Agency for Wet Stack Flow Model Study**<br>Wet Stack Flow Model Study shall be carried out by an agency which has successfully performed at least two (2) flow model studies, in separate coal fired power plants, of wet stack installed after wet limestone based FGD Absorber (without reheating of cleaned flue gas), and based on the studies developed at least two (2) wet stack liquid collection systems which are in successful operation for a period of at least two (2) years reckoned as on the date of consideration for approval but not later than six months after award date of contract to the Main bidder. |
| **4.07.00** | **Balance equipments/ systems**<br>The Bidder at his option can source the balance of plant equipment/systems not covered in clause 4.01.00, 4.02.00**,** 4.03.00, 4.04.00, 4.05.00 & 4.06.00 above. However for such balance of plant equipment/systems, the Employer reserves the rights to satisfy himself on the provenness of the equipment and capability and capacity of the manufacturers. |
| **4.08.00** | Notwithstanding anything stated above, the Employer reserves the right to assess the capabilities and capacity of the Bidder/his collaborators/ licenser/ his sub-contractors to perform the contract, should the circumstances warrant such assessment in the overall interest of the Employer. |
| **4.09.00** | To enable the approval of sub-vendors, the Bidder shall provide all necessary data such as type, design, make, capacity, duty conditions, date of commissioning/ operation etc. |

# SUB-SECTION-II

# PROJECT INFORMATION

(CHAPTERS FOR EACH 11 PROJECTS ENCLOSED SEPERATELY)

# SUB-SECTION-III

# SCOPE OF SUPPLY & SERVICES

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| **1.00.00** | **SCOPE OF SUPPLY AND SERVICES**<br><br>The scope of work for the equipment and accessories to be furnished in accordance with this specification shall include design, engineering, manufacture, inspection and testing at supplier's works, packing, forwarding to site, unloading, pre- assembly, assembly, erection, supervision, pre-commissioning, testing and commissioning and performance testing of the equipment/system and works indicated in this Sub-section of the technical specification. Any item or works though not specifically mentioned in this specification but needed to complete the equipment & systems to meet the intent of the Specification shall also be furnished, unless specifically mentioned under “Exclusion” in Sub-Section-IV of Part-A, Section-VI of the Technical Specifications. |
| 1.01.00 | The scope of supply & services is detailed out in the following Sub-Sections.<br><br>**Sub-Section**<br><br>III A - Mechanical equipment and associated systems<br><br>III B - Electrical Systems<br><br>III C - C&I systems<br><br>III D - Civil works |
| 1.02.00 | Scope of supply of the Contractor includes mandatory spares, start-up and commissioning spares and consumables. The general requirements in respect of various types of spares is given in Sub-Section-VII, Part-A of Technical Specification. |
| 1.03.00 | **Tests**<br><br>The scope of the Bidder includes all shop tests, type tests, site tests, routine tests, etc., fulfillment of complete quality assurance & inspection requirements and related activities for all the equipment & systems covered under the scope of work of Bidder as per the stipulations of Technical Specifications. |
| 1.04.00 | **Paints / Painting**<br><br>The Contractor's scope of work includes supply of paints and painting of all equipments and structures as per the Employer’s standard color coding scheme which shall be furnished to the Contractor during detail engineering stage. The painting of various components shall comply with the requirements stipulated in different part of this specification. However, for components where no specific requirement is stipulated, the painting conforming to the requirements stipulated below shall be provided. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| | (i) Surface preparation shall be blast cleaned conforming *to* Sa *2-1/2* Swiss Standard.<br>(ii) Primer coat shall consist of epoxy resin based zinc phosphate primer having minimum DFT of 100 microns.<br>(iii) Intermediate coat (or under coat) shall consist of epoxy resin based paint pigmented with Titanium dioxide with minimum DFT of 100 microns.<br>(iv) Top coat shall consist of one coat of epoxy paint suitable pigmented of approved shade and colour with glossy finish and DFT of 75 microns. Additionally finishing coat *of* polyurethane of minimum DFT of 25 microns shall be provided. |
| 1.05.00 | **Pre-commissioning and Commissioning Activities** |
| 1.05.01 | Contractor's Scope shall include all pre-commissioning and commissioning activities, required for successful performance of all equipments and systems under this package. Contractor's scope shall also include supply of all materials and services including the following for successful conductance of pre-commissioning and commissioning activities: |
| 1.05.02 | Complete pre-commissioning work including tests of facilities and all other tests as mutually agreed in the Contractor's quality assurance program as well as those identified in the specification. |
| 1.05.03 | Commissioning and initial operation of the facilities. |
| 1.05.04 | Supply of all consumables as may be required for above pre-commissioning/ commissioning activities |
| 1.05.05 | Supply of all temporary equipment such as piping including supports, valves, blowers and all necessary instrumentation for successful conductance of pre-commissioning and commissioning activities. All temporary equipments, blowers, valves etc. brought to sites, by the Contractor for pre-commissioning/commissioning purpose shall be in good working condition to ensure its safe and reliable operation at site. All such temporary equipments/components shall be brought to site at least three (3) months prior to commencement of relevant pre-commissioning/ commissioning activities. On receipt of the temporary equipments/components at site, the same shall be inspected by the Employer to ensure its safe and reliable operation and if in the opinion of the Employer the temporary equipments/ components are not in satisfactory conditions to ensure it's safe and reliable operation the same shall be immediately replaced by the Contractor. |
| 1.05.06 | The temporary equipments specifically brought by the Contractor solely for the pre-commissioning and commissioning work shall on completion of these activities, remain the property of the Contractor. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 1.05.07 | The selection of material of all the temporary equipments/ instruments shall be compatible with the service conditions expected during pre-commissioning/ commissioning activities. |
| 1.05.08 | All temporary equipments and instruments shall be clearly listed out in the bid. |
| 1.05.09 | Supply of all labour, skilled/ semi skilled supervisors, engineers and any other manpower. |
| 1.05.10 | The scope of Contractor shall also include necessary approach & Platforms for all the instruments required during commissioning and testing. These approach platforms shall be provided to meet all required safety norms and these shall be permanent nature. |
| 1.06.00 | **First Fill of Consumables, Oils & Lubricants**<br><br>All the first fill and one year's topping requirements of consumable such as grease, oil, lubricants servo fluids etc. which will be required to put the equipments covered under the scope of specifications, into successful commissioning/initial operation and to establish completion to facilities shall be furnished by the Contractor, unless specifically excluded under the Exclusions in these specifications and documents. Limestone shall be supplied by the Employer. |
| 1.07.00 | **Guarantee Tests**<br><br>The Guarantee tests for various equipment and systems shall be carried out as specified under Sub-Section-VI, Part-A of Technical Specification. All special equipment, tools and tackles, instruments, measuring devices required for the successful conductance of Guarantee Tests shall be provided by the Contractor, free of cost. All costs associated with the tests shall be included in bid price. |
| 1.08.00 | **Spare Parts**<br><br>The Contractor's scope of supply includes all the necessary commissioning spares, mandatory spares as described Sub-Section-VII / Part-A in the schedule of spare parts. The Employer reserves the right to finalize the exact quantities of the spare parts and effect price adjustment on the basis of the rates quoted by the Contractor. The Spare ordered by Employer shall be delivered at the site as per agreed delivery schedule. |
| 1.08.01 | **Mandatory Spares**<br><br>The Bidder shall indicate the prices for each & every item (except for items not applicable to the Bidder's design) in the 'Schedule of mandatory spares' whether or not he considers it necessary for the Employer to have such spares. If the Bidder fails to comply with the above or fails to quote the price of any spares items, the cost |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

of such spars shall be deemed to be included in the contract price. The Bidder shall furnish the population per unit of each item. Wherever sets are mentioned, the Bidder has to give the item details & prices of each item

1.08.02 **Recommended Spares**

In addition to the spares mentioned above, the Bidder shall also indicate in the 'Schedule of recommended list of spare parts', his recommended list of spare with unit prices, for three years of normal operation of the plant. The Employer reserves the right to buy any or all of the recommended spare parts. The Bidder shall also indicate the service expectancy period for the spare parts under normal operating conditions before the replacement is necessary. In case some of the spares parts become unapplicable due to change in design/engineering agreed by the Employer, the Employer reserves the right to procure some other spares whose prices are already available in the initial offer in lieu of such not applicable spares subject to the condition that the total amount of the initial order remains the same.

1.08.03 **Commissioning Spares**

It will be the responsibility of the Contractor to assess and furnish a list of all commissioning spars required for successful commissioning of all the equipment covered under the contract. Such a list shall be furnished by the Contractor within 8 months from the date of LOA, separately for each equipment and shall be reviewed by NTPC and discussed for mutual agreement. The commissioning spares will be so identified as not to allow the Initial operation to suffer for want of such commissioning spares. The identification of commissioning spares will not in any way relieve the Contractor of any of his responsibilities of satisfactory performance under the provisions of other conditions of contract. All the commissioning spares shall be deemed to be included in scope of the Contractor as a part of the respective equipment package at no extra cost to the Employer.

1.08.04 **Packing & Preservation**

Each spare part shall be clearly marked or labeled on the outside of the packing with its description. When more than one spare part is packaged in a single case, a general description of the contents shall be shown on the outside of such a case and other packages must be suitably marked and numbered for the purpose of identification. All cases, containers or packages, are liable to be opened for such examination as may be considered reasonable by the Engineer. In case of equipment supplied with grease/lubricants from imported origin, the supplier shall clearly indicate the indigenous equivalent of the grease/lubricant and source of supply so as to enable the Employer to procure these items from indigenous sources.

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 1.09.00 | **Special Tools & Tackles and Test/Measuring Equipments**<br><br>One set of all special tools and tackles including testing, calibrating and measuring instruments required for erection, assembly, disassembly and maintenance of all equipments/systems covered under the scope of the Contractor shall be supplied by the Contractor. These shall not be used for erection/commissioning purposes and shall be in an unused and new condition, when they are handed over to the Employer. A list of such special tools and tackles shall be submitted along with the offer. |
| 1.10.00 | The scope of the Contractor includes complete design and engineering, technical co-ordination (including participation and arranging technical co-ordination meetings), finalization of drawings/documents, submission of engineering drawing/documents and processing of their approvals by the Employer as detailed in Part-C, Section-VI and other relevant clauses given elsewhere in the technical specification.<br><br>Further, the scope shall also include submission, in proper shape & format, of all types of manuals, handbooks & documents in requisite numbers to the Employer at different phases of the project as per the requirement of Employer. |
| 1.10.01 | Bidder shall furnish all relevant data required by the Employer, at interface points within 45 days of notification of award. |

|---|---|
| **LOT-IA PROJECTS**<br>**FLUE GAS DESULPHURISATION (FGD) SYSTEM PACKAGE** | **TECHNICAL SPECIFICATION**<br>**SECTION-VI**<br>**BID DOCUMENT NO.: CS-0011-109(1A)-2** |

# SUB-SECTION-III-A1

# FLUE GAS DESULPHURISATION SYSTEM

| | |
|---|---|
| **LOT-IA PROJECTS**<br>**FLUE GAS DESULPHURISATION (FGD) SYSTEM PACKAGE** | **TECHNICAL SPECIFICATION**<br>**SECTION-VI**<br>**BID DOCUMENT NO.: CS-0011-109(1A)-2** |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| | **SCOPE OF SUPPLY** |
| **1.00.00** | The contractor's scope of supply shall include engineering, design, manufacture, supply, erection, commissioning and testing of complete mechanical, electrical, C&I and associated civil and structural works for Flue Gas Desulphurization system and its auxiliaries for **Lot 1A Projects**, as detailed in this specification. Steam generator (in Employer's scope) shall be super-critical, balance draft, dry bottom, pulverised coal fired type. The characteristics of the coal, ash and other relevant design data is given in Part-A, Sub section-V of this specification. The FGD system shall be necessarily based on Wet Lime Stone FGD technology and is intended to reduce the emissions of Sulphur Dioxide in flue gas produced by coal being fired in boiler to the limits specified elsewhere in the technical specification. |
| 1.01.00 | Complete Electrical & Control & Instrumentation system as required for the FGD system shall be included in the scope of supply. All electrical drives and actuators required for the equipment/valves/dampers shall be in the contractor's scope. Complete Civil works, structures, foundation required for all the equipment etc. is included in the contractor's scope of work. The contractor shall also include all supporting and structural works, like pipe trestles, platforms, staircases in their scope of work. |
| 1.02.00 | The scope of supply identified for FGD system here are minimum requirements and unless specifically excluded from the contractor's scope in sub-section-V (Terminal Points and Exclusions), any equipment/system not included in this specification but integral to the system offered by the contractor to meet the intent of this specification, shall also be included in the scope of the contractor. |
| 1.03.00 | The FGD system shall have an independent absorber for each unit, common limestone milling systems and common gypsum dewatering system for each **Lot 1A** Project. The contractor shall also supply an auxiliary absorbent tank, common for the two units, for storage of absorber slurry of one unit. The contractor's scope shall include the absorbers, common limestone grinding system and gypsum dewatering system. |
| 1.04.00 | The scope of the contractor for FGD system shall include all items as shown in Tender drawings 0011-109-POM-A-001/002/003 (4 sheets). All ducting, dampers, expansion joints, pumps, valves, supports, structures etc. as required for completeness of system of absorbers, common limestone grinding system & common gypsum dewatering system shall also be in the scope of the contractor for each **Lot 1A** Project. |
| **2.00.00** | **SYSTEM DESCRIPTION** |
| 2.01.00 | The FGD system shall be based on Wet Limestone Forced Oxidation process. Each unit shall be provided with an independent absorber. |
| 2.02.00 | Gas from terminal point on ID fan discharge duct shall be taken directly to the absorber through Booster Fans. In the absorber, $SO_2$ in flue gas shall be removed by a spray of recirculating slurry, pumped by slurry recirculation pumps. Alternatively, the gas shall be bubbled through the absorber slurry to remove the $SO_2$ from flue gas. Only proven system supplied earlier by the FGD vendor shall be supplied by the contractor. |
| 2.03.00 | Compressed oxidation air shall be blown through the slurry in the oxidation tank, to oxidize the Calcium sulfite to gypsum. The oxidation system may be either grid |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| | sparge type or lance jet type or Jet Air Sprager or any other proven system as per the practice of the FGD vendor. |
| 2.04.00 | Clean gas from the absorber shall be taken to the Wet Chimney, to be provided by the Contractor, through three stage mist eliminators. The contractor shall terminate the flue gas duct (at a suitable point on the common flue gas duct to chimney-upstream of the chimney terminal point and outside the chimney). Provision shall be made for facilitating operation of unit with FGD bypass through existing stack. All modifications required including providing bypass damper & Gate is included in the scope of the Contractor. |
| 2.05.00 | Limestone to the absorbers of the units shall be supplied by a wet limestone grinding system, common for the units. Limestone shall be fed to the Limestone day silos which in turn will feed the Limestone to wet ball mill through a gravimetric feeder. The classified limestone slurry from the mills shall be stored in two (2 no) limestone slurry storage tanks to be provided by the contractor, from where the slurry shall be pumped to the individual absorbers by dedicated limestone slurry pumps. |
| 2.06.00 | The gypsum from the absorber(s) shall be pumped by dedicated gypsum bleed pumps to a common Gypsum Dewatering system consisting of two streams (2x100%) of primary and secondary hydrocyclone and vaccum belt filters for gypsum dewatering. The water removed from the absorber shall be recycled to the absorbers. The waste water from the system shall be collected and neutralized using lime and neutralized effluent shall be pumped at required pressure to waste water terminal point as indicated in Sub-section IV, Part A of the Technical Specification. Contractor shall provide complete automated waste water neutralization system along with automated lime feeding and dosing system to ensure required pH of waste water is ensured before being discharged at the terminal point. However, for Barh-I (3X660 MW) & Nabinagar (4x250 MW) where separate ZLD system for waste water treatment is being provided by the contractor, separate waste water neutralization system is not required to be provided. Washed and dewatered gypsum from the dewatering system shall be fed to a belt conveyor (in Employers scope). The contractor shall discharge the gypsum cake above the Gypsum handling belt conveyor being provided by the Employer. |
| 2.07.00 | A common auxiliary absorbent tank shall be provided for storage of absorber slurry of one absorber along with slurry pumps for pumping the slurry back to any of the absorber. |
| **3.00.00** | **LIMESTONE GRINDING AND SLURRY PREPARATION SYSTEM (COMMON FOR ALL UNITS) FOR EACH LOT 1A PROJECT** |
| 3.01.00 | The contractors scope shall include a common limestone grinding system for all the units and shall comprise of: |
| 3.01.01 | 2X100% Limestone storage silos each having minimum 24 hours storage capacity equivalent to the requirements of all the units. The storage silo shall be complete with supporting steel structure, platforms, staircase, air canons, power operated gates, gravimetric feeders, level switches, air relief devices, etc. |
| 3.01.02 | 2x100% wet horizontal ball mills with each mill sized to meet 110% of the maximum total limestone requirement of all the units at Design point. |
| 3.01.03 | Two (2) limestone slurry tanks, each tank sized to meet 12 hrs total limestone slurry storage requirement for of all the units at Design point, complete with all accessories and Agitator(s). |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 3.01.04 | 2x100% limestone slurry pumps for each absorber connected to each of the limestone slurry tank (total 4 nos. of pumps for 2x800 MW). Each pump catering to slurry requirement of each unit's absorber. |
| 3.01.05 | Limestone slurry piping to each absorber, along with recirculation lines, all isolation and control valves. |
| 3.01.06 | Each mill shall be fed from an independent Limestone bunker. Each mill shall be complete with the following items, as a minimum requirement:<br>i. A bunker outlet gate<br>ii. A gravimetric limestone feeder along with its drive and all other auxiliaries<br>iii. 1 no. separator tank with agitator(s).<br>iv. 2x100% Mill circuit pump.<br>v. 1 set of hydro-cyclone<br>vi. A peripheral/central drive system with motor, speed reducer gearbox and other auxiliaries.<br>vii. An auxiliary motor for inching operation with speed reducer.<br>viii. Complete lubricating system with appropriate lubricating medium storage facility (i.e. 1 no. lube oil tank for storage of lube oil and/or 1 no. grease storage drum as required).<br>ix. Lube oil pumps, coolers, duplex oil filters, connecting piping and necessary load & remote indicating instruments. Each lube oil pump and cooler shall have a 100% identical stand-by. |
| 3.01.07 | All connecting pipes / chutes along with necessary valves between various systems of the mill and from hydro-cyclone to common slurry storage tanks shall also be in the scope of the contractor. Necessary pipes, pipe supports, trestles etc. as required for the routing of the pipes shall be under the contractor's scope. Any item not included above but necessary for safe and reliable operation of the milling system proposed by the contractor shall also be in the contractors' scope. |
| 3.01.08 | The complete Limestone Grinding System shall be installed inside a building to be provided by the Contractor as per specifications specified elsewhere. The building must be complete in all respect specially facilitating the smooth operation and maintenance of associated equipment's of above systems by providing adequate maintenance space, handling facilities, walkways, staircase & one (1) number passenger cum goods elevator of minimum capacity of 1000 kgs for easy access & movement of man/materials. etc. The building shall be sufficiently ventilated. |
| **4.00.00** | **ABSORBER SYSTEM** |
| 4.01.00 | An independent Limestone Forced Oxidation (LSFO) type absorber system shall be provided for each unit. Each absorber system shall be complete with : |
| 4.01.01 | Absorber tower complete with re-circulating slurry spray header(s) and nozzles, three stage mist eliminators, wash water nozzles, oxidation tank integral to tower, oxidation headers and nozzles, and agitators and all internal systems integral to the working of the absorber. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 4.01.02 | 2x100% re-circulating slurry pump for each level of spray. Alternately, the contractor may offer a spare level of spray with each spray level served by an independent 100% pump. In case the contractor offers a single level of spray, one number of standby pump of the same capacity & head as the working slurry recirculation pumps shall be provided.<br><br>(In case the bidder offers an absorber with gas bubbling through the slurry, the complete gas distribution system to the slurry shall be in bidder's scope. No re-circulating pump and spray header and nozzles shall be required in such case.) |
| 4.01.03 | Complete Ducting System from ID fan common outlet duct to absorber tower & from absorber outlet to wet stack chimney. |
| 4.01.04 | 2x100% Centrifugal/ positive displacement type oxidation blowers / compressors. |
| 4.01.05 | 1 No. Emergency water tank for spraying water at inlet of Absorber for upset condition. |
| 4.01.06 | All connecting piping and valves required by the system. |
| 4.01.07 | 2x100% gypsum bleed pumps. |
| 4.01.08 | Piping from gypsum bleed pumps to gypsum dewatering system, along with recirculation lines (if required) necessary isolation and control valves. |
| 4.01.09 | Routing of the duct/piping system complete with supports, structures, trestles, absorber platforms, as required shall be in the contractor's scope of supply. |
| 4.01.10 | Passenger cum Goods elevator for each Absorber of minimum capacity of 1000 kgs. |
| 4.01.11 | All Slurry re-circulating slurry pumps & Oxidation blowers shall be installed inside a building to be provided by the Contractor as per specifications specified elsewhere. All pumps & Oxidation blowers shall be in straight line. The building must be complete in all respect specially facilitating the smooth operation and maintenance of associated equipment's of above systems by providing adequate maintenance space, handling facilities, walkways, staircase etc. The building shall be sufficiently ventilated. |
| **5.00.00** | **GYPSUM DEWATERING SYSTEM** |
| 5.01.00 | The employer envisages a common gypsum dewatering system for all the units. The common dewatering system shall receive the gypsum slurry from each absorber through slurry feed pipes and shall comprise of two sets of dewatering equipments. |
| 5.02.00 | Each set (suitable for handling /dewatering of all the unit) of dewatering equipment (01 working set + 01 standby set) shall comprise of the following items as a minimum requirement:<br>i. One set of primary hydro-cyclones<br>ii. One vacuum belt filter<br>iii. One no. vacuum receiver<br>iv. One no. vacuum pump<br>v. One set of secondary hydro-cyclones<br>vi. Complete piping and valves for the system along with wash water line. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 5.03.00 | This system shall be comprising of 2x100% gypsum dewatering system with each stream sized to dewater 110% of the maximum gypsum produced by all the units operating simultaneously at Design Point, with any range of limestone specified. All other stipulations with respect to sizing and design of the dewatering system, auxiliaries and other systems shall be in line with this specification. |
| 5.04.00 | The filtrate water from belt filter dewatering and wash water from washing system and the under flow from the secondary hydro-cyclone shall be taken to a common filtrate water tank. 2x100% pump shall be provided to supply wash water (for cake washing as well as belt cloth washing) to the belt filters. In addition, 2x100% Filtrate water pump (common for all units) shall be provided to recycle the filtrate to the absorber. The contractor shall include the necessary piping and valves in their scope. |
| 5.05.00 | The gypsum slurry from each Absorber shall be fed to a common Primary hydro cyclone feed tank (sized for minimum 1 hr storage capacity) from where it will be fed to each primary set of hydro-cyclone through 2x100% Primary hydro cyclone pumps. The overflow from the primary set of hydro-cyclone shall be taken to a common Secondary hydro cyclone feed tank. 2x100% Secondary hydro cyclone pumps shall be provided to feed 2x100% secondary hydro-cyclones. The underflow from the primary hydro-cyclone shall be fed to the 2X100% vacuum belt filter system. |
| 5.06.00 | The under flow from the secondary hydro-cyclone shall be taken to the filtrate water tank. The over flow from the secondary hydro-cyclone shall be taken to a waste water neutralization system to be provided by the Contractor. The waste water system shall be complete with lime feeding & storage system, neutralization tank, waste water tank, 2x100% waste water pumps along with complete piping, instrumentation, valves, piping support etc. to discharge waste water at required pressure to waste water terminal point as indicated in Sub-section IV, Part A, Section VI of the Technical Specification. All the piping with supports, trestles as required shall be in the contractors' scope. The contractor shall also include any other item not included above but necessary to make the system complete. |
| 5.07.00 | The complete Gypsum Dewatering System shall be installed inside a building to be provided by the Contractor as per specifications specified elsewhere. The building must be complete in all respect specially facilitating the smooth operation and maintenance of associated equipment's of above systems by providing adequate maintenance space, handling facilities, walkways for easy access & movement of man/materials etc. The building shall be sufficiently ventilated. |
| **6.00.00** | **AUXILIARY ABSORBENT TANK** |
| 6.01.00 | The employer shall provide a common auxiliary absorbent tank, common for all the units, of sufficient capacity for storage of absorber slurry of one unit. |
| 6.02.00 | The contractor shall provide 1x100% slurry pumps for pumping the slurry back to the absorber of any of the units in 8 hrs (max.). All agitators, piping, valves, fittings and other structures required for the system shall be included in the scope of the contractor. |
| **7.00.00** | **PROCESS WATER & COOLING WATER STORAGE & PUMPING SCHEME (FOR 2X800 MW)** |
| 7.01.00 | Two (2) Process water Storage tanks (each tank catering to the requirements of all the units) along with two numbers of 2x100 % Booster water pumps, if required, |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| | (Each pump catering to the process water requirements of all the units) along with all necessary piping, valves, control & instrumentation to feed the tank from terminal point. Process water Storage level is automatically controlled at operating level by controlling the water flow from the Cooling Tower Blow down System from terminal point. The two tanks shall be interconnected with an isolation valve. |
| 7.01.01 | 2x100% Process Water Pumps for each unit connected to each of the Process water Storage tanks (total 4 nos. of pumps for 2x800 MW) along with all necessary piping, valves, control & instrumentation. Each pump catering to process water requirement of one unit. |
| 7.02.00 | 2x100% Mist Eliminator Wash Water Pump for each unit connected to each of the Process water Storage tanks (total 4 nos. of pumps for 2x800 MW) along with all necessary piping, valves, control & instrumentation. Each pump catering to mist washing requirement of one unit. Alternatively, Contractor can use process water pumps for mist eliminator washing if it is the standard & proven practice of the Contractor or its Technology Collaborator. |
| 7.03.00 | One (1) clarified water Storage tanks (each tank catering to the clarified water requirement for all the units) along with two numbers of 2x100 % clarified Booster water pumps (Each pump catering to the clarified water requirements for all the units) from terminal point. |
| 7.04.00 | 2x100% cake washing Pumps for each Vacuum Belt Filter. |
| 7.05.00 | 2x100% cloth washing Pumps for each Vacuum Belt Filter. |
| 7.06.00 | Any other pump or storage system not specified but required to meet the system requirement shall be provided by the contractor with the approval of the Employer. |
| 7.07.00 | All drains & overflow lines from the tanks shall be terminated to the nearest trench/drain. |
| 7.08.00 | All the storage tanks shall be lined with vinyl ester based flake glass lining from inside. |
| **8.00.00** | **SUMP & SUMP PUMPS** |
| 8.01.00 | The contractor shall provide sumps of adequate capacity in each of the following area:<br>A. Each Absorber Area<br>B. Limestone Grinding system<br>C. Gypsum dewatering system<br>Waste water which might be generated during flushing and cleaning procedures of the equipment shall be collected in the sump and shall possibly be reused in the wet absorber. |
| 8.02.00 | The contractor shall provide agitators and sump pumps of required capacity in each of this area along with necessary pipes, isolation / control valves etc for pumping back the water in the sump into the respective system. The Interior surface of the Sumps shall be lined with replaceable chlorobuty/bromobutyl rubber lining of minimum 5 mm thickness or with vinly ester based flake glass lining of minimum 3 mm thickness. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 9.00.00 | **Elevator** |
| 9.01.00 | One (1) number passenger cum goods elevator of minimum capacity of 1000 kgs for each Absorber (to be provided in case height of absorber is higher than 20m) and One (1) number passenger cum goods elevator of minimum capacity of 1000 kgs in Limestone Grinding System Building shall be provided for easy access & movement of man/materials. |
| 9.02.00 | The scope shall include all items / accessories, service along with all electrical equipment etc. required to meet all design, installation, operation, safety, protection and other requirements of IS: 14665 (latest edition) (all parts), 'Lift' and service lifts'. This scope shall include all items / devices needed to comply with the requirements indicated elsewhere in the specification. The scope shall include provision of fireman's switch. |
| 9.03.00 | One (1) nos. adequately sized, Air conditioners each having minimum cooling capacity of 2.5 Ton shall be provided for each elevator machine room to make it dust proof. |
| 9.04.00 | Complete erection, testing and commissioning including all testing and commissioning materials, consumables and other tools and tackles required for erection. |
| 9.05.00 | To obtain necessary local administration permits / approvals and make arrangements for inspection and tests required thereby. |
| 10.00.00 | **Thermal Insulation, Lagging, Cladding & Refractories** |
| | Thermal Insulation alongwith aluminum cladding, lagging, reinforcement wiremesh, cleats and supports, shall be provided for all the equipments/surfaces having skin temperature more than 60 degree Celsius. The insulation thickness shall be designed based on criteria specified in Part-B, Section-VI. |
| 11.00.00 | **Buildings** |
| 11.01.00 | Contractor shall provide buildings for Limestone Grinding System; Slurry re-circulating pumps & Oxidation blowers / Compressors; Gypsum Dewatering System & FGD control room & Analyser room (if required). The buildings must be complete in all respect specially facilitating the smooth operation and maintenance of associated equipments of above systems by providing adequate maintenance space, handling facilities, walkways, staircase etc. |
| 12.00.00 | Contractor shall provide Corrosion protection painting for structures & equipments as described in the specification |
| 13.00.00 | Contractors scope shall include all Platforms, walkways, staircase, safety rails for access of each equipment, valves, dampers, gates, instruments etc. handling facilities adequately each component of FGD system. |
| 14.00.00 | The contractor scope shall also include the provision of FGD trestle for routing of air & water lines, slurry lines, steam line, waste water, etc.. required for the complete process operations. |
| 15.00.00 | Contractor shall provide air conditioning for the FGD control room and Analyser room (if separately provided) & ventilation for the FGD system buildings as detailed in Sub-Section III-A2. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 16.00.00 | Contractor shall provide compressed air system for the FGD system as detailed in Sub-Section III-A3. |
| 17.00.00 | Contractor shall provide FIRE FIGHTING SYSTEM as detailed in Sub-Section III-A4. |
| 18.00.00 | Contractor shall provide EQUIPMENT COOLING WATER SYSTEM as detailed in Sub-Section III-A5. |
| 19.00.00 | Contractor shall provide Limestone & Gypsum handling & storage system for FGD as detailed in Sub-Section III-A6. |
| 20.00.00 | Contractor shall provide ZERO LIQUID DISCHARGE SYSTEM for FGD waste water for Barh-I (3X660 MW) & Nabinagar (4x250 MW) as as detailed in Sub-Section III-A7. |
| 21.00.00 | The scope of civil works shall be as per Sub-Section-III D. |
| 22.00.00 | Associated Electrical and Control & Instrumentation systems for FGD as detailed in Sub-Section-IIIB & Sub-Section-IIIC respectively of Part-A/Section-VI of this specification. |
| **23.00.00** | **Booster Fan & Isolation Gates** |
| 23.01.00 | For each unit, two (2) nos. Booster Fans of axial type, Constant speed, variable pitch controlled each with drive motor, base plates, foundation bolts and nuts, inlet box, discharge case, coupling, coupling guard and suitable arrangement to prevent rain water entry to fan motor. Each Booster Fan shall be provided with bearing lubrication and hydraulic blade pitch control unit(s) consisting of<br>(1) 2x100% oil pumps each with motor, coupling and coupling guard.<br>(2) 2x100% oil coolers.<br>(3) 2x100% filters, differential pressure switches, etc.<br>(4) One (1) oil storage tank.<br>(5) Instrumentation, vibration monitoring, inter connected piping, valves and fittings including pressure relief valves and non return valves.<br>(6) Electrical actuator with accessories etc.<br>Alternatively, a forced oil lubrication system (consisting of 1to 6 above ) common to bearing lubrication and for servo motor operation to each BF Fan will also be acceptable.<br>At least two (02) nos. of duplex thermocouples or duplex platinum RTDs (100 ohm at $0^{o}C$) and one no. of temperature indicators shall be provided for bearing metal temperature measurement, control and monitoring.<br>Booster fans shall be suitable for the type of foundation being provided. |
| 23.02.00 | Motorized Guillotine type gates with 2x100% seal air fans shall also be provided at suction & discharge of each Booster Fan. The Gates shall be designed for tight shut-off. The design of the gates shall ensure 99.95% leak tightness without seal air. The gates shall be 100% leak tight with seal air fans under the above conditions. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 24.00.00 | Contractor shall provide Low Height Wet Chimney(s) as per the criteria & specifications specified elsewhere in the specification for the project. |
| 25.00.00 | **Wet Stack Condensate Collection System** |
| 25.00.01 | Wet stack of 150 metre height shall be provided with a stack condensate collection system to avoid the carryover of the condensate/acidic dews/water droplets/Gypsum coming out of the stack. Design of the wet stack condensate system should be such that all the condensate are collected in the stack itself and no water droplet/condensate come out of the chimney and preventing falling of the acidic dews/water droplet/gypsum from the chimney in the plant/nearby area. |
| 25.00.02 | Drain piping shall be of suitable material from corrosion point of view. |
| 25.00.03 | All Stack liquid collection shall be easily accessible for O&M. |
| 25.00.04 | The design of the stack condensate collection system shall be provided by the bidders in its bid. |
| 25.00.05 | A common Nickel based alloy material storage/neutralizing tank for the both the units of storage capacity of 12 hrs of stack condensate of both the stack shall be provided. Storage tank/neutralization tank shall be complete with dosing, mixing and preparation system. After neutralization of the stack condensate collection, same shall be pumped to common drain system. Contractor shall provide 2 X100% pumps, complete with valves, piping fittings, level control/monitoring etc. Alternatively, bidder may propose its proven system for disposal of the condensate system in its bid for Employer's consideration. All the material in contact with the condensate shall be of suitable material for the operating duty. |
| 25.00.06 | Stack outlet liquid collector shall be designed in such a way so that the liquid condensate film near the exit of the stack is collected instead of carrying with the exit gas. Bidders shall provide all these details in its bid. |

# SUB-SECTION-III-A2

# AIR CONDITIONING, VENTILATION SYSTEM & COMPRESSED AIR SYSTEM

| | |
|---|---|
| **LOT-IA PROJECTS**<br>**FLUE GAS DESULPHURISATION (FGD) SYSTEM PACKAGE** | **TECHNICAL SPECIFICATION**<br>**SECTION-VI**<br>**BID DOCUMENT NO.: CS-0011-109(1A)-2** |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

**1.00.00** **AIR CONDITIONING SYSTEM**

**a) General**

The scope includes Engineering, Supply, Construction, Erection, Testing and Commissioning for Complete Air conditioning system consisting of D-X units with refrigerant piping & valves, Air handling units, Hi-wall split air conditioner /Cassette Air conditioners, Packaged Air Conditioners, Fresh air fans, air distribution system (ducting, filters, isolation dampers, motorized fire dampers, diffusers, grills, volume control dampers, etc.) etc., along with all electrical equipment and instrumentation as required for all the buildings which are in the scope of the bidder, as detailed out in Part-B of Section-VI.

b) **Air-conditioning system for F.G.D Control Room Building and ZLD control room building (if provided)**

Air cooled condensing units (D-X type) type air conditioners with AHU of suitable capacity with 100 % redundancy ( as per actual heat load calculation ) shall be provided .

c) SO2 analyzer room (if required) and other air conditioned offices/areas covered under this package shall be provided with Ductable/Non ductable Split air conditioners etc. as per Design criteria specified in Chapter Salient Design Data. Non ductable Split air conditioner shall conform to minimum three (3) star (***) rating and above of latest version of Bureau of Energy Efficiency (BEE) HVAC code issued by Ministry of Power, Govt of India.

d) Supply of Mandatory spares as specified.

e) Any additional items required to make the system complete.

f) For Air conditioning system, the Bidder shall provide all Instrumentation systems, accessories and associated equipment, which are included in Bidder's scope, in a fully operational condition acceptable to the Employer. The Bidder shall also provide all material, equipment and services which may not be specifically stated in the specifications but are required for completeness of the equipment/systems furnished by the Contractor and for meeting the intent and requirements of these specifications.

g) Contractor shall provide microprocessor/PLC/GIU based control system for control and monitoring of air conditioning system as per manufacturer's standard practice. However relative humidity and temperature measurement of all control rooms and all major air-conditioned areas shall be made available in FGD/ ZLD control system. Control and monitoring of air conditioning system from FGD/ZLD control system is also acceptable.

h) Apart from the above, any area/building which are in the scope of the bidder and require air conditioning, the same shall be provided with air conditioning system, as detailed out in Part-B of Technical Specification.

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 1.02.00 | **Redundancies of equipments:**<br><br>100% standby unit shall be kept for FGD/ZLD control room, SO2 analyzer room (if required) and other air conditioned offices/areas. |
| **2.00.00** | **VENTILATION SYSTEM** |

a) **General**

The scope includes Engineering, Supply, Construction, Erection, Testing and Commissioning for Complete Ventilation system consisting of Modular type Unitary air filteration Units, Supply air fans, water pumps, exhaust air fans, louvers, filters, ducting, diffusers, piping, instrumentation etc., for all the buildings which are in the scope of the bidder, as detailed out in Part-B of Section-VI.

b) **Non-A/C areas of F.G.D Control Room Building and ZLD control room building (if provided)**

**Minimum** One (1) nos. of Evaporative type Unitary Air Filtration (UAF) unit (of metallic construction- modular type) of suitable capacity with all accessories, DIDW centrifugal fan (1 x 100%), circulating water pump (1 x 100%), etc. as detailed out in technical specification shall be provided.

c) **Miscellaneous areas:** All other areas like Limestone Grinding system building, Gypsum dewatering building, Recirculation pump & Oxidation blower/compressor building etc & all other non-air conditioned areas covered under this package shall be ventilated by a combination of supply/exhaust fans and fresh air in-take / back draft louvers. For ventilation of Battery rooms and Oil rooms, fans with flame proof motor shall be used. Further, toilets shall be provided with propeller type exhaust air fans.

d) Supply of Mandatory spares as specified.

e) Any additional items required to make the system complete.

f) For Ventilation system, the Bidder shall provide all Instrumentation systems, accessories and associated equipment, which are included in Bidder's scope, in a fully operational condition acceptable to the Employer. The Contractor shall also provide all material, equipment and services which may not be specifically stated in the specifications but are required for completeness of the equipment/systems furnished by the Contractor and for meeting the intent and requirements of these specifications.

g) Contractor shall provide microprocessor/PLC/GIU based control system for control and monitoring of ventilation system as per manufacturer's standard practice. Control and monitoring of ventilation system from FGD /ZLD control system is also acceptable.

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| **3.00.00** | **COMPRESSED AIR SYSTEM**<br>a) Two (2) numbers (1 working+ 1 standby) oil free, rotary screw type air compressors for Instrument air and service air applications for FGD and ZLD plant (if provided) each of adequate capacity & adequate pressure, with their motor drives and other accessories as per equipment sizing criteria mentioned in Part A, Sub-section 'Salient design data' of technical specification. However, minimum capacity of each air compressor shall be 15$Nm^3$/min at discharge pressure of 8.5 $Kgf/cm^2$ (g).<br>b) Two (2) numbers (1 working+ 1 standby) Air Drying Plants (one for each air compressor) of adequate capacity with all interconnecting piping, valves, fittings, etc.<br>c) Two number Air Receiver each of capacity 2 $m^3$ (normal) at the discharge of each Air compressor.<br>d) One number Air Receiver of capacity 2$m^3$(normal) for ZLD plant if ZLD plant is far away from compressor location.<br>g) Monorail with Chain pulley block of minimum 2 tons or 125% of heaviest parts of equipment to be lifted whichever is more.<br>h) Complete instruments, control system with panels as required for compressed air system.<br>i) Complete compressed air and piping network for service air and instrument air application in FGD and ZLD system (if provided).<br>j) Supply of Mandatory spares as specified.<br>k) Any additional items required to make the system complete. |
| **4.00.00** | **General**<br>i. All associated Civil & structural work for air conditioning and Ventilation system and compressed air system.<br>ii. Set of commissioning spares as may be required during erection and commissioning.<br>iii. One (1) set Special tools and tackles required for maintenance of all the Mechanical, Electrical and C & I equipment under the scope of bidder.<br>iv. All steel / cast iron inserts, plates, bolts, nuts, sleeves, metallic-fasteners etc. to be grouted in concrete work and used to hold/ support the equipment/piping / ducting being supplied and erected under this specifications.<br>v. Any additional items required to make the system complete.<br>vi. Initial charge of all lubricants and grease, etc. Further, all consumables required for PG tests shall also be in Bidder's scope of supply. Grouting, dressing and final finishing of all foundations of various equipment, etc. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| | vii. Repairing and making good/ sealing of cutouts / openings in floors, roofs and walls, for executing the works under this system and making them water tight as directed by the engineer.<br><br>Corrosion protection painting for all equipment / items by Bidder as detailed in relevant clauses of technical specification. |

# SUB-SECTION-III-A**3**

# FIRE FIGHTING SYSTEM

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

**1.00.00 FIRE DETECTION AND PROTECTION SYSTEM:**

The scope includes Engineering, Supply, Construction, Erection, Testing and Commissioning for Fire Detection and Protection System for FGD area. Following system has been envisaged:

**1.1 Hydrant System:**

Complete hydrant system (pipe, hydrant valves, landing valves, water monitors, hoses, branch pipes and nozzles etc) for FGD area shall be provided as per TAC norms. Tapping for hydrant system shall be provided from nearby existing hydrant header.

**1.2 HVW Spray System:**

Automatic fire detection cum high velocity water spray system shall be provided for various transformers (having oil capacity 2000 liters or more) envisaged under this package. Tapping for HVW spray system shall be provided from nearby existing hydrant header.

**1.3 MVW Spray System:**

Automatic fire detection cum medium velocity water spray system for the various cable galleries envisaged under this package. Tapping for MVW spray system shall be provided from nearby existing Spray header.

**1.4 Fire Extinguishers**

Five numbers each type of Portable fire extinguishers consisting of water type, dry chemical powder type, CO2 type shall be provided in various facilities of FGD system.

**1.5 Analogue addressable type Fire Alarm System / Annunciation Panels:**

Analogue addressable type Fire Alarm System consisting of Multi sensor type detectors, Linear Heat Sensing Cable (LHSC) detector, cabling, junction boxes, instrumentation, Fire Alarm cum control panels, repeater panels, etc. for various areas/equipment as detailed out below:-

a) All MCC / switch gear room / Control room shall be provided with Multisensor type detectors.
b) All Conveyors and Cable Galleries shall be provided with Linear Heat Sensing Cable detectors.
c) All cable galleries shall be provided with Multisensor type detectors.

**1.6** The Contractor is responsible for getting the complete approval of the system elaborated in this specification from TAC accredited professional(s).

**1.7** If the contractor feels, it is necessary to include any other items, which, in his opinion, may be required to comply with TAC regulations, other than those indicated in the specification, the same shall also be supplied, erected and commissioned. Any amendments, modified rules to the latest TAC regulations till techno-commercial bid opening date should be considered by contractor to fulfill the above condition.

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

**1.8** Successful contractor shall furnish complete hydraulic calculation.

**1.9** Supply of complete mandatory spares as specified elsewhere.

**1.10** Set of commissioning spares as may be required during erection and commissioning.

**1.11** One (1) set Special tools and tackles required for maintenance of all the mechanical, electrical and C & I equipment under the scope of Contractor.

**1.12** Any additional item/ equipment required to make the system complete.

**1.13** Grouting, dressing and final finishing of all foundations of various equipment, etc.

**1.14** Supply of structural supports for piping in trench and for above ground piping wherever applicable.

**1.15** Supply & application of protective coatings and wrapping for buried pipes and pipes in RCC trenches, and painting for above ground piping, valves, pipe supports, etc. as detailed in technical specifications.

**1.16** Excavation, preparation of bed, laying, backfilling with compaction of soil for all underground/buried piping. Also, breaking and re-erection of paving for buried piping (if any)

**1.17** Preparation of necessary detailed drawings including schematics, layouts, isometrics, fabrication drgs, erection drgs, etc. as required and also development of “As Built Drgs”.

**1.18** Conductance of Performance and Guarantee test as per Standard Guaranteed test procedure given elsewhere in the specification.

**1.19** All pylons required for transformers, shall be anchored to soak pit base slab of individual transformer, paved area outside soak pit, etc. using anchor fasteners of adequate capacity. Subsequent to fixing the pylons, lower part of pylon which would be within filled up gravel portion shall be encased with concrete by Employer for corrosion protection.

# EQUIPMENT COOLING WATER SYSTEM

| | |
|---|---|
| **LOT-IA PROJECTS**<br>**FLUE GAS DESULPHURISATION (FGD) SYSTEM PACKAGE** | **TECHNICAL SPECIFICATION**<br>**SECTION-VI**<br>**BID DOCUMENT NO.: CS-0011-109(1A)-2** |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

**EQUIPMENT COOLING WATER SYSTEM**

**(FOR NABINAGAR - 3 X 660 MW & BARH-I(3 X 660 )**

1.00.00 **SCOPE**

1.01.00 **Equipment Cooling Water System**

The Bidder shall provide common Equipment Cooling water system for all three units with a closed circuit cooling system for cooling of the various auxiliaries of FGD system. The equipment cooling system shall include the following and as detailed out in relevant sub section of Part-B of Technical Specification.

(a) One cold water header tapped from CW Blowdown from CW pump discharge pipe.

(b) Hot secondary water pipe from the PHE's, discharging into the FGD system as process water.

(c) 2x100% capacity self cleaning strainers on the secondary side.

(d) 4 x 33.33% (3 working + 1 standby) capacity of plate type heat exchangers.

(e) 5 x 33.33% ( 3 Working + 2 standby) capacity FGD Auxiliary (Secondary) Cooling water pumps, along with drives.

(f) 4 x 33.33% ( 3 Working + 1 standby) capacity FGD DM (Primary) cooling water pumps along with drives.

(g) One Overhead DM water tank (ECW O/H tank).

(h) Alkali (Sodium Hydroxide) preparation tank, agitator and motor, piping, valves etc.

(i) Piping for normal makeup to ECW tank from existing DM water transfer pump, piping for emergency makeup to ECW tank from condensate transfer pump, other piping, fittings, supports, valves and specialties including instrumentation and electrical equipment as required and as specified for the system.

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |

1.00.00 **SCOPE**

1.01.00 **Equipment Cooling Water System**

The Bidder shall provide common Equipment Cooling water system for all two units with a closed circuit cooling system for cooling of the various auxiliaries of FGD system. The equipment cooling system shall include the following and as detailed out in relevant sub section of Part-B of Technical Specification.

(a) One cold water header tapped from CW Blowdown from CW pump discharge pipe.

(b) Hot secondary water pipe from the PHE's, discharging into the FGD system as process water.

(c) 2x100% capacity self cleaning strainers on the secondary side.

(d) 3 x 50% (2 working + 1 standby) capacity of plate type heat exchangers.

(e) 4 x 50% (2 Working + 2 standby) capacity FGD Auxiliary (Secondary) Cooling water pumps, along with drives.

(f) 3 x 50% (2 Working + 1 standby) capacity FGD DM (Primary) cooling water pumps along with drives.

(g) One Overhead DM water tank (ECW O/H tank).

(h) Alkali (Sodium Hydroxide) preparation tank, agitator and motor, piping, valves etc.

(iii) Piping for normal makeup to ECW tank from existing DM water transfer pump, piping for emergency makeup to ECW tank from condensate transfer pump, other piping, fittings, supports, valves and specialties including instrumentation and electrical equipment as required and as specified for the system.

# SUB-SECTION-III- A**5**

# LIME STONE & GYPSUM HANDLING SYSTEM

| | |
|---|---|
| **LOT-IA PROJECTS**<br>**FLUE GAS DESULPHURISATION (FGD) SYSTEM PACKAGE** | **TECHNICAL SPECIFICATION**<br>**SECTION-VI**<br>**BID DOCUMENT NO.: CS-0011-109(1A)-2** |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

**1.00.00 INTENT OF SPECIFICATION**

This specification is intended to cover the following activities and services in respect of all the equipment of **Lime Stone Handling Plant & Gypsum Handling plant** to be installed for **FGD Package**, completely covering the following activities and services in respect of all the equipment specified and covered under the specifications and read in conjunction with "Scope of Supply & Services", Part-A, Section–VI of Technical Specification.

(i) Detailed design and engineering of all the equipment and equipment system(s).

(ii) Complete manufacture including shop testing/ type testing.

(iii) Providing engineering data, drawings, Commissioning procedures and O & M manuals, etc. for the Employer's review, approval and records.

(iv) Packing and transportation from the manufacturer's works to site including transit insurance, customs clearance/ port clearance, if required.

(v) Receipt, unloading, storage, preservation, conservation and insurance of equipment at site.

(vi) Fabrication, pre-assembly, (if any), erection, testing and putting into satisfactory operation of all the equipment including successful completion of facilities.

(vii) Associated civil, structural, architectural and electrical works.

(viii) Commissioning and completion of facilities and Performance Guarantee Tests after successful completion of initial operation.

(ix) Furnishing of spares on FOR site basis and handing over to NTPC stores.

(x) Reconciliation with custom authorities, if applicable.

(xi) Satisfactory completion of the contract.

1.01.00 Before submitting his bid, the Bidder should inspect and examine the site and its surroundings and should satisfy himself as to the nature of the ground and subsoil, the quantities and nature of work, materials necessary for completion of the work and their availability, means of access to site and in general shall himself obtain all necessary information as to risks, contingencies and other circumstances which may influence or affect his offer. No consequent extra claims on any misunderstanding or otherwise shall be allowed by the Employer.

1.02.01 Based on site visit, bidder shall submit layout for Limestone handling plant & Gypsum handling facilities along with their techno-commercial bid. Bidder shall bring out all necessary modification and relocation of existing facilities, if required, along with proposed Layout submitted with the bid. ***In the absence of this, the bid shall be deemed incomplete and may be liable for rejection***.

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 1.02.02 | NTPC reserves the right to freeze a basic layout for each NTPC plant post techno commercial bid discussions. |
| 1.03.00 | The Bidder shall be responsible for providing all material, equipment and services, specified or otherwise which are required to fulfill the intent of ensuring operability and the reliability of the complete system covered under this specification. |
| 1.04.00 | Cleaning of any debris produced by the bidder during erection and commissioning shall be done immediately at each front by the bidder. |
| 1.05.00 | Bidder to extend all help and documentary support for compliance and addressing any statutory issues raised at site which pertains to the area/ work under bidder's scope. |
| **2.00.0** | **DETAILED SCOPE** |
| **2.01.00** | **Limestone Handling Plant (LHP)** |
| 2.01.01 | Limestone will be received to power plant either through road by trucks and/or through Indian railway rakes.<br><br>**Lime stone received through Road** shall be unloaded by Two (2) numbers Truck Tipplers each of minimum 20T capacity to discharge Limestone on to Box Feeders/ Surface Feeders/ Truck Unloading Hopper, complete with all mechanical, electrical and C&I, civil & structural works for unloading Limestone by truck tipplers.<br><br>Two (2) numbers Box Feeders/ Bulk-material Receiving Unit/ Underground Truck Unloading Hopper / Surface feeder, for unloading of limestone from trucks/ self-tippling trucks/ loader shovels, complete with drives, accessories all mechanical, electrical and C&I, Civil & structural works, including its supporting foundations etc. This unit shall feed limestone onto the conveyor before Limestone crusher house.<br><br>**Limestone received through Indian Railway Rakes** will be unloaded in one of the side discharge Wagon Tipplers or Track Hopper of existing Coal Handling Plant (CHP). Before existing Crusher house of CHP, the unloaded limestone will be fed to new limestone crusher house through series of new conveyors/bucket elevators. All necessary modifications involving Mechanical, Electrical, C&I, Civil and Structural works in the existing CHP for taking feed to new limestone path shall be in the scope of the bidder. |
| 2.01.02 | Limestone shall be conveyed to usage point through double stream of capacity 100% each for conveying & crushing. |
| 2.01.03 | Lime stone Belt Conveyors / Bucket Elevator complete with associated tunnel, conveyor galleries along with its supporting structures, short supports, stringers, deck plate, seal plate, conveyor foundations, drive motors, drive units, pulleys, idlers, gravity take ups including guides, pits etc., internal and external belt cleaners, pull chord switches, belt sway, zero speed switches, electro-hydraulic thruster brakes, all electrical etc. including all civil, structural and architectural works for tunnel, conveyor gallery, gallery supporting trestles and their associated foundations, as applicable. |
| 2.01.04 | One (1) number Lime stone crusher house (CH) complete with all civil, structural, architectural and electrical works etc. accommodating suitable nos. crushers and |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| | associated Vibrating feeders, R&P and Rod gates etc., passenger cum goods elevator, conveyors, chute work along with actuator operated flap gates, monorails & hoists, hoist maintenance platform, external and internal staircases, hand rails and other equipment such as sampling unit, dust extraction system etc. as specified elsewhere. |
| 2.01.05 | Suitable numbers of vibrating feeders in limestone crusher house to feed the limestone to crushers with drives, dust hoods, all mechanical, electrical accessories and supporting structures etc. |
| 2.01.06 | Suitable numbers of hammer crusher complete with drives, accessories all mechanical, electrical civil & structural works, including crusher supporting foundations, vibration isolation system with springs and viscous dampers, vibration monitoring system etc. |
| 2.01.07 | Crushed limestone Reclaim Hopper (RH) /Silo, machinery hatches at each of end of limestone storage shed for RH, fully / partially underground or over ground junction towers, tunnels and pent houses, complete with civil, structural, architectural, electrical and C&I works including over ground structural shed for entire length of limestone ground storage and machinery hatches, removable chequered plate covers over openings in machinery hatches for handling underground equipment like paddle feeders etc. (as applicable). For Limestone storage shed and for all buildings, other equipment such as DS system, ventilation system, drinking water system, drainage system etc. as specified elsewhere in the specification. |
| 2.01.08 | Junction towers (along with underground / over ground RCC structures), tunnel/conveyor gallery / bucket elevator complete with all civil, structural, architectural, electrical and C&I works including chutes, monorails, hoists/chain pulley blocks, hoist maintenance platforms, external staircases, dust debris chutes etc. All over-ground junction towers shall have separate debris disposal chute up to the ground floor. Underground junction towers shall be provided with machinery hatches along with monorail, electric hoist for handling equipment from underground to over ground. |
| 2.01.09 | Complete chute work along with chute block switches and actuator operated flap gates, mobile discharge pulleys (as applicable) in all junction towers between various conveyors. |
| 2.01.10 | Suitable number of motorized travelling tripper / flow diverter plough (as applicable) on each feeding conveyor for feeding the crushed limestone to the covered storage shed. Trippers shall be complete with all mechanical, electrical equipment, rails, chute work, rail supporting structure (along with structural stools, as required), cables with cable festooning arrangement, thruster brakes, rail clamps, electric hoist, actuator flap gates etc. |
| 2.01.11 | One number of covered storage shed for crushed limestone. The storage shed shall be sufficient to store limestone equivalent to consumption of minimum 7 days at Design Point (Generation of all units to be considered). A reclaim hopper shall be provided below the limestone storage shed for the entire length of the stockpile. Alternatively, suitable number of Limestone Storage Silos to store limestone equivalent to consumption of minimum 7 days. Suitable number of Belt feeders below silos shall be provided taking feed from silo and discharging onto onward conveyors/ Bucket elevators. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 2.01.12 | Two (2) numbers paddle feeders (in case of covered storage shed) complete with all electrical, rails, supporting structures, end stops, cable reeling drums, trailing cables, and necessary arrangement for cabling on floor of reclaim hoppers along with accessories, shall be installed at the bottom of the reclaim hoppers to scoop the limestone from reclaim hoppers and feed limestone on to the underground conveyors. |
| 2.01.13 | Two (2) nos. of lime sampling units, one for as received limestone in crusher house and one for as used limestone in TP before feeding to limestone bunkers, complete with all accessories and electrical, civil, structural works, supporting structures, approach/maintenance platforms, hoists etc. |
| 2.01.14 | Suitable number of ploughs and its actuating mechanism shall be mounted on each conveyor to feed limestone into limestone mill bunkers. Alternatively, suitable nos. fixed Trippers on each conveyor to feed limestone into limestone mill bunkers. |
| 2.01.15 | Minimum four (4) Nos. sump pumps in limestone storage shed (in case of covered storage shed), and two (2) Nos. sump pumps in all TPs completely or partially underground complete with motors, local control panel, level switches, individual discharge piping with fittings and valves to nearest plant drain including pipes etc. upto disposal point. |
| 2.01.16 | Adequate number of ventilation equipment for ventilating the limestone reclaim hopper, underground tunnel of Conveyors, underground portion of Junction towers and limestone bunker bays (housing tripper/plough conveyors) complete with all mechanical, electrical, civil and structural works and associated foundations. |
| 2.01.17 | Pressurized Ventilation system for all Switchgear rooms, MCC rooms complete with all mechanical, electrical, accessories, civil and structural works. |
| 2.01.18 | Exhaust fans to be provided in all battery rooms and all toilets complete with electrical, civil & structural works etc. Supply and exhaust fans along with required ducting shall also be provided for all underground Structures/junction towers complete with all mechanical, electrical, civil and structural works and associated foundations. |
| 2.01.19 | One (1) number of passenger cum goods elevator with drives, all electrical, mechanical, civil, structural & associated foundation works, accessories and electrical to serve various floors of lime stone crusher house. |
| 2.01.20 | Two (2) numbers of in line magnetic separators (one no. on each conveyor feeding to crusher house) and two (2) number of suspended magnets, (one no. on each conveyor feeding to Limestone bunker (in case of covered storage shed)) on conveyors complete with reject chutes, reject trolleys, supporting arrangement and all mechanical, electrical, civil, structural works and accessories. |
| 2.01.21 | Four (4) numbers of metal detectors (min. one no. on each conveyor feeding to crusher house and conveyor feeding to Limestone bunker at FGD plant) complete with all mechanical, electrical, civil, structural works and accessories. |
| 2.01.22 | Four (4) numbers of electronic type belt scales (min. one no. on each conveyor feeding to crusher house and conveyor feeding to Limestone bunker at FGD plant) for continuous weighing, complete with all mechanical, electrical, civil, structural works and accessories. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 2.01.23 | Complete dust extraction system for control of fugitive dust in limestone storage shed / Silos, junction towers, crusher house complete with fans, drives, hoisting arrangements, ducting, piping, valves etc. electrical, accessories, civil, structural and architectural works. |
| 2.01.24 | Service water and potable water system for complete limestone handling plant. Water Pump houses & water tanks for service water, cooling water (as applicable) and potable water system. |
| 2.01.25 | Cooling water system (as applicable) for scoop couplings, for complete limestone handling plant. Air cooled type scoop couplings are also acceptable. |
| 2.01.26 | Monorails and electrically operated hoist blocks as well as hand operated chain pulley blocks for servicing/installation/easy replacement of drive machinery, different types of pulleys for all conveyors, GTU and other equipment from ground level to their locations and vice-versa & landing inside the respective Buildings. |
| 2.01.27 | One (1) number of belt vulcanizing machine, suitable for all belt widths in limestone handling system, complete with all mechanical, electrical, accessories and consumables for one year of consumption. Further belt jointing facilities as specified shall be provided. |
| 2.01.28 | Minimum one (1) no. Weighing Bridge for Road trucks / Tipplers shall be provided each in Limestone unloading area and in Gypsum Loading area. |
| 2.01.29 | All buildings shall be complete with all electrical, civil, structural, architectural works, cable trenches, fire safety walls, foundation, earth mat, fencing, earthing for transformers. All cables, duct banks, trenches, cable trestles shall be complete with associated civil/ structural work and necessary civil foundations. |
| 2.01.30 | Drainage of LHP buildings, tunnels, conveyor galleries and limestone storage shed / Silos including all civil & structural works as detailed out elsewhere in the specification. |
| 2.01.31 | All equipment/fittings, supporting structure, along with insert plates, bolts, accessories, MS sleeves, base plates, grouting as may be required and proper alignment etc. |
| 2.01.32 | Complete un-used set of all special tools and tackles, which are necessary or convenient for erection, commissioning and overhauling of any equipment, covered under the scope. |
| 2.01.33 | First fill of all consumables, e.g.; oils and lubricants for one year toppings requirements. |
| 2.01.34 | Preservative shop coating, final painting of all structures and equipment. |
| 2.01.35 | All inserts, anchor bolts, foundation bolts for Contractor's equipment, platforms etc. in the entire LHP. |
| 2.01.36 | All necessary grouting & finishing of the floor after welding at all such pockets & elsewhere is in Contractor's scope. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| **3.00.00** | **GYPSUM HANDLING PLANT (GHP)** |
| 3.01.00 | Gypsum shall be conveyed from the vacuum belt filter to the storage shed through a series of double stream conveyors and transfer points/junction towers. |
| 3.02.00 | One number of covered storage shed for gypsum. The storage shed shall be sufficient to store gypsum equivalent to gypsum generation of minimum 7 days at Design Point (Generation of all units to be considered). |
| 3.03.00 | Minimum four (2) Nos. sump pumps in gypsum storage shed complete with motors, local control panel, level switches, individual discharge piping with fittings and valves to nearest plant drain including pipes etc. up to disposal point. |
| 3.04.00 | Complete dust suppression system for control of fugitive dust in gypsum storage shed, complete with pumps, water tanks, drives, hoisting arrangements, ducting, piping, valves etc. electrical, accessories, civil, structural and architectural works. |
| 3.05.00 | Service water and potable water system for complete gypsum handling plant. Water Pump houses & water tanks for service water, cooling water and potable water system. Common pump house for Limestone handling plant gypsum handling plant is also acceptable. |
| 3.06.00 | Suitable number of motorized travelling tripper / Flow diverter (as applicable) on each feeding conveyor for feeding the gypsum to the covered storage shed. Trippers shall be complete with all mechanical, electrical equipment, rails, chute work, rail supporting structure (along with structural stools, as required), cables with cable festooning arrangement, thruster brakes, rail clamps, electric hoist, actuator flap gates etc. |
| 3.07.00 | Gypsum from storage shed shall be loaded to user's trucks using front end loader/ pay loader. |
| 3.08.00 | Complete ventilation system for gypsum storage shed. |
| 4.00.00 | Bidder to note that the above list is not exhaustive and any work required for integration of complete system and ensuring its satisfactory running shall be in the scope of work and supply for this package. |

# SUB-SECTION-III- A**6**

# ZERO LIQUID DISCHARGE SYSTEM

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

## FGD WASTE WATER TREATMENT (FGD WWT) SYSTEM FOR ZLD

**1.00.00 General**

1.00.01 A FGD Waste Water Treatment (FGD WWT) System for Zero Liquid Discharge (ZLD) shall be provided by the Contractor for storing, treating and re-using all wastewaters generated from Wet Limestone based FGD system for Barh STPP St.-I (3x660MW) and Nabinagar TPP (4x250 MW) Units. The contractor shall provide evaporative concentration process for FGD Wastewater Treatment Plant to achieve zero liquid discharge (ZLD). The treatment system shall be comprised of the systems like wastewater storage, suspended solid removal, Pre-treatment (including decalcification process), Evaporative concentration, Treated water disposal, Chemical feed, Sludge dewatering etc. The removed impurities from the FGD Waste Water Treatment (FGD WWT) plant will be bound in the form of solid cake, hence allowing the station to be complete ZLD.

1.00.02 The scope of work for the equipment and accessories to be furnished in accordance with this specification shall include design, manufacture, engineering, inspection and testing at Contractor's work(s), packing, forwarding to site, unloading, erection, supervision, pre-commissioning, testing, commissioning and performance testing of the equipment/systems indicated hereunder. Items though not specifically mentioned in the specification but needed to complete the equipment and systems to meet the intent of specification, shall also be deemed to be included unless otherwise specifically mentioned under exclusions.

1.01.00 **Wastewater storage, Suspended solid removal process, Pre-treatment system**

Pre-treatment system shall consist of FGD waste water storage tank (2x50%) to store FGD wastewater, GGH washing water etc., Aeration devices, lime, ferric chloride and soda ash unloading, storage, dosing & reaction system for pH adjustment, reaction and coagulation, Clarifier feed pumps, Primary Clarifier (1x100%), Secondary Clarifier (1x100%), Clarified water/Evaporator/Brine Concentrator (BC) feed tank, Evaporator/BC feed pumps, Sludge sumps, Filter press feed pumps, Filter press (2x50%), Filterate water tank, Filterate water transfer pumps, piping, valves, instrumentation etc. to make the system complete.

1.02.00 **Evaporative concentration system**

The softened wastewater shall flow to the evaporation phase of the plant. Contractor shall provide one independent train (1x100%) or two independent trains (2x50%) of Evaporative concentration system. The Evaporative Concentration system shall be comprised of Evaporator feed tank(s), feed pumps, Evaporator feed Heat exchanger(s), Deaerator(s), Mechanical Vapour Compressor(s), Evaporator(s), Evaporator Recirculation pumps, Distillate tank(s), Distillate Pumps, Vacuum pumps (If applicable), Seeding system, Chemical feeding system, vapour ducts, recirculation ducts, piping, valves, instruments etc. shall be provided as required as per system chemistry to make the system complete.

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

The Crystallizer (1x100%) system shall be equipped with Crystalliser feed tank, feed pump, Crystalliser Heater, Crystalliser Condenser, Crystalliser distillate pump, Crystalliser Vapour body, Crystalliser Recirculation pump, Crystalliser Condensate tank, Crystalliser Condensate Pumps, Centrifuge feed pump, Centrifuge (2x50%), Centrate tank, Centrate Pump, Anti foaming system, chemical feed system, vapour ducts, recirculation ducts etc. as required as per system chemistry to make the system complete.

Hoist(s) for various vessels in evaporative concentration system, pressure transmitters, level transmitters with root valves, drain pipes equipped with float traps, Y-strainers, bypass valves, shut-off valves etc. shall be provided as per system requirement.

1.03.00 **Chemical storage, dosing system**

Chemical storage and injection equipment comprising of all required chemical feed equipment like chemical storage tanks, chemical dissolving tanks, chemical injection tanks & pumps, agitators, heaters, fume scrubbers etc., necessary chemical unloading/transfer pumps, auto dissolving equipment (if polymer is used), level gauge for all chemical tanks etc., electric heater for caustic tank, electric heat tracing for caustic piping, chemical feed pumps, chemical dosing/injection pumps, all other necessary equipment and accessories etc. as specified and as per system requirement shall be provided to make the system complete.

1.04.00 **Other**

a) Exterior & interior equipment support foundation and foundation accessories such as sole plates, counter flanges with bolts, nuts, gaskets, packing, channel base, sub-sole plates, shims, wedges, foundation anchor bolts and nuts, anchor frame and nuts, grout, embedded materials, etc.

b) Piping and valves including safety and relief valves, hangers and supports etc.

c) All required insulation and lagging materials supply and installation.

d) Lifting devices such as crane, hoist, trolley and monorail, etc.

e) Set of connections, flow element flanges and all other items, required for performance test.

f) Complete lubricating oil system and cooling water system, wherever required.

g) All instruments, instrument nozzles, connections, root valves, sensing lines and their installation materials complete with instrumentation to measure and indicate all fluid conditions.

h) Consumable materials and/or erection spare parts which will be required for storage, installation, start-up, to put the equipments covered under the scope of specifications, into successful commissioning/initial operation and to establish completion of facilities shall be provided by the bidder, unless specifically excluded under the exclusions in the specifications and documents.

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

i) All the first fill & one year's topping requirement of consumable such as chemicals**,** greases, oil, lubricants, servo fluids etc. which will be required to put the equipments covered under the scope of specifications of Zero liquid discharge (ZLD) Plant for FGD waste water, into successful commissioning/initial operation and to establish completion of facilities shall be provided by the bidder, unless specifically excluded under the Exclusions in these specifications and documents. Suitable standard lubricants as available in India are desired. Effort should be made to limit the variety of lubricants to minimum.

j) All attemperator systems including piping, control valves, isolation valves, check valves and bypass valves.

k) Enclosures for required systems. These include sound, personnel protection, weather and any other enclosures necessary to ensure a complete operating system.

l) Grounding pads with clamps or studs on the equipment.

m) Stairs and ladders, walkways, handrails, platforms and supports for monitoring, operation and maintenance of all equipment furnished by the Supplier.

n) Safety showers and eye washers

o) Sample connections

p) All required modification, replacement, relocation, demolition work of existing facilities.

q) Vinyl esteric resin mortar material for tank lining.

r) All interconnecting piping, piping supports, valves and instrumentation.

s) All support platforms and access (by stairs) shall be provided. This applies to both indoor and outdoor piping/equipment. Ladders shall be used for secondary access only.

t) Stairs shall be able to access all platforms. All exterior steel shall be epoxy black powder coated, no galvanized steel permitted in exterior applications.

u) The contractor shall envisage and provide any additional system as required to meet to make the system complete.

# SUB-SECTION-III-B

# ELECTRICAL SYSTEM/EQUIPMENT

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

## ELECTRICAL SYSTEM / EQUIPMENT

1.00.00 **GENERAL**

The Contractor's scope shall include design, engineering, manufacture, type testing, inspection & shop testing at supplier's works, packing, forwarding to site including customs clearance/ port clearance (if required), receipt and unloading, in plant transportation, handling and storage (preservation & conservation of equipment) at site, erection including associated civil and structural works, testing and commissioning of the Electrical equipment/ system and works indicated in this chapter. The scope includes all interface/ interconnections with the electrical systems under this contract as required and other systems mentioned elsewhere. Unless explicitly stated to be common for all the units, the Contractor shall provide all system/equipment for each of the units. The Electrical scope shall be as described briefly in the following clauses but not limited to it.

1.01.00 **MOTORS**

Motors along with couplings and coupling guards for all rotating auxiliaries covered under this package.

1.02.00 **HT/ LT SWITCH GEAR**

HT and 415V Switchgear / Motor control centers (as shown in Electrical Single Line Diagram Drg No. 0011-109-POE-J-001) Busduct / Cable (as applicable), distribution boards, AC/DC fuse boards, LDB, local emergency push button stations for all drives energized from MCC's under contractor scope and local motor starters (for ventilation fans) as required for plant and equipment in contractor's scope.

1.03.00 **DC SYSTEM**

**Battery and Battery Charger**

Lead acid plante type/ Nickel Cadmium batteries and Float cum boost chargers for plant and equipment in the scope of the contractor, as per system requirement. The DC system (Battery and Charger) shall be supplied to cater to various DC loads in the plant. The design and sizing criteria shall be as detailed out in the chapter B-0, Part-B of Technical specifications.

1.04.00 **TRANSFORMERS**

Transformers as per Electrical Single Line Diagram Drg No. 0011-109-POE-J-001 and system requirement, however bidder to provide complete sizing & selection criteria of Transformer's feeding Contractor's own systems.

1.05.00 **ELECTRIC ACTUATORS**

Electric actuators with integral starters along with associated accessories etc shall be supplied on as required basis for Valves / Dampers to meet the functional and the other specification requirements.

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 1.06.00 | **CABLES / BUSDUCT**<br><br>All HT/ LT power & control cables required for connection between equipment/devices in contractors scope and cables / Busduct (as applicable) between employers and contractors equipment as per Electrical Single Line Diagram Drg No. 0011-109-POE-J-001). |
| 1.07.00 | **DG SET (IF APPLICABLE)**<br><br>Diesel Generator sets of stationary type comprising the following:<br><br>(1.) Diesel Engine Complete with all accessories<br><br>(2.) An alternator directly coupled to engine through flexible/rigid coupling complete with all accessories (CT's & VT's etc.)<br><br>(3.) Control Panel<br><br>(4.) Complete starting arrangement along with battery ,its charger<br><br>(5.) Base frame and foundation bolts etc.<br><br>(6.) Exhaust ducting meeting the statuary requirements, accessories, support structure and foundation bolts.<br><br>(7.) Day Oil Tank, fuel piping and accessories<br><br>(8.) Interconnection piping and accessories<br><br>(9.) Power and control cable gland and lugs at Bidder's equipment for all cables<br><br>(10.) Cable & Cabling between Bidder's equipment.<br><br>(11.) All lubricants for first filling, consumables and touch up paints etc for commissioning.<br><br>(12.) Acoustic enclosure meeting the statuary requirements. Necessary ventilation along with necessary starters & lighting shall be provided. |
| 1.08.00 | **CABLING**<br><br>1) Contractor shall provide cable trays and their accessories with support arrangements, trestle, trenches, duct bank etc. as required for the cables under his scope of supply for the complete system. However the Cable tray, supports and tray earthing for contractor cables on employer cable vault shall be supplied by employer.<br><br>2) Contractor scope shall include laying of cable from employer board as shown in Electrical Single Line Diagram Drg No. 0011-109-POE-J-001 on the employers nearest trestle in the FGD area as shown in Drg no 0011-999-POC-F-001 subject to availability of space and suitability. In case of non availability of space in employer's trestle, contractor shall make necessary arrangements for cable tray erection & cable laying. Further Contractor shall |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| | supply cables, trestle, trenches, duct bank, cable slit, cable trays and structure etc. from employer trestle to the equipment in FGD area in the contractor's scope.<br><br>3) Contractor shall supply, lay and terminate the cables under his scope of supply<br><br>4) The contractor shall furnish the complete and consolidated feeder list for DC system, LT system and HT system for all loads and drives under the scope of supply of contractor to employer as per the format enclosed at Annexure-A. Contractor shall indicate the location of his equipment's in feeder load list.<br><br>5) Contractor shall provide cable glands and lugs for all equipment's in his scope.<br><br>6) Contractor shall provide all accessories such as rigid/ flexible conduits, fittings, junction boxes, tying materials, cable tags, and markers etc. for the cables under his scope.<br><br>7) Contractor shall provide Straight-through jointing kits for HT XLPE power cable, LT power and control cables, Cable termination kits for HT XLPE power cables, Welding receptacles, Trefoil cable clamps, Junction boxes.<br><br>8) Contractor shall provide Galvanised steel pipes/HDPE/hume pipes/PVC pipes, Miscellaneous items like M.S sections etc as required,<br><br>9) Contractor shall provide Fire proof cable penetration sealing system of Type-A and Type-B for cable galleries, cable exits etc<br><br>10) In addition to other drawings, Contractor shall also prepare complete equipment layout drawings, lighting layout drawings including cable tray layout, routing, Power and control cable schedules etc<br><br>11) Control interconnection charts shall also be prepared by bidder |
| 1.09.00 | **LIGHTING**<br><br>Complete lighting system for internal and external areas for the plant, buildings, chimney and equipment in the bidder's scope. Lighting fixtures complete with lamps & accessories, LED lighting fixture complete with driver circuit & accessories Lighting Panels, Chimney aviation light, Receptacles, Switch boxes. Conduits. Lighting Wires, Ceiling fans with regulators, Lighting poles. Lighting masts, Earth wires and rods, Junction boxes, Battery operated automatic self contained lighting fixture, Maintenance ladders as required are included in the bidder's scope.<br><br>Mandatory spare parts and maintenance equipment as required. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

1.10.00 **EARTHING AND LIGHTNING PROTECTION**

Complete below ground earth mat and above ground equipment earthing system and lightning protection for the plant and equipment under contractors scope along with its interconnection to the nearest employers earth grid at two points.

1.11.00 **PAINTING FOR ELECTRICAL EQUIPMENT**

The painting of all electrical equipment shall be epoxy based with suitable additives. The thickness of finish coat shall be minimum 50 microns (minimum total DFT shall be 100 microns). However in case electrostatic process of painting is offered for any electrical equipment, minimum paint thickness of 50 microns shall be acceptable for finish coat. The Contractor shall furnish the complete painting details during detailed engineering stage.

1.12.00 **CONSTRUCTION POWER**

To meet the construction power requirement of the FGD and associated systems, the Employer shall provide Two Number 415V feeders in LT switchgears. The Contractor shall extend supply from these Construction power feeders to meet the construction power requirements at the various locations included in the Contractor's scope through suitably rated Isolation Transformers along with LT distribution boards as per requirement. LT Packaged Sub-stations with isolation transformers may also be used for this purpose. Suitable metering arrangement along with associated Instrument transformers and Metering Cubicles meeting the DISCOM requirements shall be provided by the Contractor at each Construction power feeder, for the measurement of actual energy consumed by the Contractor. The charges only for the actual energy consumed by the Contractor shall be recovered by the Employer based on prevalent rate of DISCOM.

Supply, erection, testing and commissioning of all equipments as required for further distribution for meeting the construction power requirements shall be in the Contractor's scope. All necessary statutory requirements for charging construction power of Contractor's network shall be in the Contractor's scope. Construction power supply network is a temporary arrangement which shall be used during the project construction phase. To meet this requirement, the equipments may be arranged by Contractor either by shifting their existing equipments at other installation or by fresh procurement, which may be taken back after commissioning of the project.

Even though the Employer shall make all efforts to maintain a continuous supply of construction power, the same is not guaranteed and Employer shall not be responsible for any loss or delays which the contractor may suffer on this account. Also the Employer shall not entertain any claim for exemption/reduction of liquidated damages for delay in execution of the contract due to irregular power supply. Contractor shall arrange/provide necessary backup arrangement on his own for uninterrupted power supply.

The Contractor shall maintain a minimum drawl power factor as per DISCOM regulations for their substations, and all such devices for maintaining power factor

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

shall be under the scope of contractor. All temporary wiring must comply with local regulations and will be subject to Employer's inspection and approval before connection to supply. Power supply shall not be provided for use in labor and staff colony.

1.13.00 **TYPE TEST**

Contractor shall carry out all type tests on electrical equipment's as stipulated in relevant chapters of Part-B of technical specifications.

1.14.00 **MANDATORY SPARES**

Contractors scope shall include Mandatory Spares of all equipment as mentioned in the relevant portion of Technical Specification.

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |

# SUB-SECTION-III-C

# CONTROL AND INSTRUMENTATION SYSTEM

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

**CONTROL AND INSTRUMENTATION SYSTEM**

**1.00.00 GENERAL**

a) The Contractor shall provide Independent Control & Instrumentation system for control, monitoring and operation of associated drives and auxiliaries in FGD system including Limestone grinding & handling system, Gypsum Dewatering & handling system, Zero liquid discharge system (ZLD) (if provided) and other systems being provided under the contract, in all regimes of operation in safe and most efficient manner. The Contractor shall provide all systems, equipment, accessories and associated equipment, which are included in Contractor's scope, in a fully operational condition acceptable to the Employer.

b) The Contractor shall provide all material, equipment and services which may not be specifically stated in the specifications but are required for completeness of the equipment/systems furnished by the Contractor and for meeting the intent and requirements of these specifications. The work shall be consistent with modern FGD based power plant practices and shall be in compliance with all applicable codes, standards, guidelines and safety requirements in force on the date of award of the contract.

c) The Contractor shall also provide all the instruments along with cables, JB etc. for equipments / drives and services which may not be specifically stated in this specifications but are required for completeness of the FGD Control system shall be furnished by the Contractor and for meeting the intent and requirements of these specifications.

d) The Bidder scope shall include design, manufacture, engineering, inspection & testing at supplier's works, packing, forwarding to site, unloading, erection, testing & commissioning. The following clauses describe the brief scope of supplies. Scope shall be as described briefly in the following clauses but not limited to it. The detailed technical specifications are stipulated under Part - B, Section-VI of the specification as well as in various other Parts of the Technical Specifications.

**2.00.00 MEASURING INSTRUMENTS**

The following shall be provided as a minimum, meeting specification requirements of Sub-section - MEAS INST of Part-B, Section-VI of Technical Specification.

2.01.00 Primary instruments like Microprocessor based transmitters employing HART protocol, thermocouples & RTDs along with temperature transmitters, pressure/diff. pressure/temperature/flow (Ultrasonic/electromagnetic) transmitter & gauges, flow sensing elements (orifice plates, flow nozzles etc), Ultrasonic, Radar type level transmitters, density meter (Coriolis type. In case the bidder proposes other type of density meter as per the bidder standard and proven practice, the same shall also be acceptable except Nucleonic

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

type density meter), pH analyser, SO2 analyser, Flue Gas flow transmitter, vibration transmitter, Analyzer for ZLD system etc. for:

(a) FGD plant and other system being provided under the contract, as indicated in enclosed tender diagrams (Part E) of this specification.

(b) Integral to equipment which are not indicated in the tender drawings, but are required for control, monitoring and operation of the equipment / plant systems for which no P&IDs are enclosed, all the instruments shall be provided to meet the actual system requirements and meeting redundancy and other requirements specified under technical specifications subject to Employer's approval.

(c) For Binary and analog inputs required in major equipments of FGD system, protection triple-sensing devices shall be provided. Binary and analog inputs, which are, required for protection of more than one equipment as well as protection signals for HT Drives etc., triple sensing devices shall be provided. However, for vibration measurements and protection minimum 2 number (X and Y direction) sensors per bearing shall be provided.

(d) For other critical binary and analog inputs required for protection and interlock purpose of other equipment (e.g. those interlocks which may result in loss of production, non-availability of a major equipment etc.), triple sensors shall be provided.

(e) Temperature elements, electronic transmitters etc. are to be provided for all the cases. Use of process actuated switches is acceptable only in the cases as indicated in the tender drawings.

2.02.00 Single Input DIN rail mounting type temp transmitters (mounted in JBs) shall be provided by the Contractor for all temperature elements under Contractor's scope.

**2.03.00 CONTINUOUS EMISSION MONITORING SYSTEM (CEMS)**

2.03.01 CEMS comprising of analysers and associated items for measurement of SOx, NOx, CO, CO2, Mercury, Particulate Emission (dust density/ stack opacity) monitor, Stack Flue Gas Ultrasonic Flow Meter shall be provided for each unit by the Contractor for stack emission monitoring.

**A) LIST OF FLUE GAS EMISSION ANALYSERS**

| S. No. | KKS CODE | DESCRIPTION | RANGE | ZONE | REMARK |
|---|---|---|---|---|---|
| 1 | HNE10CQ005 | SOx ANALYSER | 0-300/0-1000PPM (SELECTABLE) | CHIMNEY | |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

| | | | | | | |
|---|---|---|---|---|---|---|
| | 2 | HNE10CQ001 | NOx ANALYSER AT CHIMNEY | 0-300/0-1000PPM (SELECTABLE) | CHIMNEY | |
| | 3 | HNE10CQ002 | CO2 ANALYSER | 0-40% | CHIMNEY | |
| | 4 | HNE10CQ004 | CO ANALYSER | 0-1000 (SELECTABLE IN 0-100/0-200,0-500,0-999 PPM) | CHIMNEY | |
| | 5 | HNE10CQ003 | OPACITY ANALYSER AT CHIMNEY | 0-999 mg/m3 (PROGRAMMABLE) | CHIMNEY | |
| | 6 | HNE10CQ006 | Mercury (Hg) Analyser | 0-100 microgram/Nm3 | CHIMNEY | |
| | 7 | HNE10CQ007 | Flowmeter (Ultrasonic Time of Transit Type | - | CHIMNEY | |

Notes:- 1) SOx, NOx, CO2 and CO analyser are shown separately for the purpose of input only, otherwise SOX, NOX, CO2 and CO analyser may be supplied as a single unit/ Combined Unit (s) meeting specification requirement.

2) These are per unit quantities.

2.03.02 CEMS, instruments shall be provided with provision for bidirectional connectivity over Modbus/RS-232/RS-485 with Employer's central cloud server for real time data monitoring, remote diagnostics & remote calibration checks, etc., complying with CPCB IT Division document "Protocol for real time (Emission & Effluent) data management from industries version 1.2 (10.6.2015) or the latest regulatory requirement prevailing at the time of award of the contract. All necessary hardware and software required at instrument end shall be provided by the Contractor. Necessary details like scheme, register addresses of analyzer, etc. shall also be provided by the Contractor for implementation of above. The Contractor shall fully assist NTPC's agency involved in implementation of above connectivity.

For CEMS - In addition to above requirement, 4-20 mA connectivity to DDCMIS shall be provided by the Contractor

2.03.03 Comprehensive Annual Maintenance Contract (AMC) for three (03) years after warranty period shall be provided by the contractor for CEMS.

2.04.00 SERVICES DURING DEFECT LIABILITY PERIOD FOR CEMS

2.04.01 The Contractor shall provide an unlimited warranty on all equipments during the Defect liability period. This warranty shall include repair, replacement, replenishment of consumables (for e.g. reagents, calibration gases etc. as applicable) and correction of identified discrepancies including Analysers, Sample Handling System, Transmitters, (as applicable) etc. at no cost to Employer.

2.04.02 The Contractor shall provide warranty spares including components for each system based on (and keeping adequate over margin) normally experienced failure rate. Exhaustive list of

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| | all such items shall be submitted along with Datasheet for Employer's review and approval during details Engg stage regarding adequacy of the same. The warranty spares as per the list mentioned above will be dispatched by the Contractor along with the main equipment consignment. However for items which have a limited shelf life shall be dispatched in a phased manner during the warranty period. Unused spares/consumables shall be Contractor's property after expiry of warranty period and shall be taken back. |
| 2.05.00 | SERVICES DURING ANNUAL MAINTENANCE CONTRACT (AMC) PERIOD FOR CEMS |
| 2.05.01 | The Contractor shall provide complete maintenance services for each System under comprehensive Annual Maintenance Contract (AMC) for period of three years after the Warranty period. |
| 2.05.02 | The AMC shall cover total maintenance of all Analysers, Sample Handling System ,Transmitters etc. coming under the scope of each system and shall include free repair/replacement of each items, replenishment of consumables, correction of problems (if any) and supply of expendable items. |
| 2.05.03 | Further, Contractor may note that during the AMC he will be allowed to use Employer's mandatory spares, but has to replenish the same within three months' time or before completion of AMC period whichever is earlier. |
| 2.05.04 | The Contractor shall prepare detailed list of faults corrected and parts, expendables utilized during AMC period and shall furnish the same to Employer, properly documented at the end of AMC period. Further, during AMC period the details as required by Employer/ Project Manager shall be made available by Contractor's personnel. |
| 2.05.05 | Contractor shall also provide a list of all required AMC spares which shall be finalized along with datasheet during detail Engineering stage. These spares will be dispatched by the Contractor at the beginning of AMC on yearly requirement basis. However for items which have a limited shelf life shall be dispatched in a phased manner during the AMC period. Unused spare/consumable shall be Contractor's property after expiry of AMC period and shall be taken back. |
| 2.06.00 | DEPUTATION OF ENGINEER/ TECHNICAL EXPERT FOR CEMS |
| 2.06.01 | Contractor shall depute Technical Experts of the OAM /OEM/OES/ (Original Analyser Manufacturer/Original Equipment Manufacturer/Original Equipment supplier) for each of the above system at Site, who will be fully qualified to perform the required duties, supervision of maintenance, repair etc. for a period of six month. Employer will intimate the contractor two weeks advance notice for start of deputation period. |
| 2.06.02 | After expiry of above six month period, Technical expert for each system shall visit site on monthly basis for monitoring the performance and rectify the problem (if any) for each system for the remaining warranty period and during entire AMC period. In the event of any malfunction/fault/failure in the system or any component thereof contractor shall depute Technical expert of respective system to reach site within 48hrs of call raised by site during the remaining warranty period and entire AMC period. |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

**3.00.00** **PROCESS CONNECTION & PIPING**

Process connection & piping including LIE / LIR, all impulse piping, pneumatic piping/tubing, valves, valve manifolds, fittings and all other accessories shall be provided on as required basis for proper installation & completeness of impulse piping system and air supply system, as stipulated under Sub-section PCP, Part-B, Section-VI of Technical Specification.

**4.00.00** **INSTRUMENTATION CABLES, C & I SYSTEM, POWER SUPPLY DISTRIBUTION CABLES & CABLE SUB-TRAYS**

a) All instrumentation cables (twisted & shielded, FRLS PVC insulated and sheathed), data highway / fibre optical cables including prefabricated cables (with plug-in connectors), cables as applicable for direct interconnection of two equipment/ system/ devices in Contractor's scope as well as for connection of signals from/to systems like MCC/LT SWGR/HT SWGR etc. (even if they are not in Contractor's Scope.) shall be provided by Contractor on as required basis.

b) All power supply distribution cables required for directly connecting two equipment / systems devices in contractor's scope shall be provided by the contractor. All these cables shall be FRLS & as per IS-1554 Part – I latest edition.

c) Above cables shall be provided along with necessary laying & termination accessories, hardware etc. meeting requirements specified under Sub-section INST CABLE, Part -B, Section-VI of Technical Specification. All sub trays along with supporting, connecting hardware etc. required for laying of instrumentation, control, power and other cables etc. up to main cable trays are under Bidders scope.

d) Cables required for interfacing PLC control system with Employers DDCMIS (both SG and BOP) located in CER shall be in bidder's scope.

e) Cables for connectivity of CEMS signals to Employer's Unit DDCMIS located in unit CER shall be in bidder's scope.

f) Junction boxes and power distribution boards for C&I Systems with requisite terminals shall be provided on as required basis.

**5.00.00** **CONTROL VALVES & ACTUATORS**

5.01.00 Control valves, actuators and accessories, shall be provided on as required basis for meeting requirements specified under Sub-section CONTROL VALVE, Part-B, Section-VI of Technical Specification. Specially designed valves/trims to prevent cavitations and limit noise and control outlet velocity, shall be provided.

5.02.00 Microprocessor Based Electronic Positioner is to be provided on as required basis with all the Control valves and all control dampers being provided by the contractor.

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| **6.00.00** | **CONTROL SYSTEM** |
| 6.01.00 | Instrumentation and Control System with interlocks, protection and annunciation for FGD system and other system being provided under the contract shall be provided with Software and hardware as required to provide a complete functioning of the system. Dual processor based PLC system with PC based Operator Work Station (OWS), programmable station and A4 size color Laser printer etc. on as required basis (to be decided during detail Engineering) for controlling and monitoring of the FGD and associated system being provided under the contract located in FGD control room. One OWS shall also be provided with capabilities of programming station of PLC and Human Machine Interface system (EWS cum OWS). The PLC configuration drawing shall be as per Tender drawing no. 0000-151-POI-A-013. Depending on the cable distance between FGD control room and FGD system such as Gypsum handling system, Limestone handling system etc, requirement of Remote Input Output (RIO) shall be finalized during detail engineering, In such cases, contractor to provide RIO on as required basis. |
| 6.02.00 | The Bidder shall provide software license for all software being used in Bidder's System. The software licenses shall be provided for the organization i.e. it should not be site-specific and shall also not be hardware/machine-specific. That is, if any hardware/machine is upgraded or changed, the same license shall hold good and it shall not be necessary for Owner to seek a new license/renew license due to up gradation/change of hardware/machine in Bidder's System at site. All licenses shall be valid for the continuous service life of the plant. |
| 6.03.00 | For each equipment/drives/pumps where Local Operation is envisaged in addition to control system as mentioned in respective Mechanical Sections, Bidder to consider Local Push button station comprising following:<br><br>a) Start Push Button<br>b) Stop Push Button<br>c) ON Running Lamp<br>d) OFF Lamp<br>e) MCC Disturbance Indicating Lamp |
| 6.04.00 | Contractor has to provide KKS codes for instrument and drives in the P&ID and other related document. |
| 6.05.00 | The minimum quantity per unit of furniture envisaged in FGD control room is as mentioned below:<br><br>a) Chair-4 nos.<br><br>b) Printer table- 1 no<br><br>c) Computer table- 2 no.<br><br>d) Key pad- 1 no.<br><br>e) Locker set -1 no |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 6.06.00 | Complete wiring / cabling from field devices to panels / MCC and vice versa including conduits / trays / fixtures etc. shall be in bidders scope. |
| 6.07.00 | Microprocessor based modular 24V DC power supply system shall be used for powering the control systems including its network devices.<br><br>24V DC power supply system for PLC based control system shall comprise of two sets, each set shall consist of 1 x 100% microprocessor controlled, intelligent, modular rectifier banks, Controller – one for each rectifier bank, 1 x 100% Nickel - Cadmium batteries for one (1) hour duty, 1 X 100% DC distribution board. 1x100% Microprocessor controlled Battery Health Monitoring System (BHMS)–common for both the sets.<br><br>Contractor shall provide UPS of suitable capacity for the intended application meeting the requirements of Technical Specifications as per Cl. No. 9.05.00, Part B, III-C5.<br><br>Contractor to note that UPS of configuration C is acceptable only upto 5 KVA. In case the consolidated load requirements exceeds 5 KVA, Contractor to provide UPS with Configuration B in place of Configuration C as per Technical Specifications as per Cl. No 9.05.00, Part B, III-C5.<br><br>Bidder shall provide power supply distribution panels/cabinets/boxes for sub distribution of DC/Main UPS/Utility feeders on as required basis. The power supply distribution box shall include change over circuitry, switch fuse units, MCBs, terminal blocks etc. suitable for application.<br><br>For detailed requirements of FGD system, refer Sub-Section III-C, Part B Section VI of technical specifications. |
| **7.00.00** | **TYPE TEST REQUIREMENT**<br><br>The type tests to be conducted for C&I systems & equipments shall be as detailed out in Sub-Section-C-06 Type Test Requirements, Part-B, Section-VI of Technical Specification. |
| **8.00.00** | **TOOLS & TACKLES**<br><br>The Contractor shall furnish a complete new set of all special tools and tackles of reputed make and model which are required for erection, ease in maintenance to have minimum down time, testing and calibration of all the equipments and systems to be provided by the Contractor under this specification for C&I systems. |
| **9.00.00** | **Interfacing with Employer's DDCMIS** |
| 9.01.00 | Hardwired Signal exchange: Hardwired signal exchange between BOP DDCMIS (under Employer's scope) and FGD PLC (under Contractor's scope) like bypass damper status, inlet and outlet gates status, ID Fans status, ESPs status, Boiler Load Index (BLI), MFT etc. shall be provided on as required basis, for implementation of protections and interlocks. Contractor |

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| | shall provide Remote Input Output (RIO) for PLC per unit, placed in Central Equipment Room (CER) for the same. However, contractor to consider IOs and cables for minimum number of hardwired signal exchange per unit as follows DI – 80, DO – 80, AI – 20 and AO – 20. NTPC shall provide 2 (Two) nos. of 24V DC power supply feeders in CER for powering RIO panel. |
| 9.02.00 | Control, operation and monitoring of FGD and associated system being provided under the contract is primarily envisaged from Contractor's OWS placed in FGD control room. In addition to above, it is also envisaged to control, operate and monitor FGD and associated system remotely from main plant Central Control Room (CCR). To achieve the above the Contractor shall provide the following:<br><br>1) The FGD plant operation shall be made available through Ethernet link following TCP/IP standard. The system shall be OPC compliant.<br><br>2) Contractor shall provide necessary hardware and software for dual fibre optic connectivity & interconnection with station wide LAN for transfer of signals. All required plant data shall be transferred to / from through links ensuring complete security. The exact number of points to be transferred through the above communication link and the format of the data shall be finalized during detailed engineering.<br><br>3) The Contractor shall provide all assistance to the BOP C&I (in Employer's scope) supplier including co-ordination and flow of required information etc.<br><br>4) Contractor shall provide complete logics for FGD and associated system such as booster fan blade pitch control, FGD bypass damper control, FGD inlet and outlet gate control etc. FGD OEM shall furnish recommendations, if any, for implementation in employer's DDCMIS for boiler control. |
| 9.03.00 | Bidder to visit site to estimate the distance between FGD control room and Employer's CCR/CER. |
| **10.00.00** | **Grounding System**<br><br>Suitable electronic grounding is to be provided by the contractor for all C&I equipments/panels/desk in the scope of the contractor. The exact scheme shall be as finalized during detailed engineering. Also Refer tender drawing 0000-999-POI-019A and Sub-Section titled "Basic Design Criteria" in Part-B, of this Technical Specification. |

# SUB-SECTION-III-D

# CIVIL WORKS

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

**1.00.00 SCOPE OF CIVIL WORKS**

1.01.01 Scope of Bidder shall include all Civil, Structural, Architectural works including underground facilities like drainage, sewerage, trenches, earthing mat/ grounding, of all the facilities associated with complete Flue gas desulfurization (FGD) system, Zero Liquid Discharge (ZLD) system & Chimney as specified elsewhere in the technical specification.

1.02.00 The work to be performed under this specification consists of providing all labour, materials, construction equipment, tools and plant, scaffolding, supplies, transportation, all incidental items not shown or specified, but reasonably implied or necessary for successful completion of the work including Bidder's supervision and in strict accordance with the drawings and specifications. The nature of work shall generally involve earthwork in excavation & deep underground excavation, extensive de-watering, shoring and strutting, sheet piling, back filling around completed structures and plinth protection, paving , disposal of surplus excavated materials, piling, concreting including reinforcement and form work, brick work, fabrication and erection of structural / miscellaneous steel works, inserts, architectural items & finishes such as plastering, painting, flooring, doors, windows & ventilators, glass and glazing, rolling shutters etc., permanently colour coated profiled steel sheeting, anchor bolts, R. C. C. trenches with covers, laying and testing of water pipes, sanitation, water supply, drainage, damp proofing, water proofing and other ancillary items.

1.03.00 The work shall have to be carried out both below and above ground level and shall be involving, basements, equipment foundations, grounding, slabs, beams, columns, footings, rafts, walls, steel frames, brick walls, stairs, trenches, pits, access roads, culverts, trestles, finishes, false ceiling and complete architectural works, etc.

The works covered under the scope of the bidder have to be executed in an operating ***/*** under construction power station. The bidder shall take all necessary precautions to protect the entire existing equipments, structures, facilities and buildings etc. from damage. In case any damage occurs due to activities of the bidder on account of negligence, ignorance, accidental or any other reason what so ever, the damage shall be made - good by the bidder at his own cost to the satisfaction of the Owner. The bidder shall take all necessary safety measures to avoid any harm, injury to his workers/staff from the equipment / facilities of the power station.

1.04.00 If during the execution of works it is found that there is interference with the existing facilities / structures, the bidder shall revise his design / detailed drawings to clear the interference and shall provide all necessary measures for the safety of existing structures. In case the details shown in tender drawings are found to be different from actual details at site, bidder shall revise his design/ detailed drawings to suit the constraints at site. No claim in terms of cost or relaxation in time shall be entertained for any redesign, rework and for safety measures provided. If at any stage of work, any dismantling or modification or relocation of any existing facility is required to be done to complete the work in bidder's scope and which has been agreed by the Employer, the same shall be done by the bidder at no extra cost or time implication to the Employer. All such changes will be as per drawings and work plan approved by the employer.

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|
| 1.05.00 | Analysis, design and preparation of construction drawings for all structure/facilities under the scope of this package and getting the same approved from the owner. |
| 1.06.00 | Uniform Finished ground level (FGL) in FGD absorber area shall be made available by the owner at a level specified in tender drawing. |
| **2.00.00** | **CONSTRUCTION FACILITIES** |

The following are also in the Bidder's scope of work:

1. Providing drinking and service water for Bidder's labour, staff and other personnel working for Bidder at the work site and in his staff/ labour colony. He shall install necessary bore wells with associated pumping or water tankers and treatment facilities to supply quality water as per standards.

2. Developing temporary staff colony and labour colony along with fencing etc. Land if required shall be arranged by the Bidder himself.

   However space required for bidder's office, storage, pre assembly and fabrication areas shall be provided by owner free of charge within the plant premises.

   The area to be allocated to the Bidder shall be discussed & finalized with the bidder after the award, keeping in view the availability of free space & similar requirement of other agencies.

3. Providing all arrangements for distribution of construction power at various locations as per his requirements from the supply point of Owner.

4. Providing all arrangements for the supply of construction water including bore-wells, water tankers etc.

5. Providing temporary construction office, construction stores (open / covered), workshops, material / field testing laboratory, any other temporary buildings

6. Providing all construction equipment, labour and materials. The Bidder shall provide all the tools and tackles required for the work.

7. Development of the pre-assembly and storage yard with fencing, drainage, internal roads, boulder soling, etc.

8. Approach road to project site is available. Further, Owner intends to construct the roads as per the layout shown in the General Layout plan in a progressive manner. Some of these roads may not be available to the bidder for his use. Similarly the drainage network for the plant site being constructed by the owner may not be available to full extent. The bidder shall plan his work within the plant area considering the above constraints of roads and drains. Access roads to his work sites, offices, stores, preassembly / fabrication yard, etc. as required for providing approach/access for men, materials, equipment, cranes, trailor, construction/erection activities etc., what so ever are required by the bidder, shall be constructed and maintained by the bidder. Bidder shall provide permanent access to all facilities/ structures from the nearby existing roads of the owner. Roads shall be in

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

concrete (M-35 grade) as per IRC standards, with minimum thickness of pavement (PQC) as 250mm. Width of all such roads shall be 7.5M concrete pavement.

9. Area lighting at the construction / erection site, pre-assembly and storage yard, office areas and labour / staff colony.

10. Providing all necessary fire-fighting devices / equipment / fire tender etc. required during the project execution stage. He shall maintain all such equipment / devices in proper working conditions throughout the period of work.

11. Providing first aid facilities at the construction / erection sites, workshops, laboratories, pre-assembly and storage yard and other places of work as per the requirement.

12. The Bidder shall arrange skilled / semiskilled / unskilled manpower from local source(s) as far as available in this country. He shall also arrange supervisory staff for quality execution of all works in his scope.

13. **Bidder's office, store, workshop, laboratory or any other temporary buildings:**

The Bidder shall adopt pre-engineered/ pre-fabricated constructions made of steel with single / double skin, insulated for un-insulated roof and wall coverings (fabricated out of permanently color coated metal sheets) for his site office, covered store workshop, laboratory or any other temporary buildings. Alternatively, bidder can adopt readymade `Portacabin' or similar construction. Bidder shall ensure that all such constructions are well-engineered, neatly constructed and overall present a pleasing look. The above requirements shall be applicable to his sub-vendors also and bidder shall be responsible for enforcing the same on his sub-vendors.

Any other type of construction if proposed by the bidder shall be subject to approval of the owner. However, such construction shall be based on proper design and shall have aesthetic look.

14. **Use of ash and ash based products:**

In line with Gazette Notification on Ash Utilization issued by MOEF and its amendment thereafter, Bidder shall use ash and ash based products in construction of his offices, stores, staff quarters and labour huts etc. He shall furnish a compliance report along with all details of use of ash and ash based products along with each bill. The above requirements shall be applicable to his sub-vendors also and Bidder shall be responsible for enforcing the same on his sub-vendors.

15. **Repair & Maintenance Facilities by the Bidder:**

Bidder shall establish/set up at site suitable repair facilities for construction plant, equipment and machinery (like cranes, hydra, forklifts, welding equipments, etc.) He will also make arrangements/tie up with manufacturers/ suppliers of such construction plant, equipment & machinery, for periodic overhaul/maintenance and for major breakdown, if any. He shall also keep

| CLAUSE NO. | SCOPE OF SUPPLY & SERVICES |
|---|---|

adequate stock of spares at site for various construction plant, equipment and machinery to meet day to day requirements as recommended by the equipment manufacturer/suppliers or as instructed by the Engineer. Bidder shall deploy dedicated qualified, full time mechanical/electrical foreman/supervisors for manning the repair facilities as specified above.

# SUB-SECTION-IV

# TERMINAL POINTS & EXCLUSIONS

| CLAUSE NO. | TERMINAL POINTS & EXCLUSIONS |
|---|---|
| **1.00.00** | **TERMINAL POINTS** |
| 1.01.00 | **FGD**<br><br>The terminal points identified herein below shall be read in conjunction with the tender drawings, scope of supply and technical specifications of various systems covered under the package. |
| 1.02.00 | **Flue Gas Duct**<br><br>(i) Un cleaned Flue Gas — For each unit:<br><br>i) One tapping from the common Flue Gas Duct going towards the existing Chimney (in case of twin flue chimney). No load of duct shall be transmitted on the Employers facilities.<br><br>ii) One tapping each from the two Flue Gas Duct going towards the existing Chimney (in case of single flue chimney). No load of duct shall be transmitted on the Employers facilities. |
| 1.03.00 | **Auxiliary Steam System** (For ZLD application)<br><br>Contractor shall take a tap off suitably from the existing Aux. steam header ( Pr. 16 ata, Temp-210 deg. C) available at BC bay below dearator floor. |
| 1.04.00 | **Equipment Cooling Water** |
| 1.04.01 | **Normal make up to ECW tank**<br><br>Contractor shall take a tap off suitably from the existing DM normal make up header ( DM normal make up pump discharge) available along C-row at CD bay rack for meeting the makeup water requirement of ECW system. The pressure available at TP will be 4Ksc (gauge) wrt FGL (approx.). |
| 1.04.02 | **Emergency make up to ECW tank**<br><br>Contractor shall take a tap off suitably from the existing DM Emergency make up header (condensate transfer pump discharge) available along C-row at CD bay rack for meeting the emergency make up water requirement of ECW system. The pressure available at TP will be 4 Ksc (gauge) wrt FGL (approx.). |

| CLAUSE NO. | TERMINAL POINTS & EXCLUSIONS |
|---|---|
| 1.05.00 | **Process Water**<br><br>For FGD system, Contractor shall take a tap off suitably from the existing CW blow down header available near the CW pump house. The pressure available at TP will be 1.9 Ksc (gauge) wrt FGL (approx..). |
| 1.06.00 | **Gypsum Wash Water (Clarified Water)**<br><br>For Gypsum washing, Contractor shall take a tap off suitably from the existing HVAC header (HVAC make up pump discharge) available along C-row at CD bay rack for meeting the water requirement of Gypsum washing. The pressure available at TP will be 4Ksc ( gauge) wrt FGL (approx.). |
| 1.07.00 | **Potable water**<br><br>Contractor shall take a tap off suitably from the existing potable water supply header (potable water pump discharge) available along C-row at CD bay rack for meeting the potable water requirement . The pressure available at TP will be 3Ksc ( gauge) wrt FGL (approx.). |
| 1.08.00 | **Waste Water**<br><br>FGD waste water pipes shall terminate along with isolation valve at 5 Meters near HCSD Mixing Tank , and 300 mm above FFL in HCSD Silo Area. Pressure at terminal point shall be 3.0 kg/cm2(g) , pH shall be 7.0 (approx.) and temperature shall be <50°C. |
| 1.09.00 | **Limestone**<br><br>i) For unloading of Limestone through WT/Track Hopper of the existing Coal Handling Plant, limestone 'Feed Point' before existing CHP's Crusher House.<br><br>ii) For unloading with Road-Truck Unloading System, entry to truck unloading area. |
| 1.10.00 | **Gypsum**<br><br>Outlet of Gypsum storage silo/shed |
| **1.11.00** | **FIRE DETECTION AND PROTECTION SYSTEM**<br><br>**(i) Mechanical:**<br>Separate Hydrant and spray header (within 100 metre) available in plant area for tapping required for Hydrant and spray system for FGD/ZLD facilities. Minimum pressure available for hydrant and spray system shall be 8 Kgf/cm2. |

| CLAUSE NO. | TERMINAL POINTS & EXCLUSIONS |
|---|---|
| 1.12.00 | All interconnections of matching flanges/expansion joints/piping/ducting etc, between employer supplied equipment/equipment supplied by other contractors and contractor supplied items at terminal points specified above shall, however, be in the scope of FGD Contractor. |
| 1.13.00 | **Electrical** |
| 1.13.01 | Terminal points of Contractor's electrical scope, applicable for all systems/ subsystems described in relevant clauses for SCOPE is given below:<br>(i) Terminals of Employers HT switchgear. |
| **1.14.00** | **Control & Instrumentation**<br>a) Employer's marshalling cabinets for hardwired signal exchange with Employer system.<br>b) Instrument air at one point (if required).<br>c) One (1) no. 240V, single phase, 50 Hz feeder per unit for meeting the unregulated AC power supply requirement for illumination, heating, ventilation, and utility outlets, etc. at bidder's Power supply distribution panel.<br>d) Two (2) 415 V, 3 – phase 3 wire, 50 Hz feeder for each set of the bidder's 24 V DC system. |
| **2.00.00** | **EXCLUSIONS** |

# SUB-SECTION-V

# SALIENT DESIGN DATA

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

**1.00.00** The Flue Gas Desulphurisation (FGD) System FOR KUDGI-I 3X800 MW, LARA-I 2X800 MW, GADARWARA-I 2X800 MW & DARLIPALLI-I 2X800 MW shall be designed to comply with the requirements stipulated under 'Guarantee point and Design point' in the table below:

| Sl. No | Item | Guarantee Point | Design Point |
|---|---|---|---|
| 1 | Boiler Load in MW (e) | 800 | VWO |
| 2 | Type of Coal | Worst coal | Worst coal |
| 3 | Ambient air condition | 27° C temp. and 60% RH | 45° C temp. and 60% RH |
| 4 | Coal Flow (T/hr) | 584 | 611 |
| 5 | Gas flow at the FGD inlet when firing respective coal ($Nm^3$/sec)* | 848 (1336 $m^3$/s) | 918 (1494 $m^3$/s) |
| 6 | Gas temperature at FGD inlet (deg.C) | 135 degree Celsius | 150 degree Celsius |
| 7 | Flue Gas Composition at FGD system inlet: | | |
| | (i) $O_2$ (% v/v wet) | 6.337 | 6.115 |
| | (ii) $CO_2$ (% v/v wet) | 10.868 | 10.501 |
| | (iii) $H_2O$ (% v/v wet) | 10.910 | 3.958 |
| | (iv) $SO_2$ (% v/v wet) | 0.067 | 0.065 |
| | (v) $N_2$ (% v/v wet) | 71.818 | 69.362 |
| | (vi) Inlet $SO_2$ (mg/$Nm^3$-wet) | 1915 | 1858 |
| | (vii) $NO_x$ | < 100 MG/$Nm^3$ at 6% $O_2$ | |
| | (viii) Dust (mg/$Nm^3$) | 50 | 200 |

| | (x) HCl (ppm)-wet | 45 | 45 |
| | (xi) HF (ppm)-wet | 12 | 12 |
| 8 | $SO_2$ removal Efficiency (Continuous) (%) | 96.91 | 96.91 |

* The flue gas volume in $Nm^3$/sec shall be calculated at 101.325 kPa and 273.15 K.

## 5.00.00 Chimney

**5.01.00** A "wet Chimney" shall be installed downstream of Wet Flue Gas Desulfurization (FGD) system by the Contractor. Clean gas from the absorber shall be taken to the Chimney through three stage mist eliminators. Treated flue gas from the absorber shall be discharged through a wet stack without reheating of the flue gas.

The Contractor, shall take into account the entire characteristics of expected combination of fuels to be fired, for the complete load range of operation and the expected numbers of Steam Generator start-ups while designing the Chimney flue liner considering Steam Generator in operation both with & without FGD system in operation. The chimney flue liner cladding shall be made of 2 mm thick Titanium (Grade 2 as per ASME SB265) or C-276 alloy over 8 mm thick (minimum) mild steel base metal of flue liner. Cladding shall be done to achieve the required quality as per ASTM B 898-11. External surface of chimney flue liner projecting over the chimney roof shall be wrapped with 2 mm thick Titanium / C-276 sheet over insulation. The wet stack shall be designed as per the guidelines of EPRI Revised Wet Stack Design Guide.

| SN | Item | Design Condition |
|---|---|---|
| 1 | Boiler Load in MW (e) | VWO |
| | | |
| 2 | Gas flow ($M^3$/sec) | Design Point |
| 3 | Gas temperature at Chimney inlet (deg. C) | To be worked out considering Design Point conditions |

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

| | | |
|---|---|---|
| 4 | Flue Gas velocity (m/s) | < 18 at Design Point |

5.02.01 A wet stack study shall be performed by the Contractor for each unit with a wet stack installation where there does not exist an identical or mirror image installation that has already had a wet stack study performed. A wet stack model study shall consist of the following:

(i) Condensation calculations
(ii) Minimum 1:12 scale physical flow model for liquid collector design
(iii) Computational flow model for plume downwash analysis
(iv) Physical or computational flow model for CEMS elevation flow performance

5.02.02 Liquid collectors shall be designed and developed experimentally using a physical model. The model shall begin at the outlet of the absorber mist eliminator(s), include the absorber outlet and ducting, the stack breaching duct and a minimum of three (3) diameters of the stack liner above the top of the stack breaching duct. Physical model shall include any internal devices that may affect the gas flow, such as structural members, flow controls, and expansion joints. Liquid collectors shall be located where needed in the absorber outlet, the ductwork between the absorber outlet and the chimney liner, in the chimney liner, and in the exit nozzle. These collectors shall collect liquid from surfaces, prevent re-entrainment, and guide the liquid to locations where it can be drained out of the system and prevent the discharge of droplets from the top of the stack that are large enough to rain out to the ground before evaporation.

| 2 | Granule size | | Medium |

**Note:**

1. *Guaranteed parameters (guarantee on limestone consumption, auxiliary power consumption & gypsum purity) shall be based on available (reactive) CaCO3 content of 89%. The design of Flue Gas Desulphurisation (FGD) system & auxiliaries shall be based on available (reactive) CaCO3 content of 79%.

2. For the purpose of volumetric computations of limestone handling & storage system the bulk density of limestone shall be taken as 1400 kg/m3. However for

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

torque, drive & structural load requirements the density of lime stone shall be taken as 1700 kg/m3. For gypsum, the bulk density shall be taken as 900 kg/$m^3$ for volumetric computation and 1250 kg/m3 for torque, drive & structural load requirements.

**7.00.00 AIR CONDITIONING SYSTEM**

**GENERAL REQUIREMENTS**

1. All equipments shall be located indoor unless otherwise agreed to by the Employer. The equipment and layout shall generally be in accordance with the General Layout Plant drawings.
2. The layout of all equipment and accessories shall be developed in a way to facilitate easy accessibility and maintenance of all equipments.
3. Each equipment shall be provided with suitable lifting arrangement, e.g. Lifting lugs, eye bolts, etc to facilitate maintenance.

**7.01.00 DESIGN PHILOSOPHY FOR AIR CONDITIONING**

1. Design ambient conditions for all air conditioning system shall be as per **Appendix-A**
2. All equipments of Air Conditioning system shall be designed for continuous duty.
3. All air conditioned areas shall be maintained at 24 deg. C ± (plus or minus) 1 deg. C and relative humidity of 50% ± (plus or minus) 5%.
4. The fresh air quantity for air-conditioned areas of FGD Control Room etc. shall be 0.45 $M^3$/minutes/person or 1.5 air change per hour whichever is greater. Fresh air fan capacity shall be minimum 10% of the total CMH value of working indoor units.
5. Lighting load shall be minimum 2 Watts/Sq. feet.
6. The occupancy for general area shall be minimum one person per 10 Sq. M and for conference room the same shall be one per 3 Sq.M. In the equipment rooms etc, the occupancy may be one person per 25 Sq.M (Minimum).
7. In Air conditioning system for FGD Control Room, return air shall be routed back to AHU room through plenum space.
8. The supply and return air ducts shall be provided with automatic (motorised) fire dampers (of 90 minutes fire rating) at locations where ducts pass through walls & floors. Operation of these dampers shall be interlocked with the fire alarm system and shall also be possible to operate manually from

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

the remote control panel. Required electrical contacts in control panel of A/C plant and further wiring upto fire alarm panels shall be done by Bidder.

9. Soft water make up (if required) for complete air conditioning system shall be provided by the bidder in-line with terminal point specified in technical specification.

10. Coil face area of Air Handling units shall be designed considering a face velocity of not more than 2.5 m/sec.

11. Air distribution system shall be sized to have a constant frictional drop along its length and velocity through ducts shall not exceed 7.6 m/sec.

12. Requirement of Underdeck Insulation (for A/C area)

Underdeck insulation of 50 mm nominal thickness of glass wool (32 Kg/cu.m) or rock wool (48 Kg/cu.m) shall be provided if

i) Non A/C area is located just above the A/C area. In this case, underdeck insulation shall be provided underneath of the ceiling of A/C area.

ii) Non A/C area is located just below the A/C area. In this case, underdeck insulation shall be provided underneath of the ceiling of Non A/C area.

iii) Underneath the ceiling of AHU room located below the A/C area or exposed to Atmosphere.

13. AHU's shall be provided with two stage of filteration i.e. pre and fine filter. All fresh air supply shall also be filtered using pre and fine filter.

14. A minimum design margin of ten (10) % shall be considered in design of A/C Plant Capacity for each area.

15. For areas, where A/C load is of the order of 25-60 TR, Direct Expansion (D-X) type Condensing unit (with AHU) shall be provided depending on the availability of space/ layout etc. For areas, where A/C load is of the order of 15-25TR, ductable split/packaged A/C shall be provided. Smaller areas which are away from the D-X type Condensing unit /central chilling units which may require air conditioning upto 15 TR rating shall be served with Hi-wall Split/Cassette air conditioner units as per requirement.

16. Insulation for supply and return air ducts: Supply and return ducts shall be insulated. All types of Insulation used for HVAC application shall be CFC/HCFC free.

**7.02.00 REDUNDANCY OF EQUIPMENTS**

**7.02.01** Redundancy of various A/C system equipments shall be as follows:

**a) FGD Control Room Building**

i) Air Cooled condensing units Air conditioners: 2X100%

ii) AHU (with VVVFD): 2 X 100%

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

b) 100% standby shall be provided for area served by Cassette / Hi-wall Split /Ductable split AC/Package type air conditioners for all other control rooms covered in the scope of this package.

c) Fresh air fans shall be 1 x 100 % Capacity for each AHU room.

**7.03.00 DESIGN PHILOSOPHY – Ventilation System**

1. Air changes per hour in evaporative/ mechanically ventilated areas shall be as follows:

| | | | |
|---|---|---|---|
| i) | For all evaporative cooled areas | - | 8 |
| ii) | General areas | - | 20 |
| iii) | MCC / Switchgear rooms and Battery rooms& other areas where gaseous fumes/ vapours are generated | - | 30 |

2. However in areas producing lot of heat, temperature shall be the criteria as follows:-

a) Inside temperature shall be minimum 3 deg.C below the design ambient temperature during summer for evaporative cooled areas.

b) Inside Temperature shall be maximum 3 deg.C above the design ambient temperature during summer for mechanically ventilated areas.

**Note :** Dry bulb temperature during summer = 45 Deg C.

The criteria which gives higher number of air changes/higher quantity of air of either of condition (Cl. 1 or 2) flow shall be selected.

3. All ventilation systems shall operate on 100% fresh air. All mechanically ventilated areas shall be positively ventilated by means of supply air fans fitted with filters and exhaust fans for ventilation of heat generating areas combination of supply air fans with exhaust air fans shall be provided. MCC / switchgear and cable gallery areas shall be provided with gravity operated back draft dampers in association with supply air fans in order to maintain positive pressure. Battery rooms and other fumes/odour generating areas shall be negatively ventilated by means of exhaust air fans / roof exhausters and intake louvers. All other areas like pump house, Blower/compressor house (if any), etc shall be positively ventilated by a combination of supply air fan and exhaust air fan. Supply air fan catering for electrical areas (MCC & Switchgear rooms) shall be provided with pre-filters and fine filters and for other areas shall be provided with pre-filter only. For Positive ventilation CFM of exhaust air shall be 60% of CFM required for supply air. Similarly for

| CLAUSE NO. | SALIENT DESIGN DATA | |
|---|---|---|

negatively ventilated area, CFM of supply shall be 60% of total CFM exhaust.

4. All the equipments of Ventilation system shall be designed for continuous duty.

5. The supply air ducts of evaporative type ventilation system entering into switchgear room, cable galleries etc. shall be provided with automatic (motorised) fire dampers (of 90 minutes fire rating). Operation of these dampers shall be interlocked with the fire alarm system and shall also be possible to operate manually from the remote control panel. Required electrical contacts in control panel of A/C plant and further wiring upto fire alarm panels shall be done by Bidder.

6. Circulating water Capacity for Air washer units shall be minimum 0.7 Cu.M/hr per 1000 Cu.M /hr of air flow. Velocity through piping shall be limited to 2.0 m/sec and for gravity flow the same shall be limited to 1.5 m/sec. Air distribution system shall be sized to have a constant frictional drop along its length and air velocity through ducts shall not exceed 12.5 m/sec.

7. For pumps, continuous motor rating (at $50^{O}$C ambient) shall be atleast 10% above the maximum load demand of the pump in the entire operating range.

   For fans, compressors and blowers continuous motor rating (at $50^{O}$C ambient) shall be atleast 10% above the maximum load demand at the design duty point.

8. Supply air fans, exhaust air fans & ventilations of each area shall be provided with local starter panels.

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

**Appendix-A**

Outside Design Ambient condition to be considered for Air Conditioning system and ventilation System for various project/station are as under.

| Location | Season | Dry Bulb Temp. (Deg. C) | Wet Bulb Temp. (Deg. C) |
|---|---|---|---|
| Kudgi Stg-I (3x800) | Summer | 42.0 | 21.6 |

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

**8.00.00 Fire Detection and Protection System**

**8.01.00 General Design Criteria**

All major equipment/ system components in the entire fire protection & detection system shall have the approval from one of the following:

a) Underwriters laboratories of USA

b) LPCB-UK

c) VDS

d) BIS (for the approval of pumps and valves as applicable)

e) FM- USA

However design and installation of complete system and requirements shall be approved by TAC accredited professional(s)-India.

**8.02.00 Hydrant System**

Design philosophy (minimum requirement)

i) Category of Hazard and minimum terminal pressure shall be as TAC norms.

ii) All the landings of staircases, building, and other multi-storied structures of the plant shall be provided with hydrant landing valves.

iii) Each of the landing valves and external hydrant valves associated with FGD area shall be provided with a hose box. Each hose box shall contain two (2) numbers of 15M long hoses & coupling, branch pipes & nozzles, spanner etc as per TAC guidelines.

For landing valves of various buildings of FGD area, the hose box shall have two (2) numbers 7.5 m long hoses, branch pipes, couplings, nozzles, spanners, etc. as per TAC guidelines.

iv) The pipelines routed in RCC trenches shall be provided with coating and wrapping. Road, Rail or pipe trench crossing be through trestle/RCC hume pipes of appropriate pressure class and the pipe lines shall be provided with coating and wrapping as per specification.

**8.03.00 HVW & MVW Spray System**

Design Philosophy (Minimum Requirements)

i) Design discharge density shall be as per the rules of TAC and/ or NFPA standards.

ii) Deluge valve along with trims like pressure gauge, water motor gong, etc. shall be UL/FM or equivalent approved / listed. The deluge valve (auto resetting type) assembly shall consist of accessories such as water motor gong, alarm test valves, drip/drain valves, strainers for these valves, hydraulic releasing system, solenoid valves, etc. Further, the design

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

features and make of all the projectors / spray nozzles shall be UL/FM or equivalent approved / listed.

iii) A strainer ('Y' type) be provided at upstream of deluge valve.

iv) Pressure switches be provided in spray and detector piping to exhibit "FIRE" and "SPRAY ON" annunciations and as well as for interlock.

v) Wet type pipe detector network shall be provided for spray system using quartzoid bulb detectors.

vi) Each of the outdoor deluge valve and accessories shall be provided with housing.

vii) Remote manual operation of the deluge valves shall be possible from the respective fire alarm cum control panel when the system is selected in remote manual mode. Apart from the automatic operation of the deluge valve, the system shall have provision for manual operation of the deluge valve by means of hand operated lever close to the deluge valve assembly. There shall also be a provision to operate deluge valve electrically from a nearby local panel.

8.04.00 **Fire Detection, Alarm and Control System**

**Design Philosophy (Fire Alarm and Detection System)**

i. The addressable type panels at FGD Control equipment rooms shall receive signal from sensors from various areas/ equipments of the respective units. This shall give audio-visual annunciations for fire in each of the risk area / equipment / status of the fire protection system as well as system operator open / short circuit status of detector or control cabling, etc. Further, this shall activate a hooter/sounder in each of the area provided with fire/smoke detection system

ii. Alarms from the FGD fire alarm panel shall be repeated simultaneously in repeater panel at Fire station. Also the fire alarms of this area has to be communicated to the main plant Fire alarm control panel through potential free contacts.

iii. The addressable panel shall evaluate the signals received from the detectors, transmit the fire or trouble alarms (audio-visual) to prearranged points, supervise and monitor the complete fire detection & extinguishing circuits, initiate control functions like shutdown of draft fans, air-conditioning and ventilation plant/equipment, closure of Fire dampers in A/C & Ventilation system etc. Opening smoke extraction vents, switching on smoke extraction equipment emergency lighting, tripping of transformer lockout relays etc.

iv. All the circuits from the detectors to the panels and the circuits from the panels to the actuating devices (such as solenoid valves, deluge valves, push buttons etc.) shall be closed loop type and shall be supervised for open and short circuiting. The trouble signal also be annunciated in the respective panels.

v. Facilities shall be provided on the fire alarm panel for simulating fire conditions, sensitivity adjustment, isolation of detectors etc. from the panel.

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

**9.00.00 Compressed Air System**

**DESIGN CRITERIA / BASIS AND PERFORMANCE GUARANTEE**

1. All the equipments shall be designed for continuous duty and as well as for intermittent operation. Frequent start/stop of the system shall not result deterioration in performance nor damage to the equipment.
2. The compressors and Air Drying plants shall operate under the following ambient conditions.
   - i. Minimum temperature : 10 deg.C
   - ii. Maximum temperature : 50 deg. C
   - iii. Design condition (temperature & Relative humidity) : 45 deg.C& 75% RH
   - iv. Height above MSL (m) : Refer Chapter "Project Information"
3. The design ambient conditions for the motors shall be as mentioned in relevant Electrical sub-sections.

9.01.00 **Selection of Capacity of Air Compressor**

a) **Air Compressor**

**Air Compressor shall be designed to meet the Instrument air and service air requirement of all the equipments/plant/systems to be supplied by the Contractor for FGD Plant and ZLD plant (if applicable) as follows:-**

| Sl. No. | Continuous Requirement | Quantity (in $NM^3$/min) |
|---|---|---|
| 1. | Instrument air requirement for FGD plant (Continuous) | **A** |
| 2. | Instrument air requirement for ZLD plant (Continuous) | **B** |
| 3. | Service air requirement for FGD plant | **C** |
| 4. | Service air requirement for ZLD plant | **D** |
| **5.** | **Total Air requirement** | **= A+B+C+D** |
| **6.** | **Capacity of air compressor** | **= 2(A+B+C+D)** |

**Notes:** While calculating the air requirement of Bidder's equipments/plant/systems, for continuous requirements of instrument air and service air, no diversity factor shall be considered and they are to be assumed to be of "Simultaneous Requirements". The intermittent requirement of instrument air and service air, if any shall be converted into

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

continuous requirement by considering frequency of such requirements or selecting an appropriate diversity factor and such diversity factor shall not be less than 0.4.

1. The capacity of air drying plant shall be equal to the capacity of the individual air compressors. The Air drying plant, at its rated capacity, shall be designed to deliver continuously air at dew point of minus (-) 40 deg C at atmospheric pressure and the Quality of dry outlet air to conform to Instrument Society of American Standard S7.3 "Quality Standard for Instrument Air".
2. Discharge pressure available at the outlet of Air drying Plant shall be minimum 7.5 Kg/cm2 (g) or more as per the requirement of Contractor.
3. The discharge pressure of compressor shall be minimum 8.5 $Kg/cm^2$(g).
4. The heat exchangers are DMCW cooled and the maximum cooling water temperature at compressor coolers inlet to be considered same as that of PHE outlet cooled DMCW temperature.
5. The temperature rise of cooling water in the heat exchangers of the Compressed air system shall be limited to 5-10 deg C.
6. Noise level shall not exceed 90 dBA to a reference level of 0.0002 microbar when measured at a distance of 1.5 meter above the floor. Required acoustic enclosures may be provided to meet the above condition. The discharge blow-off silencer and intake silencers shall be designed to meet the above noise limitation level.
7. Parallel operation of compressors shall be possible without any undue vibration and noise.
8. The flow in compressed air piping shall be designed for the design capacity of each compressor and the flow in header and ring mains to be designed for the total capacity of working compressors.
9. All hot vessels/pipelines/ valves shall be insulated to restrict the outside temperature within 60 deg.C or less with mineral wool (or equivalent), GI wire netting and aluminum cladding/cover.

| | |
|---|---|
| **10.00.00** | **LIMESTONE HANDLING PLANT** |
| 10.01.00 | Rated capacity of Limestone handling system from existing CHP shall be 1200 TPH upto crushed limestone storage system. Belt speed of conveyors shall not be more than 3.4 m/s. |
| 10.02.00 | All conveyors shall be designed for 110% of rated capacity. |
| | Rated capacity (corresponding to CHP capacity) shall be guaranteed capacity for 100% duty equipment. For 50% duty equipment design capacity shall be guaranteed capacity. |
| | For purpose of guaranteed power consumption rated capacity shall be considered in either case. |
| 10.03.00 | 2x100 %( one working + one standby) conveying stream shall be provided in the CHP. |
| 10.04.00 | Design capacity of the conveyor system shall be considered for the selection of belt width, belt speed and the continuous motor rating at 50 deg C Ambient |
| 10.05.00 | Belt conveyor system shall be designed as per the 5th edition of 'Belt Conveyors for Bulk Materials' published by Conveyor Equipment Manufacturer's Association' or equivalent |

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

International Standard. **Ai** value for idler shall be considered 2.8lb (min.) for the purpose of conveyor design calculation only.

10.06.00 All mechanical, Electrical, civil and structural system design shall consider:

a) Simultaneous running of both conveyors at rated capacity.

b) Starting of one stream with other stream in standstill condition.

c) Starting of one stream with other stream in operation at rated capacity.

d) Round the clock operation of Limestone Handing Plant.

e) The following aspects shall be taken care of coal / limestone:

i) The limestone delivered to power station shall be of size 250mm and below. However, occasionally 1-2% coal of 400 mm lump size may also be encountered.

ii) Due to open cast method of mining involved, the coal may contain shale and sand stone as high as 20%. Also occasionally, metal pieces like broken shovel teeth, brake shoe, wires etc. may also come along with coal/ Limestone.

iv) The coal / limestone as received' shall contain varying percentage of fines. This may form adhesive lumps particularly during monsoon when surface moisture is at its maximum value. The sizing and selection of all equipment shall take care of above.

f) For volumetric computations of limestone handling system the bulk density of limestone shall be taken as 1400 kg/m3. However for torque & drive requirements the density of lime stone shall be taken as 1700 kg/m3. For gypsum, the bulk density shall be taken as 900 kg/m3 for volumetric computation and 1250 kg/m3 for torque and drive requirements.

10.07.00 **LHP EQUIPMENT**

**a) Design capacities & margins**

| Sl no | Equipment | Duty requirement | Design capacity as %age of duty requirement |
|---|---|---|---|
| 1 | Crushers | 2x50% or 1x 100% | 110% |
| 2. | Vibrating feeders | 2x50% or 1x 100% | 110% |
| 3. | Paddle feeders | 1x 100% | 150% |
| 4 | Belt feeder for crusher house | 2x50% or 1x 100% | 110% |

10.08.00 **Drive equipment Rating**

Continuous Motor Rating (Name Plate Rating) at 50 Degree Centigrade Ambient temp. for Electric Motors

a) For conveyors of belt conveyor systems *120% of actual power at drive motor output

| CLAUSE NO. | SALIENT DESIGN DATA | |
|---|---|---|
| | | shaft at specified design capacity |
| | b) Crushers, monorail hoists (travel and hoisting), elevators, rack and pinion gates, all the drives in sampling units, various pumps of DS/DE systems, service water systems, cooling water system, potable water system and sump pumps, Ventilation Fans. | *110% of actual power requirement at drive motor output shaft at guaranteed (rated) capacity. |

*The actual power at drive motor output shaft shall be calculated after considering all the losses of down the line equipment's of the drive train.

**Gear Box Rating :**

a) For belt conveyor systems @ Service factor X {1.2 times the actual power requirement at drive pulley shaft at design capacity}

In any case, gear box rating shall not be less than motor nameplate rating.

b) For other equipment @ Service factor X {1.2 times the actual power requirement of the driven equipment }

@ Service factor shall include all the components considered by the supplier and should be clearly indicated in manufacturer's gear box selection catalogues

**Coupling**

Not less than motor nameplate rating.

10.09.00 **Hoists**

| Drive | |
|---|---|
| (i) More than 2.0 tonne or more than 10.0 m lift or hoists coming out-side the buildings | Motor driven for both travel & lift. |
| (ii) Other hoists including the hoists for handling takeup pulley and takeup weight | Manual for both travel & lift. |

10.10.00 **Belt Scale**

Belt scale shall be designed for a range of 20% to 120% of rated capacity with an accuracy of at least (±) 0.25 percent throughout its range.

10.11.00 **Belting and Pulleys for 1200 TPH**

a) Belt ratings shall be selected in such a way that there are only three (3) ratings for Nylon/Nylon belting and maximum two (2) ratings of steel cord belting. This however excludes sealing belt (for sealing slots of tripper floor) and belting of belt feeders. (Belting shall be completely interchangeable among same rating of belt.) Minimum number of plies for belting shall be four (4). Other details of belting shall be as specified else where in the specification.

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

(b) For Pulley, following minimum parameters shall be followed:

(1.) Shell thickness : 20 mm (Min.)

(2.) End disc plate thickness : 30 mm(Min.)

(3.) Maximum allowable deflection of shaft at hubs : 5 Minutes

(4.) Diameter :

(i) All drive pulleys : 800 mm dia (min.)
1000 mm dia (min.) (In case of steel cord belts)

(ii) All balance pulleys : 630 dia (min)

**Belting and Pulleys for 150TPH rated conveying capacity (LHP &GHP)**

(a.) Belt ratings shall be selected in such a way that there are only three (3) ratings of belting. This however excludes and belting of belt feeders. Belting shall be completely interchangeable among same rating of belt.

(b) Minimum number of plies shall be three (3). Other details of belting shall be as specified elsewhere in the specification.

(c) For Pulley, following minimum parameters shall be followed:

(1.) Maximum allowable deflection of shaft at hubs : 5 Minutes

(2.) End disc plate thickness : 12 mm (min.)
Shell plate thickness : 12 mm (min.)

(3.) Diameter:

(i) All drive pulleys : 630 dia (min)

(ii) All balance pulleys : 500 dia (min)

Further approval from belt manufacturers shall be obtained by the contractor regarding the adequacy of the pulley diameters.

d) Maximum type of pulleys permitted based on pulley diameter and shaft diameter shall be limited to three (3) nos. These shall comprise of two (2) nos. drive pulleys & one (1) no. for all balance pulleys excluding tripper & SS pulleys.

10.12.00 Bulk density of limestone & gypsum shall be considered as follows:

| | Limestone | Gypsum |
|---|---|---|
| a) For volumetric computation | -1400 kg/$m^3$ | 900 kg/$m^3$ |
| b) For load/ strength | - 1700 kg/$m^3$ | 1250 kg/$m^3$ |

10.13.00 2x100 %( one working + one standby) conveying stream shall be provided in the limestone and gypsum handling system.

10.14.00 The covered storage shed/silo for limestone shall be sufficient to store limestone equivalent to consumption of minimum 7 days. The covered storage shed for gypsum shall be sufficient to store gypsum equivalent to generation of minimum 7 days.

Further approval from belt manufacturers shall be obtained by the contractor regarding the adequacy of the pulley diameters.

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

Maximum type of pulleys permitted based on pulley diameter and shaft diameter shall be limited to five (5). These shall comprise of two (2) nos. drive pulleys and three (3) nos. for all balance pulleys. Pulleys for Belt Feeder, fixed &travelling tripper, SS pulleys & S/R pulleys are not included in the above categories

10.15.00 **Dust extraction system**

Type : Venturi scrubber type

Location : Belt feeder after crusher & Vibrating Screening

Feeder at crusher house.

10.16.00 **Service Water System**

Service water connections are to be provided in conveyor galleries & tunnels at 50 meter interval and one (1) no. on each floor of Transfer Points, toilets and minimum two (2) nos. on each floor of crusher house.

(a.) Flow at each valve : 5 cub.m/hr

(b.) Minimum discharge

Pressure at tap point : 2 kg/sq.cm

(c) No. of valves operated : 6 nos.

Simultaneously

10.17.00 **Ventilation System**

**A. Mechanical Ventilation System:**

i. Underground Areas: Minimum 15 supply air changes and minimum 7 exhaust air changes per hour.

ii. Other Areas Minimum 10 supply air changes per hour.

**B. Pressurized Ventilation System**: Minimum 15 supply air changes per hour

10.18.00 **Chutes:**

Minimum clear cross section of chute: 1000 mm X 800 mm (inside both ways)

**11.00.00 LIMESTONE HANDLING PLANT AND GYPSUM HANDLING PLANT**

11.01.00 The coal conveyors shall also be suitable for handling limestone unloaded at wagon tipplers/ track hopper and being conveyed to limestone crusher house at 1200 MTPH (min). Limestone conveyors before crusher house and upto storage shed shall be rated for 1200 MTPH(min.). The rated capacity of limestone reclaimer conveyors from storage shed to limestone mill bunkers shall be 150TPH. The rated capacity of all gypsum handling conveyors shall be 150TPH.

11.02.00 **Belting and Pulleys for 150TPH rated conveying capacity (LHP &GHP)**

| CLAUSE NO. | SALIENT DESIGN DATA |
|---|---|

(a.) Belt ratings shall be selected in such a way that there are only three (3) ratings of belting. This however excludes and belting of belt feeders. Belting shall be completely interchangeable among same rating of belt.

(b) Minimum number of plies shall be three (3). Other details of belting shall be as specified elsewhere in the specification.

(c) For Pulley, following minimum parameters shall be followed:

(1.) Maximum allowable deflection of shaft at hubs : 5 Minutes

(2.) End disc plate thickness : 12 mm (min.)

Shell plate thickness : 12 mm (min.)

(3.) Diameter:

(i) All drive pulleys : 630 dia (min)

(ii) All balance pulleys : 500 dia (min)

Further approval from belt manufacturers shall be obtained by the contractor regarding the adequacy of the pulley diameters.

d) Maximum type of pulleys permitted based on pulley diameter and shaft diameter shall be limited to three (3) nos. These shall comprise of two (2) nos. drive pulleys & one (1) no. for all balance pulleys excluding tripper & SS pulleys.

11.03.00 Bulk density of limestone & gypsum shall be considered as follows:

| | Limestone | Gypsum |
|---|---|---|
| a) For volumetric computation | -1400 kg/$m^3$ | 900 kg/$m^3$ |
| b) For load/ strength | - 1700 kg/$m^3$ | 1250 kg/$m^3$ |

11.04.00 2x100 %( one working + one standby) conveying stream shall be provided in the limestone and gypsum handling system.

11.05.00 The covered storage shed/silo for limestone shall be sufficient to store limestone equivalent to consumption of minimum 7 days. The covered storage shed for gypsum shall be sufficient to store gypsum equivalent to generation of minimum 7 days.

**FUNCTIONAL GUARANTEES, LIQUIDATED DAMAGES FOR SHORTFALL IN PERFORMANCE AND PERFORMANCE GUARANTEE TESTS**

**1.00.00 GENERAL**

The term “Performance Guarantees” wherever appears in the Technical Specifications shall have the same meaning and shall be synonymous to “Functional Guarantees”. Similarly the term “Performance Tests” wherever appears in the Technical Specifications shall have the same meaning and shall be synonymous to “Guarantee Test(s)”.

**2.00.00 PERFORMANCE GUARANTEES / PERFORMANCE TESTS**

2.01.00 **General Requirements**

2.01.01 The Contractor shall guarantee that the equipment offered shall meet the ratings and performance requirements stipulated for various equipment covered in these specifications.

2.01.02 The guaranteed performance parameters furnished by the Bidder in his offer, shall be without any tolerance values whatsoever. All margins required for instrument inaccuracies and other uncertainties shall be deemed to have been included in the guaranteed figures. No tolerance or allowance on the test result will be permitted for instrument errors or inaccuracy, the method of testing or any other causes.

2.01.03 The Contractor shall conduct performance test and demonstrate all the guarantees covered herein. The various tests which are to be carried out during performance guarantee tests are listed in this Sub-section. The guarantee tests shall be conducted by the Contractor at site in presence of Employer on each unit individually.

2.01.04 All costs associated with the tests including cost associated with the supply, calibration, installation and removal of the test instrumentation shall be included in the contract price.

2.01.05 The performance tests shall be performed using only the normal number of Employer supplied operating staff. Contractor, vendor or other subcontractor personnel shall be used only for instructional purposes or data collection. At all times during the Performance Tests the emissions and effluents from the Plant shall not exceed the Guaranteed Emission and Effluent Limits.

2.01.06 It shall be responsibility of the Contractor to make the plant ready for the performance guarantee tests.

| CLAUSE NO. | FUNCTIONAL GUARANTEES AND LIQUIDATED DAMAGES |
|---|---|

2.02.00 **Test Instrumentation, Flow Measurement and their Calibration**

2.02.01 All instruments required for performance testing shall be of the type and accuracy required by the code and prior to the test, the Contractor shall get these instruments calibrated in an independent test Institute approved by the Employer and submit the same to Employer prior to commencement of test. All test instrumentation required for performance tests shall be supplied by the Contractor and shall be retained by him upon satisfactory completion of all such tests at site. All calibration procedures and standards shall be subject to the approval of the Employer prior to commencement of test. The protecting tubes, pressure connections and other test connections required for conducting guarantee test shall conform to the relevant codes.

Tools and tackles, thermowells (both screwed and welded) instruments/devices including flow devices, matching flanges, impulse piping & valves etc. and any special equipment, required for the successful completion of the tests, shall be provided by the Contractor free of cost.

The Performance test shall be carried out as per the agreed procedure. The detailed PG test procedure shall be submitted within 90 days of the date of Notification of Award and finalization of the PG test procedure shall be done within 180 days from the date of Notification of Award.

2.02.02 The P&G test procedures shall be submitted for equipments/system & subsystem under Contractor's scope for all Guarantees as mentioned below, as per latest International codes / standard including correction curves, meeting the specification requirements along with sample calculations & detailed activity plan of preparation (including test instrumentation), conductance and evaluation of Guarantees.

2.02.03 The Contractor shall submit for Employer’s approval the detailed Performance Test procedure containing the following:

(a) Object of the test.

(b) Various guaranteed parameters & tests as per contract.

(c) Method of conductance of test and test code.

(d) Duration of test, frequency of readings & number of test runs.

(e) Method of calculation.

(f) Correction calculations & curves.

(g) Instrument list consisting of range, accuracy, least count, and location of instruments.

| CLAUSE NO. | FUNCTIONAL GUARANTEES AND LIQUIDATED DAMAGES | एनटीपीसी NTPC |
|---|---|---|

(h) Scheme showing measurement points.

(i) Sample calculation.

(j) Acceptance criteria.

(k) Any other information required for conducting the test.

2.03.00 **Test Reports**

After the conductance of Performance test, the Contractor shall submit the test evaluation report of Performance test results to Employer promptly but not later than one month from the date of conductance of Performance test. Preliminary test reports shall be submitted to the Employer after completing each test run. Four (4) hard copies and two (2) soft copies on CD-ROM of each test report of final conducted test on each equipment/plant/system shall be submitted to Employer for approval.

2.03.01 Performance Guarantee Tests on the equipments/systems not covered in this Sub-section shall be carried out as per the procedure/test codes specified in respective detailed specifications.

2.04.00 **Acceptance of Guarantee Test Results**

**(i) For Category-I Guarantees**

In case during performance guarantee test(s) it is found that the equipment/system has failed to meet the guarantees, the Contractor shall carry out all necessary modifications and/or replacements to make the equipment/system comply with the guaranteed requirements at no extra cost to the Employer and re-conduct the performance guarantee test(s) with Employer's consent. In case the specified performance guarantee(s) are still not met but are achieved within the Acceptable Shortfall Limit as specified at **clause 3.00.00** of this sub-section, Employer will accept the equipment/system/plant after levying liquidated damages as per **clause 3.00.00** of this sub-section. However, if, the demonstrated performance guarantee(s) continue to be beyond the stipulated Acceptable Shortfall Limit, even after the above modifications/replacements within ninety (90) days or a reasonable period allowed by the Employer, after the tests have been completed, the Employer will have the right to either of the following:

Reject the equipment / system / plant and recover from the Contractor the payments already made

OR

Accept the equipment /system/ plant after levying Liquidated Damages. The liquidated damages for shortfall in performance indicated in clause 3.00.00 of this sub-section shall be levied separately for each unit. The rates indicated in clause 3.00.00 of this sub-section are on per unit basis. The liquidated damages shall be pro-rated for the fractional parts of the deficiencies.

**(ii) For Category-II Guarantees**

In case during performance guarantee test(s) it is found that the equipment/ system has failed to meet the guarantees, the Contractor shall carry out all necessary modifications and/or replacements to make the equipment/system comply with the guaranteed requirements at no extra cost to the Employer and re-conduct the performance guarantee test(s) with Employer's consent. In case the specified performance guarantee(s) are still not met even after the above modifications/replacements with in ninety (90) days or a reasonable period allowed by the Employer, after the tests have been completed, the Employer will have the right to either of the following:

Reject the equipment /system / plant and recover from the Contractor the payments already made.

OR

Accept the equipment/system after assessing the deficiency in respect of the various ratings, performance parameters and capabilities and recover from the contract price an amount equivalent to the damages as determined by the Employer. Such damages shall, however be limited to the cost of replacement of the equipment(s)/system(s), replacement of which shall remove the deficiency so as to achieve the guaranteed performance. These parameters/capacities shall be termed as “Category-II” Guarantees.

**3.00.00 AMOUNT OF LIQUIDATED DAMAGES (LD) APPLICABLE FOR GUARANTEES FOR EACH PROJECT**

The rate of liquidated damages and acceptable shortfall limits for different guarantees shall be as under and such liquidated damages shall be deducted from the Contract Price of the project.

**NOTES APPLICABLE FOR EACH PROJECT**:

i) Each of the liquidated damages specified above shall be independent and these liquidated damages shall be levied concurrently as applicable.

ii) If the contract currency is other than US dollars, then the liquidated damages shall be in equivalent amount in contract currency based on Bill selling exchange rate of State Bank of India prevailing on the date of award of contract.

| CLAUSE NO. | FUNCTIONAL GUARANTEES AND LIQUIDATED DAMAGES |
|---|---|

iii) All these liquidated damages for short fall in performance shall be deducted from the contract price as detailed in accompanying General Conditions of Contract (GCC)/ Special Conditions of Contract (SCC)

iv) Contractor's aggregate liability to pay Liquidated Damages (LD) for failure to attain the functional guarantee shall not exceed twenty five percent (25%) of the Contract Price.

v) The LD values are applicable on per unit basis.

**4.00.00 GUARANTEES PARAMETERS**

4.01.00 **Guarantees Under Category-I**

**The Performance Guarantees which attract Liquidated Damages (LD) are as follows:**

The following shall be guaranteed by the Bidder under guarantee point condition of Sub- Section-V, Part-A of section- VI:

**(i) SO2 removal Efficiency**

The Contractor shall Guarantee that $SO_2$ removal efficiency at guarantee point (as specified in Clause 1.00.00/2.00.00/3.00.00/4.00.00 Sub-section-V, Part-A of Section-VI applicable for respective project) shall not be less than the value specified under guarantee point conditions (as specified in Clause 1.00.00/2.00.00/3.00.00/4.00.00 Sub-section-V, Part-A of Section-VI applicable for respective project). (To be conducted as per the stipulation of Cl. no. 6.00.00 of this sub-section.)

**(ii) Limestone consumption of FGD system**

Limestone consumption of FGD system in kg/hr under guarantee point conditions (as specified in Clause 1.00.00/2.00.00/3.00.00/4.00.00 Sub-section-V, Part-A of Section-VI applicable for respective project) and SO2 removal efficiency of not less than the value specified under guarantee point conditions (as specified in Clause 1.00.00/2.00.00/3.00.00/4.00.00 Sub-section-V, Part-A of Section-VI applicable for respective project)

**(iii) Auxiliary Power Consumption**

The Contractor shall guarantee the total auxiliary power consumption for the FGD plant in normal operation at the guarantee point conditions, as specified in Clause 1.00.00/2.00.00/3.00.00/4.00.00 Sub-section-V, Part-A of Section-VI applicable for respective project, inline with the requirements stipulated in clause 5.00.00 of this Sub-Section.

| CLAUSE NO. | FUNCTIONAL GUARANTEES AND LIQUIDATED DAMAGES |
|---|---|

**4.02.00** **Guarantees Under Category-II**

**The parameters/capabilities shall be demonstrated for various systems/ equipments shall include but not limited to the following:-**

**(i) Wet ball Mill capacity at rated fineness**

The contractor shall demonstrate the guaranteed capacity of each limestone pulverizer under the following conditions:

i) Limestone fineness : 90% or higher (as per the requirement of the absorber) through 325 mesh.

ii) Limestone Quality : All available quality from the specified range.

**(ii) Wet ball Mill wear parts guarantee**

Contractor shall demonstrate the life of wet ball Mill wear parts in line with requirements stipulated in Part B of the Technical Specification. The establishment of the above guarantee shall be based on the operating records available at the Power station and will be computed for each pulverizer based on actual total hours of operation.

**(iii) Wet ball Mill ball consumption**

Contractor shall guarantee ball consumption per ton of limestone throughput in line with requirements stipulated in Part B of the Technical Specification. Contractor shall furnish the minimum ball diameter below which the balls shall be replaced.

**(iv) Vacuum Belt Filter Capacity**

Contractor shall demonstrate the Designed Capacity of the Vaccum Belt Filters to dewater the quantity of gypsum with the specified purity and moisture content as specified in Part B of the Technical Specification.

**(v) Gypsum Purity**

The contractor shall demonstrate that the purity of the gypsum produced shall not be less than 90%, chloride content shall not be more than 100ppm and the moisture content shall not be more than 10% for guarantee point condition.

| CLAUSE NO. | FUNCTIONAL GUARANTEES AND LIQUIDATED DAMAGES |
|---|---|

**(vi) Waste Water**

The Contractor guarantees that the maximum purge flow rate to waste water treatment system for the complete plant shall be $10m^3$/hr averaged over a 24 hour period from each unit.

**(vii) Performance characteristics of fans (capacity, head developed, etc.).**

**(viii) Margins on fans in case Booster Fan is provided by the Contractor.**

Booster Fans - As specified in Part B of **Technical Specifications**

**(ix) Passenger cum Goods Elevator for FGD absorber & Limestone Grinding Building:** Over load tests, travel and hoist speed checks.

**(x) Noise**

All the plant, equipment and systems covered under this specification shall perform continuously without exceeding the noise level over the entire range of output and operating frequency specified in Part-C of Section-VI of the technical specifications.

Noise level measurement shall be carried out using applicable and internationally acceptable standards. The measurement shall be carried out with a calibrated integrating sound level meter meeting the requirement of IEC 651 or BS 5969 or is 9779.

Sound pressure shall be measured all around the equipment at a distance of 1.0 m horizontally from the nearest surface of any equipment/ machine and at a height of 1.5 m above the floor level in elevation.

A minimum of 6 points around each equipment shall be covered for measurement. additional measurement points shall be considered based on the applicable standards and the size of the equipment. the measurement shall be done with slow response on the a - weighting scale. the average of a-weighted sound pressure level measurements expressed in decibels to a reference of 0.0002 micro bar shall not exceed the guaranteed value. corrections for background noise shall be considered in line with the applicable standards. all the necessary data for determining these corrections, in line with the applicable standards, shall be collected during the tests.

| CLAUSE NO. | FUNCTIONAL GUARANTEES AND LIQUIDATED DAMAGES |
|---|---|

**(xi) Mist Outlet Droplet Content**

The mist eliminator outlet droplet content shall be guaranteed to be $\leq$ 20 mg/Nm3 at absorber outlet measured over a period of 24 hrs continuous operation.

Mist outlet-droplet content shall be measured as per applicable clauses in VDI Norm 3679 and the Contractor shall carry out the tests as per the test procedure approved by the Employer.

**(xii) Availability of FGD Plant**

The Contractor shall guarantee the maximum availability of FGD Plant for the range of coal and limestone specified inline with the requirements stipulated in clause 7.00.00 of this Sub-Section

**(xiii) Air Conditioning System**

**A. Following shall be demonstrated at Shop**

1) Capacity and static pressure of AHU fans at its rated duty point.

**B. Following shall be demonstrated at Site**

1) Capacity (TR) of air cooled condensing units (D-X type) for A/C system of FGD control room building.

2) Guaranteed room conditions during summer for all the Air conditioned areas.

3) Vibration and noise level of condensing units & centrifugal fans of AHUs.

**(xiv) Ventilation System**

**A. Following shall be demonstrated at Shop**

1) Capacity and discharge pressure of pumps of UAF units at its rated duty point of Ventilation system.

2) Capacity and static pressure of UAF fans at its rated duty point of Ventilation system.

**B. Following shall be demonstrated at Site**

1) Vibration & Noise level of centrifugal fans & pumps of UAF units.

**(xv) Compressed Air System**

a) Following shall be demonstrated at shop:

i) Capacity and discharge pressure of each air compressor.

b) Following shall be demonstrated at site:

ii) Dew point of air at the outlet of air drying plants of air compressor.

| CLAUSE NO. | FUNCTIONAL GUARANTEES AND LIQUIDATED DAMAGES |
|---|---|

iv) Pressure drop across air drying plant .

v) Vibration and noise level of air compressors, blowers of air drying plant (if applicable)

**xvi) Equipment Cooling Water System**

i) Vibration, noise and parallel operation without hunting & abnormal noise and with flow sharing within 10% of each other at the rated duty point shall be demonstrated at site.

ii) Design heat load of plate type heat exchangers and Inlet & Outlet temperatures of the Plate type heat exchangers on the primary and secondary side to be demonstrated at site. Pressure drop across the Plate type heat exchanger on the primary & secondary water circuit to be demonstrated at site.

**xvii) Waste Water Treatment System (Applicable for Barh-I (3X660 MW) & Nabinagar (4x250 MW)**

The Contractor shall guarantee the followings.

A). Wastewater treatment capacity($m^3$/hr) : ≥ 30 for **Barh-I (3X660 MW)**

B). Wastewater treatment capacity($m^3$/hr) : ≥ 20 for **Nabinagar (4x250 MW)**

C). Operating time : 16hr for Pre-treatment process, 24hr for Evaporation process

D). The distillate quality (Evaporator and crystallizer combined) shall be a maximum of 50 ppm TDS at 120 $^oF$, while the solids produced for disposal which will pass the paint filter test.

**5.00.00 AUXILIARY POWER CONSUMPTION (PA) FOR EACH PROJECT**

The unit auxiliary power consumption shall be calculated using the following relationship.

$P_a = P_u + T_L$

$P_a$ = Guaranteed Auxiliary Power Consumption.

$P_u$ = Power consumed by the auxiliaries of the unit under test.

$T_L$ = Losses of the transformers supplied by bidder based on works test reports.

While guaranteeing the auxiliary power consumption of each project the bidder shall necessarily include all continuously operating auxiliaries under this package. The auxiliaries to be considered shall include but not be limited to the following:

| CLAUSE NO. | FUNCTIONAL GUARANTEES AND LIQUIDATED DAMAGES |
|---|---|

i. Absorber Recirculation Pump(s)/Gas Cooling Pumps

ii. Absorber Oxidation Air Blower(s)

iii. Absorber Oxidation Tank Agitator(s)

iv. Gypsum Bleed Pump

v. Limestone Gravimetric feeder, Wet ball mill and their integral Auxiliaries divided by the number of units in the project

vi. Limestone Slurry Pump

vii. Vacuum Belt Filter, Vacuum Pump and its integral auxiliaries divided by the number of units in the project

viii. Power consumption of Booster water pump (if provided) divided by the number of units in the project.

ix. Process water pump(s) divided by the number of units in the project

x. Mist Eliminator Wash Water pump(s)

xi. Power consumption of Belt Filter Wash Water Pump divided by the number of units in the project

xii. DM Cooling (normally working) Water pump one(1) to supply cooling water on the primary (DM) side of the plate type heat exchangers in the closed loop Equipment cooling water system.

xiii. Auxiliary Cooling (normally working) water pump one(1) to supply cooling water on the secondary side of the plate type heat exchangers in the closed loop Equipment cooling (unit auxiliary) water system.

xiv. Booster Fans

xv. Power consumption of Limestone Slurry Tank Agitator(s) divided by the number of units in the project

xvi. Power consumption of Filtrate Pump divided by the number of units in the project

xvii. Power consumption of Belt Filter Wash Water Pump divided by the number of units in the project

xviii. Power consumption of Cloth Wash Water Pump divided by the number of units in the project

| CLAUSE NO. | FUNCTIONAL GUARANTEES AND LIQUIDATED DAMAGES |
|---|---|

xix. Power consumption of Hydro-cyclone and Waste Water Pump divided by the number of units in the project

xx. Power consumption of all other continuous running Agitators divided by the number of units in the project

xxi. Air Conditioning System (*)

Total Power consumption at motor input terminals of working units (i.e. excluding stand-by) at its rated duty point of compressor and condenser fans of air cooled condensing unit, Air handling unit (AHU) fans for the Air conditioning system of FGD Control Room Building and ZLD Control Room Building (if provided) divided by total nos. of units in respective project..

xxii Total power consumption at motor input terminal at rated duty of fan of UAF divided by total nos. of units in respective project. (*)

((*) Above guaranteed power consumption values shall be at 20 deg C for centrifugal fans of AHUs and at 30 deg C for centrifugal fans of air washer units and at an elevation of RL (+) - m for both AHUs and Air washer unit centrifugal fans.)

xxiii Total power consumption at motor input terminal at rated duty of Air compressor, Air drying plant (Heater and blower, as applicable) divided by total nos. of units in respective project

xxiv. Power consumption of Evaporator feed pump divided by the number of units in the project, in case ZLD system is provided

xxv. Power consumption of Evaporator/Brine concentrator recirculation pump divided by the number of units in the project, in case ZLD system is provided

xxvi. Power consumption of Distillate pump divided by the number of units in the project, in case ZLD system is provided

xxvii. Power consumption of Crystalliser feed pump divided by the number of units in the project, in case ZLD system is provided

xxviii. Power consumption of Crystalliser recirculation pump divided by the number of units in the project, in case ZLD system is provided

xxix. Power consumption of Mechanical vapour Compressor divided by the number of units in the project, in case ZLD system is provided

The equipment's listed above for calculating auxiliary power consumption are indicative. Any other equipment required for continuous operation of the system shall also be considered for calculation of auxiliary power consumption. Power consumption of all equipments provided on unitized basis shall be included in the unit auxiliary power consumption. For common station auxiliaries, the power

| CLAUSE NO. | FUNCTIONAL GUARANTEES AND LIQUIDATED DAMAGES |
|---|---|

consumption shall be assigned to each unit based on unit load for the purpose of calculating the unit auxiliary power consumption.

**Note :**

1. The bidder shall furnish a list of equipments to be covered under auxiliary power consumption, which shall be subject to Employer's approval.
2. The equipments listed above for calculating auxiliary power consumption are indicative. Any other equipment required for continuous operation of the system shall also be considered for calculation of auxiliary power consumption.

**6.00.00 METHOD OF COMPUTING TEST EFFICIENCY OF FGD**

The performance tests shall be carried out in accordance with ASME PTC 40 (1991) code. No tolerance or allowance on the test result will be permitted for instrument errors or inaccuracy, the method of testing or any other causes. The details of the test shall, however be mutually agreed upon between the employer and the contractor.

**7.00.00 METHOD OF COMPUTING AVAILABILITY**

The Contractor shall guarantee 98 % availability of FGD plant including waste water treatment system for Zero Liquid Discharge (ZLD), wherever provided, for a continuous period of 120 days. An availability guarantee test shall be conducted to assure this level of availability for a period of 240 days as per the procedure indicated below.

Availability 'A' in %:

$$A = \frac{Tc \times 100\%}{Tk}$$

Tc – recorded time of FGD operation, expressed in hours,

Tk – recorded time of boiler operation, expressed in hours,

However, it is required that:

(i) In order to calculate the FGD availability, operation hours will be counted except boiler start-ups when the operation hours counting will start on the moment of shut down of all oil burners,

(ii) FGD will be regarded as a FGD in operation, when by-pass damper is closed and total flow of flue gas from boiler goes via FGD, and SO2

| CLAUSE NO. | FUNCTIONAL GUARANTEES AND LIQUIDATED DAMAGES |
|---|---|

content is below 100 mg/Nm3 (dry basis at 6% $O_2$) in cleaned flue gas for the range of specified coals & loads.

(iii) If FGD is out of operation during the boiler operation time as a result of the Employer's decision, this time will not be counted as boiler operation time for calculating the FGD availability,

(iv) Boiler operation hours will be counted based on the recorded boiler operation hours and the recorded data will be made available to the Contractor by the Employer.

Mandatory spares have been identified in the Employer. Contractor can use the mandatory spares supplied under the contract during this period in agreement with the Employer. However, if other additional spares are required for demonstration of availability demonstration guarantee, Bidder to should clearly indicate along with their offer.

If the calculated availability after 120 days availability test is lower than the guaranteed value, the Contractor will undertake actions as per clause 2.04.00 (ii) of this Sub-Section to achieve the guaranteed availability.

# SUB-SECTION-VII

# MANDATORY SPARES

| CLAUSE NO. | MANDATORY SPARES |
|---|---|

**1.00.00** **GENERAL**

The Bidder shall include in his scope of supply all the necessary Mandatory spares, Start-up and commissioning spares and Recommended spares and indicate these in the relevant schedules of the Bid Forms & Price Schedules. The general requirements pertaining to the supply of these spares is given below:

1.01.00 **MANDATORY SPARES**

a) The list of mandatory spares considered essential by the Employer is indicated in the list enclosed to this Sub-Section. The bidder shall indicate the prices for each and every item (except for items not applicable to the bidders design) in the 'Schedule of Mandatory Spares' whether or not he considers it necessary for the Employer to have such spares. If the bidder fails to comply with the above or fails to quote the price of any spare item, the cost of such spares shall be deemed to be included in the contract price. The bidder shall furnish the population per unit of each item in the Bid Forms & Price Schedules. Whenever the quantity is mentioned in "sets" the bidder has to give the item details and prices of each item.

b) Whenever the quantity is indicated as a percentage, it shall mean percentage of total population of that item in the station (project), unless specified otherwise, and the fraction will be rounded off to the next higher whole number. Wherever the requirement has been specified as a 'set' (marked by **) it will include the total requirement of the item for a unit, module or the station as specified. Where it is specified as 'set' (marked by*) it would mean the requirement for the single equipment / system as the case may be. Also one set for the particular equipment. e.g. 'set' of bearings for a pump would include the total number of bearings in a pump. Also the 'set' would include all components required to replace the item; for example, a set of bearings shall include all hardware normally required while replacing the bearings.

c) The assembly / sub assembly which have different orientation (like left hand, right hand, top or bottom), different direction of rotation or mirror image positioning or any other regions which result in maintaining two different sets of spares to be used for subject assembly / sub-assembly shall be considered as different type of assembly/sub-assembly.

d) The Employer reserves the right to buy any or all the mandatory spare parts.

e) The prices of mandatory spares indicated by the Bidder in the Bid Proposal sheets shall be used for bid evaluation purposes.

f) All mandatory spares shall be delivered at site at least two months before scheduled date of initial operation of the first unit. However, spares shall not be dispatched before dispatch of corresponding main equipments.

g) Wherever quantity is specified both as a percentage and a value, the Bidder has to supply the higher quantity until & unless specified otherwise.

1.02.00 **RECOMMENDED SPARES**

a) In addition to the spare parts mentioned above, the Contractor shall also provide a list of recommended spares for 3 years of normal operation of the plant and indicate the list and total prices in relevant schedule of the Bid Forms & Price Schedules. This list shall take into consideration the mandatory spares specified in this Sub-Section and should be independent of the list of the mandatory spares. The Employer reserves the right to buy any or all of the recommended spares. The recommended spares shall be delivered at project site at least two months before the scheduled date of initial operation of first unit. However, the spares shall not be dispatched before the dispatch of the main equipment.

b) Prices of recommended spares will not be used for evaluation of the bids. The price of these spares will remain valid up to 6 months after placement of Notification of Award for the main equipment. However, the Contractor shall be liable to provide necessary justification for the quoted prices for these spares as desired by the Employer.

1.03.00 **START-UP & COMMISSIONING SPARES**

a) Start-up & commissioning spares are those spares which may be required during the start-up and commissioning of the equipment/system. All spares used till the Plant is handed over to the Employer shall come under this category. The Contractor shall provide for an adequate stock of such start up and commissioning spares to be brought by him to the site for the plant erection and commissioning. They must be available at site before the equipments are energized. The unused spares, if any, should be removed from there only after the issue of Taking Over certificate. All start up spares which remain unused at the time shall remain the property of the Contractor.

1.04.00 The Bidder shall include in his scope of supply all the necessary Mandatory spares, Start-up and commissioning spares and indicate these in the relevant schedules of the Bid Forms & Price Schedules. The general requirements pertaining to the supply of these spares is given below:

| CLAUSE NO. | MANDATORY SPARES |
|---|---|

| | |
|---|---|
| **2.00.00** | The Contractor shall indicate the service expectancy period for the spare parts (both mandatory and recommended) under normal operating conditions before replacement is necessary. |
| **3.00.00** | All spares supplied under this contract shall be strictly inter-changeable with the parts for which they are intended for replacements. The spares shall be treated and packed for long storage under the climatic conditions prevailing at the site e.g. small items shall be packed in sealed transparent plastic with desiccators packs as necessary. |
| **4.00.00** | All the spares (both recommended and mandatory) shall be manufactured along with the main equipment components as a continuous operation as per same specification and quality plan. |
| **5.00.00** | The Contractor will provide Employer with cross-sectional drawings, catalogues, assembly drawings and other relevant documents so as to enable the Employer to identify and finalize order for recommended spares. |
| **6.00.00** | Each spare part shall be clearly marked or labeled on the outside of the packing with its description. When more than one spare part is packed in a single case, a general description of the content shall be shown on the outside of such case and a detailed list enclosed. All cases, containers and other packages must be suitably marked and numbered for the purposes of identification. |
| **7.00.00** | All cases, containers or other packages are to be opened for such examination as may be considered necessary by the Employer. |
| **8.00.00** | The Contractor will provide the Employer with all the addresses and particulars of his sub-suppliers while placing the order on vendors for items/components/ equipments covered under the Contract and will further ensure with his vendors that the Employer, if so desires, will have the right to place order for spares directly on them on mutually agreed terms based on offers of such vendors. |
| **9.00.00** | The Contractor shall warrant that all spares supplied will be new and in accordance with the Contract Documents and will be free from defects in design, material and workmanship. |
| **10.00.00** | In addition to the recommended spares listed by the Contractor, if the Employer further identifies certain particular items of spares, the Contractor shall submit the prices and delivery quotation for such spares within 30 days of receipt of such request with a validity period of 6 months for consideration by the Employer and placement of order for additional spares if the Employer so desires. |
| **11.00.00** | The Contractor shall guarantee the long term availability of spares to the Employer for the full life of the equipment covered under the Contract. The Contractor shall |

guarantee that before going out of production of spare parts of the equipment covered under the Contract, he shall give the Employer at least 2 years advance notice so that the latter may order his bulk requirement of spares, if he so desires. The same provision will also be applicable to Sub-contractors. Further, in case of discontinuance of manufacture of any spares by the Contractor and/or his Sub-Contractors, Contractor will provide the Employer, two years in advance, with full manufacturing drawings, material specifications and technical information including information on alternative equivalent makes required by the Employer for the purpose of manufacture/procurement of such items.

| CLAUSE NO. | MANDATORY SPARES |
|---|---|

## Mandatory Spares List (For Each Project)

| Sl. No. | Description | Nos. / Sets for Each Project |
|---|---|---|
| **1.01.00** | **A. Booster Fans** | |
| | 1. Fan assembly (excluding fan body) | 1 no. |
| | 2. Booster fan motor | 1 no. |
| | 3. Fan bearings | 1 set |
| | 4. Booster fan motor bearings | 1 set |
| | 5. Spares for blade bearing Assembly | |
| | 5.1 Bearings | 2 sets |
| | 5.2 'O' rings | 2 sets |
| | 5.3 Bushes | 2 sets |
| | 5.4 Metallic rings | 2 sets |
| | 5.5 Intermediate piece (if applicable) | 1 sets |
| | 6. Lube Oil / Hydraulic Oil system | |
| | 6.1 Pump assembly | 1 nos. of each type |
| | 6.2 Pump motor | 1 no. of each type & rating |
| | 6.3 Pressure regulator | 2 nos. |
| | 6.4 Filters | 2 nos. |
| | 6.5 Coupling between oil pump & motor | 1 nos. |
| | 7. Fan Blades | 1 sets |
| | 8. Coupling between Fan & Motor | 1 sets. |
| | 9. Hydraulic servomotor | 1 no. |
| | 10. Booster fan impeller liner | 1 sets |
| | 11. Booster fan casing liner | 1 set |

| | | |
|---|---|---|
| **1.02.00** | **Gates in Flue Gas System** | |
| | 1. Seals | 1 set of each type<br>(Set means complete replacement for one gate) |
| | 2. Actuator | 1 no. of each type & rating |
| | 3. Expansion joint | 1 number for each type and size |
| | 4. Seals for guillotine gate(Both port side and bonnet side) (In case Gates are provided) | 1 set for each gate |
| **1.03.00** | **Not Used** | |
| **1.04.00** | **Absorber** | |
| | 1. Liner Material | 5% coverage of each material and thickness for one Unit/Absorber |
| | 2. Absorber Spray/Oxidation nozzles | 10% of each type and size |
| | 3. Absorber Mist Eliminator Washing Nozzles | 10% of each type and size |
| | 4. Absorber Mist Eliminator | 5% of each type and size/configuration |
| **1.05.00** | **Oxidation Air Blower** | |
| | 1. Impeller Assembly | 1 no. |
| | 2. Bearings | 1 no. of each type |
| **1.06.00** | **(A) Agitators**<br>(For Absorber Oxidation Tank & Aux. Absorbent/Emergency tank), | |
| | 1. Impeller Assembly | 1 no. of each type and size |
| | 2. Bearing Assembly | 1 no. of each type and size |

| | | |
|---|---|---|
| | 3. Motor | 1 no. of each type and size |
| | 4. Belt and Pulley (If applicable) | 1 no. of each type and size |
| | 5. Gear Box Assembly (If Applicable) | 1 no. of each type and size |
| | 6. Agitator shaft assembly | 1 no. of each type and size |
| | 7. Shaft seal | 1 no. of each type and size |
| | 8. Complete Agitator assembly | 1 no. of each type and size |
| | (B) AGITATORS for Mill Separator Tank, Limestone Slurry Preparation Tank, Secondary hydroclone feed, Waste water, Filtrate tank and any other tank provided with agitators) | |
| | 1. Impeller Assembly | 1 no. of each type |
| | 2. Bearing Assembly | 1 no. of each type |
| | 3. Motor | 1 no. of each type |
| | 4. Belt and Pulley (If applicable) | 1 no. of each type |
| | 5. Gear Box Assembly (If Applicable) | 1 no. of each type |
| | 6. Agitator shaft assembly | 1 no. of each type and size |
| | 7. Complete Agitator assembly | 1 no. of each type and size |
| **1.07.00** | **Slurry Pumps**<br>(Absorber Slurry Recirculation/Gas Cooling Pump/Recycle Pump, Gypsum Bleed Pumps, Mill Circuit Pump, Limestone slurry supply Pumps and any other slurry pumps) | |
| | 1. Impeller Assembly | 4 no. of each type and size |
| | 2. Complete Casing (For the Absorber Slurry Recirculation/Gas Cooling Pump/Recycle Pump Bidder shall supply complete casing) | 1 no. of each type and size |

| | | |
|---|---|---|
| | 3. Casing Liners (where replaceable liners are provided) | 1 set* |
| | 4. Seals | 4 set of each type and size |
| | 5. Bearings | 1 no. of each type and size |
| | 6. Motor | 1 no. of each type and size |
| | 7. GEAR BOX | 1 No. for each type and size of pump. |
| | 8. Motor-Pump Coupling | 1 no. of each type |
| **1.08.00** | **Hydro-cyclones**<br>(Mill , Gypsum Primary Dewatering, Secondary Waste Water and any other Hydrocyclone) | |
| | 1. Hydro-cyclone Isolation Valve | 10% of each type OR 1 no. whichever is higher |
| | 2. Hydro-Cyclone | 10% of each type OR 1 no. whichever is higher |
| | 3. Hydro-Cyclone rubber lining-Feed chamber and Overflow chamber | 10% of each type OR 1 no. whichever is higher |
| | 4. Vortex finder & Apex inserts | 10% of each type OR 1 no. whichever is higher |
| **1.09.00** | **Feeders** | |
| | 1. Belt | 2 sets * |
| | 2. Belt drive motor | 1 nos. |
| | 3. Belt drive reducer | 1 nos. |
| | 4. Speed Reducer Assembly | 1 set* |
| | 5. Weighing Instruments | 1 set* |
| | 6. Feeder weighing roll | 1 no. |
| | 7. Gravimetric feeder gate actuator | 1 no. |

| | | |
|---|---|---|
| | assembly | |
| | 8. Counter assembly of feeder complete | 1 no. |
| | 9. Feeder head pulley assembly | 1 no. |
| **1.10.00** | **Limestone Mills** | |
| | 1. Mill Wear Parts (Liners) & Grinding element | 1 sets |
| | **Note :** One set of Mill Wear Parts (Liners) above is defined as under :<br>1 Set = (Grinding elements needed for complete replacement of one mill) X (8000 x 1) / GWL, rounded off to nearest higher whole number.<br>Where :<br>GWL =Guaranteed wear life of Mill Wear Parts as offered by the bidder. | |
| | 2. Mill Motor | 1 no. |
| | 3. Auxiliary Motor | 1 no. |
| | 4. Gear box internals (including Bearings and Seals) | 2 sets * |
| | 5. Complete Gear Box | 1 sets * |
| | 6. Mill motor Bearings | 1 sets * |
| | 7. Lube Oil / Grease System | |
| | 7.1 Pump assembly | 1 nos. of each type |
| | 7.2 Motor | 1 nos. of each type |
| | 7.3 Pressure regulator | 1 nos. of each type |
| | 7.4 Filters | 2 nos. of each type |
| | 7.5 Pump & Motor coupling | 1 nos. of each type |

| | | |
|---|---|---|
| **1.11.00** | **Slurry Valves** | 4 no. of each type and size |
| **1.12.00** | **Slurry Line Bends** | 4 no. of each type and size |
| **1.13.00** | **Vacuum Belt Filter** | |
| | 1. Filter Cloth | 4 sets |
| | 2. Belt | 1 sets |
| | 3. Vacuum Box Seals | 2 sets |
| | 4. Drive Motor | 1 no. |
| **1.14.00** | **Vacuum Pumps** | |
| | 1. Pump Impeller Assembly | 1 no. |
| | 2. Pump Bearing | 1 set |
| | 3. Seals | 1 set |
| | 4. Motor | 1 no. |
| **1.15.00** | **Vacuum Breaker Valves** | |
| | 1. Valve Assembly | 1 no. |
| | 2. Actuator | 1 no. |
| **1.16.00** | **Sump Pumps** | |
| | 1. Complete Impeller Assembly | 1 no. of each type |
| | 2. Casing Liners | 1 set* of each type |
| | 3. Bearing | 1 set* |
| | 4. Motor | 4 no. of each type |
| | 5. Pump discharge valve assembly | 1 no. of each type |
| **1.17.00** | **Horizontal Centrifugal Pumps** | |
| | 1. Complete Impeller Assembly | 1 no. of each type |

| | | |
|---|---|---|
| | 2. Casing Liners | 1 set* of each type |
| | 3. Bearing | 1 set* |
| | 4. Motor | 1 no. of each type |
| | 5. Pump discharge valve assembly | 1 no. of each type |

Note:

1. Any change in size, material, design etc, which obviates one to one replacement of the part shall be considered a different type.

* Unless otherwise stated, a set shall mean complete replacement for one equipment.

| **1.18.00** | **Goods Cum Passenger Elevator** | |
|---|---|---|
| | 1. Friction block | 2 nos. |
| | 2. Guide roller of each type | 20% of total population or 3 nos. of type whichever is higher |
| | 3. Contactors of each type | 2 nos. |
| | 4 Control Transformer | 1 no. of each type |
| | 5. Time device | 2 nos. of each type |
| | 6. Rectifiers | 4 nos. of each type |
| | 7. Overcurrent relay | 2 nos. of each type |
| | 8. Auxiliary relay | 3 nos. of each type |
| | 9. Resistor | 3 nos. of each type |
| | 10. Fuses of each rating | 20% of the total population |
| | 11. Limit switches of each type | 3 nos. |
| | 12. Push button | 3 nos. of each type |

| | | |
|---|---|---|
| | 13. Contact device (if applicable) | 3 nos. of each type |
| | 14. Brake motor | 2 nos. of each type |
| | 15. Transmitters | 2 nos. of each type |
| | 16. Switches of each type | 3 nos. |
| | 17. Receiver | 2 nos. of each type |
| | 18. Bearings of each type & size | 2 nos. |
| | 19. Roller of each type | 3 nos. |
| | 20. Worm gear spares | |
| | 'O' rings | 3 sets * |
| | Sealing ring of each type | 3 sets * |
| | 21. Spares for brake | |
| | Fan | 2 nos. of each type |
| | Magnetic coil | 3 nos. of each type |
| | Brake disc | 2 sets * |
| | Brake pad | 2 sets * |
| | 22. Bushing (for door front) | 2 sets * |
| | 23. Pinion | 2 nos. of each type |
| | 24. Elevator Motor with VVVF drive | 1 no of each type |

**1.19.00 AIR CONDITINING AND VENTIALTION SYSTEM**

| | | |
|---|---|---|
| 1.0 | **Air handling unit (for each model)** | |
| 1.1 | V-belts for AHU Blower | 2 Sets |

| | | |
|---|---|---|
| 1.2 | AHU Blower bearing | 1 Set |
| 1.3 | Blower motor bearing | 1 Set |
| 1.4 | Filters at suction and discharge of all AHUs | 25% of installed population |
| 2.0 | **Unitary air filtration unit** | |
| 2.1 | *Supply Air fans* | |
| 2.1.1 | V-belts for supply air fans | 2 Sets |
| 2.1.2 | Supply air fan bearings | 1 Set |
| 2.2 | *UAF Pump* | |
| 2.2.1 | Pump bearings | 1 Set |
| 2.2.2 | Impeller for pump | 1 no. |
| 2.2.3 | Pump Shaft | 1 no. |
| 2.2.4 | Shaft sleeves | 1 Set |
| 2.2.5 | Gland Packings for pumps | 1 Set |
| 2.2.6 | Nylon Filter | 1 Set |
| 2.2.7 | Spray nozzles | 5% of total population or 50 Numbers whichever is higher. |
| 2.2.8 | Water strainer | 1 No. |
| 2.2.9 | Brass suction screen/strainer for unitary air filtration tank. | 1 Set |
| 2.2.10 | Motor for Centrifugal fan for UAF | 1 No |
| **3.0** | **Control & Instrumentation** | |
| i) | Air-Conditioning System | |

| CLAUSE NO. | MANDATORY SPARES | |

| 6.0 | **Process Connection Piping (for Impulse Piping / Tubing, Sampling Piping / Tubing and Air Supply Piping as Applicable)** | |
| 6.1 | Valves | 1 no. of each type, class, size and model |
| 6.2 | 2 way valve manifold | 1 no. of each type, class, size and model |
| 6.3 | Fittings | 1 no. of each type, class, size and model |

**1.20.00 SPARES FOR FGD WASTE WATER TREATMENT (FGD WWT) SYSTEM FOR ZLD (APPLICABLE FOR PROJECTS WHERE ZLD SYTEM IS BEING PROVIDED)**

| **A-1) Blowers (If applicable) (FOR EACH TYPE & SIZE)** | | | |
|---|---|---|---|
| **Sl. No.** | **Name of Items** | **Unit** | **QTY** |
| | | | |
| 1) | Impeller with nuts & other accessories | Set | 1 |
| 2) | Shaft | Set | 1 |
| 3) | Bearings of Blowers | Set | 1 |
| 4) | Suction filter Assembly | Set | 1 |
| 5) | V Belts (if applicable) | Set | 1 |
| **Note : One(1) set consists of quantity required for complete replacement for one(1) blower** | | | |
| **A-2) Flushing/Cleaning System (if applicable) (FOR EACH TYPE & SIZE)** | | | |
| **Sl. No.** | **Name of Items** | **Unit** | **QTY** |
| 1) | Flushing Pump | No | 1 |
| **A-3) Chemical Cleaning System (If applicable ) (FOR EACH TYPE & SIZE)** | | | |
| **Sl. No.** | **Name of Items** | **Unit** | **QTY** |
| 1) | Mixer (Agitator) of Chemical Tanks | No | 1 |
| 2) | Chemical Cleaning Pump | No | 1 |
| 3) | Cartridge Filter Elements (If applicable) | Set | 1 |

**a- 4) Spares for horizontal pumps for FGD WWT system for ZLD (for each type & size)**

| Sl. No. | Name of Items | Unit | QTY |
|---|---|---|---|
| 1) | Impeller with nuts & other accessories | Set | 1 |
| 2) | Wearing rings (Impeller & Casing ; as applicable) | Set | 2 |
| 3) | Shaft | Set | 1 |
| 4) | Shaft Sleeves | Set | 2 |
| 5) | Pump & Drive Coupling, bushes, pins with all fasteners | Set | 1 |
| 6) | Pump bearings | Set | 1 |
| 7) | Mechanical Seal (if applicable) | Set | 1 |

**Note : One(1) set consists of quantity required for complete replacement for one(1) Pump of each type/size**

**A-5) Spares for Clarifier**

| Sl. No. | Name of Items | Unit | Qty |
|---|---|---|---|
| 1) | Turbine drive shaft assembly (If applicable) | Set | 1 |
| 2) | Rake (Scrapper) drive shaft assembly (If applicable) | Set | 1 |
| 3) | Oil seal for gear box | Set | 1 |

**Note: One (1) set consists of quantity required for complete replacement for one clarifier.**

**A- 6) Spares for Injection/dosing pumps in Chemical storage & dosing system (for each type & size)**

| Sl. No. | Name of Items | Unit | QUANTITY |
|---|---|---|---|
| **1)** | Complete Pump | **Set** | **1** |

**A- 7) Spares for Unloading pumps in Chemical storage & dosing system (for each type & size)**

| Sl. No. | Name of Items | Unit | QTY. |
|---|---|---|---|
| 1) | Complete Pump | Set | 1 |

**a-8) Spares for Agitators (for each type & size)**

| Name of Items | Unit | QTY |
|---|---|---|
| Agitator Assembly with Motor & Gear Box | Set | 1 |

**A- 9) Valves (except Control Valves)**

| Sl. No. | Name of Items | Unit | QTY |
|---|---|---|---|
| 1) | Valves of all types | LOT | 1 numbers of each type / size /material of construction/Rating |

| A- 10) Spares for Electrically operated hoist for FGD WWT system for ZLD (for each type & size) | | | |
|---|---|---|---|
| **Sl. No.** | **Name of Items** | **Unit** | **QTY.** |
| 1) | Bearings | Set | 1 |
| 2) | Rope guide | Set | 1 |
| 3) | Brake lining | Set | 1 |
| 4) | Wire rope | Set | 1 |
| **Note : One(1) set consists of quantity required for complete replacement for one(1) hoist of each type & capacity** | | | |

| A- 11) Spares for Plate type heat exchangers for FGD WWT system for ZLD (for each type & size) | | | |
|---|---|---|---|
| **Sl. No.** | **Name of Items** | **Unit** | **QTY.** |
| 1) | Gaskets | Lot | comprising 30% of total requirement |
| 2) | Fastners | Lot | comprising 10% each type |
| 3) | Plates | Lot | comprising 20% of each type |
| **Note : One(1) set consists of quantity required for complete replacement for one(1) heat exchanger of each type & capacity** | | | |

| A- 12) Spares for Vapor Compressors for FGD WWT system for ZLD (for each type & size) | | | |
|---|---|---|---|
| **Sl. No.** | **Name of Items** | **Unit** | **QTY.** |
| 1) | Impeller Assembly | Set | 1 |
| 2) | Bearings | Set | 1 |
| **Note : One(1) set consists of quantity required for complete replacement for one(1) compressor of each type & capacity** | | | |

**1.21.00** **AIR CONDITINING AND VENTIALTION SYSTEM**

| | | |
|---|---|---|
| 1.0 | **Air handling unit (for each model)** | |
| 1.1 | V-belts for AHU Blower | 2 Sets |
| 1.2 | AHU Blower bearing | 1 Set |
| 1.3 | Blower motor bearing | 1 Set |
| 1.4 | Filters at suction and discharge of all AHUs | 25% of installed population |

| | | |
|---|---|---|
| 2.0 | **Unitary air filtration unit** | |
| 2.1 | *Supply Air fans* | |
| 2.1.1 | V-belts for supply air fans | 2 Sets |
| 2.1.2 | Supply air fan bearings | 1 Set |
| 2.2 | *UAF Pump* | |
| 2.2.1 | Pump bearings | 1 Set |
| 2.2.2 | Impeller for pump | 1 no. |
| 2.2.3 | Pump Shaft | 1 no. |
| 2.2.4 | Shaft sleeves | 1 Set |
| 2.2.5 | Gland Packings for pumps | 1 Set |
| 2.2.6 | Nylon Filter | 1 Set |
| 2.2.7 | Spray nozzles | 5% of total population or 50 Numbers whichever is higher. |
| 2.2.8 | Water strainer | 1 No. |
| 2.2.9 | Brass suction screen/strainer for unitary air filtration tank. | 1 Set |
| 2.2.10 | Motor for Centrifugal fan for UAF | 1 No |
| **3.0** | **Control & Instrumentation** | |
| i) | Air-Conditioning System | |
| 3.1 | Electronic Transmitters | |
| 3.1.1 | Transmitters of all types and model no. (for the measurement of Pressure, differential pressure flow, level, temperature etc.) | 5% or 1 No. of each type and model whichever is more. (to be divided into various ranges in proportion to main population) |

| | | |
|---|---|---|
| 3.2 | Temperature elements | |
| 3.2.1 | RTD's* | 5% or 1 No. which ever is more ** |
| 3.2.2 | Thermo well<br>* (With head assembly, terminal block and nipple) | 5% or 1 No. which ever is more **<br>** (to be divided into various insertion lengths in proportion to main population) |
| 3.3 | All types of Local Indicators | 5% or 1 No. of each make, model and type whichever is more (to be divided to various ranges in proportion to main population of all make, model and type) |
| 3.4 | Process Actuated Switch Devices Includes all types of Pressure, differential pressure, flow, and temperature, and differential temperature, level switch Devices. | 5% or 1No. of each type and model whichever is more. |
| 3.5 | Relative Humidity Sensors | 1 No. |
| 3.6 | Geyserstat | 1 No. |
| 3.7 | Local Humidity/Temperature indicators | 2 Nos. each |
| 4.0 | **Process Connection Piping (for Impulse Piping / Tubing, Sampling Piping / Tubing and Air Supply Piping as Applicable)** | |
| 4.1 | Valves | 10% or 1 No. of each type, class, size and model whichever is more. |
| 4.2 | 2 way, 3way, 5way valve manifolds | 10% or 1 No. of each type, class, size and model whichever is more. |
| 4.3 | Fittings | 10% or 1 No. of each type, class, size and model whichever is more. |

| | | |
|---|---|---|
| (II) | Ventilation System | |
| **5.0** | **Measuring Instruments** | |
| 5.1 | Pressure Gauge | 1 No. (for centrifugal pumps of UAF units). |
| 5.2 | Level transmitter | 1 No. |
| 5.3 | Pressure transmitter | 1 No. (for UAF units) |
| 6.0 | **Process Connection Piping (for Impulse Piping / Tubing, Sampling Piping / Tubing and Air Supply Piping as Applicable)** | |
| 6.1 | Valves | 1 no. of each type, class, size and model |
| 6.2 | 2 way valve manifold | 1 no. of each type, class, size and model |
| 6.3 | Fittings | 1 no. of each type, class, size and model |
| | | |

**1.22.00 FIRE DETECTION AND PROTECTION SYSTEM**

| | **ITEM DESCRIPTION** | **QUANTITY** |
|---|---|---|
| **1.0** | **DELUGE VALVE ASSEMBLIES** | |
| 1.1 | Complete deluge valve assembly along with internals and accessories | |
| 1.1.1 | 150 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 1.1.2 | 100 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 1.1.3 | 80 NB | 10% or 1 No. of each type, class, size and model whichever is more. |

| | ITEM DESCRIPTION | QUANTITY |
|---|---|---|
| 1.2 | Clapper assembly complete (consisting of clapper seat rubber, screws, etc.) | |
| 1.2.1 | 150 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 1.2.2 | 100 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 1.2.3 | 80 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 1.3 | Solenoid coils | |
| 1.3.1 | 150 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 1.3.2 | 100 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 1.3.3 | 80 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| **2.0** | **VALVES (BUTTERFLY)** | |
| 2.1 | Butterfly | |
| 2.1.1 | 150 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 2.1.2 | 100 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 2.1.2 | 80 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 2.2 | Disc (Butterfly) | |
| 2.2.1 | 150 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 2.2.2 | 100 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 2.2.3 | 80 NB | 10% or 1 No. of each type, class, size and model whichever is more. |

| | ITEM DESCRIPTION | QUANTITY |
|---|---|---|
| 2.3 | Stem for Butterfly Valve | |
| 2.3.1 | 150 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 2.3.2 | 100 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 2.3.3 | 80 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| **2.4** | **Gasket for Butterfly Valve** | |
| 2.4.1 | 150 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 2.4.2 | 100 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 2.4.2 | 80 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| **2.5** | **Bushing/Bearing (butterfly valve)** | |
| 2.5.1 | 150 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 2.5.2 | 100 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 2.5.3 | 80 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| **3.0** | **BASKET STRAINERS / Y-TYPE STRAINERS for HVW / MVW SPRAY SYSTEM** | |
| 3.1 | Strainer elements with o-rings and stiffeners. | |
| 3.1.1 | Y- Type strainer | |
| 3.1.1.1 | 150 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| 3.1.1.2 | 100 NB | 10% or 1 No. of each type, class, size and model whichever is more. |

| | ITEM DESCRIPTION | QUANTITY |
|---|---|---|
| 3.1.1.3 | 80 NB | 10% or 1 No. of each type, class, size and model whichever is more. |
| **4.0** | **MVW SPRAY SYSTEM** | |
| 4.1 | Spray Nozzles | 10% or 10 No. of each type, class, size and model whichever is more. |
| 4.2 | QB Detectors | 10% or 20 No. of each type, class, size and model whichever is more. |
| **5.0** | **HVW SPRAY SYSTEM** | |
| 5.1 | Spray nozzles | 10% or 10 No. of each type, class, size and model whichever is more. |
| 5.2 | QB Detectors | 10% or 20 No. of each type, class, size and model whichever is more. |
| **6.0** | **FIRE DETECTORS** | |
| 6.1 | Multisensor detectors (Addressable) | 10% or 10 No. of each type, class, size and model whichever is more. |
| 6.2 | Indicators assembly for smoke detectors provided in false ceiling (Response indicator) | 10% or 10 No. of each type, class, size and model whichever is more. |
| 6.3 | LHS cable for conveyors | 10% of each type, class, size and model whichever is more. |
| **7.0** | **CONTROL AND INSTRUMENTATION** | |
| **7.1** | **MEASURING INSTRUMENTS** | |
| 7.1.1 | All types of Local indicators | 1 no. of each make, model and type |
| 7.1.2 | Process Actuated Switch Devices :<br>(All types of Pressure, diff. pressure, flow, temperature, level switch devices). | 1 no. of each type and model |

| | ITEM DESCRIPTION | QUANTITY |
|---|---|---|
| 7.1.3 | All type of Electronic Transmitters and Ultrasonic Transmitters including sensors. | 10% or 1 no. of each type and model whichever is more. |
| 7.1.4 | Limit switches for isolation valves | 1 no. of each type |
| **7.2** | **PROCESS CONNECTION PIPING (For Impulse Piping / Tubing and Air Supply Piping as Applicable)** | |
| 7.2.1 | Valves | 1 no. of each type, class, size and model. |
| 7.2.2 | 2 way, 3 way, 5 way valve manifolds | 1 no. of each type, class, size and model. |
| 7.2.3 | Fittings | 5% or 1 no. of each type, class, size and model whichever is more. |
| **7.3** | **CABLES** | |
| 7.3.1 | Pre fabricated cable of each type. | 1 no. of each type, size and model. |
| 7.3.2 | Pre fabricated cable connector | 1 no. of each type and model |
| 7.3.3 | Other cables (including core cable, short term fire proof cable, fibre optic cables etc) | 5% of each type, pair/ core and size of actual installed quantity. |
| **7.4** | **FIRE ALARM PANEL & REPEATER FIRE ALARM PANEL** | |
| 7.4.1 | Fuses | 100% of population |
| 7.4.2 | Indicating lamps | 100% of population |
| 7.4.3 | Push Button | 10 Nos. of each type and rating |
| 7.4.4 | Power supply modules | 10% or 1 No. of each type & rating whichever is more |
| 7.4.5 | Control modules, loop cards modules, isolator cards | 10% or 1 No. of each type, whichever is more. |

| | ITEM DESCRIPTION | QUANTITY |
|---|---|---|
| 7.4.6 | LCD display of each type unit of panel | 1 No. |
| 7.4.7 | Cartridges for printers | 2 Nos. |
| 7.4.8 | Interface unit / modules for non-addressable devices, auxiliary / output relay modules, control modules, supervisory control modules and any other electronic modules | 10% or 1 No. of each type whichever is more. |
| 7.4.9 | LED's of each type | 100% of population. |
| 7.4.10 | Power supervision relay | 4 Nos. of each type. |
| 7.4.11 | Fire screen / alarm buzzer | 1 No. of each type |

**1.23.00** **Compressed Air System:**

| | ITEM DESCRIPTION | QUANTITY |
|---|---|---|
| 1.0 | Oil free Screw Air Compressor | |
| 1.1 | H. P. Stage<br>Complete HP Stage assembly consisting of high pressure element, Bearing for male and female rotors (drive end), Bearing for male and female rotors (non-drive end), Timing gears, Graphite ring shaft for compressor chamber seals or white metal labyrinth, suction valve, discharge valve, packing set, Axial thrust bearing, Labyrinth oil seal or radial seals or double acting seals for drive shafts. | 1 Set of each type/rating |
| 1.2 | L. P. Stage<br>Complete LP Stage assembly consisting of | 1 Set of each type/rating |

| | ITEM DESCRIPTION | QUANTITY |
|---|---|---|
| | high pressure element, Bearing for male and female rotors (drive end),Bearing for male and female rotors (non-drive end), Timing gears, Graphite ring shaft for compressor chamber seals or white metal labyrinth, suction valve, discharge valve, packing set, Axial thrust bearing, Labyrinth oil seal or radial seals or double acting seals for drive shafts. | |
| 1.3 | Motor Bearings | 2 Sets |
| 1.4 | LP stage Gear and Pinion | 1 Set |
| 1.5 | HP stage Gear and Pinion | 1 Set |
| 1.6 | Air Intake Filter Element With Gaskets | 4 Sets |
| 1.7 | Oil Filter Element With Gaskets & Seals | 4 Sets |
| 1.8 | Safety Valve Springs and Gaskets for HP stage | 1 Set |
| 1.9 | Safety Valve Springs and Gaskets for LP stage | 1 Set |
| 1.10 | Valves (within the compressor house with actuators | 2 nos of each type/ratings/ size. |
| 1.11 | Oil Pump/Motor | |
| 1.11.1 | Oil Pump and Motor complete assembly | 1 Set |
| 1.11.2 | Pump impeller/rotor with shaft | 1 Set |
| 1.11.3 | Set of bearings | 2 Set |
| 1.11.4 | Set of Seals | 2 Set |
| 1.12 | Drain / Moisture Trap | 2 Set of each type/size. |
| 1.13 | Oil Cooler Gaskets & Seals | 2 sets |

| | ITEM DESCRIPTION | QUANTITY |
|---|---|---|
| 2.0 | **AIR DRYING PLANT (Twin tower type) FOR IA SYSTEM (As applicable)** | |
| 2.1 | Pre filter element(Ceramic candle or as applicable) | 2 sets |
| 2.2 | After filter element(Ceramic candle or as applicable) | 2 sets |
| 2.3 | Heater element(if applicable) | 1 sets |
| 2.4 | Blower bearing(if applicable) | 1 sets |
| 2.5 | Blower motor bearing(if applicable) | 2 sets |
| 2.6 | Valves & Valve Actuators (pneumatic/hydraulic) | 2 sets |
| 2.7 | Heater coil for temperature stabilization (for HOC type)(as applicable) | 2 sets |
| 3.3 | Rotary drum type Air drying plant for Instrument Air system (As applicable) | |
| 3.3.1 | Drive assembly consisting of motor, gear boxes, drive shaft & coupling | 1 set |
| 3.4 | Motor for air compressor | 1 no. |
| 3.5 | **MEASURING INSTRUMENTS** | |
| | **1 Electronic Transmitters** | |
| | (i) Transmitters of all types, ranges and model no. (for the measurement of Pressure, differential pressure flow, level, etc.) | 10% or 1 No. of each type and model, whichever is more |
| | **2 Temperature elements** | |
| | (i) RTD's* of each type and length | 10% or 2 Nos. of each type and length Which ever is more |
| | ii) Thermocouples of each type like K-type, R-type, metal etc. and length * | 10% or 2 Nos. of each type and length Which ever is |

| | ITEM DESCRIPTION | QUANTITY |
|---|---|---|
| | | more |
| | (iii) Thermowell for application like mill outlet temperature and SH/RH/Eco/ true gas temp. in furnace | 10% or 2 Nos. of each type and length Which ever is more |
| | (iv) Temperature transmitters | 10% of each type and length whichever is more |
| | 3 Local Indicators like temperature gauges, pressure gauges, differential pressure gauges, flow gauges flow meters etc., | 5% or 1 No. of each make, model and type whichever is more (to be divided to various ranges in proportion to main of all make, |
| | 4 Process Actuated Switch Devices Includes all types of Pressure, differential pressure, flow, temperature, differential temperature, level switch Devices | 5% or 1 No. of each type and model whichever is more |
| | 5 Dew Point meters | 5% or 1 No. of each type and model whichever is more |
| **3.6** | **MICROPROCESSOR BASED/PLC BASED CONTROL/ ELECTRONIC BASED CONTRAL PANEL (IF APPLICABLE)** | |
| 1 | Fully programmed controller of electronic modules of each type (as applicable) | 10% or 1 no. whichever is more |
| 2 | Power supply module (if applicable) | 10% or 1 no. whichever is more |

| **NOTE:** | |
|---|---|
| 1. | Wherever set is mentioned, one set of the spares of that item shall be for complete replacement of that particular item for one equipment. |
| 2. | Any fraction of a item shall mean the next higher integer. |

| | |
|---|---|
| 3. | Wherever quantity has been specified as percentage (%), the quantity of mandatory spares to be provided by contractor shall be the specified percentage (%) of the total population of the plant. In case the quantity so calculated happens to be fraction, the same shall be rounded off to next higher whole number. |
| 4. | Wherever the quantities have been indicated for each type, size, thickness, material, radius, range etc., these shall cover all the items supplied and installed and the breakup for these shall be furnished in the bid. |
| 5. | In case spares indicated in the list are not applicable to the particular design offered by the bidder, the bidder should offer spares applicable to offered design with quantities generally in line with the approach followed in the above list. |

**1.24.00 LIMESTONE & GYPSUM HANDLING**

| S.N. | | If Applicable (Y/N) | ITEM | QUANTITY | Unit |
|---|---|---|---|---|---|
| **1** | | | **Mechanical** | | |
| **A)** | | | **Paddle Feeder** | | |
| 1 | | | Rotor arm with Liners & Bolts | 1 | sets of each type |
| 2 | | | Liners of rotor arms | 2 | sets of each type |
| 3 | | | Gear box (including Paddle wheel, | | |
| | | | Travel drive, cable reel drive ) | | |
| | i) | | Complete assembly | 1 | set of each type |
| | ii | | Bearings | 1 | set of each type |
| | iii) | | Oil Seals | 2 | nos. of each size |
| | iv) | | Input shaft with pinion | 2 | sets of each type |
| 4 | | | **Hydraulic Power Pack** | | |
| | i) | | Rotor Pump with electric motor, coupling, valves & servo motor (mounted on pump)etc. | 2 | set of each type and rating |
| | ii) | | Solenoid Valves complete with coils | 2 | set of each type and size |

**Note** :

1. Unless stated otherwise a 'set' means items or sub-items required for each type/size range of the assembly/ sub-assembly, required for replacement in one main equipment. It is further intended that the assembly/ sub-assembly which have different orientation (like left hand or right hand, top or bottom), different direction of rotation or mirror image positioning or any other reasons which result in maintaining two different sets of the spares to be used for the subject assembly/ sub-assembly, these shall be considered as different types of assembly/ sub-assembly.
2. Wherever quantity has been specified as percentage (%), the quantity of mandatory spares to be provided by contractor shall be the specified percentage (%) of the total population of the plant. In case the quality so calculated happens to be a fraction, the same shall be rounded off to next higher whole number.
3. Whenever the quantities have been indicated for each type, size, thickness, material, radius, range etc., these shall cover all the items supplied and installed and the breakup for these shall be furnished in the bid.
4. In case spares indicated in the list are not applicable to the particular design offered by the bidder, the bidder should offer spares applicable to offered design with quantities generally in line with the approach followed in the above list.
5. Price of each and every item is to be given separately.

| 1.07.03 | Central Processor Unit | 1 nos. of each type and model. |
| 1.07.04 | Interconnecting Cables | 10% of each type and size |
| 1.07.05 | Cooling Fan in PLC system / cabinet | 2 Nos. |
| 1.07.06 | Indication lamps of all types | 100% |
| | 1. Keyboards/mouse | |
| | 1.1 Keyboard | 2 nos. of each type. |
| | 1.2 Mouse | 2 nos. of each type. |
| | 2. Printers and their parts | |
| | 2.1 Color laser printer (A4) | 1 no |
| | 2.2 Long term storage unit | 1 no |
| | 2.3 Blank CDs | 10 boxes |
| | 3. HMIPIS Devices | |

| CLAUSE NO. | MANDATORY SPARES | |
|---|---|---|

| | | |
|---|---|---|
| | 3.1 OWS with licensed software loaded along with monitor | 2 nos. of each type and model. |
| | 3.2 Server for unit LAN or Information Work Stations (As applicable) | 1 nos. |
| | 3.3 Net work components like Switch /repeaters/hubs etc. (as applicable) | 2 nos. of each type and model. |
| | 3.4 Control units for LVS | 1 no. |
| | 4. Cables and Connectors. | |
| | 4.1 Prefab interconnecting cables with connectors | 2 nos. of each type and length. |
| | 4.2 System bus cable with connectors | -do- |
| | 4.3 I/O bus cable with connectors for remote I/O units | -do- |
| | 4.4 Power Supply Modules & Power Packs for control system | 10% of each type model and rating, whichever is more |
| | 5. Electronic modules of each type and model for control system (This shall include all type of cards like I/O cards, controller cards, CPU module or Card, logic cards etc.) | 10% or 2 nos. of each type and model whichever is more |
| | 6. Bus coupler/Interface hardware and other communication devices. | 10% of each type and model |
| | 7. Relays | 10% of each type and rating |
| | 8. Batteries used for battery backup of RAMs. | 10% of each type and model |
| | 9. Fuses | 200 % |

| | | |
|---|---|---|
| 1.08.00 | **OTHER RELATED CONTROL AND INSTRUMENTATION SYSTEMS / EQUIPMENTS** | |
| | 1. Lime Feeders | |
| | 1.1 Motion monitor | 10% or 2 nos. whichever is more. |
| | 1.2 Speed pick-up | 10% or 2 nos. whichever is more. |
| | 1.3 Torque switch (if applicable) | 10% or 2 nos. whichever is more. |
| | 1.4 Load Cell | 10% or 2 nos. whichever is more. |
| | 1.5 Electronic cards & Power Supply cards | 10% or 2 nos. whichever is more. |
| | 1.6 Clutch (if applicable) | 10% or 2 nos. whichever is more. |
| | 1.7 Local indication lamps | 200 % |
| | 1.8 Panel meters | 10% or 2 nos. whichever is more. |
| | 1.9 Limit switch assembly for lime-on-belt, no lime flow, shear pin failure, etc. | 10% or 2 nos., whichever is more. |
| 1.09.00 | **CONTROL VALVES, ACTUATORS & ACCESSORIES (Following items shall be provided under this clause for all modulating control valves being supplied under this package)** | |
| | 1. Pneumatic and electro-hydraulic actuator assembly | 10% or 1 no. of each type, model and rating, whichever is more. |
| | 2. Valve trim (including cage, plug, stem, seat rings, guide bushings etc.) | 1 set for each type of control valve. |

| | | |
|---|---|---|
| | 3. Diaphragms, O' rings, seals etc. of all types make etc. | 100% |
| | 4. Pressure Gauges of all types, make, rating etc. | 10% or 2 nos. of each type whichever is more |
| | 5. Solenoid valves (if applicable) | 10% or 2 nos. of each type whichever is more |
| | 6. Positioner units (complete unit)& accessories (link assembly) | 10% or 1 no. of each type whichever is more |
| | 7. Pneumatic air-filter/Regulator of each type, make rating etc. | 10% or 2 Nos., whichever is more |
| | 8. Air lock relays | 10% or 2 nos. of each type whichever is more |
| 1.10.00 | **PNEUMATICS ISOLATION / BLOCK VALVES, ACTUATORS & ACCESSORIES (For all ON/OFF valves supplied under this package)** | |
| | 1. Pneumatic actuator assembly | 10% or 1 no. of each type, model and rating, whichever is more. |
| | 2. Diaphragms, O' rings, seals etc. of all types make etc. | 100% |
| | 3. Limit switches (complete unit)& accessories (link assembly) | 10% or 2 Nos., whichever is more |
| | 4. Pneumatic air-filter/Regulator of each type, make rating etc. | 10% or 2 Nos., whichever is more |

**1.26.00 ELECTRICAL**

**1.01.00 LT Switchgear:**

**Part A:**

| S.No. | Item Description | Quantity |
|---|---|---|
| 1 | Complete breaker | 10% of each type & rating(min 1 No) |
| 2 | Ammeter | 2 Nos of each type, size & range |
| 3 | Voltmeter | 2 Nos of each type, size & range |
| 4 | Relays | 10 % of each type (min 2 Nos) |
| 5 | Bus bar support insulators ~~(Porcelain)~~ | 10 Nos. |

**Part B:**

| | | |
|---|---|---|
| 1 | Spring charging motors | 3 Nos of each type & rating |
| 2 | Aux. Contact set | 6 sets of each type & rating |
| 3 | Limit switches | 10 Nos of each type. |
| 4 | Arc chutes | 10% of each type & rating |
| 5 | Fixed contact set | 3 Nos sets of each type & rating |
| 6 | Moving contact set | 3 Nos sets of each type & rating |
| 7 | Arcing contact | 3 Nos sets of each type |
| 8 | Charging spring | 2 Nos of each type & rating |
| 9 | Current transformer | 3 Nos of each type & |

| | | |
|---|---|---|
| | | ratio |
| 10 | Closing coil | 6 Nos of each type & rating |
| 11 | Trip coil | 6 Nos of each type & rating |
| 12 | CT for Bimetal O/L relays | 3 Nos of each type & rating |
| 13 | Voltage transformer | 3 Nos of each type & ratio |
| 14 | Control supply transformer | 3 Nos of each type and rating |
| 15 | (a) Power contactor | 2 Nos of each type & rating |
| 16 | (b) Coil of above contactor | 2 Nos of each type & rating |
| 17 | Air break switches/ MCCBs | 3 Nos of each type & rating |
| 18 | DP air break switches(DC) | 3 Nos of each type & rating |
| 19 | Control & selector switches | 3 Nos of each type & rating |
| 20 | Control fuses & neutral links | Total 50 Nos (Fuses) & ~~5%~~ 10 Nos (Neutral links), to cover all the ratings. |
| 21 | Indicating lamps | Total 30 Nos to cover all the types & ratings |
| 22 | Vertical bus bar dropper support insulators | 25 Nos. |
| 23 | Bus duct flexible connectors (both transformer and switchgear end) | 1 set for thee phases of each type & size |
| 24 | (a) Primary disconnect in MCC (Bus bar end)(Male/female contact) | Total 15 Nos. proportionately divide for all ratings |

| | | |
|---|---|---|
| 25 | (b) Secondary disconnect in MCC (Cable end) | Total 15 Nos. proportionately divide for all ratings |
| 26 | Push buttons | 10 Nos of each type |
| 27 | Power fuses | Total 20% proportionately divide for all ratings (min 3 Nos) |
| 28 | Thermal Bimetal relays | Total 5%. proportionately divide for all ratings (min 1 No) |
| 29 | Current transducers | 2 Nos of each type & rating |
| 30 | Voltage transducers | 2 Nos of each type & rating |
| 31 | Busbar aluminium flat pieces | 12 meters of each type & rating |
| 32 | Busbar angles/formed pieces for breaker | 2 Nos. of each type |
| 33 | Terminal blocks | 12 Nos of each type & rating |
| **1.02.00 ELECTRICAL ACTUATORS** | | |
| 1 | Actuators | 1 no of each type and rating |
| **1.03.00 LIGHTING** | | |
| 1. | LED Fixture | 5 nos of each type and rating |

| 1.04.00 MV SWITCHGEARS | | |
|---|---|---|
| 1 | Breaker of each rating | 10% of each type & rating (Min 1 No.) |
| 2 | Numerical relays | 10% of each type (Min 2 Nos) |
| 3 | Aux. Relays/ Lock out relays/ Timers(if applicable) | 10% of each type (Min 2 Nos) |
| 4 | Bus bar support insulators | 12 Nos. |
| 5 | Energy meter of each type & range | 1 Nos. of each type |
| 6 | Spring charging motor complete | 2 Nos. of each type. |
| 7 | Current transformer of each type & ratio | 3 Nos. of each type |
| 8 | Potential transformer of each type & ratio | 3 Nos. of each type |
| 9 | Shunt trip coil | 5 Nos. of each type & rating |
| 10 | Closing coils | 5 Nos. of each type & rating |
| 11 | Moving contact assembly of each rating (One set means complete replacement for one breaker) | 2 sets |
| 12 | Stationary (fixed) contact of each rating (One set means complete replacement for one breaker) | 2 sets |
| 13 | Bus seal off bushings | 3 nos. of each type & size |
| 14 | Limit switches | 10 Nos. of each type |
| 15 | Control switches | 2 Nos. of each type |
| 16 | Selector switches | 2 Nos. of each type |
| 17 | Isolation switch for the control supply | 2 Nos. |

| | | |
|---|---|---|
| 18 | Circuit breaker auxiliary contact assembly | 6 Nos. of each type & rating |
| 19 | Indicating lamps with holders | 20 set |
| 20 | (a) Fuse base and holder | 12 Nos. |
| | (b) Fuse link | 12 Nos. |
| 21 | Isolating contact ( fixed & moving)( one set means male & female contacts of one complete breaker) | 4 sets of each rating |
| 22 | Terminal blocks | 6 Nos. |
| 23 | Multiple pin plug contact assy. with cables (male & female) | 6 Nos. |
| 24 | Inter-phase barrier | 2 Nos. of each type |
| 25 | Vacuum Contactors with HRC fuses (if applicable) | 2 Sets (One set = Three fuses) |
| 26 | Surge arresters | 3 Nos. of each rating |

**1.05.00 MV Busduct**

| | | |
|---|---|---|
| a | Support insulators of each type | 10 Nos. |
| b | Three phase set of flexible terminal connectors for switchgear end of each type & rating | 1 set |
| c | Three phase set of flexible terminal connector for transformer end of each type & rating | 1 set |
| d | Seal off bushings of each type & rating | 3 nos. |

NOTE: ONE SET MEANS COMPLETE REQUIREMENT OF ONE PHASE, WHEREVER NOT SPECIFIED

## 1.06.00 TRANSFORMER

| Sr. No. | ITEMS DESCRIPTION | Transformer (For each type/rating) |
|---|---|---|
| 1. | HV Bushing with metal parts and gaskets | 2 Nos. |
| 2. | LV bushing with metal parts and gaskets | 2 Nos. |
| 3. | LV Neutral bushing with metal parts and gaskets | 2 Nos. |
| 4. | WTI with contacts | 1 No. |
| 5. | OTI with contacts | 1 No. |
| 6. | Pressure relief device | 1 No. |
| 7. | MOG | 1 No. |
| 8. | Buchholz relay complete | 1 No. |
| 9. | Set of gaskets (See Note 1) | 1 Set |
| 10. | Set of valves | 2 Nos. of each type/size |
| 11. | Air cell for conservator | 1 No. |
| 12. | Neutral Grounding Resistor w/o supporting structure | 1 No. |

**Note 1:** 1 set consists of gaskets required for 1 No. transformer for the following

(a) Protection and monitoring devices

(b) Cooler circuit

(c) Largest inspection cover, if applicable

(d) HV/LV turret, if applicable

| CLAUSE NO. | MANDATORY SPARES |
|---|---|

NOTE:

**1.** Wherever set is mentioned, one set of the spares of that item shall be for complete replacement of that particular item for one equipment.

**2.** Any fraction of a item shall mean the next higher integer.

**3.** Wherever quantity has been specified as percentage (%), the quantity of mandatory spares to be provided by contractor shall be the specified percentage (%) of the total population of the plant. In case, the quantity so calculated happens to be fraction, the same shall be rounded off to next higher whole number.

**4.** Wherever the quantities have been indicated for each type, size, thickness, material, radius, range, etc., these shall cover all the items supplied and installed and the breakup for these shall be furnished in the bid.

**5.** In case, spares indicated in the list are not applicable to the particular design offered by the bidder, the bidder should offer spares applicable to offered design with quantities generally in line with the approach followed in the above list.

| CLAUSE NO. | MANDATORY SPARES | |
|---|---|---|
| **1.27.00** | **MANDATORY SPARES FOR CHIMNEY ELEVATOR (Qty. indicated are for one (1) No. Chimney Elevator)** | |
| A. | BRAKE | ASSEMBLY Qty. |
| | 1. Brake Assembly complete | 1 No. |
| B. | GEAR ASSEMBLY | |
| | 2. Gear Assembly complete | 1 No. |
| C. | DOOR FRONT | |
| | 3. Bearing | 3 Nos. |
| | 4. Roller | 3 Nos. |
| | 5. Bushing (if applicable) | 2 Nos. |
| D. | LIMIT CAMS | |
| | 6. Sensor | 3 Nos. |
| | 7. Switch arm | 3 Nos. |
| E. | CAB | |
| | 8. Guide roller | 100% of the total ones installed each type or min. 1 no. whichever is higher |
| | 9. Switch | 3 Nos. |
| F. | SLIDING DOOR | |
| | 10. Rollers (if applicable) | 4 Nos. each type |
| G. | MACHINERY | |
| | 11. Guide roller | 2 Nos. |

**BIDDING DOCUMENT NO. : CS-0011-109(1A)-2**

# PART – B (DETAILED TECHNICAL SPECIFICATION)

# SUB-SECTION-IV-D (CIVIL WORKS)

# SUB-SECTION-IV-D

# CIVIL WORKS

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **1.00.00** | **GENERAL** |
| **1.01.00** | This section of the bidding document deals mainly with the technical specification for the design and preparation of detailed drawings, getting the design and drawings approved by the Employer, fabrication, erection and construction of the necessary civil, structural and architectural works associated with the FGD package for **Lot-1A**. The work shall have to be carried out both below and above ground level and shall be involving, basements, equipment foundations, slabs, beams, columns, footings, rafts, walls, steel frames, brick walls, stairs, trenches, pits, access roads, culverts, trestles, silos, sumps, Limestone storage hopper & shed, Crusher House, Transfer points, Conveyor Galleries, Tunnels, Gypsum storage shed, Chimney, Gypsum dewatering building, Ball Mill building, FGD control room building, Tank Foundations, absorber tower foundation, transformer foundation, MCC Building, finishes, complete architectural aspects, drainage, sanitation, water supply (from terminal points to various buildings/facilities) and all other civil, structural and architectural works associated with the complete FGD package. |
| **1.02.00** | The specifications are intended for the general description of the work, quality and workmanship. The specifications are not, however, intended to cover minutest details and the work shall be executed according to the relevant latest Indian Standard Codes / I. R. S. / I. R. C. specifications. In absence of the above, the work shall be executed according to the best prevailing local Public Works Department practices or to the recommendations of relevant American and British Standards or to the instructions of the Engineer. Some of the relevent I. S. Codes to be followed is mentioned in the Technical Specifications. The Contractor is expected to get clarified on any doubts about the specifications, etc. before bidding, in writing with the Employer in respect of interpretation of any portions of this document. |
| **1.03.00** | Bidder or his agencies engaged as detailer for fabrication drawings should have the experience of detailing for power plant structures or steel plant or Industrial structures like Petro/ Chemical/ Refinery/ Cement/FGD Plant/Coal Handling Plant/Ash Handling Plant etc.<br><br>The designer responsible for preparation of scope drawings shall review and approve the fabrication drawings prepared by the detailer before releasing them for fabrication. |
| **2.00.00** | **Sub QR for Civil Works:** |
| 2.01.00 | Bidder or its agency should have in past executed civil and structural works for 500 MW or higher capacity coal based/Lignite based power plant including earthwork in filling involving mechanical compaction and cutting in hard rock, foundations, Bulk material handling plant involving underground storage hopper and underground tunnels. |
| 2.02.00 | Bidder can engage more than one agency, in case the Bidder itself is not able to meet the requirement at 2.01.00. The agency being engaged for a particular work should have in the past executed such works of 500 MW or higher capacity plant. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 2.03.00 | For Chimney, Bidder or its agency should have in the past built at least one (1) reinforced concrete chimney of minimum 100m height. |
| 2.04.00 | In case Bidder or its agency do not meet the requirements at 2.01.00 and the Bidder proposes to engage agency (ies) for civil & structural works on work volume basis (except for Chimney), Bidder or its agency (ies) should have executed such works in the past and the annual rate of execution in the reference works should not be less than eighty percent (80%) of the asking rate of such works, (structural steel fabrication & erection, RCC, earthwork in filling involving mechanical compaction and cutting in hard rock, RCC in underground storage hopper and underground tunnels ) for which it is being engaged.<br><br>Successful Bidder shall finalize the agency (ies) for each work in consultation with Engineer-in-charge at site before engaging them. |
| | **Design agency for Civil & Steel Structural Works:** |
| 2.05.00 | Bidder or its agency (ies) should have carried out the design and detailed engineering of following works:<br>(i) Civil & Structural works associated with at least one bulk material handling plant for 500 MW or higher capacity coal based/Lignite based power plant.<br>(ii) For Chimney, Bidder or its design agency (ies) should have carried out design & detailed engineering of at least one reinforced concrete chimney with steel flues, of minimum 100m height.<br>(iii) Machine foundations such as Mill foundations/ Block foundations. |
| 2.06.00 | Bidder can engage more than one agency (of repute), in case the Bidder itself is not able to meet the requirement at 2.05.00.<br><br>The design agency (ies) proposed by the Bidder shall be subject to Employer's approval. |
| **3.00.00** | **Work Description** |
| **3.01.00** | **Truck Hopper, Limestone Storage hopper and Underground Tunnel**<br><br>Truck Hopper shall consist of underground portion, which shall be of R. C. C. with structural steel shed covered with permanently Colour coated profiled steel sheets.<br><br>Limestone storage hopper shall be of RCC with structural steel shed covered with permanently Colour coated profiled steel sheets.<br><br>The structural arrangement to be adopted for the design and construction of Limestone Storage hopper shall essentially consist of R. C. C. frames spaced at approx. 3.0M centers with R. C. C. wall panels on the sides and R. C. C. raft at the bottom, fixed to the frames. Minimum thickness of R. C. C. raft at bottom shall be 600 |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | mm. Minimum thickness of RCC side walls shall be 600 mm at bottom and 300 mm at top.<br><br>The vertical and inclined portion of hopper shall be provided with 50 mm thick guniting (shotcreting). Details of shotcreting have been given elsewhere in this specification.<br><br>Expansion joints shall be provided at a maximum distance of 40m. 600 mm wide water stop fabricated with 22G copper plate with bitumen board fillers and polysulphide sealing compound as specified elsewhere shall be used as expansion joint material.<br><br>Floor shall be provided with cross slope not flatter than 1 in 50 towards side drains. Side drains shall be sloped towards sump where sump pumps as specified elsewhere, shall be provided. The slope of side drains shall not be flatter than 1 in 400. Side drains and sump shall have removable type steel grating cover.<br><br>Water proofing / Damp proofing of under ground Truck hopper, Limestone Storage hopper, tunnels and underground (i. e. basement) portion of transfer houses shall be done by providing the following treatments:<br><br>Chemical injection grouting for inner faces (details as specified elsewhere).<br><br>Polymer modified cementitious coating on earth side face as per the following :<br><br>(1) On the outer surface of walls, frames and roof slabs coming in contact with earth, polymer modified cementitious coating in two layers as specified and as per manufacturer's specifications shall be provided directly on the concrete surface.<br><br>(2) 50 mm thick P. C. C. (1 : 2 : 4 with 10 mm nominal size stone aggregates) shall be provided under the raft i.e. over the lean concrete, followed by polymer modified cementitious coating in two layers ( slurry mix application ) as per manufacturer's specification. 50 mm thick P. C. C. ( 1 : 2 : 4 ) with 10 mm nominal size stone aggregates shall then be laid over the polymer modified cementitious coating before laying the raft.<br><br>Truck hopper and its gratings shall be designed for movement of front end loader/ bulldozer over them. Bull dozer weight shall be considered as about 35T. The gratings shall be built of min. 200x28mm thick flats in main direction and min.100mm x 20mm thick in secondary direction. No painting/galvanization shall be provided in gratings. However, two coats of Red oxide Primer to be provided immediately after fabrication.<br><br>Plinth protection along with drains shall be provided along the Hopper complex. However, 5m wide paving shall also be provided around machinery hatches.<br><br>Earth pressure to be considered for design shall be due to earth pressure at rest (Ko) condition only. Earth pressure due to surcharge intensity of Uniformly Distributed Load (U. D. L) of intensity 2 T / Sq. M. shall be considered in the design.<br><br>A minimum safety factor of 1.2 against uplift due to ground water shall be ensured during execution and after execution, considering dead weight of the structure to be |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | 0.9 times only, ground water table to be taken at adjoining formation level and soil wedge angle of not more than 15 degrees.<br><br>Also, FOS against uplift, to be taken as 1.0, considering the dead wt. of structure and soil resting on side projections if any in the vertical plane. Inclined wedge action of soil shall not be considered in this case.<br><br>Wherever, slope of tunnel exceeds $10^o$, R. C. C. steps shall be provided for the entire width of each walkway. |
| **3.02.00** | **Overhead / Ground Conveyor Galleries and Trestles**<br><br>Overhead conveyors shall be located in a suitably enclosed gallery of structural steel. The overhead gallery shall consist of two vertical latticed girders having rigid jointed portal frame at both ends. Cross beams at floor level supporting conveyor stringer beams shall be made of single rolled steel beam or single channel section (ISMB or ISMC) or plate girder. Horizontal bracings are to be provided at top & bottom plan of the gallery (latticed girders shall be braced together in plan at the top and bottom). Common end portal frame shall not be used for adjacent conveyor spans. Roof truss shall be provided at upper node points of latticed girders to form an enclosure. Contractor can also use tubular steel sections for roof truss only of conveyor galleries. The tubular steel section shall be of circular/rectangular/square shape. The circular steel tube shall conform to IS 1161 and rectangular/square steel sections shall conform to IS 4923. The steel structures using tubular sections shall be designed and fabricated as per IS 806 – "Code of Practice for use of steel tubes in general building construction." and EN 1993-1-8:2005. The maximum span of overhead gallery shall be limited to 25 meters unless higher span is required due to site conditions, which shall be subject to approval of the Engineer. The gallery should as far as possible be erected as a box section keeping all the vertical and horizontal bracing tied in proper position. The gallery should be checked for all erection stresses that are likely to develop during handling and erection and if required, temporary strengthening of gallery members during erection shall be made.<br><br>Seal plates under the conveyor galleries shall be provided in such a way that complete gallery bottom shall form a leak proof floor.<br><br>The ground conveyors shall be located in suitably enclosed gallery of structural steel consisting of rigid portal frames spaced at regular intervals and suitably braced. Plinth protection along with drains shall be routed along the ground conveyors.<br><br>For double stream conveyor gallery, two side and one central walkway of width 800 mm and 1100 mm respectively shall be provided. The width of two side walkways for single stream conveyor gallery shall be 800 mm and 1100 mm respectively. Both sides of central and side walkways shall be provided with pipe handrails all along the conveyor gallery. Hand railing should not be supported on conveyor supporting stringers. The walkways shall be chequered plate construction with anti - skid arrangement. The anti - skid arrangement will consist of welding of 10 mm square steel bars at a maximum spacing of 500 mm along the length of the gallery. Where the slope of walkway is more than $10^o$, chequered plate steps with nosing and toe guard shall be provided. The floor of conveyor gallery all along the gallery length, shall be provided with minimum 12 gauge thick seal plates and other drainage arrangements as specified elsewhere |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

Conveyor gallery shall have permanently colour coated steel sheet covers on roof and both sides. However in roof, a panel of minimum 1.5 m x 1.5 m area at about 6.0 m center shall be provided with translucent sheets of polycarbonate material for natural lighting. A continuous slit opening of 500 mm shall be provided on both sides just below the roof sheeting. Adequate provision of windows shall be kept on both sides of conveyor gallery as appended in Mechanical Section (Belt conveyor system). Windows shall be provided with wire mesh as specified elsewhere in this specification.

Cross - over with chequered plate platform and ladder for crossing over the conveyors shall be provided at approximately every 100 M intervals of conveyor. Crossover shall preferably be located over four-legged rigid trestle location.

For railway tracks passing below overhead conveyor gallery and along conveyors, the railway clearances both underground as well as over ground shall have to be adhered to for design, execution and erection of foundations, trestles, galleries etc., so that movement of locomotives and wagons is not hampered in any way during execution and afterwards. However at the location where the overhead conveyor gallery crosses road / rail line, minimum clearance of 8.0m above the road crest / rail top shall be provided.

For calculation of material load on moving conveyor, a multiplication factor 1.6 shall be used to take care of inertia force, casual over burden and impact factor etc.

Thus material load per unit length of each moving conveyor shall be

$$1.6 \times \frac{\text{Rated capacity of conveyor system}}{\text{Conveyor Belt Speed}} \times F$$

Where, F = 1700/1400 for lime & 1250/900 for gypsum

It should be noted that for structural design, unit weight of lime shall be assumed as 1700 Kgs. / Cu. M. instead of 1400 Kgs. / Cu. M., unit weight of gypsum shall be assumed as 1250 Kgs. / Cu. M. instead of 900 Kgs. / Cu. M. considered for system sizing purpose. Conveyor Gallery structure shall be designed considering both conveyors operating simultaneously.

Conveyor gallery and supporting trestles located between transfer houses / buildings shall be arranged in any one of the following ways.

a) All gallery supporting trestles shall be four legged type only. One end of each gallery span shall be hinged to the supporting trestle and the other end shall be slide type. Slide type support shall be with P. T. F. E. bearings to allow both rotation & longitudinal movements.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | b) In between transfer houses / buildings, four legged trestles shall be placed at a maximum interval of 90 metres. The arrangement shall be such so as to ensure that force in the longitudinal direction (i. e. along the conveyor length) of conveyor gallery of length not more than 90 m is transferred to any four legged trestle. In the space between each successive four legged trestles, two legged trestles shall be provided at regular intervals. The end supports resting on the four-legged trestle can have either ends hinged or one hinge and the other on slide type depending on the arrangements. Slide type support shall be with P. T. F. E. bearings to allow both rotation & longitudinal movements.<br><br>End of conveyor gallery which will be supported over transfer house, shall be so detailed that only vertical reaction is transferred from conveyor gallery and no horizontal force in longitudinal direction is transferred from conveyor gallery to transfer house structure and vice - versa.<br><br>For trestles and trestle foundations for conveyor galleries located adjacent to existing structures, over ground and under ground facilities, location and details of these trestles and foundations shall have to be decided such that there is no interference both underground as well as over ground with existing structures and facilities. Trestle columns / ground conveyor portal column base shall be kept 300 mm higher than the existing ground level. |
| **3.03.00** | **Transfer Houses**<br><br>The over ground portion of the transfer house shall be framed structure of structural steel work with permanently colour coated profiled steel sheet side cladding (from lowest working floor level till top) and R. C. C. floors comprising of RCC slab over profiled metal deck sheets (to be used as permanent shuttering) over structural beams. Shear anchor studs shall be provided through metal deck at regular interval on all top flange/flange plate of structural beams. However, the lower portion of side cladding, at ground, for a minimum height of 0.9 m above the finished floor level shall be one brick thick wall plastered on both side. In some areas like MCC floors etc., one brick thick wall cladding shall be provided. Brick wall cladding shall be supported on encased wall beams and suitably anchored to adjoining columns and beams. Contractor shall have option to use tubular steel sections for roof truss only. Vertical bracings shall be provided only on four sides along the periphery. Grade slab with 0.9m height one brick thick wall plastered on both side at periphery shall be provided for all transfer houses.<br><br>Adequate steel doors and windows for proper natural lighting and ventilation shall be provided. In addition to steel windows, panels of suitable size to suit the architectural treatment and made of translucent sheets of polycarbonate material shall also be provided on the side cladding for natural lighting.<br><br>The roof of Transfer points shall be provided with pre-fabricated insulated metal sandwich panels. Composition of Insulated Metal Sandwich Panels shall be as described elsewhere in the Technical Specification. Adequate slope shall be provided for quick drainage of rain water. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **3.04.00** | **Crusher House**<br><br>The crusher house shall be framed structure of structural steel work with permanently colour coated profiled steel sheet side cladding. However, panels of suitable size to suit the architectural treatment and made of translucent sheets of polycarbonate material shall also be provided on the side cladding for natural lighting. The lower portion of side cladding, at ground, for a height of minimum 0.9m above the finished floor level shall be of one brick thick wall plastered on both faces. Floors shall be of R. C. C. slab over profiled metal deck sheets (to be used as permanent shuttering) over structural beams. Shear anchor studs shall be provided through metal deck at regular interval on all top flange/flange plate of structural beams. Within this building cubicles are to be provided for resting room of operators and these shall be constructed with one brick thick brickwork having both sides plastered and roof slab. Adequate steel doors and windows for natural lighting and ventilation shall be provided. Contractor shall have option to use tubular steel sections for roof truss only . Vertical bracings shall be provided only on four sides along the periphery.<br><br>The roof of Crusher house shall be provided with pre-fabricated insulated metal sandwich panels. Composition of Insulated Metal Sandwich Panels shall be as described elsewhere in the Technical Specification. Adequate slope shall be provided for quick drainage of rain water.<br><br>Crushers shall be supported on R. C. C. deck, which in turn will rest on suitable vibration isolation system consisting of springs and dampers. This R. C. C. deck shall be isolated from the floor. However, the vibration isolation system consisting of springs and dampers may rest on main building framework. Detailed specification of vibration isolation system including the unbalanced force, frequency and amplitude criteria and other design requirements are appended elsewhere in this specification |
| **3.05.00** | **Control building, M. C. C. Buildings**<br><br>These shall be steel or RCC framed building with R. C. C. roof and floor. For steel framed building roof /floor shall comprise of RCC slab over profiled metal deck sheets (to be used as permanent shuttering only ) over structural beams. Cladding shall be of brickwork/concrete blockwork with plastering on both sides. Roof shall be provided with roof water proofing treatment, as specified elsewhere in the Technical specification. Suitable arrangement shall be provided so as to prevent ingress of water into the cable trenches inside the building from cable entry locations.<br><br>All air - conditioned areas, shall be provided with the suspended permanently colour coated aluminium false ceiling system (details specified elsewhere) with under deck insulation.<br><br>Adequate aluminium doors and windows shall be provided for natural lighting, ventilation and view. All windows in air conditioned rooms shall have hermetically sealed double glazing. |
| **3.06.00** | **Pent House**<br><br>These shall be of R. C. C. framed structures with columns, beams, slabs and foundations etc. Cladding shall be of brickwork with plastering on both sides. Roof |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | shall be provided with roof water proofing treatment as specified elsewhere. Adequate nos. of steel doors and windows shall be provided for natural lighting and ventilation. |
| **3.07.00** | **Gypsum Storage Shed**<br><br>The Gypsum storage shed shall be RCC framed structure with structural steel work shed with permanently colour coated profiled steel sheet roof and side cladding, grade slab and RCC foundations etc. Roof shall be provided with troughed profile permanently colour coated sheet with adequate slope for quick drainage of rain water. |
| **3.08.00** | **Toilets**<br><br>Toilet with potable water line facilities shall be provided in each of the following locations:<br><br>(a.) In all M. C. C. Rooms<br><br>(b.) Control Building |
| **3.09.00** | **Staircases, Gratings, Handrails**<br><br>All floors of transfer points/crusher houses and other facility buildings shall be accessible through staircase. All staircases of Transfer points and crusher house shall be of steel. Cage ladders (min. 450mm wide) shall be provided for access to roof of penthouses, single storey mcc rooms & mumty. All Stairs shall be minimum 1200 mm wide, maximum rise should not be more than 180 mm and minimum tread with 250 mm. Numbers and arrangement (including enclosures etc.) of stair cases shall be such as to meet the fire safety requirement as per guide lines of statutory regulatory bodies. For steel staircases , Stringers shall be of rolled steel channel ( minimum ISMC 250) and tread shall be of steel gratings. Out side stairs to transfer points/crusher house shall be open type. Minimum 50 x 50 x 6 mm size angles with lugs shall be provided as edge protection for treads of stairs in underground TP's<br><br>All gratings shall be electro forged types. Minimum thickness of the grating shall be 40 mm for indoor installation and 32 mm for outdoor installation. However, at entry or road crossing point's minimum thickness of grating shall be 40 mm The opening size shall not be more than 30mmx100mm. The minimum thickness of the main bearing bar shall be 6 mm or as per design requirement whichever is higher. All gratings shall be designed for minimum imposed load of 500Kgs. / Sq. M. If actual expected load is more than the specified load, then actual load is to be considered. All gratings shall be hot dip galvanized at the rate of 610 g. per sq.m. after surface preparation by means of blast cleaning/ acid pickling.<br><br>Minimum 1000 mm high hand railing shall be provided around all openings, projections / balconies, walkways, platforms, Stairs, etc. All handrails and ladder Pipes shall be 32 mm nominal bore MS Pipes (medium class) as per IS:1161. Handrails shall have top and middle rails at a height of 1000 mm and 500 mm and the vertical post spacing shall not exceed 1.50 M, with provision of kick Plates (100 |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | mm high and 6 mm thick). All handrails and ladders shall be galvanised at the rate of 610 Gms / Sq. M as per IS:4736. |
| **3.10.00** | **Trenches** |
| | All trenches for cables or any other underground facility as detailed out elsewhere shall be of R. C. C. Cable trenches shall be provided with pre - cast R. C. C. covers / chequered plate cover. Cable trenches as well as pre - cast covers shall be provided with edge protection angles and lifting hooks. All embedments / block outs as required and specified elsewhere in these specifications shall be provided. Proper drainage arrangement shall be provided. Trench pre - cast cover weight shall not be more than 65 Kgs. Trench covers near entry or at road crossings shall be designed for 10 T wheel load at centre. Pre - cast covers shall be designed for central point load of 75 Kgs. R. C. C. cable trenches shall be filled with sand after erection of cables, up to top level and covered with pre - cast R. C. C. covers. For cable trenches outside buildings, top level shall be 200 mm above G. L and sand filling shall be overlaid with 50 thk. PCC.<br><br>Minimum 50 x 50 x 6 mm size angles with lugs shall be provided as edge protection all around cut outs / openings in floor slabs, edges of drains supporting grating/precast RCC covers, edges of R. C. C. trenches supporting pre - cast covers, supported edges of pre - cast cover |
| **3.11.00** | **Cable gallery/trestles** |
| | Cable galleries/trestles shall be made of structural steel. The contractor can use either rolled sections or tubular steel sections. The tubular steel section shall be of circular/rectangular/square shape. The circular steel tube shall conform to IS:1161 and rectangular/square steel sections shall confirm to IS:4923. The steel structures using tubular sections shall be designed and fabricated as per IS:806 – “Code of Practice for use of steel tubes in general building construction.” and **EN 1993-1-8:2005**. |
| **3.12.00** | **Transformer Foundation** |
| **3.12.01** | Foundations of transformers shall be designed for seismic and wind loads in addition to other applicable loads. Block foundations shall be provided for the main transformer block.<br><br>The oil soak pit, if provided, shall be filled with gravel of size 40mm. The volume of the soak pit shall be sufficient to store complete oil of the transformer/reactor along with 10 minutes of fire water considering only 40% of the volume as available voids between gravel filling. However, in case a separate oil collection tank is provided for the transformer/reactor, oil soak pit of volume equivalent to one-third (1/3) the oil volume of transformer/reactor shall be provided around transformer/reactor. The oil collection tank, in such cases, shall be designed for an effective capacity of complete oil of the transformer along with 10 minutes of fire water. The oil soak pit shall also be provided with a sump at the corner to allow drainage of water/oil from the soak pit.<br><br>Arrangement for moving the transformer into place using rail cum road, jacking pads and pulling blocks including inserts, as required, shall be provided along with the transformer/ reactor foundations. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | RCC Firewall shall also be provided between the transformers wherever required.<br><br>300 mm thick PCC M20 encasement all around the Pylon supports inside soak pit for fire fighting system shall be provided up to top of gravel filling. Coarse aggregate filling inside the transformer oil soak pit shall be carried out only after construction/erection of Pylon supports and PCC encasement. |
| **3.12.02** | **Fencing**<br><br>Fencing with toe wall and steel gates shall be provided around the transformers. Fencing shall comprise of PVC coated GI chain link fencing of minimum 8G (including PVC coating) of mesh size 75 mm and of height 2.4 m above the toe wall. The diameter of the steel wire for chain link fence (excluding PVC coating) shall not be less than 12G. Fence posts shall be of pre – cast R. C. C. of minimum M20 grade. All corner posts will have two stay posts and every tenth post will have transverse stay post. Suitable R. C. C. foundation for the post and stays shall be provided based on prevailing soil conditions. Gates shall be sturdy with locking provisions.<br><br>Toe walls of brick masonry shall be provided between fence posts all along the run of the fence with suitable foundation. Toe wall shall be minimum 200 mm above the formation level with 50 mm thick P. C. C. coping (1: 1. 5: 3) and shall extend minimum 300 mm below the formation level. Toe wall shall be plastered on both sides and painted with two coats of cement paint of approved colour and shade. Toe wall shall be provided with weep holes at suitable spacing |
| **3.13.00** | **Booster Fan Foundation**<br><br>Booster Fan foundations shall be RCC block foundation directly resting on virgin soil/ pile below Ground level. The vertical faces of this block foundation shall be isolated from adjacent footings by providing minimum 100mm thick polystyrene board of type-1 conforming to IS: 4671 with density 20 Kg/cum sandwiched between the vertical face of block foundation and 230 thick brick wall all round. |
| **3.14.00** | **CHIMNEY** |
| **3.14.01** | **Salient Features**<br><br>Single-flue or multi-flue chimney(s) shall be provided. Chimney shall be of reinforced concrete construction. There shall be one flue (liner) for each unit. The flue gas emission point shall be minimum 150 meters above the plant grade level.<br><br>The chimney shell (windshield) shall be constructed using slip form shuttering. Internal platforms of steel structure shall be provided for enabling access to various elevations of the chimney and to provide support to the flue liners. Spacing of internal platforms shall not exceed 45.0 M. The platform beams shall be supported on concrete shell using suitable load bearing arrangement in the recesses provided for the purpose. The platform beams getting supported in the chimney shell shall have complete bearing support within the thickness of shell at that location and shall in no case be supported completely/partially on corbels/ brackets from the shell. "Through openings" in shell if provided to facilitate erection of platform beams shall be closed with cast-in-situ RCC closure wall on the external face of the shell. Necessary dowel |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | bars shall be provided in the shell during construction for this purpose. Openings in the concrete shell for flue duct entry, access door & truck entry door at ground level, air ventilation etc shall be provided. Hand railing shall be provided all around internal staircase & around the ventilation voids in the internal platform using min. 32 mm nominal bore MS pipes of medium class conforming to IS:1161. Spacing of railing posts shall not be more than 1500 mm centre to centre with a minimum height of 1200 mm. The handrail shall have three rows of horizontal members between the railing posts including the top member. Kick plate of min. size 100x6 thick shall be provided in the hand railing.<br><br>The flue duct outside the chimney shall be suitably connected to the flue liner inside the chimney through a transition duct. The transition duct shall be bottom supported and shall be profiled into a circular shape to connect to the flue liner. The flue duct shall be so designed that no load is transferred on the chimney shell due to the duct. The interface between the flue liner and the transition ducting shall be provided with non-metallic fluroelastomeric fabric expansion joint.<br><br>The expansion joint in the flue liner shall comprise of non-metallic fluoroelastomeric material suitable to withstand a temperature of 300 Deg C, shall be acid resistant to withstand acidic flue gas condensates arising out of flue gas parameters & operating conditions as specified elsewhere in the specification and shall also prevent dust accumulation. The space between the expansion joint material and the liner shall be packed and sealed by providing a bolster made up of light weight compressible material suitable to withstand a temperature of 300 Deg C and acid resistant to withstand acidic flue gas condensates arising out of flue gas parameters & operating conditions as specified elsewhere in the specification. The bolster shall be confined in texturized glass fabric having a final covering of stainless steel wire mesh.<br><br>Chimney roof shall be of RCC slab over a grid of structural steel beams and provided with rainwater drainage system. An internal structural steel staircase supported from chimney shell with chequered plate floor panels and pipe handrails, shall be provided for full height of the chimney and an internal cage ladder for a small height, over last staircase landing to access the chimney roof through a roof access hatch.<br><br>The other components of the chimney include liner test ports (for continuous pollution monitoring), liner hatches, grade level slab of RCC with metallic hardener floor finish, acid resistant treatment on roof slab, a large electrically operated grill type roll-up door and personnel access metallic door at grade level, roof drain basin, rain water down comer pipe (150 mm diameter galvanized pipe), connection to plant drains, louvers with bird screens for ventilation and all other openings in the wind shield, mild steel wind strakes (if required), all finishing works, electrical power distribution boards, lighting panels, power & control cabling and wiring systems, stair and platforms lighting, socket outlet, lightning protection and grounding system, aviation obstruction lighting with photoelectric controller etc, communication system, a rack and pinion elevator and other items, though not specifically mentioned but reasonably implied and necessary to complete the job in all respects.<br><br>Aviation Warning Lights (AWL) shall be mounted on door panel of required size (open able from interior of chimney shell) fixed to openings in the chimney shell at locations and levels specified elsewhere. Suitable provision for approach to the AWL shall be provided at the platform level. AWL shall be located at about 1-1.5 metre above the top of platform to enable easy handling for maintenance.<br><br>The size of roll-up door shall be determined based on minimum requirement for ventilation and transportation & erection of flue segments. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **3.14.02** | **Design Concept**<br><br>Design and construction of various components and systems of the chimney shall be in accordance with relevant Indian Standard and where provisions are not covered in Indian Standard, reference shall be made to ACI, BS, CICIND and other international standards.<br><br>In case of any conflict between this document and the Indian and International Standards, the stipulations of this document shall prevail.<br><br>Imposed loading for design of all chimney components shall not be less than 5 kN/ Sq.m. An additional 25% of liner load shall be taken as impact loading for liner erection in addition to the liner load.<br><br>The min. thickness of web for plate girders shall be kept as 12 mm.<br><br>Seismic forces on the chimney system shall be determined based on site specific seismic information provided elsewhere in this document.<br><br>Wind forces on the chimney system shall be determined based on site specific wind design criteria provided elsewhere in this document.<br><br>The chimney and its components shall be designed to resist the most onerous forces resulting from all the possible combinations of the various loadings. Design of all chimney components shall be based on working stress method. |
| **3.14.03** | **Wind Shield**<br><br>The wind shield shall be designed for vertical loading, cross wind loading, seismic loading, circumferential wind loading, thermal gradients etc. The load calculation and load combinations shall be as detailed in IS 4998 (Part 1) : 1992. The wind shield shall be analysed for cases with and without flue liner loads.<br><br>Forces/stresses in the wind shield due to eccentricity effects of local (e.g. corbel) loadings, insolations effects, rotation of chimney foundations, construction tolerances and moments of second order shall also be considered.<br><br>Seismic response of the chimney shall be computed by the response spectrum method. At least, the first five modes of vibrations shall be used for this analysis.<br><br>The cross wind analysis of the chimney shall be carried out irrespective of the value of the Scruton Number for the chimney and other empirical considerations which suggest structural immunity to cross wind oscillations.<br><br>The effect of the openings/cut-outs in the chimney shell shall be duly considered in the design of the windshield. The minimum thickness of shell shall not be less than 500mm.<br><br>The stresses for the shell design shall not exceed the limits given in Cl. 7.0 of IS:4998 (PART-I) 1975 for various combinations of loads, excepting the stress in concrete for the case of dead load + wind load which shall not exceed 0.30fck where fck is the characteristic compressive strength of concrete.<br><br>The minimum vertical reinforcement shall be 0.3% of the concrete area. The maximum spacing of the reinforcement bars shall not be more than 250 mm on each face. The minimum circumferential reinforcement shall be 0.2% of the concrete area. The maximum spacing of the reinforcement bars shall not be more than 200 mm on each face. The circumferential reinforcement in the top 3 meters of the windshield |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | shall be twice that required from design forces. The clear cover to reinforcement shall be 50 mm.<br>There shall be a continuous ring of concrete shell without any opening for a height of atleast 5m below the soffit of flue duct openings.<br>There shall not be any reverse (outward) slope in the inside face of chimney shell. Where there is a sudden change in slope/ profile of the shell, the circumferential reinforcement shall be increased to twice the requirement as per the design in a circumferential band extending atleast 3m above and below such slope/profile change level.<br>The diameter of the reinforcing bar for the main vertical reinforcement of shell shall not be less than 25mm for a shell height upto the top level of flue duct opening.<br>Shell thickness between any two 10m reference levels shall not vary more than 150mm.<br>The minimum thickness of shell/closure wall at beam support recess/ opening locations shall be 100mm.<br>Grade of concrete for chimney shell, and other super structure shall be minimum M 30. Only OPC cement shall be used for Chimney shell and other super structure.<br>The final design shall be checked & verified by 'Wind Tunnel Test' and shall be conducted at a reputed institution. Dynamic interference effects due to additional chimney(s)/NDCTS's and other tall structures located in the area or in the future expansion stage of the project shall be determined along with the other topographical features of the local area through model test. |
| **3.14.04** | **Flue Liners**<br>The flue gas parameters & various operating conditions for selection of flue liner material, material specification for flue liner and the criteria of flue gas exit velocity for sizing the flue liner shall be as specified elsewhere in the specification.<br>For flue liner with base metal as mild steel, the thickness of the base metal shall be determined from structural considerations. The thickness of any clad metal/coating/block lining etc. provided on the base metal shall not be considered for computing the structural strength of flue liner. The minimum thickness of the mild steel base metal shall, however, not be less than that specified elsewhere in the specification.<br>Two manholes placed diametrically opposite shall also be provided in each flue at all internal platform levels.<br>The supporting/restraining arrangements of the liners should be such that expansion of the liners longitudinally or circumferentially is not restrained.<br>Clean-out door shall be provided below the flue for the removal of ash. |
| **3.14.05** | **Internal Platforms**<br>The platforms shall be designed for dead, imposed (live), erection work and other possible loadings and temperatures effects. These platforms shall provide support and lateral restraint to the steel liners and provide access for inspections and maintenance. Forces imposed on the floors due to lateral restraint of flues shall be enhanced aptly for impact effects. These platforms shall also be designed suitably for |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | the liner erection works. The platform shall be made up of chequered floor panels supported on grid of structural steel beams. All beams shall have bolted connections. The maximum permissible deflection in main steel girders supporting flue liner shall be span/1000. |
| **3.14.06** | **Internal Staircase**<br><br>The staircase shall have a clear passage way width of not less than 800 mm and a clear headroom of not less than 2100 mm. The riser height shall not be more than 175 mm and tread width shall not be less than 225 mm. |
| **3.14.07** | **Foundation**<br><br>The chimney foundation shall be designed for the most critical combination of forces and moments, resulting from all possible combinations of the various loadings from the chimney system during all stages of constructions. The effect of water table shall be considered and the foundation shall be checked for overturning for minimum and maximum vertical loads. There should be no uplift under any portion of the foundation for any loading condition. Since chimney is a wind sensitive structure no allowance shall be made in the load carrying capacity of the bearing strata / piles under any load case/combination with wind. No allowance shall be made in the stresses for design of foundation for wind loading. The foundation diameter to depth ratio shall be maintained to around 10 and should preferably not exceed 12. The diameter of the reinforcing bar for the main radial and tangential reinforcement for the foundation shall not be less than 25mm. The spacing of radial steel at the outer edge of the foundation shall not be more than 250mm. Grade of concrete for foundation shall be minimum M 25. |
| **3.14.08** | **Thermal insulation**<br><br>The insulation shall be semi-rigid, resin bonded type, in the form of slabs and shall conform to IS: 8183. Blanket type insulation shall not be used. The density of insulation shall not be less than 64 kg/cu.m for resin bonded glass wool insulation and 100 kg/cu.m for resin bonded rock wool. The coefficient of thermal conductivity of insulation shall not be more than 0.52mW/cm/oC at a mean temperature of 100oC.<br><br>The insulation thickness shall be determined based on the maximum/minimum ambient temperature, surface air velocity worked out based on the draught of ventilation air in the annular space between the flue liner and chimney shell, insulation surface emissivity of 0.3 and the insulation cold face maximum temperature not exceeding 55 degree Celsius. The draught of air in the annular space shall be the natural draught created by the heating of air by the flue liner and the air being vented out through the openings in the chimney shell. The increase in the annulus air temperature due to the rising heated air shall be taken into account while calculating the insulation thickness.<br><br>The insulation thickness shall not be less than 100 mm, in any case, and shall be provided in two layers with the second layer of insulation covering the joints of the first layer. The insulation shall be wrapped on the outer-most surface with galvanised wire mesh using MS galvanised pins and speed washer. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **3.14.09** | **Chimney Painting**<br>(i) All exposed steel surfaces (including exterior surface of mild steel flue liner in case the design does not envisage provision of thermal insulation on the exterior surface of flue liner) except surfaces of steel wind strakes shall be painted as specified in corrosion protection clause of this specification.<br>(ii) All exposed surfaces of steel wind strakes shall be painted with epoxy phenolic coating system having total 240 microns DFT.<br>a) All steel surfaces shall be provided with two component epoxy primer coat (having solid by volume minimum 51% ±2%) of minimum 70 micron DFT to be applied over blast cleaned surface conforming to Sa 2½ finish of ISO 8501-1 with surface profile 40-60 Micron. The primer coat shall be applied in shop immediately after blast cleaning by airless spray technique.<br>b) Primer coat shall be followed with the application of Intermediate coat of epoxy phenolic coating (solid by volume minimum 63%) of minimum 100 micron DFT. This coat shall be applied in shop after an interval of minimum 24 hours (from the application of primer coat) by airless spray technique.<br>c) Intermediate coat shall be followed with the application of finish coat of two-pack aliphatic Isocyanate cured acrylic finish paint (solid by volume minimum 55% ±2%) with Gloss retention (SSPC Paint Spec No 36, ASTM D 4587, D 2244, D 523) of Level 2 (after minimum 1000 hours exposure, Gloss loss less than 30 and colour change less than 2.0 $\Delta$E) and minimum 70 micron DFT. This coat shall be applied in shop after an interval of minimum 10 hours and within six (6) months (from the completion of Intermediate coat), Colour and shade of the coat shall be as approved by the Employer.<br>(iii) All steel parts embedded in concrete like Strake embedment assembly including bolts, nuts, washers, pipe sleeves and insert plate shall be galvanized as per IS:4736. The minimum weight for galvanizing shall be 610 g/sq.m and shall comply with relevant IS Codes.<br>(iv) The inside surface of chimney shell above roof, horizontal surface of shell at top, underside of concrete roof slab, external surface of mini-shell above roof etc shall be painted with epoxy phenolic coating system having total 220 microns DFT.<br>a) All concrete surfaces shall be provided with two component transparent polyamide cured epoxy sealer coating (having solid by volume minimum 40% ±2%) of minimum 50 micron DFT to be applied over cleaned surface in multiple coats. Surface to be coated shall be absolutely dry, clean and dust free.<br>b) Sealer coat shall be followed with the application of Intermediate coat of epoxy phenolic coating (solid by volume minimum 63%) of minimum 100 micron DFT. This coat shall be applied after an interval of minimum 24 hours (from the application of primer coat) by airless spray technique.<br>c) Intermediate coat shall be followed with the application of finish coat of two-pack aliphatic Isocyanate cured acrylic finish paint (solid by volume minimum 55% ±2%) with Gloss retention (SSPC Paint Spec No 36, ASTM D 4587, D 2244, D 523) of Level 2 (after minimum 1000 hours |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | exposure, Gloss loss less than 30 and colour change less than 2.0 $\Delta E$) and minimum 70 micron DFT. This coat shall be applied after an interval of minimum 10 hours and within six (6) months (from the completion of Intermediate coat), Colour and shade of the coat shall be as approved by the Employer.<br>d) The entire external surface of chimney shell shall be painted with epoxy phenolic coating as specified in (iv) above in alternate bands of 'signal red' and 'bright white' colours. |
| **3.14.10** | **Electrical System**<br><br>415V, normal and emergency AC power supply for chimney shall be derived from main plant power supply system. Emergency supply shall feed 20% of platform lighting, 50% of staircase lighting, aviation obstruction lighting and elevator load. All other loads shall be connected on normal power supply.<br><br>Ambient temperature for design of all equipment shall be considered as 55 deg. C which is likely to be encountered inside the chimney. The equipment shall be suitable for installation and render trouble free operation at higher ambient temperature and rigorous weather conditions prevailing at chimney.<br><br>All equipment supplied shall comply with relevant IS Standards.<br><br>The distribution boards of chimney shall comprise switch fuse units of appropriate ratings. Emergency board shall have two incomers, one from emergency supply and other from normal AC distribution board itself. Auto changeover scheme shall be provided in emergency board to enable changeover to healthy source on failure of any source.<br><br>Dry type isolating transformer of Dyn connection shall be provided in emergency board to obtain neutral lead, in case 3 phase 3 wire emergency supply is derived from main plant.<br><br>Various platforms shall be illuminated by dust tight HPSV well glass lighting fixtures. Average illuminations level of 150 lux shall be maintained on equipment and 70 lux on platforms & 100 lux on staircases (minimum 1 lighting fixture at each landing).Any additional fixture to take care of dark patches/shadows shall also be provided. Lighting system shall be controlled through MCB provided in lighting panel.<br><br>A lighting and power panel each shall be located at grade level and at other in between levels as required. All distribution boards, aviation lighting controls, etc. shall be located at grade level only. At each platform, 1 No. 63A, 415V welding receptacle and 1 No. 20A, 240V receptacle shall be provided and shall be fed from power panel. Wiring installation for lighting fixture shall be of PVC insulated copper/aluminium wires through galvanised steel conduits.<br><br>Aviation obstruction lighting system shall conform to the requirements of the latest rules and regulations of the International Civil Aviation Organization (ICAO), National Airports Authority (NAA) and Directorate of Air Routes and Aerodromes (DARA). The type of aviation obstruction lighting system shall be of medium intensity aviation obstruction lights having an effective intensity of 2000 to 20,000 cd depending upon back ground illuminance. Obstacle lights shall have a day time effective intensity of minimum 20000 cd. The intensity of lights shall be 20000 cd ± 25% at twilight and shall reduce automatically to a night time intensity of 2000 cd ± 25% through the use of photo-cell. The obstacle lights shall flash simultaneously at a rate between 20 to 60 per minute. A minimum of three levels will be provided with aviation obstruction |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | lights and there will be four light units per level. The lowest level should not be lower than 45 meters above the ground and vertical spacing of the intermediate levels could vary between 45 and 105 meters. The intermediate lights shall be spaced as equally as possible. Aviation obstruction lighting shall be complete with lights, photo cell, controller, special cables, etc..<br><br>A temporary aviation obstruction lighting system shall be provided during construction of the chimney.<br><br>Cables from distribution board to lighting panels/power panels/receptacles shall be 1100V grade, multicore FRLS HR-PVC insulated, PVC inner sheathed, armoured, PVC outer sheathed stranded copper/ Aluminuim laid on galvanised sheet steel cable trays. Cables shall be terminated using double compression type cable glands and solder less crimping type tinned copper cable lugs. Minimum size of the power cable shall not be less than 2.5 sq.mm copper or 4 sq.mm Aluminuim. Minimum size of control cable shall not be less than 1.5 sq.mm.<br><br>Lightning protection system shall comprise minimum 3 vertical air terminations for each flue liner, horizontal air terminations and minimum 4 Nos. of down conductors spaced 90 degrees apart routed all along chimney height on external surface and connected to the earthing system. Down conductors shall be of minimum 50x6 mm galvanized steel strip. Each down conductor shall be provided with a test link at 1 metre above ground level. Each test link shall be enclosed in a galvanised sheet steel enclosure. Above ground level earthing and lightning protection system shall comprise galvanised steel strips. These materials provided at top 12 meters shall have additional coating of 2 mm thick seamless lead cover and the accessories like nuts, bolts, washers etc. shall be of stainless steel to take care of corrosion. Chimney earthing system shall be interconnected to main plant earthing system.<br><br>A temporary lightning protection & earthing system shall be provided during construction of the chimney till a permanent lightning protection & earthing system is installed. In no case reinforcement bars of Shell should be used as earthing Down Conductors<br><br>Communication system comprising of telephone socket at every internal platform level and at grade level, necessary wiring installation, a telephone hand set, junction boxes etc. shall also be provided. Telephone cables shall be of minimum 0.6 mm diameter annealed high conductivity electro copper conductor, PVC insulated, twisted, PVC tape wrapped, screened, rip corded, PVC sheathed, conforming to relevant ITD (Indian Telephones Department) specifications.<br><br>All equipment to be supplied shall be of type tested quality. The Contractor shall submit for Owner's approval the reports of all type tests as listed below:<br><br>(A) Distribution boards/panels-Degree of protection tests<br><br>(B) Aviation lights:<br><br>(1) Intensity Test<br><br>(2) Degree of protection test<br><br>For various equipment, the technical requirements and practices shall conform to the relevant clauses of the main plant electrical specification. |
| **3.14.11** | **Rack and Pinion Elevator**<br><br>A rack and pinion elevator, with a load carrying capacity of 400 kg (min) (passenger cum goods), cabin floor size of 1100 mm x 1000 mm (min.) and an operating speed |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | of 40 m/min. (approx.), shall be provided for travel from the grade level to the top of the chimney. A landing platform shall be provided at all access/ platform levels. The elevator shall be of a proven and approved make. Enclosure shall be fabricated from tubular steel and expanded metal or wire mesh, 2.1 m high (Approx.). A Safety device comprising of an over speed governor in constant mesh with the rack by means of a flame hardened steel pinion shall be provided to protect the cab against over speed during the cab downward motion and the same shall actuate the brake mechanism and stop the down ward motion gradually. The lift shall be installed using anchor fasteners. The electrical requirement of the system shall conform to the main electrical specification. Drive motor shall be of S3 duty class with CDF of 25% and maximum number of 120 starts per hour in 55 degree Celsius ambient temperature. The motor shall be provided with internal 220V AC single phase space heaters or an alternate heating system. The elevator shall be supplied, installed, painted, tested, commissioned etc. complete with all mandatory spares (as specified in Part-F of this specification) and operation maintenance manual |
| **4.00.00** | **Drainage & Water Supply Works** |
| 4.01.00 | Drainage System:<br><br>The drainage arrangements shall be so planned so as to ensure quick disposal of drainage water without stagnation and / or overflow. It is envisaged to clean the facility buildings etc. with water periodically.<br><br>Minimum 4 nos. down comers shall be provided in each building at corners.<br><br>For Conveyors, each down comer shall lead the water / slurry to pit (of 2 Cu.M capacity) to allow settling of lime/gypsum. The water from the pit shall overflow into contractor's R.C.C drain, which will lead the discharge finally into owner's drain routed alongside the nearby road.<br><br>For Ball Mill building, Gypsum dewatering building, FGD control room building, peripheral drains (Brick drains with steel gratings provided around the building) shall lead the water / slurry to a local pit (of 2 Cu. M. capacity) near each facility to allow settling. The water from the pit shall overflow into contractor's R.C.C drain, and finally into owner's drain routed alongside the nearby road.<br><br>In case of Control rooms and M. C. C. buildings Pump houses, etc, water / slurry coming from down comers shall discharge into peripheral drains (Brick drains with steel gratings provided around the building) which will lead the water / slurry into contractor's R.C.C drain, which will lead the discharge finally into owner's drain routed alongside the nearby road.<br><br>Contractor's scope shall also include construction of necessary culverts under the rail lines / roads as per railway / I. R. C. standards and approval of Railway culverts from concern Railway authorities. |
| **4.02.00** | **Internal and external water supply, drainage etc.**<br><br>The scope for potable water supply includes all distribution systems, tanks, pipes, fittings etc. as required and as described here or elsewhere in the specifications. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | The scope for service water supply and dust control water supply shall be as described elsewhere in the specifications.<br><br>For water supply, medium class galvanized mild steel pipes conforming to IS: 1239 shall be used.<br><br>All facility buildings shall be provided with open surface brick drains of minimum size of 300 mm width and 300 mm depth all around the periphery. All drains excepting the peripheral drains around facility building shall be of R. C. C. construction. Drains shall have removable steel grating cover and shall be provided with edge protection angles.<br><br>The scope for foul water from toilets shall include layout and laying of sewers up to the Employer's main sewer line for sewerage system together with all fittings and fixtures and inclusive of ancillary works such as connections, manholes and inspection chambers within the building and from the building to the Employer's sewer line.<br><br>For rain water down comer and those to be used for conveying water / slurry generated from cleaning of buildings floors, Galvanised MS pipes conforming to IS: 1239 (for 150 mm NB Medium grade pipes) with welded joints shall be used for MCC buildings, penthouse, control rooms, ball mill building, gypsum dewatering building, storage sheds.<br><br>Galvanising shall be as per IS: 4736. The minimum mass of zinc coating shall not be less than 400 gms/sq.m. as per IS:6745. The zinc coating shall be smooth and shall be subjected to testing as per IS: 2633, for uniformity of coating. The zinc coating shall be free from all defects as per IS: 2629.<br><br>All rain water down comers shall be provided with roof drain heads and complete with shoes bends, junctions, sockets, adapters, brackets and finished with anti corrosive painting over a coat or primer.<br><br>For design of building drainage system IS: 1742 shall be followed.<br><br>For sanitary / sewerage pipes above ground, sand cast iron pipes conforming to IS : 1729 with leak proof lead joints.<br><br>For underground drain pipes, minimum class NP - 2 pipes conforming to IS: 458. At road crossings, concrete pipes of class NP 3 conforming to IS: 458 and at rail crossing R.C.C. box culvert to be provided.<br><br>For sewerage below ground stoneware pipes conforming to IS: 651 with concrete bedding and haunch. |
| **5.00.00** | **COLOUR COATED AND OTHER SHEETING WORK** |
| **5.01.00** | **Material**<br><br>**a) Wall Cladding & Roofing Material**<br><br>Troughed permanently colour coated sheet of approved shade and colour shall be |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | **i)** either of steel with minimum 0.6mm bare metal thickness (i.e. excluding the thickness of galvanizing/aluminium-zinc coating and painting) of grade G250 as per AS1397 / grade SS255 as per ASTM A653M / grade S250GD as per EN 10326 with zinc coating to class Z275 / aluminium-zinc alloy coating to class AZ150<br>**ii)** or of minimum 0.5mm BMT (i.e. excluding the thickness of galvanizing/aluminium-zinc coating and painting) of grade G350 as per AS1397 / grade SS340 class 4 as per ASTM A792M / grade S350GD as per EN 10326 with zinc coating to class Z275 / aluminium-zinc alloy coating to class AZ150<br>**iii)** or of steel of minimum 0.4mm BMT (i.e. excluding the thickness of galvanizing/aluminium-zinc coating and painting) of grade G550 as per AS1397 / grade SS550 as per ASTM A792M / grade S550GD as per EN 10326 with zinc coating to class Z275 / aluminium-zinc alloy coating to class AZ150<br><br>Alternatively aluminium feed material of minimum bare metal thickness of 0.7 mm of aluminium alloy of Series 31000 and above as per IS 737 and IS 1254.<br><br>**b) Metal Deck Roof Material**<br><br>Troughed permanently colour coated metal decking sheets shall be<br><br>**i)** either of steel with minimum 0.8mm bare metal thickness (i.e. excluding the thickness of galvanizing/aluminium-zinc coating and painting) of grade G250 as per AS1397 / grade SS255 as per ASTM A653M / grade S250GD as per EN 10326 with zinc coating to class Z275<br>**ii)** or of minimum 0.6mm BMT (i.e. excluding the thickness of galvanizing/aluminium-zinc coating and painting) of grade G350 as per AS1397 / grade SS340 class 4 as per ASTM A792M / grade S350GD as per EN 10326 with zinc coating to class Z275<br>**iii)** or of steel of minimum 0.6mm BMT (i.e. excluding the thickness of galvanizing/aluminium-zinc coating and painting) of grade G550 as per AS1397 / grade SS550 as per ASTM A792M / grade S550GD as per EN 10326 with zinc coating to class Z275.<br><br>Alternatively aluminium feed material of minimum bare metal thickness of 0.9 mm of aluminium alloy of Series 31000 and above as per IS 737 and IS 1254 can also be used for metal decking.<br><br>Thickness tolerance of (+/-) 0.04mm is permissible. However, all design calculations shall be carried out on the basis of lowest value of sheet thickness provided. |
| **5.02.00** | **Colour Coating**<br><br>Steel shall be colour coated with total coating thickness of at least 40 microns (nominal) comprising of silicon modified polyester (SMP with silicon content of 30% to 50%) paint or Super Polyester paint, of minimum 20 microns (nominal) dry film thickness (DFT) on external face over primer coat of minimum 5 microns (nominal) and minimum 10 microns (nominal) SMP or super polyester paint over primer coat of minimum 5 microns (nominal) on internal face. SMP and Super polyester paint systems shall be of industrial finish of product type 4 of AS/NZ2728. |
| **5.03.00** | **Design Criteria**<br><br>For wall cladding insulated / uninsulated sides and roof, permanently colour coated sheet of troughed profile shall be used. The nominal depth of trough shall be 30 mm. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | For profiled metal decking sheets (to be used for RCC floor slab or roof slab) the sectional modulus and moment of inertia of troughed profile per meter width shall be so as to limit the deflection of sheets to span/250 under total super imposed loading (DL +LL) comprising the self-weight of metal deck sheet, dead weight of green concrete and an additional construction load 100kg per sq.m for two span condition. The section modulus and moment of inertia of troughed profile shall be computed as per the provisions of IS 801 for satisfying the deflection and strength requirements.<br><br>For metal deck sheets used for roofing ( with or without RCC) and side cladding, the sectional modulus and moment of inertia of troughed profile per metre width shall be such that the deflection of sheets is limited to span/250 under design wind pressure for two span condition. The sectional modulus and moment of inertia of troughed profile shall be computed as per the provisions of IS 801 for satisfying the deflection and strength requirements. No increase in allowable stress is permissible under wind load condition. |
| **5.04.00** | **Fasteners**<br><br>Side cladding/roofing/decking sheets shall be fixed to the runner/purlins using self-drilling special coated fasteners confirming to corrosion resistant class 3 of AS3566 and tested for 1000 hours salt spray test. Spacing of Self-drilling fasteners in transverse direction (along runners/purlin) shall be equal to the pitch of trough or 250(+/-100) mm, whichever is lesser and in longitudinal direction at every runner/purlin location.<br><br>Shear anchor studs shall also be provided through troughed permanently colour coated metal decking sheets metal deck, which are to be used as permanent shuttering, at regular interval on all top flange / flange plate of structural beams.<br><br>The shear anchor studs for fixing metal deck sheet to floor structural beams shall conform to Type-B studs specified in AWS D1.1/D1.1M or equivalent as shear connector of 19mm diameter and 100mm length manufactured from cold drawn round steel bars conforming to the requirement of ASTM A 29, of grade designation 1010 through 1020, of standard quality with either semi-killed or killed, welded by Drawn Arc Stud Welding through metal deck sheet.<br><br>The shear anchor studs for fixing metal deck sheet to roof structural purlins shall conform to Type-B studs specified in AWS D1.1/D1.1M or equivalent as shear connector of 16mm diameter and 65mm length manufactured from cold drawn round steel bars conforming to the requirement of ASTM A 29, of grade designation 1010 through 1020, of standard quality with either semi-killed or killed, welded by Drawn Arc Stud Welding through metal deck sheet.<br><br>Alternatively, J/U type hooks shall be used in roofing which shall be provided in transverse direction (along runners/purlin) at a spacing equal to the pitch of trough or 250(+/-100) mm, whichever is lesser and in longitudinal direction at every runner/purlin location. |
| **5.05.00** | **Miscellaneous Details**<br><br>To minimize the number of joints, the length of the sheet shall preferably be not less than 4.5m, cut pieces shall not be used, unless specifically approved by the Engineer. However, the actual length shall be such so as to suit the purlin / runner spacing. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | Lap between the sheets shall be at least 150mm in the longitudinal direction and at least one crest wide in the transverse direction which shall be properly anchored / fixed with fasteners.<br><br>Z spacers if required shall be made of at least 2 mm thick galvanised steel sheet of grade 350 as per IS 277<br><br>Sealant used for cladding shall be butyl based, two parts poly sulphide or equivalent approved, non stainless material and be flexible enough not to interface with fit of the sheets<br><br>. Filler blocks as a trough filler shall be used to seal cavities formed between the profiled sheet and the support or flashing. The filler blocks shall be manufactured from black synthetic rubber or any other material approved by the Engineer.<br><br>All flashings, trim closures, caps etc. required for the metal cladding system shall be made out of plain sheets having same material and any weather/moisture sealants with appropriate material and coating specification as mentioned above for the outer face of the metal cladding. Overlap shall be min. 150 mm or as specified by manufacturer. |
| **5.06.00** | **Pre-Fabricated Insulated Metal Sandwich Panels**<br><br>For structures where Pre-Fabricated Insulated Metal Sandwich Panels shall be used for Roofing, the sandwich panels shall comprise top sheet as troughed permanently colour coated sheet & bottom sheet as plain permanently colour coated with 50mm thick insulation sandwiched between the two sheets. Each sheet shall be<br><br>**i)** either of steel with minimum 0.6mm bare metal thickness (i.e. excluding the thickness of galvanizing/aluminium-zinc coating and painting) of grade G250 as per AS1397 / grade SS255 as per ASTM A653M / grade S250GD as per EN 10326 with zinc coating to class Z275 / aluminium-zinc alloy coating to class AZ150<br>**ii)** or of minimum 0.5mm BMT (i.e. excluding the thickness of galvanizing/aluminium-zinc coating and painting) of grade G350 as per AS1397 / grade SS340 class 4 as per ASTM A792M / grade S350GD as per EN 10326 with zinc coating to class Z275 / aluminium-zinc alloy coating to class AZ150<br>**iii)** or of steel of minimum 0.4mm BMT (i.e. excluding the thickness of galvanizing/aluminium-zinc coating and painting) of grade G550 as per AS1397 / grade SS550 as per ASTM A792M / grade S550GD as per EN 10326 with zinc coating to class Z275 / aluminium-zinc alloy coating to class AZ150.<br><br>Alternatively aluminium feed material of minimum bare metal thickness of 0.7 mm of aluminium alloy of Series 31000 and above as per IS 737 and IS 1254.<br><br>Metal sheets (steel or aluminium) shall be colour coated with total coating thickness of at least 40 microns (nominal) dry film thickness (DFT) comprising of Silicon Modified Polyester (SMP with silicon content of 30% to 50%) paint or Polyester paint, of minimum 20 microns (nominal) SMP or polyester paint on one side (exposed face), over minimum 5 micron (nominal) primer coat and minimum 10 micron (nominal) SMP or Polyester paint over minimum 5 micron (nominal) primer coat on other side. SMP and Super Polyester paint shall conform to product type 4 of AS/NZS 2728. Troughed sheet shall be of approved profile, sectional properties, (suitable for the specified loading / deflection and purlins / runners spacing), colour and shade. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | Special coated fastener conforming to corrosion resistant Class 3 of AS3566 and tested for 1000 hours salt spray test shall be used for fixing Pre-Fabricated Insulated Metal Sandwich Panels with the structural members below.<br><br>The contractor shall prepare working drawings of sheeting system including end and side laps, fixing details etc. before starting sheeting work at site. |
| **5.07.00** | **Polycarbonate Sheets**<br><br>The polycarbonate sheet to be used for cladding and glazing purpose in conveyor galleries, Transfer points & pump houses shall have toughed profile to match with the metal cladding profile. Minimum 3.0mm thick fire retardant and UV resistant polycarbonate clean sheet of approved make shall be used. The polycarbonate sheet shall be installed along with the metal cladding so as to have a watertight lapping arrangement. Suitable detailing shall be made to cater for the thermal expansion. IS 14434 to be referred for other details |
| **6.00.00** | **Roof Details** |
| **6.01.00** | Roof slab shall be minimum 150 mm thick(**above the top surface (crest) of the metal deck sheet**) and shall have minimum 10 dia HYSD reinforcement bars placed at 200 mm center both ways at top and bottom. |
| **6.02.00** | 900 mm high and minimum 100 mm thick R. C. C. parapet wall shall be provided over roofs of all buildings. Parapet wall shall have suitable coping. External face of parapet wall of the buildings provided with metal cladding shall also be finished with metal cladding of design and colour as per approved architectural drawings. |
| **6.03.00** | Junction of roof and parapet shall be provided with 150 x 150 mm size concrete fillet. |
| **6.04.00** | Drain level shall be provided with 45 x 45 cm size khurras having minimum thickness of 30 mm of M-15 concrete over PVC sheet of 1 m x 1m x 400 micron and finished with 12 mm 1 : 3 cement : sand plaster. |
| **6.05.00** | Roofs of all control rooms, M. C. C. rooms, penthouse etc., shall have roof water proofing treatment. Roof water proofing treatment shall be as follows:<br><br>1) Application of polymerised mastic over the RCC roof to achieve smooth surface as primer coat.<br>2) Application of high solid content liquid applied urethane based elastomeric water proofing membrane, over the primer coat, to give uniform joint less dry film thickness of minimum 1.5 mm (as per ASTM C 836 and C 898).<br>3) For efficient disposal of rain water, the run off gradient for the roof shall not be less than 1: 100. This gradient shall be provided by screed concrete M-15 (using 12.5 mm coarse aggregate) and / or cement mortar (1: 4) over the elastomeric water proofing membrane with 25mm thick cement mortar (1:4) topping.<br>4) Wearing course at top, shall consist of 25 mm thick P. C. C. (M-15) cast in panels of maximum 1.2 x 1.2 m size and reinforced with 0.56 mm diameter galvanized chicken wire mesh and sealing of joints using sealing compound / elastomeric water proofing membrane. Pathways for handling of materials and movement of personnel shall be provided with 22 mm thick chequered cement concrete tiles as per IS : 13801 for a width of 1000 mm in place of P. C. C. |
| **6.06.00** | For efficient disposal of rain water, the run off gradient for the roof shall not be less than 1:100. This gradient can be provided either in structure or subsequently by |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | screed concrete M-15 (using 12.5 mm coarse aggregate) and/ or cement mortar (1:4). However, minimum 25 mm thick cement mortar (1:4) shall be provided on top to achieve smooth surface. |
| **6.07.00** | Medium class galvanised mild steel pipes conforming to IS: 1239/ IS: 3589 with welded joints shall be provided for rain water down comers to drain off rain water from the roof. These shall be suitably concealed with masonry work, to match with the exterior finish. The number and size of down comers shall be governed by IS: 1742 and IS: 2527. RCC roof shall be provided with 45 x 45 cm size Khurras having minimum thickness of 30 mm with M-15 concrete over PVC sheet of 1mx1mx400micron and finished with 12 mm thick cement sand plaster 1:3. |
| **6.08.00** | Access to RCC roof of Gypsum dewatering building, FGD Control room building, MCC building, Ball mill building shall be through RCC staircase, and roof access to all other buildings all shall be through cage ladder as per requirement. |
| **6.09.00** | Fillets at junction of roof and vertical walls shall be provided with cast - in - situ cement concrete (M-15) nominal mix followed by 12 mm thick 1:4 cement sand plaster. |
| **6.10.00** | The rainwater down comers shall be provided with suitable C.I. grating at inlet point. |
| **7.00.00** | **RCC Floors, Paving & Grade Slab details**<br><br>The floor slabs shall be minimum 150 mm thick(above the top surface (crest) of the metal deck sheet) and shall have minimum 10 dia HYSD reinforcement bars placed at 200 mm center both ways at top and bottom.<br><br>In case Bidder opts for steel super-structure with RCC floors/ roof, the bidder shall necessarily use Troughed permanently colour coated metal decking sheets having minimum thickness of 0.8mm as permanent shuttering. The detailed material property requirement of metal deck sheet is specified elsewhere in the specification. These profiled metal deck sheets shall be fixed to the structural steel beams/ purlins using headed shear anchor studs specified elsewhere in the specification.<br><br>Chequered plates (used for floors, walkways etc.) shall be minimum 6 mm thick. Mild steel flats/angles of suitable size shall be welded to the bottom portion of chequered plates at a designed spacing to stiffen chequered plates suitably. Chequered plates shall be fixed by staggered welding of suitable size. Floors of trenches shall have integral finish to concrete base.<br><br>Toe guard of size 100 x 6 mm shall be provided at various openings provided in floors e.g. around stair case openings, chute openings and other similar cutouts. For conveyor walkways, angle runner to act as toe guard shall be provided.<br><br>R. C. C. floors (where no brick masonry walls are provided) shall be provided with handrails all along the periphery.<br><br>RCC paving of minimum 150 mm thick with M25 grade concrete, over an under bed as specified herein shall be provided for areas mentioned below. RCC paving shall be designed as rigid reinforced concrete pavement for the crane/ vehicular/ equipment movement loads which the paving has to bear. The under bed for paving shall consist of preparation and consolidation of sub-grade to the required level, laying of stone soling of 200mm compacted thick for normal duty paving and 400mm |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | compacted thick for heavy duty paving with 63 mm and down aggregate with interstices filled with selected moorum/ non-expansive soil followed by 75 mm thick 1:4:8 PCC (1 part cement, 4 parts sand and 8 parts stone aggregate) with 40 mm nominal size aggregate. For normal duty paving, reinforcement of the RCC paving shall consist of minimum 8mm dia bars @ 200 mm c / c in both directions at the centre of the slab. For heavy duty paving/ passage, reinforcement of the RCC paving shall consist of minimum 10mm dia bars @ 200 mm c / c in both directions at the centre of the slab.<br><br>Paving areas shall be provided with the metallic hardener floor finish as specified elsewhere in the specification.<br><br>Passages shall be provided inside the FGD block connecting to the outer periphery road to have access to the various facilities/buildings. These passage areas shall be provided with heavy duty paving for movement of heavy vehicles. The top surface of the passages shall be finished with 50 mm thick metallic hardener topping. Heavy duty paving shall also be provided for the areas in the equipment lay down area, unloading & maintenance area with 50 mm thick metallic hardener topping.<br><br>Lightly loaded areas such where no heavy traffic movement is envisaged shall be provided with Normal Duty paving.<br><br>All facility buildings shall be provided with 750 mm wide plinth protection all around. It consists of 50 mm thick P.C.C. M-20 grade with 12 mm maximum size aggregate over 200 mm thick stone soling using 40 mm nominal size rammed, consolidated and grouted with fine sand<br><br>An area of minimum 5 m width all around the tank foundations and other facility buildings shall be paved. This paving shall be beyond the extent of plinth protection. Further, heavy duty paving shall be provided for passages connecting the outer periphery road to have access to the various facilities/buildings.<br><br>Plinth level of all buildings shall be kept at least 500 mm above the finished grade / formation level.<br><br>Suitable open RCC drains shall be provided to dispose off storm water drain. The paving shall be provided with slope of 1:500 to dispose the surface water/wash water to the nearest drain.<br><br>Sewer lines (Cast Iron), interconnected by sewer manholes (RCC) at regular intervals (not exceeding 30 meter centre to centre) shall be provided to dispose off sewage from FGD block to sewage pump house.<br><br>**GRADE SLAB OF BUILDINGS AT GROUND FLOOR**<br><br>In buildings, the grade slab shall consist of 150mm thick RCC M25 grade base slab over an under bed as specified below. The under bed for ground floor slab shall consist of 75mm thick 1:4:8 PCC on stone soling of 200mm compacted thick with 63 mm and down aggregate with interstices filled with well graded selected sand/ moorum/ non-expansive soil on compacted and dressed sub - grade. Reinforcement for the slab shall consist of minimum 8mm dia. bars @ 200 mm c/c at top & bottom of the slab in both directions. However, at unloading & maintenance area, stone soiling of minimum 400mm thick and grade slab with minimum 10mm dia bars @ 200 mm c/c at top and bottom in both directions shall be provided.<br><br>Further, top surface of grade slabs shall be finished with 50mm thick metallic hardener topping. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **8.00.00** | **Brickwork and allied masonry works**<br><br>All brick walls shall be non - load bearing in-filled panel walls.<br><br>All brickwork shall be designed as per Indian Standards and shall be plastered on both faces. All external walls shall be minimum one brick thick in 1: 6 cement: sand mortar. Brick walls shall be provided with 12 mm and 18 mm thick 1: 6 cement: sand plaster on smooth and rough face of the brick work respectively.<br><br>Bricks to be used in brickwork shall be of minimum Class designation 50.<br><br>Brickwork cladding for various structures shall be so provided that there is a clear gap of 40 mm between inside face of external brick wall and outside face of column flange. Structural steel wall beams supporting brickwork shall be suitably encased with plaster or 1: 2: 4 concrete as the case may be. In case of box type steel beam, encasement shall be done with cement sand plaster in specified thickness and proportions over G. I. wire netting of 0.9 mm thickness.<br><br>Parapets, chajjas, windows and door heads, architectural faces, fins etc. shall be provided with drip course in 1 : 4 cement sand mortar.<br><br>50 mm thick Damp proof course shall be provided at plinth level for all brick wall.<br><br>All R. C. C. ceilings shall be rendered smooth and finished with whitewash unless otherwise specified. Ceiling of control rooms, M. C. C. rooms (except areas provided with false ceiling) shall be provided with 6 mm thick plaster. |
| **9.00.00** | **Earthing Mat**<br><br>40 mm Dia MS Rods as earthing mat, placed at a distance of 1.0M away and at depths between 0.60M and 1.00M shall be supplied and laid all around the periphery of buildings, structures, and outdoor equipment, as per the approved drawings. Risers of 40 mm Dia MS Rods and connecting to the above Earthing mat shall also be supplied and laid in position by the Contractor, as per the approved drawings. Risers shall be laid up to a height of 300 mm above the local Ground level, at each of the columns of the buildings on outside of the buildings, and minimum 2 (Two) numbers for structures and outdoor equipment. The contractor also supply and lay necessary number of 3.0 M deep vertical 40 mm Dia MS Rods Earthing electrodes and connecting them to the Earthing mat, as per the approved drawings and the supplying and laying of 40 mm Dia MS Rods for connecting the Contractor's earthing mat with the Employer's earthing mat separately at two locations. |
| **10.00.00** | **SITE LEVELLING**<br><br>Site leveling of gypsum storage area , lime storage area , gypsum dewatering area , truck hopper and associated areas to be levelled in one block. Each block shall be finished to the formation level as specified in drawing. Bidder shall deploy adequate number of experienced site leveling contracting agency(s) with requisite earth moving and compacting equipment to complete the work as per schedule.<br><br>Bidder shall carry out the topographical survey before he commences detailed design and site leveling. This survey shall cover the entire FGD area including gypsum |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | storage ,gypsum handling area , lime storage area ,gypsum dewatering area , truck hopper area, limestone grinding and slurry storage area in Bidder's scope of work. Based on field observations the contractor shall prepare and submit for Owners review the survey maps of the surveyed sited on suitable scale, indicating grid lines, contour lines and demarcating all permanent features like roads, railways, water-ways, buildings, power lines, natural streams, trees etc. For each area two sets of survey maps shall be prepared and submitted, one showing the spot levels and contours with grid lines and the other showing the grid lines, contours and permanent features<br><br>Since the construction of roads and drains for the FGD area including gypsum storage ,gypsum handling area , lime storage area ,gypsum dewatering area , truck hopper area, limestone grinding and slurry storage area is included in the scope of Bidder, it shall be the responsibility of the Bidder to ensure that these facilities are also constructed along with site leveling works. Bidder shall ensure that road access and drainage facilities for each block is available when site leveling in that block is completed. Unless otherwise instructed by the Engineers, all roads and drains within a block shall be constructed by the bidder within a month from the date of completion of site leveling of that block.<br><br>The specified formation level(s) shall be achieved either by excavation where the existing ground levels are higher than the specified formation level or by raising by controlled filling with borrowed earth where the existing ground levels are lower than the specified level<br><br>All materials arising out of site clearance and excavation shall be the property of owner. They shall be dealt with in the manner specified by the Engineer. Earth / boulders / rock etc. excavated and useful portion (serviceable materials) of trees cut shall be stacked at suitable places within Owner's acquired land for the plant including the reservoir and the ash disposal area in a manner as directed by the engineer. Woods, branches, trunks of trees shall be termed as serviceable material. Other materials like twigs, leaves, roots, vegetable and organic matters etc. shall be termed as unserviceable material and shall be sorted out from the serviceable materials before disposal. They shall be cleared from the area and disposed off at places within Owner's acquired land for the plant including the reservoir and the ash disposal area in a manner as directed by the engineer.<br><br>If the excavated material is suitable and accepted by the Engineer as fill material, the same can be used for filling in other areas where raising by filling is required. Otherwise the same shall be taken and stacked at places(s) within the plant boundary as directed by the Engineer.<br><br>Filling with rock shall be done only after the written permission of the Engineer in the following manner:<br><br>Filling with rock shall be done only in areas identified for laydown and preassembly .<br><br>Original ground after removal of all organic and vegetable matters shall be consolidated by rolling as directed by the engineer subject to a minimum of six passes of 8-10 tonnes roller. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

- Excavated rock shall be laid (on original ground or after filling 300 mm thick layers of soil as specified), in layers not exceeding 1000 mm and rolled with with vibratory roller (10-15 tonnes static weight) with minimum six passes.

- Over the compacted layer of rock, soil shall be filled in horizontal layers not exceeding 300mm in compacted thickness. The soil shall be compacted as specified elsewhere.

- It shall be ensured that the top soil layer is in minimum 3 layers of 300 mm each. To achieve this the thickness and number of rockfill layers below can be suitably adjusted.

Contour map and spot levels of the area based on the preliminary survey carried out by Owner is enclosed for the purpose of guidance of Bidder. However, Owner does not lake any responsibility about the accuracy of the survey details furnished and any variation of the said data shall not constitute a valid reason for changing the terms and conditions of the contract. Bidder is requested to carry out his independent assessment of the existing ground levels before furnishing his. bid Detailed survey shall be carried out by Bidder after award of work and all findings as stated earlier shall be submitted for Owner's review.

Before commencement of cutting/filling, all organic and vegetable matters like grass. Plants shrubs bushes, weeds, trees (with girth less than 30 cm measured at height of 1m above ground level) etc. in the areas to be filled, shall be completely removed along with their roots and disposed off. .It shall also be ensured that the area
to be filled is clear of any water, slush etc. Original ground shall be compacted by rolling as directed by the Engineer subject to a minimum of six passes of 8 to 10 tonne
roller The earth shall then be spread in horizontal layers not exceeding 300 mm in compacted thickness. Each layer shall be watered and compacted with proper moisture
content and with such equipment as may by required to obtain a compaction of 95% or more of Standard Proctor's maximum dry density. The moisture content of the fill
material shall be controlled to obtain near optimum moisture content during compaction.
The fill material shall be tested for determining optimum moisture content and maximum dry density by Standard Proctor Test as per IS : 2720 (Part-VII). The fill material shall also be tested for determining moisture content before compaction as per IS:2720 (Part-II) For each of the above tests, one sample for every 10,000 cubic metre of fill material shall be tested. Additional samples shall be tested, whenever there is a change in the source or type of fill material. The compacted soil shall be tested for its dry density as per IS2720 (Part-XXIX) or Part-XXVIII). Samples shall be taken at the rate of one sample for every 10,000 sq.m. area for each compacted layer. In addition random checks shall be carried out in compacted soils by means of Proctor needle penetration. Bidder shall submit to the Engineer, the test results immediately after completion of the tests. A sample shall be deemed to have passed the test when the in-situ dry density is equal to or more than the specified percentage of maximum dry density. If a sample taken from a layer fails to pass the test, the layer shall be further compacted till two samples

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

taken and tested from this layer pass without any negative deviation. Only after this. spreading of further layers shall be taken up.

Before start of filling, the Bidder shall submit to the Owner his proposal for the methodology to be adopted for compaction for each type of fill material. The Bidder shall also carry out compaction trials to establish the proposed methodology. The Bidder
shall start the compaction work only after approval of the methodology by the Owner

The surface of the cut/filled up areas after reaching final level shall be dressed to the required levels and slopes. The difference in levels shall not be more than +/- 10cm
locally.

The borrow areas outside the overall plant boundary limits for obtaining suitable fill material which is required over and above the earth available after cutting high grounds
within the plant area, for site levelling shall be arranged by the Bidder himself and all
expenses in respect of royalties, taxes, duties, etc. for borrow areas/fill material shall
be borne by him. He shall also obtain and submit to the Owner the necessary clearances/permission from the concerned authorities for the borrow areas/fill material.

Material suitable for filling shall be loaded and transported to the filling site by the Bidder.
Any coarse grained or fine grained low plastic soil, free from shingle, salts, organic matter, sod or any other foreign substances, may be used for filling. The Bidder shall
test the fill material to establish its suitability and submit its results to the Owner. Fill material shall be approved by the Owner. The following types of materials shall not be used for filling:

a) Material from swamps, marshes and bogs.

b) Expansive clays

c) Peat, logs, stumps, sod and perishable materials.

d) Materials susceptible to combustion

e) Any material or industrial and domestic produce which will adversely affect other materials in the work.

f) Materials from prohibited areas

Bidder shall include in his offer any extra filling that may be required on account of subsidence of the original ground due to overburden of filling above and/or compaction works for site levelling.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | After levelling, the contractor shall establish concrete pillars at the intersection points of the grid lines for future reference. These pillars shall project at least 450 mm above the formation level and shall be labelled permanently with their respective coordinates and reduced levels.<br><br>Filling upto the specified formation level shall extend at least 2.0m beyond the outside face of boundary wall/fence. Thereafter, it shall be finished at a suitable slope (not steeper than 1 Vertical:2 Horizontal) and provided with good quality dry stone pitching minimum 300mm thick for slope upto level difference of 3m. If the level difference is more than 3m, the stone pitching shall be provided with RCC bands with suitable design and benching. |
| **11.00.00** | **FENCING**<br><br>Fencing with toe wall and steel gates shall be provided around the gypsum storage area , lime storage area , gypsum dewatering area , truck hopper and associated areas . Fencing shall comprise of PVC coated GI chain link fencing of minimum 8G (including PVC coating) of mesh size 75 mm and of height 2.4 m above the toe wall. The diameter of the steel wire for chain link fence (excluding PVC coating) shall not be less than 12G. All Fence posts shall be of 75 x 75 x 6 MS angles spaced at 2.5 m c/c distance. All corner posts will have two stay posts and every tenth post will have transverse stay post. Suitable R. C. C. foundation for the post and stays shall be provided based on prevailing soil conditions. Gates shall be sturdy with locking provisions.<br><br>Toe walls of brick masonry shall be provided between fence posts all along the run of the fence with suitable foundation. Toe wall shall be minimum 200 mm above the formation level with 50 mm thick P. C. C. coping (1: 2. 4) and shall extend minimum 300 mm below the formation level. Toe wall shall be plastered on both sides and painted with two coats of cement paint of approved colour and shade. Toe wall shall be provided with weep holes at suitable spacing. |
| **12.00.00** | **ROADS**<br><br>All roads shall be of rigid pavements unless otherwise specified. The design of rigid pavement shall be carried out as per IRC: 58. The effects of design wheel load, maximum tyre inflation pressures, tyre contact area for the vehicle, traffic loads, environmental factors such as temperature changes in the pavement, other factors, like impact, load repetitions, etc., are to be taken. Detailed plate load tests to determine the modulus of sub grade reaction “K” shall be carried out as per the procedure outlined in IS: 1888. The design traffic load shall be a minimum value of 4 million standard axles. The road shall be designed for 30 years of life and considering a minimum traffic growth rate of 1 per cent per annum. The concrete pavement for roads shall be minimum 250 mm thick slab.<br><br>The road construction including its shoulders, base, sub base and concrete pavement shall be as per IRC standards. IRC: 58 shall be followed for the pavement design and IRC: 15 shall be followed for the construction of the concrete pavement. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | The road base shall be with minimum 150 mm thick dry lean concrete over granular sub base. Dry lean concrete shall be laid by a mechanical paver and compacted by vibratory rollers. Concrete pavement of the road shall be done with fully mechanized paver fitted with electronic sensors for construction techniques. Dry lean concrete shall be minimum M10 grade and concrete pavement slab shall be minimum M35 grade concrete.<br><br>The finished top (crest) of all roads shall be 350 mm above the surrounding finished ground level.<br><br>The sub grade under all roads and its shoulders shall be compacted to achieve 95 per cent or more of Standard Proctor's Density MDD using mechanical means.<br><br>Cutting / extending / rerouting / remaking of existing roads including associated works to maintain continuity of road system / network shall also be carried out.<br><br>All culverts and RCC bridges at crossings of all roads / rail tracks / facilities with drains / nallahs / channels / roads / rail tracks / pipes / other facilities, etc. are to be designed and constructed.<br><br>Unless otherwise specified, all roads shall be double lane roads. |
| **13.00.00** | **GATE ALONG BOUNDARY WALL:**<br>The gate shall be complete with fabricated hinges, MS aldrops with locking arrangement, tempered steel pivot, guide track of MS tee, bronze aluminum ball bearing, castor wheel etc.<br>All gates shall be given anti-corrosive treatment in three coats.<br>The structural steel shall confirm to IS: 2062 (latest) and all other relevant IS codes.<br>Beside the each gate one room of size not less than 3m X 3m shall be provided for security guards. The room shall be made of brick/ RCC and with RCC roof. In addition to the room, one toilet block shall also be provided. |
| **14.00.00** | **LIME & GYPSUM HANDLING AND ASSOCIATED BUILDINGS STORM WATER DRAINAGE SYSTEM**<br>Storm water drain shall be designed taking into account the finished ground levels of the plant area, drainage pattern, intensity of rainfall, etc with a return period of 50 years. These values shall be based on rainfall intensity of 90mm/hr. All RCC drains shall be either RCC Cast-in-Situ or RCC Pre-cast drains. The minimum grade of concrete shall be M25 for RCC Cast-In-Situ drains and M30 for RCC Pre-cast drains. The maximum velocity for RCC open drains shall be limited to 1.8 metre per second. However, minimum velocity of 0.6 metre per second for self - cleansing shall be ensured. Bed slope not milder than 1 in 1000 shall be provided.<br><br>Open RCC rectangular section, unless required otherwise due to functioned requirement, shall be provided for all drains. The thickness of side walls and bottom slab of RCC drains shall be minimum 150mm or as per design considerations whichever is higher for drains upto depth of 1m from formation level. For depth of drain more than 1m from formation level, the thickness of side walls and bottom slab |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | of RCC drains shall be minimum 200mm or as per design considerations whichever is higher. The drains shall be provided on both sides of roads .These shall be designed to drain the road surface as well as all the free and covered areas, etc. Box culverts shall be provided at all rail, road and other crossings.<br><br>All drains inside the building shall have minimum 40 mm thick grating covers. In areas where heavy equipment loads would be coming, precast RCC covers shall be provided in place of steel grating.<br><br>The invert levels of the in-plant and plant peripheral drains shall be kept such that water can be discharged by gravity to the main / trunk drains under all conditions.<br><br>The invert levels of the drains shall be decided in such a way that the water can easily be discharged to the natural water bodies above the high flood. |
| **15.00.00** | **SEWERAGE SYSTEM**<br><br>The connection of sewer pipe line for the associated buildings of FGD and Lime and gypsum handling area to nearest owner's sewage network is in bidder's scope.<br><br>Cement concrete pipes of class NP-3 as per IS:458 shall be used below ground level for sewage disposal in all areas . However, for pressure pipes and under roads spun C.I. pipes conforming to IS:1536 of required class shall be used.<br><br>RCC manholes with CI cover shall be provided at every 30m along the length, at connection points, and at every change of alignment, gradient or diameter of a sewer pipeline. This shall be as per IS:4111.<br><br>Sewage pump house shall be provided as per IS:4111. |
| **16.00.00** | **LOADING** |
| **16.01.00** | For consideration of loads on structures IS : 875 - 'Code of practice for structural safety of buildings' shall be followed. In addition to the dead load, live load, equipment load (including impact / vibration). Temperature loads etc. various loading conditions arising due to operation and maintenance of equipment shall be considered in the design. The structure and equipment shall also be designed for seismic loads as per the **"Criteria for Earthquake Resistant Design of Structures and equipment"** and the **"Criteria for Wind Resistant Design of Structures and equipment"** specified in the **"Project Information section"** of technical specification. Wind and seismic forces shall not be considered to act simultaneously. The following minimum live loads shall be adopted for the design of various structures. If actual expected load is more than the specified load, then actual load is to be considered. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | a ) Roofs | 150 Kgs. / Sq. M. for accessible roofs and 75 Kgs. / Sq. M. for non - accessible roofs.<br>In addition to this dust load (Dead load) of 150 Kgs. / sq. m. on flat roofs & 75 Kgs. / sq. m. on inclined roofs shall also be considered. |
| | b ) R. C. C. floors | 500 Kgs. / Sq. M. |
| | c ) Stair and balconies | 500 Kgs. / Sq. M. |
| | d ) Toilet rooms | 200 Kgs. / Sq. M. |
| | e ) Chequered plate floors | 400 Kgs. / Sq. M. |
| | f ) Walkways ( including walkways in conveyor galleries ) | 300 Kgs. / Sq. M. |
| | g ) Conveyor galleries | In addition to the live loads, loads due to cable trays, fire fighting / service water pipes shall also be considered @ 125 Kgs. / m ( minimum ) on each of the longitudinal girder.<br>Roof-truss members are to be checked for supporting fire fighting pipes/ Service water pipes. |
| | h ) Road Culverts and its allied structures including R. C. C. pipe crossing & road crossing of trenches. | For class 'AA' loading and checked for class A loading as per IRC standard. |
| | i ) Channels / trenches | In addition to earth pressure and water pressure, etc. additional earth pressure due to surcharge of 2T / Sq. M. shall also be considered for design. |
| | j ) Covers for trenches / channels | Covers for channels & trenches, shall be designed for a live load of 0.4T Sq. M. and loading as mentioned under clause in trenches, whichever is critical. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | k ) Sumps and tanks and other underground basement type structures — In addition to earth pressure with a surcharge of 2T / Sq. M. (or surcharge due to Railway loading whichever is critical for Railway load bearing structures etc.) and sub - soil water pressure etc. These are also to be designed for the following conditions :<br>i ) Water / liquid inside and no earth outside (applicable only to such structures which are liable to be filled up with water or any liquid ).<br>ii ) Earth with surcharge outside and no water / liquid inside<br>iii ) For underground (basement) structures protection against buoyancy during execution and after execution shall be ensured without superimposed loadings with minimum factor of safety of 1.2 against buoyancy. |
| | If the erection load is higher than the specified live loads on any floor or part thereof, then the erection loads are to be considered for the design.<br><br>Permissible increase in stresses of materials and bearing pressure of soil due to wind load or seismic load shall be as per relevant I. R. S. and I. S. code. |
| **16.02.00** | **Crane load**<br>For crane loads, an impact factor of 25% and lateral crane surge of 10% (of lifted weight + trolley weight) shall be considered in the analysis of frame according to the provisions of IS:875. The longitudinal crane surge shall be 5% of the static wheel load. Longitudinal surge and lateral surge shall not be considered to act simultaneously. |
| **16.03.00** | **Temperature load**<br>For temperature loading, the total temperature variation shall be considered as 2/3 of the average maximum annual variation in temperature. The average maximum annual variation in temperature for this purpose shall be taken as the difference between the mean of the daily minimum ambient temperature during the coldest month of the year and mean of daily maximum ambient temperature during the hottest month of the year. The structure shall be designed to withstand stresses due to 50% of the total temperature variation.<br><br>Suitable expansion joints shall be provided in the longitudinal direction wherever necessary with provision of twin columns. The maximum distance of the expansion joint shall be as per the provisions of IS: 800 and IS: 456 for steel and concrete structures respectively. |
| **17.00.00** | **DESIGN CRITERIA** |
| **17.01.00** | The design of all R. C. C. structures shall be carried out as per ‘code of practice for plain and reinforced concrete for general building construction’, IS : 456 ( latest ). |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **17.01.00** | Design of steel structures shall be done by the Working stress method. Design shall be as per provisions of IS:800 :1984 and other relevant IS standards. |
| **17.02.00** | Minimum size of the angle section to be used as structural members shall be 50 X 50 X 6. Minimum weld size shall be 6 mm. Connections shall be designed for 70 % of shear capacity of the member or the actual shear force, whichever is higher. The steel structures using tubular sections shall be designed and fabricated as per IS:806 – "Code of Practice for use of steel tubes in general building construction." and EN 1993-1-8:2005. Minimum grade of steel & thickness of Tubular/Hollow sections shall be Yst 240 Mpa & 4.0mm respectively |
| **17.03.00** | The building shall conform to local bye - laws, rules and regulations for industrial buildings and also B. I. S. publications, SP 32 and 41. |
| **17.04.00** | Slotted holes shall not be assumed to act as expansion joint for relieving of stresses and suitable bearings shall be provided at the supports. |
| **17.05.00** | Stresses for all structures shall be checked for the higher of the forces obtained from gust factor method and the peak wind speed method. |
| **17.06.00** | Horizontal bracing system shall be provided at floor levels around the openings. |
| **17.07.00** | Shear force in steel columns shall be transferred to the pedestals / foundations exclusively either through foundation bolts or the shear key arrangement. |
| **17.08.00** | For design of liquid retaining structures, IS : 3370 ( Part - I to IV ) ( latest ) shall be followed. Face of the structure in contact with liquid shall be designed as un - cracked section. For design of R. C. C. pipes for culverts, latest editions of IS : 458, IS : 783 should be followed. |
| **17.09.00** | For design of all underground structures / foundations, ground water table shall be assumed at the formation level ( i. e. the adjoining ground level ). For all underground structures like tunnel, underground transfer point and underground hopper etc. crack width shall be limited to 0.2mm. |
| **17.10.00** | Design of masonry walls shall be made as per IS : 1905. |
| **17.11.00** | Civil task drawing indicating various equipment loading and supporting arrangement and floor loads to be submitted along with the design calculation. |
| **17.12.00** | Minimum 0.12% of reinforcement shall be provided on the top face of the foundation concrete on either direction and minimum percentage of reinforcement at bottom face of foundation shall be same as that stipulated for beam as per IS:456. |
| **17.13.00** | Foundations for all tanks shall be designed for as per IS: 803. |
| **17.14.00** | Footings shall be so proportioned to as to minimise the differential settlement. |
| **17.15.00** | All gallery supporting trestles shall be so proportioned that the transverse deflection of gallery due to wind / seismic load should not exceed trestle height / 1000 as stipulated in IS: 11592. This deflection condition shall be strictly followed. Peak wind speed method shall be considered for checking the transverse deflection. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **17.16.00** | The crusher and transfer house structures shall be so designed that transverse deflection at places where conveyor galleries meet, should be equal to the respective transverse deflection of conveyor supporting trestles. |
| **17.17.00** | **Deflection criteria**<br>The maximum Horizontal Deflection for various structures shall not exceed and be limited to the following: |

| Sl. No. | Description | Maximum value of |
|---|---|---|
| 1. | For Trestles and transfer points (Transverse deflection at Conveyor gallery supporting level) | Height/1000 (For Wind load by Peak Wind Speed Method / Seismic Load) |
| 2. | For other Buildings | Height/325 |

| | | |
|---|---|---|
| **17.18.00** | a) | Permissible deflection (unless specified otherwise in this specification) for latticed framework and beams of floors other than drive floor shall be span/325. |
| | b) | The allowable deflection for beams directly supporting drive machinery shall be restricted to span/500 unless specified otherwise in this specification. |
| | c) | The deflection for manually operated cranes & monorail supporting beams shall not exceed span/500.<br>For electric overhead cranes :<br>1) upto 50 t capacity : span/750<br>2) over 50 t capacity : span/1000 |
| | d) | The vertical deflection of metal deck sheet for roofing and side cladding shall be limited to span/250 |
| | e) | The permissible vertical deflection for beams supporting drive machinery shall be restricted to span / 500 and for other beams it shall be within span / 325. |
| | f) | Permissible deflection for all purlins, cladding runners, roofing/cladding sheets and grating / chequered plates shall be span/250. However, the maximum vertical deflection of Grating/ Chequered plate shall be limited to 6 mm. |
| 17.19.00 | a) | Dispersion of load in any direction through soil shall be as per IS: 8009 (relevant part). |
| | b) | Dispersion of load through concrete shall be considered at an angle of 45 degrees with horizontal from the edge of contact area. |
| 17.20.00 | a) | The design and construction of RCC structures shall be carried out as per IS: 456. Working stress method shall be adopted for the design wherever |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | specifically mentioned in this specification.<br>b) For design and construction of steel-concrete composite members, IS: 11384 shall be followed.<br>c) For reinforcement detailing, IS: 5525 and SP: 34 shall be followed.<br>d) Two layers of reinforcement (on both inner and outer faces) shall be provided for RCC wall sections having thickness 150 mm or more. |
| 17.21.00 | a) All RCC liquid retaining/conveying shall be designed by working stress method as outlined in clause no. 4.5 of IS 3370 (Part-2) 2009 unless specified other wise.<br>b) Water proofing treatment shall be provided for liquid retaining/ carrying structures and basement type structures (requiring dry working condition). Dense and durable concrete with water cement ratio not more than 0.45 shall be used. Plasticiser /super-plasticiser cum water proofing compound shall be added to the concrete. All the construction/expansion joints shall be provided with PVC water bar and/or chemical injection grouting as per IS:6494. As applicable internal/external surface of such structures shall be provided with acrylic based polymer modified cementitious composite coating system for critical structures. For liquid carrying/retaining structures, minimum two coats of such coating shall be applied. For external application wherever the surface is in contact with the earth, fine silica/quartz sand of 0.6 mm nominal size shall be added in the coating mix for better abrasion resistance and total nominal thickness of such coating shall be minimum 1.5 mm. For non critical structures minimum two coats of bitumen grade 85/25 as per IS:702, mixed with 1% of anti-stripping compound meeting the requirement of IS:6241, shall be applied. The total application of bitumen shall not be less than 1.7 kg/sq.m.<br>Bidder shall submit a comprehensive scheme for water proofing treatment based on above or any other alternative scheme, internationally accepted for Employer's approval prior to commencement of work.<br>c) All liquid retaining/carrying structures shall be tested for water tightness as per the provisions of IS: 3370 and IS: 6494 and in case of leakage, the same shall be rectified by chemical injection grouting through nozzles. |
| **17.22.00** | For design of all underground structures, foundations, etc. ground water table shall be assumed at the finished ground level unless specified otherwise. |
| **17.23.00** | Earth pressure for all underground structures shall be calculated using coefficient of earth pressure at rest or co-efficient of active earth pressure, whichever is applicable, depending upon the structural configuration. However, for the design of substructure of pump houses, earth pressure at rest shall be considered. Co-efficient of passive earth pressure shall be used only in design of shear keys for stability against sliding. |
| **17.24.00** | a) Following loading conditions shall be considered in addition to the loading from super structure for the design of substructure of pump house, channels, sumps, tanks, trenches and other underground structures containing liquid<br>i) Water pressure from inside and no outside pressure, like earth pressure, ground water and surcharge pressure (applicable only to structures, which are liable to be filled up with water or any other liquid.)<br>ii) Earth pressure, surcharge pressure and ground water pressure from outside and no water pressure from inside. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | iii) Design shall also be checked against buoyancy due to the ground water during construction as well as after construction stages. Minimum factor of safety of 1.2 against buoyancy shall be ensured considering empty condition inside and ignoring the superimposed loadings. Provision of pressure relief valves/flap valves, etc., shall not be permitted to counter the buoyancy unless specified otherwise.<br>iv) Base slab and piers of the pump houses shall also be designed for the condition of different combination of pump sumps being empty during maintenance stages with maximum ground water level.<br>b) Intermediate dividing pier of pump sumps and partition wall (if applicable) in channel shall be designed considering water on one side only and other side being empty for maintenance.<br>c) All pump houses and other substructures (wherever applicable) shall be checked for stability against sliding and overturning during construction as well as operating conditions for various combinations of loads. |
| **17.25.00** | **Design of Block Foundation**<br>a) Block foundation resting on soil shall be analyzed using elastic half space theory. In case the foundation is supported over piles, Novak's approximation shall be used for determining the spring constant and damping ratio of pile groups. The mass of the RCC block shall be at least three times the mass of machine. Free vibration analysis of the foundation shall be carried out to evaluate the natural frequencies. The fundamental natural frequency shall be kept at least 20% away from the operating frequency (speed). Forced vibration analysis shall be carried out if the dynamic forces are made available by the machine supplier in which case the amplitude limits stipulated by the machine supplier and ISO 10816, whichever is lower, shall be satisfied.<br>Reinforcement design shall be done by working stress method as per IS:456-2000 and IS:2974 (Part-IV).<br>b) For the foundations supporting minor rotating equipment weighing less than one ton or if the mass of the rotating parts is less than one hundredth of the mass of the foundation, no dynamic analysis is necessary. However, if such minor equipment is to be supported on building structure, floors, etc., suitable vibration isolation shall be provided by means of springs, neoprene pads, etc., and such vibration isolation system shall be designed suitably. |
| **18.00.00** | **Coating on RCC water retaining structures (other than drinking water)**<br>Epoxy phenolic coating shall be applied on internal surfaces of the RCC water retaining structures, as per details specified below:<br>All concrete surfaces shall be provided with two component transparent polyamide cured epoxy sealer coating (having solid by volume minimum 40% ±2%) of minimum 50 micron DFT. Surface to be coated shall be absolutely dry, clean and dust free.<br>Sealer coat shall be followed with the application of epoxy phenolic coating (solid by volume minimum 63%) of minimum 400 micron DFT. This coat shall be applied after an interval of minimum 24 hours (from the application of primer coat) by airless spray technique. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | **Coating on RCC water retaining structures (drinking water)**<br>Internal surfaces of RCC water retaining structures shall be provided with minimum 400 micron Food grade epoxy coating complying to FDA Title 21, Part 175.300. Surface to be coated shall be absolutely dry, clean and dust free |
| . | |
| **19.00.00** | **Fabrication** |
| | All steel structures shall be fabricated in factory, transported and erected at site. All factory fabricated structures shall have bolted field connections.<br><br>Chimney flue liners can either be fabricated at factory in segments, transported and welded at site before erection or fabricated at site. For Chimney flue liners, to prevent flue gas leakages, the applicable field joints shall necessarily be welded. |
| **20.00.00** | **Electrodes** |
| 20.01.00 | The electrodes used for welding shall be of suitable type and size depending upon specifications of the parent material, the method of welding, the position of welding and quality of welds desired. Only low hydrogen electrodes shall be used for welding of medium /high tensile steel and for mild steel plate thickness above 20 mm. |
| 20.02.00 | All low hydrogen electrodes shall be baked and stored before use as per manufacturer's recommendation. The electrodes shall be re-baked at 250°C - 300°C for one hour and later on cooled in the same oven to 100° C. It shall be transferred to a holding oven maintained at 60°C - 70°C. The electrodes shall be drawn from this oven for use. |
| 20.03.00 | Where coated electrodes are used they shall meet the requirements of IS: 814 and relevant ASME - Sec. II. Covering shall be heavy to withstand normal conditions of handling and storage. |
| 20.04.00 | Only those electrodes that give radiographic quality welds shall be used for welds, which are subjected to radiographic testing. |
| 20.05.00 | Where bare electrodes are used these shall correspond to specification of the parent material. The type of flux-wire combination for submerged arc welding shall conform to the requirements of F-60 class of AWSA-5-17-69 and IS: 3613. The electrodes shall be stored properly and the flux shall be baked before use in an oven in accordance with the manufacturer's requirements as stipulated. |
| 20.06.00 | The contractor shall take specific approval of the weld for the various electrodes proposed to be used on the works before any welding is started. |
| **20.07.00** | **Edge Preparation for Welding**<br><br>Suitable edge as per weld joint detail shall be prepared either by machines or by automatic gas cutting. All edges cut by flame shall be ground before they are welded. |
| **20.08.00** | **Pre Heating and Post Heating**<br><br>Mild steel and medium / high tensile steel plates thicker than 20mm, will require Pre-Heating of the parent plate prior to welding as mentioned in Table - 1 for mild steel and Table - 2 for medium / high tensile steel, however, higher pre heat temperature |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

may be required as per approved welding procedure and it shall be followed. In welding materials of unequal thickness, the thicker part shall be taken for this purpose.

Base metal shall be preheated, not withstanding provisions of IS: 9595 to the temperature given in Table - 1 for mild steel and Table - 2 for medium / high tensile steel, prior to welding or tack welding. When base metal not otherwise required to be pre heated is at a temperature below 0°C it shall be pre heated to atleast 20°C., prior to tack welding or welding. Pre heating shall bring the surface of the base metal to the specified pre heat and this temperature shall be maintained as minimum inter-pass temperature welding is in progress.

**TABLE - 1**
**MINIMUM PREHEAT AND INTERPASS TEMPERATURE FOR WELDING MILD STEEL**

| | Welding Using | |
|---|---|---|
| **Thickness of thicker part at Point of welding** | **Low hydrogen electrode or submerged arc welding** | **Other than low hydrogen electrode** |
| Upto and including 20mm | None | None |
| Over 20mm and up to and including 40mm | 20°C | Not allowed |
| Over 40mm and up to and including 63mm | 66°C | Not allowed |
| Over 63mm | 110°C | Not allowed |

Note: Type of electrode and the preheating requirements for welding shall be as per approved welding procedure.

**TABLE - 2**
**MINIMUM PREHEAT AND INTERPASS TEMPERATURE FOR WELDING MEDIUM / HIGH TENSILE STEEL**

| | Welding Using | |
|---|---|---|
| **Thickness of thicker part at Point of welding** | **Low hydrogen electrode or submerged arc welding** | **Other than low hydrogen electrode** |
| Upto and including 20mm | None | Not Allowed |
| Over 20mm | 120oC - 140°C | Not Allowed |

Note : Type of electrode and the preheating requirements for welding of medium and high tensile steel shall be as per approved welding procedure.

20.09.00 Pre heating may be applied by external flame which is non-carbonizing like LPG, by electric resistance or electric induction process such that uniform heating of the

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | surface extending up to a distance of four times the thickness of the plate on either side of the welded joint is obtained. |
| 20.10.00 | Thermo-chalk, thermo-couple or other approved methods shall be used for measuring the plate temperature. |
| 20.11.00 | All butt welds with plates thicker than 50mm and all site butt welds of main framing beam supporting the bunker shall require post weld heat treatment as per procedure given in AWS D-1.1. Post heating shall be done up to 600oC and rate of application shall be 200oC per hour. |
| 20.12.00 | The post heat temperature shall be maintained for 60 minutes per 2.5cm thickness. For maintaining slow and uniform cooling, asbestos pads shall be used for covering the heated areas. |
| **21.00.00** | **Paving, Drainage and Sewage** |
| | RCC paving of minimum 150 mm thick with M25 grade concrete, over an underbed as specified herein shall be provided. RCC paving shall be designed as rigid reinforced concrete pavement for the crane/ vehicular/ equipment movement loads which the paving has to bear. The under bed for paving shall consist of preparation and consolidation of sub-grade to the required level, laying of stone soling of 200mm compacted thick for normal duty paving with 63 mm and down aggregate with interstices filled with selected moorum followed by 75 mm thick 1:4:8 PCC (1 part cement, 4 parts sand and 8 parts stone aggregate) with 40 mm nominal size aggregate. Paving areas shall be provided with the metallic hardener floor finish as specified elsewhere in the specification.<br><br>2.5 m wide paving with metallic hardener around periphery of all sumps and underground tanks shall be provided.<br><br>Suitable drains shall be provided to dispose off storm water as well as floor wash of the FGD area block. The paving shall be provided with slope of 1:500 to dispose the surface water/wash water to the nearest drain.<br><br>Sewer lines (Cast Iron), interconnected by sewer manholes (RCC) at regular intervals (not exceeding 30 meter centre to centre) shall be provided to dispose off sewage from FGD area to the nearest available manhole of the owner.<br><br>The plant storm water drainage shall be designed taking into account the finished grade levels of the plant area, drainage pattern, intensity of rainfall, etc., The storm water drainage shall cater to storm water run off resulting from one hour rainfall intensity, with a return period of 50 years. The value of minimum rainfall intensity shall be taken as 75mm/hr. The maximum velocity for pipe drains and open drains shall be limited to 2.4m/sec and 1.8 m/sec. respectively. However, minimum velocity of 0.6m/sec. for self-cleansing shall be ensured. Bed slope not milder than 1 in 1000 shall be provided. The open drains shall be open rectangular drains of RCC unless required otherwise due to functional requirement. RC box culverts shall be provided at rail, road or other crossings.<br><br>Sewers shall be designed for a minimum self-cleansing velocity of 0.75m/sec and the maximum velocity shall not exceed 2.4m/sec. |
| **22.00.00** | **Statutory Requirements**<br><br>Bidder shall comply with all the applicable statutory rules pertaining to Factories Act, Fire Safety Rules at Tariff Advisory Committee. Water Act for pollution control, Explosives Act, etc. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | Provisions of safety, health and welfare according to Factories Act shall be complied with. These shall include provision of continuous walkways along the crane - girder level on both sides of building, comfortable approach to EOT crane cabin, railing, fire escape, locker room for workmen, pantry, toilets, rest room etc.<br><br>Provisions for fire proof doors, number of staircases, fire separation wall, lath plastering/encasing the structural members (in fire prone areas), type of glazing etc. shall be made according to the recommendations of Tarrif Advisory Committee.<br><br>Statutory clearances and norms of State Pollution Control Board shall be followed.<br><br>Bidder shall obtain approval of Civil/Architectural drawings from concerned authorities before taking up the construction work. |
| **23.00.00** | **INSPECTION, TESTING AND QUALITY CONTROL**<br><br>Sampling and testing of major items of civil works viz. earthwork, concreting, structural steel work (including welding), piling, sheeting, etc. shall be carried out in accordance with the requirements of this specification. Wherever nothing is specified relevant Indian Standards shall be followed. In absence of Indian Standard equivalent International Standards may be used.<br><br>The Bidder shall submit and finalise a detailed field Quality Assurance Programme before starting of the construction work according to the requirement of this specification. This shall include frequency of sampling and testing, nature/type of test, method of test, setting of a testing laboratory, arrangement of testing apparatus/equipment, deployment of qualified/experienced manpower, preparation of format for record, Field Quality Plan, etc. Tests shall be done in the field and/or at a laboratory approved by the Engineer. The Bidder shall furnish the test certificate from the manufacturer's of various materials to be used in the construction. |
| **24.00.00** | **CONCRETE**<br><br>All R. C. C. works to the done under this specification, unless specified otherwise shall be design mix concrete. Minimum grade of concrete for various structures shall be as follows:<br><br>a ) M25 - For all underground / sub-structural/ super-structure R. C. C. work.<br><br>b ) M30- For Block Foundation<br><br>c) M35- For spring supported RCC deck<br><br>Minimum 75 mm thick P.C.C M-7.5 shall be provided as mud mat below all foundations.<br><br>For concreting of underground structures requiring water tightness, plasticizer cum water proofing admixture shall be added to the concrete mix.<br><br>Both coarse and fine aggregates shall conform to IS: 383 for concrete, shotcreting etc. unless otherwise mentioned. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **25.00.00** | **Excavation, Backfilling, Disposal and Stacking of materials Details** |
| **25.01.00** | **Excavation in Soil**<br><br>Excavation for foundation shall be to the bottom of lean concrete and as shown on drawing or as directed by the Engineer. The bottom of all excavations shall be trimmed to required levels and when excavation is carried below such levels by error, it shall be brought back to the specified level by filling with concrete of nominal mix 1 : 3 : 6 (cement: coarse sand: 40 mm down aggregates ), as directed by the Engineer.<br><br>The Contractor shall ascertain for himself the nature of materials to be excavated and the difficulties, if any, likely to be encountered in executing this work. Cofferdams, sheet piling, shoring, bracing to maintain suitable slopes, draining etc. shall be provided and installed by the contractor, to the satisfaction of the Engineer.<br><br>Surplus excavated materials shall be disposed off by the contractor at locations up to a lead of 5 kms from the plant boundary wall as directed by the engineer.<br><br>The Contractor shall have to constantly pump out any water collected in excavated pits and other areas due to rain water, springs etc. and maintain dry working conditions at all times until the excavation, placement of reinforcement, shuttering, concreting, Backfilling is completed. The Contractor shall remove all slush/muck from the excavated areas to keep the work area dry. The Contractor, if required, shall employ sludge pumps, for this purpose.<br><br>For other details, excavation clauses as given at “Foundation system and Geotechnical Data Chapter” given at “Project Information section” of technical specification, are to be referred. |
| **25.02.00** | **Excavation in Rock**<br><br>For the work of excavation in rock, Contractor shall engage specialised agency having experience of excavation in rock involving wedging and blasting. The agency shall be subject to approval of Engineer and the Contractor shall furnish details of relevant experience in support while seeking approval for the agency.<br><br>Blasting shall be resorted to only with the written permission of the Engineer. All the statutory laws, (Explosives Act etc.) rules, regulations, Indian Standards etc. pertaining to the acquisition, transport, storage, handling and use of explosives etc. shall be strictly followed.<br><br>The contractor shall obtain Licenses from Competent Authorities for undertaking blasting work as well as for procuring, transporting to site and storing the explosives as per Explosives Act. The Contractor shall be responsible for the safe transport, use, custody and proper accounting of the explosive materials.<br><br>Surplus excavated materials shall be disposed off by the contractor at locations up to a lead of 5 kms from the plant boundary wall as directed by the engineer. The Contractor shall have to constantly pump out any water collected in excavated pits and other areas due to rain water, springs etc. and maintain dry working conditions at all times until the excavation, placement of reinforcement, shuttering, concreting, backfilling is completed. For other details for excavation in rock, clauses as given at |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | "Foundation system and Geotechnical Data Chapter" given at "Project Information section" of Technical specification, are to be referred. |
| **25.03.00** | **Backfilling, Disposal and Stacking of materials**<br><br>Backfilled earth shall be compacted as per "Foundation system and Geotechnical Data Chapter" given at "Project Information section" of technical specification.<br><br>However, the backfill under the rail lines and roads shall be compacted to minimum 95 % of the standard proctor density at OMC unless otherwise stated by rail Authorities.<br><br>The contractor is required to excavate upto any depth as shown on the drawings or as directed by the Engineer. Lifting of excavated materials shall be done either by manual or mechanical or both means if called for by the Engineer.<br><br>The disposal / stacking areas for excavated materials shall be indicated by the Engineer. The carriage of excavated materials shall be done by the methods mentioned below:<br><br>The excavated materials shall be carried beyond the initial lead of 50 m but upto 500 m by manual / animal labour or by mechanical means. If directed by the Engineer this material shall be used directly for filling purposes.<br><br>For leads exceeding 500 m the Contractor shall transport the excavated materials by mechanical means only and as directed by the Engineer. The Contractor may be allowed to carry materials through Kuccha roads. Providing and maintaining of the Kuccha roads shall be the responsibility of the Contractor. The transported material shall be neatly stacked as directed by the Engineer.<br><br>Some excavated materials required for filling purposes, may have to be carried upto a lead of 500 m and stacked as per instructions of the Engineer. Excavated materials carried beyond 500 m shall normally be for disposal purpose only. Double handling of materials shall be avoided as far as possible. However, depending on site condition excavated materials carried beyond a lead of 500 m may also be required to be brought back for filling purpose.<br><br>Materials to be used for filling purpose shall be stone, sand or other inorganic materials and they shall be clean and free from shingle, salts, organic matter, large roots and excessive amount of sod, lumps, concrete or any other foreign substances which could harm or impair the strength of the substances in any manner. All clods shall be suitably broken to small pieces. When the material is mostly rock boulders, these shall be broken into pieces not larger than 150 mm size before backfilling and shall be backfilled in layers of 300mm interstices filled with sand. In case of broken rock boulders used for back filling, the top cover shall be with 1.0m thick soil. The layers of rock boulders, interstices filled with sand shall be compacted by plate vibrators. Sand used for filling shall be clean, medium grained and free from impurities. Fines less than 75 microns shall not be more than 20%. In any case, the materials to be used for filling purposes shall have the prior written approval of the Engineer. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | In case the materials have to be brought from pits / quarries, then it shall be the Contractor's responsibility for identification of such quarry areas, obtaining approval from their use from concerned authorities, excavation / quarrying loading and carriage of such material, unloading and filling at specified locations. The Contractor shall pay any fees, royalties etc. that may have to be pain for utilisation of borrow areas. |
| **26.00.00** | **GALVANISING**<br><br>All burrs and irregular edges of the structural steel members to be galvanised shall be ground smooth before galvanising.<br><br>Purity of Zinc to be used for galvanising shall be 99.5 % as per IS : 209 ( latest edition ).<br><br>The weight of the zinc coating shall be at least 610 Gms. / $m^2$ unless noted otherwise. |
| **27.00.00** | **CHEMICAL INJECTION GROUTING**<br><br>Minimum, 12 mm dia ( NB ) threaded nozzle of suitable length, shall be provided over the surface and along the construction joint line in a grid pattern at a spacing not exceeding 1.5 m c / c before concreting operation. Adequate precaution shall be taken to keep the nozzles plugged at both ends to prevent them from getting closed by concrete.<br><br>For fixing of any nozzle in set concrete suitable size hole shall be drilled, preferably by using repercussive hammer drill electrically operated, in grid pattern and grouting nozzle shall be fixed in these holes.<br><br>After the nozzles are fully set, neat cement slurry admixed with water soluble non - shrink polymer / monomer based chemical shall be injected through the net - work of nozzles with low pressure grout pumps at a pressure of about 2.0 Kgs. / $cm^2$. Cement slurry shall be prepared by mixing cement with non-shrink polymer/monomer @ 500 gm/50 kg bag of cement and water, ensuring that Water: Cement ratio does not exceed 2 (by weight). Wetter the structure, lesser should be the water cement ratio. The property of the polymer/monomer should be such that when it is mixed with water @0.5% by weight of water, the viscosity of the resultant solution (water and polymer/monomer) should not be more than 1.2 centipoises. Plasticizing agent shall be added wherever required. The grouting shall be started at very low pressure and increased gradually to a required pressure. The grouting shall continue, till the hole refuses to take any further grout, even at an increased pressure. Applied pressure shall not be more than the designed strength of the concrete. After completion of grouting operation, the nozzles shall be sealed properly to the satisfaction of the Engineer. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **28.00.00** | **POLYMER MODIFIED CEMENTITIOUS COATING** |
| **28.01.00** | **Materials**<br><br>Modified liquid polymer blend shall be a dispersion containing 100 % acrylic based polymer solids. Polymer shall be mixed in the ratio of 1 cement: 0.5 polymer (for minimum solid content of polymer 30%).<br><br>Portland cement based dry powder.<br><br>Clean, fine specially prepared quartz sand approximately 0.6 mm size. |
| **28.02.00** | **Mixing**<br><br>The liquid polymer shall be stirred well and cement based powder shall then be added slowly to make a Slurry Mix. For preparation of Brush Topping Mix, quartz sand shall be added slowly and mixed well till a homogeneous mixture is obtained. The mix shall be used within half an hour of the preparation. Addition of quartz sand may not be necessary, in case dry power contains the same. |
| **28.03.00** | **Properties of Coating**<br><br>It must adhere to wet surface.<br><br>It should develop adequate bond strength, with the concrete surface, not less than 2 N / Sq. mm.<br><br>Co - efficient of permeability shall be about $5x10^{-10}$ Cm / Sec.<br><br>Water absorption after continuous soaking shall not be more than 1 %.<br><br>The materials shall be permeable under water vapour.<br><br>The material shall be resistant to acids and alkalies present in the soil and underground water with normal pH value between 4 and 14.<br><br>The co - efficient of thermal expansion of the material shall be close to that of concrete. |
| **28.04.00** | **Application**<br><br>The concrete surface shall be cleaned and made free from grease, oils or loosely adhered particles. The surface shall be damp without any free water. For exterior underground part, application (b) pertaining to Brush topping Mix shall be followed.<br><br>**(a) For Slurry Mix**<br><br>A minimum of 2 coats shall be applied on the surface. The first coat being applied, when the surface is still damp and left to harden for 4 to 6 hours. After 4 to 6 hours of the application of second coat, it shall be finished by rubbing down with a soft dry |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | sponge. The coverage shall not be less than 1 : 1 Kgs. / $m^2$ in the 2 coats. A lap of 75 mm shall be provided at the joints.<br><br>The coating shall be air dried for 4 to 6 hours and, thereafter, cured for 7 days after the application of last coat.<br><br>**(b) For Brush Topping Mix**<br><br>This shall be applied in two coats. A primary coat of slurry mix can also be first applied on the surface as first coat. After the coating has dried up, a coat of Brush Topping Mix shall be applied over it with a push broom or any other similar brush. It shall be left in broom finished condition. The nominal thickness shall be 1.5 mm and minimum thickness shall be 1.0 mm. A lap of 75 mm shall be provided at the joints. It shall be ensured that no pinhole exists and rebrushing shall be done to cover the pinholes, if any.<br><br>The Coating shall be air dried for 4 to 6 hours and thereafter cured for 7 days after the application of last coat.<br><br>Rate of application of coating shall be established to achieve the required thickness. |
| **29.00.00** | **Architectural Concepts**<br><br>Buildings shall be architecturally treated in such a way that it presents a pleasing composition of mass and void with suitable and functionally designed projections and recesses. The overall impact of the building shall be one of aesthetically unified architectural composition having a comprehensive scale, blending with the surroundings and taking full consideration of the climatic conditions and the building orientation. All the buildings shall be architecturally treated in such a way so as to be in harmony with the surroundings. The over all composition may have straight or curvilinear profiles.<br><br>Necessary projections, fins, parapets, chajjas etc. in addition to the minimum area specified elsewhere in this specification shall be provided as required.<br><br>Nothing extra shall be payable for any changes required while getting the drawings / scheme approved and for executing the same.<br><br>All structures, buildings and facilities shall be designed as per provisions of National Building Code 2005 and Local building by - laws as applicable including provisions of the Factories Act of the State concerned, with regard to requirement of free access, stairs, minimum head room, walkways, ventilation, toilets etc. and safety requirements like railings, fire escapes etc. Further all layouts and detailed drawings shall meet the relevant statutory requirements specified in recommendations of Petroleum act, Explosives act and Indian Electricity rules' as applicable. |
| **29.01.00** | **FINISHING SCHEDULE** |
| **29.01.01** | **Flooring**<br><br>The nominal total thickness of floor finish shall be 50mm i.e. underbed & topping. The floor shall be laid on an already laid and matured concrete base. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | Flooring of tiles / stone shall be fixed with 18 mm thk cement sand mortar 1:4, above PCC under bed (M 20 (with graded aggregate of nominal size 12.5mm) design mix)<br><br>Flooring of Concrete hardener topping shall be provided above the PCC underbed (M 20 (with graded aggregate of nominal size 12.5mm) design mix). |
| **29.01.02** | Wherever specified Heavy duty ceramic tiles of size 300x300x7 mm thick (minimum) of reputed manufacturer (Kajaria, Orient, Johnson or equivalent) of approved finish shade and colour to be used. Vitrified ceramic tiles wherever specified shall be 600x600 mm with minimum 9.5 mm thickness and of reputed manufacturer (Kajaria, Johnson, Orient or equivalent). |
| **29.02.00** | **Floor finish & skirting:**<br><br>The nominal thickness of floor finish shall be 50 mm.<br><br>Floors of toilets, pantries / kitchen shall be finished with Heavy duty (grade-5) dust pressed ceramic tiles 300mmx300mm x7 mm thick as per IS:15622, including pointing the joints with white cement mixed with matching pigment, of approved make, size & colour shade.<br><br>(1) Floors of Office Room, Labs, Control Rooms, RIO Rooms and all other A/c Room shall be finished with Mirror polished Vitrified ceramic tiles ( minimum 9.5 mm thk) with 3 mm groove joints as per approved pattern, pointed neatly with 3X4mm stainless epoxy grout SP- 100 of Laticrete or approved equivalent in approved colour to match colour of tile.<br><br>(2) Suitable supporting arrangement shall be provided with M.S. angles / channels on cable trenches in MCC and Control rooms for mounting Control panels / MCC.<br><br>(3) In rest of the areas, IPS (Cement concrete flooring) with Concrete hardener topping shall be 12mm thick with ordinary grey cement using uniformly graded, properly treated iron particles shall be provided.<br><br>(4) Floors and sides of under ground RCC structures like valve pits, trenches and tanks shall have simultaneous (integral) neat cement finish at the time of concreting.<br><br>(5) The interconnecting walkway between various structures, buildings and facilities shall be finished with 22 mm chequered concrete tiles at top. 1000 mm wide walkway of 22mm thick chequered concrete tiles shall be provided on terrace for maintenance purpose, in all RCC /Metal deck roof buildings.<br><br>(6) Skirting in general shall be 150mm high, Dado in toilet, kitchen & pantry shall be up to specified height (up to 2200 mm for toilets, up to 600 mm high above counter top in kitchen and pantry area). The dado height shall be measured from finished floor level. Skirting and Dado shall match with the floor finish.<br><br>(7) Battery Room shall be provided with Acid resistant tile on horizontal and vertical surfaces, at all levels for all type of works, including One coat of bitumen primer followed by 12 mm thick bituminastic layer, 20 mm thick Acid Resistant tiles, 6 mm thick under-bed by potassium silicate mortar, 6 mm thick pointing of joints of tiles with acid/alkali resistant epoxy/furane mortar up |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | to a depth of 20 mm and bituminastic end sealing. 1200 mm high dado on wall shall be with 12 mm thk Acid resistant tiles of the similar finish and the joints to be finished as per flooring tiles, with the rest of wall height and ceiling finished in chemical resistant paint (chlorinated rubber based).<br>(8) Well polished 18 mm thick Kota stone jointed with neat cement slurry mixed with pigment to match the shade of the stone including rubbing and cleaning, complete, to be provided in entrance area, entrance steps, Entrance area, staircases (tread, riser, landings, skirting). |
| **29.03.00** | Sunken RCC slab shall be provided in false flooring area and toilet, Kitchen and pantry, so as to keep the finished floor level of these areas same as that of the surrounding area. |
| **29.04.00** | Water proofing treatment to be provided on sunken portion of all vertical and horizontal surfaces of depressed portions of all toilets, W.C., kitchen, Pantry and the like consisting of :<br>(i) Ist course of applying cement slurry @ 4.4 kg/sq.m mixed with water proofing compound conforming to IS 2645 in recommended proportions including rounding off junction of vertical and horizontal surface.<br>(ii) IInd course of 20 mm cement plaster 1:3 (1 cement: 3 coarse sand) mixed with water proofing compound in recommended proportion including rounding off junction of vertical and horizontal surface.<br>(iii) IIIrd course of applying blown or residual bitumen applied hot at 1.7 kg. per sq.m of area.<br>(iv) IVth course of 400 micron thick PVC sheet. (Overlaps at joints of PVC sheet should be 100 mm wide and pasted to each other with bitumen @ 1.7 kg/sq.m). |
| **29.05.00** | **Acid / Alkali Resistant Treatment:**<br>Acid / alkali resistant lining treatment shall be provided in different areas as follows:<br>Neutralization Pit: The walls shall be provided with one coat of bitumen primer, followed by 18 mm thick bitumastic layer, 115 mm thick A.R. bricks, 6 mm thick under bed of potassium silicate mortar, pointing the joints of bricks with acid / alkali resistant epoxy / furane mortar upto a depth of 20 mm and bitumastic end sealing. Suitable plasters shall be provided with A.R. bricks at regular intervals depending upon the height of lining, as per the specification.<br>The floor of neutralization pit shall be provided with acid / alkali resistant lining treatment as given in the above para, except that the 115 mm thick A.R.tile layer shall be replaced by 75 mm thick A.R. tile layer and pilasters shall be omitted.<br>The ceiling of neutralization pit shall be provided with one coat of epoxy primer followed by 2 coats of epoxy paint (150 micron).<br>Acid / Alkali storage area / projections above the floor, pedestals projecting from the floor / saddles. : The floor shall be provided with one coat of bitumen primer followed |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | by 12 mm thick bitumastic layer, 20 mm thick A.R. tiles, 6 mm thick under - bed by potassium silicate mortar, 6mm thick pointing of joints of tiles with acid / alkali resistant epoxy / furane mortar up to a depth of 20 mm and bitumastic end sealing. Dado of 12 mm thk Acid Resistant tiles up to 1.0M high shall also be provided if applicable in case of walls nearby.<br><br>Alum/Lime Storage area and first floor of Chemical House : One coat of bitumen primer followed by 12mm thick bitumastic layer, 20 mm thick A.R. tiles, 6 mm thick underbed of potassium silicate mortar, 6mm thick pointing of joints of tiles with acid /alkali resistant epoxy /furane mortar up to a depth of 20 mm and bitumastic end sealing.<br><br>Alum solution preparation tank:<br><br>The wall shall be provided with one coat of bitumen primer followed by 12 mm thick bitumastic layer, 75 mm thick A.R. tiles, 6 mm thick underbed by potassium silicate mortar, pointing of joints of tiles with acid / alkali resistant epoxy / furane mortar upto a depth of 20 mm and bitumastic end sealing.<br><br>The floor shall be provided with acid / alkali resistant lining treatment as given in the above para except that the 75 mm thick A.R. tile layer shall be replaced by 12 mm thick A.R. tile layer.<br><br>Basket of Alum solution preparation tank: 5 mm thick epoxy lining over a coat of epoxy primer.<br><br>Curved surfaces of saddles shall have minimum 12 MM thick bitumastic layer to support the vessel / tanks.<br><br>Effluent Drains: Acid Resistant lining treatment indicated for the storage area shall be provided on the bed as well as walls of the drains with 38 MM AR tiles. The underside of the pre-cast slab cover shall be applied with one coat of epoxy primer and two coats of epoxy coating, total DFT 150 microns.<br><br>Lime tank: Two coats of bitumen paint conforming to IS: 9862, with total DFT 150 microns. |
| **29.06.00** | **Walls** |
| **29.06.01** | All walls shall be non-load bearing infilled panel walls. All external walls shall be minimum one brick thick masonry wall. |
| **29.06.02** | All external and internal walls shall be with minimum one brick masonry (230 or 250 mm) including toilet walls. Toilet partition low height walls shall be minimum half brick masonry. |
| **29.06.03** | For all air conditioned areas/ rooms, wherever metal cladding is envisaged as cladding material, additional brick masonry wall (230m thick) shall also be provided in addition to metal cladding for effective air conditioning. This brick wall shall be plastered & painted as specified elsewhere in the specification. |
| **29.06.04** | RCC transoms and mullions of size 115x115mm with suitable reinforcement shall be provided wherever necessary to reinforce the brickwork. |
| **29.06.05** | 50 mm thick DPC in Cement concrete (M-20) with water proofing compound followed by two layers of bitumen coating 85/ 25 grade as per IS: 702 @ 1.7 kg/ sq.m. shall be provided at plinth level before starting the masonry work. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **29.06.06** | The bricks shall be laid with cement mortar (1:6) for one brick thick walls and (1:4) for half brick thick walls IS: 1905, IS: 2212 and SP -- 20 shall be followed for brick work design and construction. |
| **29.07.00** | **Plastering** |
| **29.07.01** | External (rough) surface of walls shall be plastered with 18 mm thick cement plaster, consisting first (base) layer of 12 mm thick plaster in cement sand mortar (1:6) and second (finishing) layer of 6 mm thick plaster in cement sand mortar (1:4).<br>The internal (smooth) surface of walls shall have 12 mm thick plaster in cement sand mortar (1:6).<br>All external / internal RCC surfaces including RCC parapet walls shall be provided with minimum 12mm thick plaster in cement sand mortar (1:4) except walls of underground structures like cable trenches / valve pits etc. |
| **29.07.02** | All exposed faces of R.C.C. walls of structures, buildings and facilities shall have minimum 12 mm thick cement sand plaster 1:6. |
| **29.07.03** | All RCC ceilings (except areas provided with false ceilings and cable vault ceiling) shall be provided with 6 mm thick cement sand plaster 1:4. |
| **29.07.04** | All plastering work shall conform to IS: 1661. |
| **29.08.00** | **Painting** |
| **29.08.01** | All painting on masonry or concrete surface shall preferably be applied by roller. If<br>Applied by brush then same shall be finished off with roller. |
| **29.08.02** | All paints shall be of approved make including chemical resistant chlorinated rubber paint. |
| **29.08.03** | Minimum two finishing coats of paint shall be applied over a coat of primer. |
| **29.08.04** | The thinner shall not be used with textured paint (Sandtex Matt or equivalent) finish. |
| **29.09.00** | **Internal Finish**<br>All Air conditioned areas shall have 2mm of polymer based water resistant putty (wall putty) to given an even and smooth surface. |
| **29.09.01** | Acrylic emulsion paint shall be as per IS: 5411 (Part - 1). Acrylic distemper shall be as per IS: 428. Air - conditioned areas shall be applied with minimum 2 coats of acrylic emulsion paint. All other areas shall be applied with minimum 2 coats of Acrylic distemper. |
| **29.09.02** | Toilet, Pantry / Kitchen areas shall have dado with Designer ceramic tiles, 300x200mw (matt finish) upto 2.2 m height and shall match with floor finish. Above dado, Acrylic distemper shall be applied. |
| **29.09.03** | Areas coming in contact with chlorine fumes or acid / alkali shall have two coats of acid / alkali resistant chlorinated rubber paint over suitable primer on walls above dado & ceiling.<br>The paint shall be of approved colour shade and make. |
| **29.10.00** | **External Wall Finish**<br>One pack, ready mix and ready to use, resin / polymer bonded granular textured coating finish of 2.5 mm (natural coloured graded stone chips ), of approved colour, and shade for all types of plastered and / or exposed concrete surface, in all kinds of works, at all levels, including preparation of surface, preparation of working drawing, |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | labour, material, equipment, handling, transportation, mixing, laying, applying finishing, testing, curing, making grooves, scaffolding, staging, etc., all complete, as per specifications, drawings and instructions of the Engineer-in-charge.<br><br>Toe wall of chain link fencing shall be provided with two coats of Acrylic Smooth Exterior Paint<br><br>The finish shall be of approved colour shade and make. |
| **29.11.00** | **Ceiling Finish**<br><br>Ceiling shall have min. two (2) coats of Acrylic distemper except AC areas & Battery room. |
| **29.11.01** | For painting on concrete, masonry and plastered & surface, IS: 2395 shall be followed. For painting on steel work and ferrous metals, IS: 1477 shall be followed. |
| **29.11.02** | Fire resistant transparent paint (confirming to IS: 162 ) shall be provided on all wood work, over French police or flat oil paint. French polish shall confirm to IS : 348. Flat oil paint shall confirm to IS: 1237. |
| **29.12.00** | **Doors, Windows, Ventilators, Louvers, Rolling Shutters & Glazing** |
| **29.12.01** | Adequate Doors, Windows, Louvers and Ventilators shall be provided for proper lighting and ventilation of all buildings. The area of windows shall be at least 10% of the floor area of the respective building. In addition to the above, wherever room height is more than 3.5 m, a band of ventilators of 600 mm height (minimum) shall be provided at the top. |
| **29.12.02** | Unless specified all doors, of air conditioned areas, entrance lobby of all buildings shall have electro colour coated (anodised) aluminium frame work with glazing. Windows, ventilators & partitions of all buildings shall have electro colour coated (anodised) aluminium frame work with glazing. All doors of toilet, kitchen, pantry & store areas shall be of factory made pre - laminated solid core flush door shutters, as per IS: 2202 (Part-II) with pressed steel door frame. Control room shall have Aluminium glazed door & partitions. All other doors (unless otherwise specified) shall be of steel. |
| **29.12.03** | All steel doors shall consist of double plate flush door shutters. The door shutter shall be 45 mm thick with two outer sheets of 18 G rigidly connected with continuous vertical 20 G stiffeners at the rate of 150 mm centre to centre. Side, top and bottom edges of shutters shall be reinforced by continuous pressed steel channel with minimum 18 G. The door shall be sound deadened by filling the inside void with mineral wool. Doors shall be complete with all hardware and fixtures like door closer, tower bolts, handles, stoppers, aldrops, etc. |
| **29.12.04** | Wherever functionally required, rolling shutters of suitable size approved by the Owner, with suitable operating arrangement manual/ electric shall be provided to facilitate smooth operations. Rolling shutters shall conform to IS: 6248. |
| **29.12.05** | All windows and ventilators at ground floor level shall be provided with suitable anodised aluminum grill. |
| **29.12.06** | Fire proof doors with panic devices shall be provided at all fire exit points as per the requirements. However minimum Fire rating shall be 2 hours. These doors shall be double cover plated type with mineral wool insulation. |
| **29.12.07** | Hollow excluded Section of minimum 2 mm wall thickness as manufactured by INDAL, Jindal, Hindalco or equivalent shall be used for all Aluminium doors, windows, ventilators and Partitions. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **29.12.08** | The doors, Windows & ventilators frame shall be of suitable size & thickness for fixing the glazing. The Glazing thickness shall be minimum 6 mm thk clear toughened glass for all glazed doors, windows, ventilators & partitions. Windows in air conditioned areas shall be provided with 24mm thick hermetically sealed composite double glazing. |
| **29.12.09** | Doors and windows on external walls shall be provided with sunshade over the openings with width 600 mm more than the opening width. The projection from the finished face of the wall for sunshade shall generally be 450 mm over window openings, 750 mm over door openings and 900 over Rolling shutters, or as decided and approved by the Engineer. |
| **29.12.10** | Float glass or flat transparent sheet glass shall conform to IS: 2835. |
| **29.12.11** | All glazing work shall conform to IS: 3548. |
| **29.12.12** | Windows in conveyor gallery shall be provided with welded wire fabric of 1.6mm thick wire as per IS: 4948 and 12mm x 30mm mesh size. |
| **30.00.00** | **WATER SUPPLY, DRAINAGE AND SANITATION** |
| **30.01.00** | Polyethylene water storage tank conforming to IS: 12701 shall be provided (for the use of toilet, pantry and kitchen) over the roof, with adequate capacity depending on the number of users and 8 hours requirement complete with all fittings including float valve, stop cock etc. The capacity of tank shall be calculated minimum 500 liters, per toilet, pantry and kitchen |
| **30.02.00** | Galvanised MS pipe of medium class conforming to IS: 1239 shall be used for internal piping works for potable water supply. |
| **30.03.00** | Sand C.I. pipes with lead joints conforming to IS: 1729 shall be used for sanitary works above ground level. |
| **30.04.00** | The facilities provided in the toilet block shall depend on the number of users. However, minimum facilities to be provided shall be as stipulated below. IS: 1172 shall be followed for working out the basic requirements for water supply, drainage and sanitation. In addition, IS: 2064 and IS: 2065 shall be also be followed. |
| **30.05.00** | Each toilet block shall have the following minimum facilities. Unless specified all the fittings shall be of chromium plated brass (fancy type).<br>The common toilet area shall have finished floor level at 15 mm below the finished floor level of surrounding area.<br>Following minimum fittings & fixtures together with associated plumbing works shall be provided as specified below. |

| **Sl. No.** | **Type of Fitting / Fixtures** | **Gents Toilet** |
|---|---|---|
| i) | 1 no wall mounted coloured glazed vitreous china European water closet with flush valve. | 1 No. |
| ii) | Coloured glazed vitreous china flat back lipped urinals with photo voltaic controlled automatic flushing system including all requisite fittings and fixtures | 1 |
| Iii) | Wash Basin (oval shape) with photo voltaic control system and all requisite fittings and fixtures to be fixed on concrete platform finished with 18mm thick first | 1 No. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | | |
|---|---|---|
| | grade polished granite stone | |
| iv) | Wall to wall mirror minimum 450 mm high (minimum 6mm thick float glass) including all fittings | 1 No. |
| v) | Stainless steel Towel Rail 600mm Long x 20 mm dia. | 1 No. |
| vi) | Stainless steel Liquid soap holder cum dispenser with requisite fittings. | 1 No. |
| vii) | Overhead Drinking water storage tank (Minimum 500 Litres capacity)- High density polyethylene (cylindrical/vertical) molded seamless type. | 1 |
| viii) | Overhead Service water storage tank (Minimum 500 Litres capacity)- High density polyethylene (cylindrical/vertical) molded seamless type | 1 No. |

One No. drinking water connection with C.P. brass valve for fixing water cooler by Owner.

Required plumbing work from Owner's service water terminal point to the service water tank and from tank to the toilet accessories mentioned above.

Required plumbing work from Owner's potable water terminal point to the drinking water tank and from tank up to the water coolers.

Janitor room. Adequate space shall be provided.

Provision for installation of water cooler.

**30.06.00** All structures, buildings, facilities, liquid storage tanks shall be provided with peripheral surface brick drains of all around periphery and suitably connected to nearest Owner's drain. Overflow and drains from storage tanks shall be laid to and suitably connected to Owner's open surface drains.

**30.07.00** The sewerage and waste water disposal system shall consist of providing all associated plumbing and underground pipe works together with all fittings and fixtures and inclusive of ancillary works such as connections, manholes and inspection chambers, including connection to Owner's nearest main sewer line or as directed by Engineer. If required, R.C.C. septic tank and soak pit of required capacity shall be provided by the Bidder.

**30.08.00** Miscellaneous Architectural Items

(a.) In all buildings suitable arrangement with provision of floor traps for draining the water collected from leakage, floor washing, fire fighting etc. shall be provided on all floors which shall be connected to rain water down comers.

(b.) Wherever required minimum 1000 high hand railing with 32 NB M.S. pipes medium class as per IS : 1239 shall be provided, with toe & knee rail and toe guard plate, around all floor / roof openings, around periphery of Neutralisation Pit, projections of balconies, walkways, platforms, steel staircase etc.

(c.) However for RCC staircases in structures, buildings and facilities, railings with 20 mm square MS bar balustrades with suitable anti corrosive paint of approved colour MS flats for knee & toe guard with 50mm Ø NB MS pipe hand rail at top shall be provided.

(d.) All air conditioned areas / common corridors shall be provided with false ceiling constructed from 15 mm mineral Fibre Board in tile form of

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | 600x600mm with supporting system as per manufacture guidelines. 50 mm thick mineral wool insulation (conforming to IS : 8183) shall be provided with as under deck insulation). Additional hangers and height adjustment clips shall be provided for return air grills, light fixtures, Air conditioning ducts etc. Minimum headroom below false ceiling shall be 3.0 m. |
| | (e.) Under - deck insulation shall be provided on the ceiling (underside of roof slab) and underside of floor slab of air - conditioned areas depending upon the functional / air - conditioning requirements. The under - deck insulation shall consist of 50 mm thick mineral wool insulation conforming to IS : 8183 backed with 0.05 mm thick aluminium foil & 24 G x 25 mm mesh wire netting and shall be fixed to ceiling with 24 G wire ties and suitable fixing arrangements. |
| | (f.) Parapets, chajjas, window / door heads, architectural facias, fins etc., shall be provided with drip course in cement mortar (1 : 3 ). |
| | (g.) 150mm thick fillets at junction of roof slab / chajja slab and parapet / vertical walls shall be provided with cast - in - situ cement concrete 1 : 2 : 4 nominal mix, followed by 12 mm thick cement sand plaster (1 : 4). |
| | (h.) Suitable provision shall be made for fixing of ceiling fans in office areas of different structures, buildings and facilities. |
| **31.00.00** | **CORROSION PROTECTION** |
| 31.01.00 | GENERAL |
| | (a) All Steel structures shall be provided with painting as given in the specification. Further, painting system shall also meet the requirements of Corrosivity category C3 (durability High) as per ISO 12944. |
| | Painting system for steel surfaces embedded in Concrete is given separately. |
| | (b) All Painting shall be done as per technical specification. Painting scheme shall be submitted by the bidder for approval of employer. |
| | (c) All steel structures shall be designed by following basic design criteria in ISO 12944 Part 3. However, where it is not feasible to follow the design criteria given in ISO 12944 Part 3 where the steel surface are inaccessible for application of protective coating, corrosion allowance of 1.5 mm shall be kept in thickness(over the design thickness) of structural steel members. |
| | d) Painting scheme shall be resubmitted by the Bidder for approval of employer. |
| 31.02.00 | PAINTING OF STEEL SURFACES EMBEDDED IN CONCRETE: |
| | a) For the portion of Steel surfaces embedded in Concrete, the surface shall be prepared by Manual Cleaning and provided with Primer Coat of Chlorinated Rubber based Zinc Phosphate Primer of Minimum 50 Micron Dry Film Thickness (DFT). |
| | b) All threaded and other surfaces of foundation bolts and its materials, insulation pins, Anchor channels, sleeves, etc. shall be coated with temporary rust preventive fluid and during execution of civil works, the dried film of coating shall be removed using organic solvents. |
| 31.03.00 | PAINTING OF STEEL SURFACES (OTHER THAN THOSE EMBEDDED IN CONCRETE) |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | a) All steel surfaces shall be provided with two component moisture curing zinc (ethyl) silicate primer coat (having minimum 80% of metallic Zinc content in dry film, solid by volume minimum 60% ±2%) of minimum 70 micron DFT to be applied over blast cleaned surface conforming to Sa 2 ½ finish of ISO 8501-1 with surface profile 40-60 Micron. The primer coat shall be applied in shop immediately after blast cleaning by airless spray technique. Zinc dust composition and properties shall be Type-II as per ASTM D520-00.<br><br>b) Primer coat shall be followed with the application of Intermediate coat of two component polyamide cured epoxy with MIO Content (containing lamellar MIO minimum 30% on pigment, solid by volume minimum 80% ±2%) of minimum 100 micron DFT. This coat shall be applied in shop after an interval of minimum 24 hours (from the application of primer coat) by airless spray technique.<br><br>c) Intermediate coat shall be followed with the application of finish coat of two-pack aliphatic Isocyanate cured acrylic finish paint (solid by volume minimum 55% ±2%) with Gloss retention (SSPC Paint Spec No 36, ASTM D 4587, D 2244, D 523) of Level 2 (after minimum 1000 hours exposure, Gloss loss less than 30 and colour change less than 2.0 $\Delta$E) and minimum 70 micron DFT. This coat shall be applied shop after an interval of minimum 10 hours and within six (6) months (from the completion of Intermediate coat), Colour and shade of the coat shall be as approved by the Employer.<br><br>Notes:<br><br>1. For Primer, high quality surface preparation is necessary and good amount of moisture is required for proper curing. Below 70 % relative humidity, curing time may go up to 7 days or more. In such a case additional water sprinkling may be ensured for completion of curing. Additionally Inorganic zinc silicate cannot be recoated; even with itself. Typically it should be used when coating bare steel surface for first time.<br><br>2. The most frequent problem associated when top coating Primer is bubbling/pin holing especially with non-weathered zinc silicate coatings. To a great extent, this bubbling of finish paint can be eliminated by applying a mist coat of intermediate/topcoat as the first pass of the product, allow the bubbles to subside and then apply a full coat, as required.<br><br>3. In case top coating of zinc silicate with epoxy/polyurethane coatings, is expected to be delayed, it is advisable to use a suitable tie coat to avoid formation of white rust. However, if white rust forms then clean the surface with high pressure water, dry and apply the subsequent coats as required.<br><br>4. Touch up paintings on damaged areas: Surface preparation by manual tools, wire brush/ emery paper etc. Minimum 6 inches peripheral area, adjoining to damaged area to be covered. If metal surface is exposed, it is to be painted with Zinc rich epoxy (70 micron) or suitable primer with existing paint scheme. If primer is intact, intermediate & top coat to be done with specified DFT in scheme. |
| 31.04.00 | **COATING FOR MILD STEEL PARTS IN CONTACT WITH WATER.**<br><br>a) All mild Steel parts coming in contact with water or water vapour shall be hot dip galvanised. The Minimum Coating of Zinc shall be 610 Gms / Sq. M. for galvanised Structures and shall comply with IS: 4759 and other relevant Codes. Galvanising shall be checked and tested in accordance with IS: 2629. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | b) The galvanising shall be followed by the application of an etching Primer and dipping in black bitumen in accordance with BS: 3416, unless otherwise specified. |
| 31.05.00 | **Gratings**<br>All gratings shall be blast cleaned to Sa 2 ½ finish or cleaned by acid pickling as per ISO 8501-1 and shall be hot dip galvanized at the rate of 610 Gms / Sq. M. |
| 31.06.00 | **Hand Railings and Ladders**<br>All Mild steel handrails and ladders shall be galvanised at the rate of 610 Gms / Sq. as per IS: 4736. However, Stainless steel handrails shall be provided as specified in General Architectural Specification clause 9.0.0. |
| 31.07.00 | **Sea Worthiness**<br>All Steel Sections and fabricated Structures, which are required to be transported on sea, shall be provided with anti corrosive Paint before shipment to take care of sea worthiness. |
| 31.08.00 | **For Reinforced Concrete Work.**<br>i) The protection for concrete sub-structure shall be provided based on aggressiveness of the soil, chemical analysis of soil/sub-soil water and presence of harmful chemicals/salts.<br>ii) The protection to super structure shall depend on exposure condition and degree of atmospheric corrosion.<br>This shall require use of dense and durable concrete, control of water cement ratio, increase in clear cover, use of special type of cement and reinforcement, etc., coating of concrete surface, etc.,<br>Bidder shall furnish the details of corrosion protection measures. |
| **32.00.00** | **Miscellaneous** |
| **32.01.00** | Ordinary form work shall be used in roofs and floor slabs in transfer houses, footings, pedestals, cable trenches, pits etc., Plywood form work shall be used for all over ground exposed work like columns, beams, floors and ceilings in control room and M. C. C. buildings. |
| **32.02.00** | Monorail girders and fixtures shall be provided for monorails at the locations as required and as described elsewhere in these specifications or drawings. Monorail openings in the walls shall be provided with steel frame doors preferably sliding type or otherwise open able inside, access platforms and ladders. |
| **32.03.00** | Steel frame around openings in roof and on external walls for mounting of exhaust fans shall be provided. |
| **32.04.00** | Ready mix non - shrink cementitious grout of reputed manufacturer as approved by the Employer shall be used for grouting of block outs and foundation bolts, underpinning of base plates and machine bases. Crushing strength of grout shall be one grade higher than the foundation concrete. Minimum crushing strength shall be 30 N / $mm^2$ unless higher strength requirement is specified by the equipment supplier or the grout manufacturers. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **32.05.00** | The bottom of steel in case of cable / pipe galleries and trestles shall be generally 3m above the ground except for rail / road crossing where it shall be 8m above the rail top / road crest/ground. Further in bunker areas it shall be 8 m above the ground. |
| **32.06.00** | Polysulphide Sealing Compound shall be two-part polysulphide sealant and shall be from approved manufacturer, conforming to IS : 12118. Materials shall consist of polysulphide polymer and a curing agent. Gun grade material shall be used unless otherwise specified. The application of the sealant shall be strictly followed as per manufacturer's guidelines. |
| **33.00.00** | **SHOTCRETING** |
| **33.01.00** | **General Requirements** |
| **33.01.01** | Generally, shotcreting shall be done in accordance with IS : 9012. |
| **33.01.02** | Reinforcement for shotcreting shall be as detailed below, unless specified otherwise.<br><br>Reinforcement in one direction consisting of 6 mm M. S. bars at 750 mm c / c shall be connected to the lugs for fastening of the wire fabric. This shall be used in case of 50 mm or above thick shotcreting. |
| **33.01.03** | Wire fabric conforming to IS : 1566 shall be used as reinforcement and shall consist of wire, 3 mm diameter, spaced 50 mm both ways and shall be electrically cross welded. Wire fabric shall be securely tied to 6 mm bars for 50 mm thickness. Adjacent sheet of wire fabric shall be lapped at least 100 mm and tied. |
| **33.01.04** | Clear cover to reinforcement mesh shall not be less than 15 mm. |
| **33.01.05** | Minimum thickness of shotcreting shall be 50 mm. for abrasion resistant work and 25 mm for ordinary surface protection work. |
| **33.02.00** | **Material**<br><br>Generally, the materials shall be in accordance with aggregates specification given hereunder. |
| **33.02.01** | Fine aggregate shall consist of natural sand or crushed stone from a known source and shall be strong, hard, coarse, sharp, chemically inert, clean and free from any coating. It shall be free from clay, coal or coal residue, organic or any other impurities that may impair the strength or durability of the concrete and shall conform to IS : 383. |
| **33.02.02** | Fine aggregate (Sand) shall be well graded and particles shall range in size within the following limits. The Engineer, may approved the use of any other grading as per requirement or as per IS : 9012. |
| **33.02.03** | The fineness modulus shall be preferably between 2.5 and 3.3. Any other value can be used, with prior approval of the Engineer. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **33.03.00** | **Application** |
| **33.03.01** | After the placement of reinforcement and / or welded mesh and not more than six hours prior to the application of shotcrete, the surface shall be thoroughly cleaned of all loose materials and dirt. The Contractor shall properly prepare the surfaces, reinforcement and / or welded mesh to receive the shotcrete. Cleaned surfaces shall be wetted not more than hour prior to shotcreting. |
| **33.03.02** | The mix as placed on surface shall be one part cement to three parts approved sand by mass. Cement and sand shall be dry mixed; not water shall be added after mixing and before using in the gun. The quantity of water when added shall be only that which is sufficient to hydrate the cement. For average atmospheric conditions, the water cement ratio for shotcrete in place shall be between 0.35 and 0.5 by mass. Suitable admixture shall be used wherever required. |
| **33.03.03** | A uniform pressure of not less than 3 $Kg/cm^2$ at the nozzle shall be maintained. Necessary adjustments shall be made to ensure this pressure, taking into account the length of hose and height of the place to be shotcreted, above location of the machine. |
| **33.03.04** | The application shall proceed in an upward direction. Beams, stiffeners and intermediate walls, if any, shall be wrapped with wire fabric and completely covered with shotcreting. All rebound shall be removed from the area of application as the work progresses and such rebound material shall not be reused. |
| **33.03.05** | As soon as the freshly shotcreted surface shows the first dry patches, a fine spray of water shall be applied to keep too moist. After the surface has hardened, it shall be kept continuously moist for minimum seven days. If there is extreme heat, especially when accompanied by hot winds, the shotcreted surface, immediately upon completion, shall be covered with burlap or similar covering, which must be kept continuously moist for 14 days after shotcreting. The temperature of the lining shall not be permitted to exceed $38^0C$ during placing of concrete. |
| **34.00.00** | **VIBRATION ISOLATION SYSTEM**<br><br>These specifications are meant for the design, supply and erection of vibration isolation system for supporting crushers. |
| **34.01.00** | **Supporting Arrangement** |
| **34.01.01** | **For Crushers:**<br><br>The crushers shall be supported on vibration isolation system consisting of steel helical springs and viscous dampers. The supporting arrangement for each crusher shall consist of an R. C. C. deck supported on steel helical spring units and viscous damper units which in turn shall be supported on girders. The girders shall be an integral part of the crusher house building.<br><br>The part of the structure consisting of the R. C. C. deck, springs and viscous dampers shall hitherto be referred to as “spring supported foundation”. The part of the structure, which is below the spring shall hitherto be called “supporting structure”. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **34.01.02** | The Contractor should do the Engineering / design, supply and erection of vibration isolation system consisting of steel helical spring units and viscous dampers supporting the top deck which in turn would support the crushers. The vibrations isolation system supplied shall be of a proven make. The Contractor or his sub - contractor who designs and supplies the system should have designed, supplied and installed such systems for not less than five machines of speeds and unbalance forces comparable to the machine proposed by the vendor. The vibration isolation systems installed by the contractor or his sub - contractor in such machines should have been working satisfactorily for at least five years. |
| **34.02.00** | **Scope of Work** |
| **34.02.01** | Scope of work shall include the following :<br><br>(a.) Engineering<br><br>(1.) Design of the vibration isolation system using steel helical springs and viscous dampers to support an R. C. C. top deck supporting the equipment. This includes the static and dynamic analysis of the vibration isolation system with the R. C. C. top deck and the equipment.<br><br>(2.) Structural design of the R. C. C. top deck including preparation of General Arrangement drawings, detailed reinforcement drawings, bar - bending schedules etc.<br><br>(3.) Calculation of loads on the structure supporting the springs and viscous dampers, their points of application and the stiffness requirements of the supporting structure.<br><br>(4.) Drawings showing embedments and their locations and details on the R. C. C. top deck.<br><br>(5.) Drawings showing blockouts, recesses etc. on the top deck.<br><br>(6.) Design of the supporting structure, including preparation of detailed drawings and bill of materials.<br><br>**(b.) Supply including packing and transportation to site**<br><br>(1.) Steel helical spring units and viscous dampers, including associated auxiliaries for installation of the spring units and dampers like steel shims, adhesive pads etc.<br><br>(2.) Frame ( s ) for pre-stressing of spring elements.<br><br>(3.) Suitable hydraulic jacks system including electric pumps, high pressure tubes etc. required for the installation, alignment etc. of the spring units, two extra hydraulic jacks, one hand operated pump and spares for the hydraulic jack system as required. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | **(c.) Erection and Commissioning**<br><br>(1.) Complete erection and commissioning of the vibration isolation system including :<br><br>(2.) Pre-stressing of spring elements, placing of spring elements in position, checking clearances on the shuttering of the R. C. C. top deck, construction of the supporting structure and the R. C. C. top deck, releasing to pre-stress in spring elements and making final adjustments and alignments after machine installation etc.<br><br>(3.) The scope of work shall be deemed to include all activities which may not have been explicitly mentioned but are reasonably implied for the successful completion of the work for which these specifications are intended.<br><br>(4.) This part of the specifications is for vibration isolation system. For the construction of the supporting structure for the crusher and the top deck, the relevant parts of the specification should be referred to.<br><br>**(d.) Documentation**<br><br>(1.) Submission of detailed design calculation, analysis ( static and dynamic ) and drawings for Employer's acceptance and approval.<br><br>(2.) Furnishing methodology of providing shuttering and its removal as well as concreting of deck slab, installation of springs and dampers and the sequence of operation.<br><br>(3.) Furnishing installation and maintenance manual indicating equipment, procedure etc., necessary for installation, maintenance of vibration isolation system.<br><br>(4.) Furnishing a check list for confirming the readiness of the civil fronts for the installation of vibration isolation system and equipment required at each stage installation.<br><br>(5.) Bill of materials of various elements such as springs, visco-dampers, with their rating, stiffness etc., included in supply.<br><br>(6.) Detailed specifications of the vibration isolation system and various items included in the supply and the standard (local or international) to which they conform.<br><br>(7.) Proposed erection strategy of the entire system. |
| **34.03.00** | **Design Requirements for Crusher Foundation** |
| **34.03.01** | **Dynamic Analysis**<br><br>Detailed dynamic analysis shall be done for the top deck together with springs and dampers and the natural frequencies and amplitudes of vibration shall be |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | determined. A mathematical model of the top deck shall be formulated with three - dimensional beam / plate finite elements for the purpose of analysis with the spring idealised with vertical and horizontal stiffnesses. The mass of the machine together with that of the top deck shall be considered for the analysis.<br><br>Natural frequencies upto at least 10 % above the operating speed shall be determined and these frequencies shall be checked against the design criteria.<br><br>Forced response dynamic analysis shall be carried out for the operating condition unbalance forces using a sinusoidal forcing function. Unbalance forces as given by this specifications shall be used for his purpose. The amplitudes shall be checked against the design criteria. The dynamic forces from this analysis shall be used for structural design with a suitable fatigue factor. |
| **34.03.02** | **Isolation Efficiency**<br><br>The vibration isolation system shall be designed for about 90 % isolation efficiency. |
| **34.03.03** | **De-coupling**<br><br>A ratio of the least 10 ( ten ) shall be ensured between the stiffness of the supporting structure and the stiffness of the spring system in the vertical direction to achieve de-coupling between the two ( the stiffness of the spring system being lower ). This ensures that dynamic analysis of the supporting structure need not be carried out. |
| **34.03.04** | **Frequency Criteria**<br><br>The frequency criterion has already been laid down implicitly by the isolation efficiency criteria and de-coupling required.<br><br>The first bending mode frequency of the top deck shall be at least 20 % above the operating speed. |
| **34.03.05** | **Unbalance Forces for Crushers**<br><br>Unbalance forces arising out of all the following cases shall be considered for checking the design and amplitudes.<br><br>(a.) Balance quality grade Q 40 as per VDI 2060 - 1966.<br><br>(b.) One hammer broken condition. The missing hammer shall be assumed to be closest to the crusher non - drive end of the crusher.<br><br>(c.) Three hammers broken condition. All the three hammers broken shall be assumed to be from the same suspension bar and located at the non - drive end of the crusher. |
| **34.03.06** | **Amplitude Criteria for Crushers**<br><br>The calculated amplitudes (mean to peak values) shall not exceed following limits under the specified conditions. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | 1) Operating speed of 750 RPM<br><br>(a.) 150 microns for an unbalance force arising out of balance quality grade Q 40 as per VDI 2060 - 1966.<br><br>(b.) 300 microns in case of a one hammer broken condition.<br><br>(c.) Amplitudes need not be checked for a three hammer broken condition.<br><br>2) Operating speed of 450 RPM<br><br>(a.) 200 microns for an imbalance force arising out of balance quality grade Q-40 as per VDI -2060-1966.<br><br>(b.) 400 microns in case of a one hammers broken condition.<br><br>(c.) Amplitude need not be checked for a three hammer broken condition.<br><br>For intermediate operating speed between 450 to 750 RPM the amplitude limits can be linearly interpolated.<br><br>The amplitude limits mentioned above are in both vertical and horizontal directions. The amplitudes shall be calculated at critical points on the top surface of the R. C. C. deck. The amplitudes shall be checked for the most unfavorable superposition of modes in any direction. However, phase difference between the maximum amplitude occurring in different directions due to the rotating vetor may be considered while superimposing the modes. |
| **34.03.07** | **Unbalance force and Amplitude Criteria**<br><br>The unbalance forces and amplitude criteria shall be as per the equipment manufacturer's recommendations or as per VDI 2060/ VDI 2056, whichever is more stringent. |
| **34.03.08** | **Transient Resonance**<br><br>Transient resonance, which may occur during the start - up or coasting down condition of the crusher, shall be checked, and the amplitudes in such a condition should not exceed one - and - half times those at operating speed for each design condition. |
| **34.04.00** | **Strength Criteria**<br><br>The following criteria shall apply for the design of top deck :<br><br>(a.) Dead loads, live loads, Seismic loads and dynamic loads shall be considered for the design. The most unfavorable combination shall considered for design.<br><br>(b.) Seismic loads shall be assumed to act together with dynamic loads for a one millimeter eccentricity in the rotor. However, seismic loads and dynamic loads arising out of hammer breakage need not be considered together |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | (c.) Fatigue shall be considered while designing for dynamic forces. A fatigue factor of 2.0 shall be used on all dynamic forces to arrive at the equivalent static force for the purpose of design.<br><br>(d.) Working stress method shall be used for the design of R. C. C. deck. In survival condition, 10 % overstressing may be permitted.<br><br>(e.) The R. C. C. top deck shall be at least of M35 grade of concrete as per IS : 456.<br><br>(f.) Fatigue need not be considered for the three hammer broken condition.<br><br>(g.) For calculating unbalance forces, the heaviest hammer ( plain or toothed ) shall be considered. |
| **34.05.00** | **Approval of Designs and Drawings**<br><br>All design calculation, drawings and documents shall be in English. All design calculations and drawings shall be submitted to Employer for approval. However, approval of such designs and drawings shall not relieve the contractor of his responsibility regarding the adequacy of the foundation to carry the design forces. |
| **34.06.00** | **Standards**<br><br>Latest revisions of the following Codes shall be used for the design of the crusher foundations.<br><br>(a.) IS : 456 Code of Practice for Plain and Reinforced concrete.<br><br>(b.) IS : 2974 ( Part IV ) Code of Practice for Design and Construction of Machine Foundations ( Part IV ) for rotary type machine of low frequency.<br><br>(c.) IS : 1893 ( Criteria for Earthquake Resistant Design of Structures ).<br><br>(d.) DIN 4024 Machine Foundations :<br><br>Flexible supporting structures for machines with rotating masses.<br><br>(e.) DIN 2089<br><br>Helical Compression Springs out of round wire and rod; calculation and Design.<br><br>(f.) DIN 2096<br><br>Helical Compression Springs out of round wire and rod; quality requirements for hot formed compression springs.<br><br>(g.) VDI 2056 - Criteria for assessing mechanical vibrations of machines.<br><br>(h.) VDI 2060 - Criteria for assessing the state of balance of rotating rigid bodies.not be permitted to exceed 38$^{o}$C during placing and curing |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **35.00.00** | **Packaging and Transportation.**<br><br>All the equipment shall be suitably protected coated, covered or boxed and crated to prevent damage or deterioration during transit, handling and storage at site till the time of erection. While packing all the materials the limitations from the point of view of availability of railway wagon sizes in India should be taken into account. The contractor shall be responsible for any loss or damage during transportation, handling and storage due to improper packing. |
| **36.00.00** | **Plant Life**<br><br>The plant shall be designed for a minimum operating life of 30 years under the conditions of operation. Assurance shall be given that plant components are adequate for this lifetime. If there are any exceptional items of the plant on which an assurance of meeting this clause cannot be given, life of such components and the difficulties associated with them shall be stated. |
| **37.00.00** | **PTFE (Poly Tetra Fluoroethylene) Bearing**<br><br>The bearing shall be of reputed make and manufacturer as approved by the Engineer, for required vertical load and end displacement/rotation. PTFE bearing shall be sliding against highly polished stainless steel and the coefficient of friction between them shall be less than 0.06 at 55 kg/sq.cm. In order to prevent cold flow in PTFE surface it shall be rigidly bonded by a special high temperature resistance adhesive to the stainless steel substrata. The stainless steel surface that slides against the PTFE is mirror polished. The stainless steel shall be bonded to the top plate by special high strength adhesive. The thickness of stainless steel plate shall be between 1.0 mm to 1.5 mm. |
| **38.00.00** | **TESTS FOR MATERIAL / WORKMANSHIP**<br><br>All tests required for all materials, quality of workmanship or any other tests as desired by the Engineer shall be at contractor's cost. |
| **39.00.00** | **MATERIALS** |
| **39.01.00** | **For Civil, Structural and Architectural works**<br><br>Employer will not supply any material. All materials including cement, reinforcement steel and structural steel, whatsoever required for execution and completion of the entire scope of work covered under this specification shall be arranged by the contractor at his own cost. All materials procured by the contractor shall meet the quality requirements specified in this specification.<br><br>The contractor shall keep sufficient stock of cement and steel at site at any point of time when the work is in progress excluding what has been already incorporated in the works, so that any disruption / delay in availability of these materials during procurement will not affect the progress of work at site. The minimum quantity of such materials in stock at site shall not be less then the Requirement of one ( 1 ) month in case of Cement and Requirement of two ( 2 ) Consecutive months in case of Steel. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **39.02.00** | **Structural steel**<br><br>Structural Steel (including embedded Steel) shall be straight, sound, free from twists, cracks, flaw, laminations and all other defects. Structural steel shall comprise of mild steel, medium strength steel and high tensile steel as specified below. |
| **39.02.01** | **Mild Steel**<br><br>a) Rolled sections shall be of grade designation E250, Quality A/BR, Semi-killed/ killed conforming to IS 2062. All steel plates shall be of Grade designation E250, Quality BR (fully killed), conforming to IS 2062 and shall be tested for impact resistance at room temperature. Plates beyond 12mm thickness and up to 40mm thickness shall be normalized rolled. Plates beyond 40mm thickness shall be vacuum degassed & furnace normalised and shall also be 100% ultrasonically tested as per ASTM –A578 level B-S2.<br><br>b) Pipes shall conform to IS 1161.<br><br>c) Hollow (square and rectangular) steel sections shall be hot formed conforming to IS: 4923 and shall be of minimum Grade Yst 240.<br><br>d) Chequered plate shall conform to IS 3502 and shall be minimum 6 mm thick excluding projection. Steel for chequered plate shall conform to grade E250A semi killed of IS: 2062 or equivalent grade conforming to ASTM & BS standards only. |
| **39.02.02** | **Medium and High Tensile Steel**<br><br>Rolled Sections and plates shall be of grade designation E350 or higher, Quality B0 (Fully killed), conforming to IS 2062. Plates beyond 12mm thickness and up to 40mm thickness shall be normalized rolled. Plates beyond 40mm thickness shall be vacuum degassed & furnace normalised and shall also be 100% ultrasonically tested as per ASTM –A578 level B-S2. |
| **39.03.00** | Fly ash based Portland pozzolona cement conforming to IS: 1489 Part - I shall preferably be used. However, the contractor may use other types of cements conforming to IS: 269, IS: 8112, IS: 12269, & IS: 455. |
| **39.04.00** | **Reinforcement steel shall conform to:**<br><br>a) Mild steel bars of grade I of IS: 432 Part – I or grade A of IS: 2062.<br><br>b) High yield strength deformed TMT steel bars of grade Fe-500 having minimum elongation of 14.5 % or Fe-500D, and conforming to other requirements of IS 1786. |
| **40.00.00** | **CODES AND STANDARDS**<br><br>All standards, specifications, acts and code of practice referred to herein shall be the latest editions including all applicable official amendments and revisions. Other Indian, foreign Codes and Standards not listed here but referred to elsewhere within this specification shall also be deemed to be part of this list.<br><br>In case of conflict between this specification and those (IS standards, codes etc.) referred to herein, the former shall prevail. |

**FLUE GAS DESULPHURIZATION (FGD) SYSTEM**

**1.00.00 GENERAL**

The design/specifications/sizing of various plants/systems/equipment offered for Flue Gas Desulphurisation (FGD) System shall comply with the requirements detailed hereinafter:

1.01.00 **System Description**

The Flue Gas Desulphurisation (FGD) System shall be based on Wet Limestone Forced Oxidation process. The FGD system shall be installed downstream of the Induced Draft (ID) fans (Employer's scope).The flue gas shall be drawn from air preheater outlets of the balanced draft, pulverised coal fired Steam Generator and guided through adequately sized duct work into the specified number of independent gas streams of each Electrostatic Precipators. The flue gas after the Electrostatic Precipitators shall be led to the suction of the ID fans. The flue gas temperature may approach the economiser outlet temperature of about 300°C in case the regenerative airpreheaters fails to operate. The Contractor shall take this aspect into account while designing the Flue Gas Desulphurisation (FGD) System.

1.02.00 **Service Conditions**

The Steam Generators, being provided by Employer, are designed to burn pulverised coal having properties as indicated in Sub-section-II-A (Project Information), Part-A, Section-VI. Also HFO/HPS/LSHS and LDO shall be used during startup and at low loads for warm up and flame stabilization as specified in respective Project Information Chapter. The design of Steam Generator shall not call for any oil support for flame stabilization beyond 40 % BMCR load when firing any coal. Further, the frequency and duration for startup and low loads operation may be quite long during the first year of unit commissioning and operation. The Steam Generator has been designed for cyclic/two shift operation. Expected numbers of Steam Generator start-ups during 25 years of design life are as follows:

| | **Type of Starts** | **Number of Starts** |
|---|---|---|
| | | |
| a. | Hot start (after 8 hours of unit shut down) | **4000** |
| | | |
| b. | Warm start (after 36 hours of unit shut down) | **1000** |
| | | |
| c. | Cold start (after 72 hours of unit shut down) | **150** |

The Contractor, shall take into account the entire characteristics of expected combination of fuels to be fired and the expected numbers of Steam Generator start-

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | ups while designing the FGD system. |
| 1.03.00 | **Design Criteria** |
| 1.03.01 | The Flue Gas Desulphurisation (FGD) System shall be designed to meet all the conditions specified above. Representative coal and ash analysis for the expected coal and oil are given in Sub-section-II-A (Project Information), Part-A, Section-VI for each project. The FGD system and all the associated auxiliaries shall be designed to comply with the requirements stipulated under 'Guarantee Point' and 'Design Point' conditions indicated in Sub-Section-V, Part-A, Section-VI of the Technical Specification for the respective projects. The values indicated for FGD sizing shall be considered as minimum design criteria. These shall be modified to more conservative values if Contractor experience warrants the same. However, no credit shall be given to the Contractor for this during evaluation of the bids. Utilization of these values in no way relieves the Contractor of his responsibility to meet all the guarantee requirements. The Contractor shall also furnish along with his offer the detailed calculations and data along with his Bid to establish as to how the Bidder will meet the efficiency requirements both at design and guarantee point as specified in FGD sizing criteria. |
| 1.03.02 | The FGD system shall be installed downstream of the ID fans and shall be based on wet Limestone Forced Oxidation Process. The FGD system shall be designed to achieve the required $SO_2$ capture without the use of oxalic acid or any other additives. The FGD System shall be designed so as to be in operation whenever the Steam Generator is in operation.<br><br>However, provision shall be made by the Contractor for facilitating operation of unit with emergency FGD bypass. This shall also facilitate the online maintenance of absorber system and associated equipment's. The arrangement of the flue gas system shall allow complete isolation of the absorber from the gas side, with the unit in operation. For this purpose. Motorized Guillotine type gates has be provided at (i) hot gas inlet to Booster Fans, (ii) Outlet of Booster Fans and (iii) in the bypass duct (common Flue Gas Duct going towards the existing Chimney). Further, Quick opening Bi-plane motorized/pneumatic damper along with 2x100% seal air fans shall be provided in the by-pass duct by the Contractor. The same shall also be taken into account while designing the control & logics for the FGD System. |
| 1.03.03 | The wet absorber system shall be designed to maintain the required $SO_2$ removal. |
| 1.03.04 | In order to be compatible to all possible modes of operation, the design of the FGD plant shall enable short start-up times, compatible with load changes in the Steam Generator and shall ensure reliable mode of continuous operation. |
| 1.03.05 | The flue gas desulphurization plant (FGD) shall be designed to be operated with limestone as specified in Sub-Section-V, Part-A, Section-VI of the Technical Specification. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 1.03.06 | The FGD and the ancillary facilities shall be suitable for unlimited operation with all transients and at any load point between the minimum and maximum load point of the Steam Generator. Further, the FGD plant shall be suitable for an unlimited operation at any pollutant concentrations between minimum and maximum without exceeding the emission values of $SO_2$ emission of less than 100 mg/$Nm_3$ (6% $O_2$ dry). |
| 1.03.07 | In case of failure of the SG and ancillary equipment, the FGD plant shall be brought automatically to the off-load operation without restriction by the current load case by suitable measures. |
| 1.03.08 | In case of a power failure all items of equipment (e.g. minimum one agitator in absorber and limestone slurry tank, flue gas damper upstream & downstream of FGD, Process water pump & lube oil system of Booster Fan & Ball Mill) which may cause irreversible damage to the FGD System shall be connected to the emergency power supply system to be provided by the Contractor. Bidder shall furnish a list of all such Auxiliaries in their bid proposal. |
| 1.03.09 | In case of shutdown and outage periods, draining and flushing of limestone slurry and gypsum slurry pipe work, tanks and all other items being in contact with limestone slurry or gypsum slurry shall be possible without restriction and without necessity of extensive or unusual preparation and activity. Draining and flushing which are required even during short time outages or an emergency shutdown shall be started automatically and by remote control from the Control Room. |
| 1.03.10 | AII items or equipment which are subject to wear, abrasion or failure (e.g. nozzles, pumps, pipe work, etc.) shall be designed and installed for easy replacement, repair and maintenance. |
| 1.03.11 | The design and the construction shall be performed so as to avoid stress corrosion cracking, galvanic or other types of corrosion. Especially when using two different alloys, appropriate measures shall be taken to avoid corrosion. This is subject to approval by the Employer. |
| 1.03.12 | All items of equipment including flue gas ducts, expansion joints, etc. shall be designed considering thermal and mechanical strength as a function of the maximum temperature which might occur in case of a failure of any upstream equipment. |
| 1.03.13 | Waste water which might be generated during flushing and cleaning procedures of the equipment (e.g. lime slurry bins, pipes, trucks, etc.) shall be collected in sump and shall possibly be reused in the wet absorber. |
| 1.04.00 | **Justification of Proposed Design** |
| 1.04.01 | All the design procedures, systems, and components proposed shall have already been adequately developed and have demonstrated good reliability under similar or more arduous conditions elsewhere. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 1.04.02 | The Bidder shall submit with the offer, comprehensive information on how the L/G ratio, mass balance, spray nozzle cone angle, spray nozzle arrangement, limestone consumption etc. of the proposed design has been arrived at. The Contractor shall also submit alongwith the offer, a detailed write up on the proposed design features with recent design modifications, if any, and their specific advantages over the previous designs. |
| 1.05.00 | **Statutory Approval** |
| | The engineering, design, supply and installation of FGD system and the associated auxiliaries shall comply with the applicable safety code and regulation of the locality where the system is being installed. |
| 1.06.00 | **Location & Layout Requirements** |
| 1.06.01 | The Contractor shall offer the best design to accommodate the Flue Gas Desulphurisation (FGD) System and Lime stone & Gypsum handling & storage system within the confines of the space available. The location of FGD System and associated facilities shall be decided by the Bidder after visiting the Project site. |
| 1.07.00 | **Capital Overhaul of FGD System** |
| | Employer envisages to carryout the capital overhaul of units once in three (3) years. The design and materials for various equipments/auxiliaries etc. shall be selected by the Contractor keeping in view the above requirement of the Employer, such that no major repairs/replacements, requiring shutdown of the unit, are needed in between the capital overhauls. |
| 1.08.00 | **Maintenance** |
| 1.08.01 | The Contractor shall provide adequate handling facilities & approach as for carrying out on-line and off-line maintenance of the FGD system and its auxiliaries. In order to carry out on-line maintenance, it shall be possible to readily disassemble, repair and reassemble the equipment supplied in the shortest period. |
| 1.09.00 | **Noise level** |
| | The equivalent weighted average of sound level measured at a distance of 1.5 m above floor level in each elevation and one meter horizontally from the base of any equipments furnished and installed under these specifications, expressed in decibel to a reference of 0.0002 microbar, shall not exceed 85 dB(A). |
| **2.00.00** | **EQUIPMENTS AND SYSTEMS SPECIFICATIONS** |
| | Specified hereafter are the minimum acceptable functional requirements of the Employer, and all components, equipments and systems for the Flue Gas |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

Desulphurisation System shall be designed to cater to these requirements. Compliance to various stipulations of the Technical Specifications, functional requirements of Employer and utilization of various parameters and their values in the specification by the Contractor shall in no way relieve the Contractor of his responsibilities to meet all guarantee requirements or of providing completely safe and reliable operating equipment/systems.

The complete FGD system and the associated auxiliaries shall be designed by the standard industrial practices. The FGD system shall be designed to achieve the required $SO_2$ capture without the use of oxalic acid or any other additives. Only field proven materials for similar application shall be used for the system. The complete installation of liners shall be made under the supervision of the liner supplier as per their guidelines.In the execution of the welds contractor must ensure that welding material has same corrosion resistance as the actual plate surface.

Alloy to carbon steel welds must either be hidden behind a covering strip of alloy material, or be executed by a special welding procedure ensuring the same quality at the weld surface as the alloy lining. All welding which shall be in the contact with process fluids shall be executed under the supervision of the designer/manufacturer.

**3.00.00 FLUE GAS SYSTEM**

3.01.00 The entire flue gas system, flue gas ducts, absorber etc. shall be designed to meet the following conditions:

| | | |
|---|---|---|
| 1. | Design internal pressure at 67% yield strength (mm wc) | +660 and -150 mmwc or maximum conceivable head of Booster fan (if provided), whichever is higher |
| 2. | Design Inlet Gas Temperature (deg.C) | 150 |
| 3. | Short temp excursion temperature of inlet gas (for approx. fifteen (15) minutes at a time) (deg. C) | 300 |
| 4. | Inlet Dust Burden in Gas (mg/Nm3) | 200 |
| 5. | Maximum flue gas velocity through the Absorber (M/sec) | Not more than 4 m/s at Design Point Conditions |
| 6. | Recirculation Slurry pH | Not less than 5.5 under all operating conditions |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **3.02.00** | **Design** |
| 3.02.01 | The flue gas ducts shall be sized and designed to meet all the criteria as specified in Cl. No 16.00.00 this subsection. |
| 3.02.02 | All ducts with operating temperature above $60^0$C shall be insulated in accordance with cl. No. 17.00.00 of this sub section. |
| 3.02.03 | The duct layout shall ensure that there is no accumulation of acid mist on the duct floor. |
| 3.02.04 | The duct to Absorber inlet shall be made of Carbon steel of minimum 7mm thickness. The duct to Absorber inlet shall be made of Carbon steel of minimum 7mm thickness. The duct from Absorber outlet to bypass duct shall be made of Carbon steel of minimum 7mm thickness with 2 mm (minimum) thickness lining / cladding / wall paper of Alloy C276 / Alloy 59 or better material. |
| 3.02.05 | In addition to the base offer as described above, the bidder may also submit an alternate offer for a different material / lining of duct from Absorber outlet to stack, if the bidder has previous experience of the same. The bidder should have supplied a similar design of duct in previous installations for similar application. Bidder shall indicate the applicable price implication for such an alternate offer in the relevant Bid Proposal sheet. The Bidder shall also furnish details of the previous installations of such system and bring out all the technical features of the system proposed. Bidder to note that application of lining material in the ducts shall be carried out under the supervision of designer/manufacturer. Bidder to note that application of lining material in the duct shall be carried out under supervision of Designer/Manufacturer. |
| 3.02.06 | Wherever required, expansion joints of proven design shall be provided in the ducts to take care of differential expansion in the system. The material chosen for expansion joints shall suitable for the duty conditions and the corrosive atmosphere of the FGD system and shall be field proven for similar applications. The expansion joints shall be guaranteed for faultless material and workmanship, for a minimum guaranteed life of not less than 20000 hrs. of operation. During Guarantee period any defects noticed in the expansion-joints due to faulty material and workmanship shall be rectified by the Contractor free of cost. |
| 3.02.07 | The Contractor, shall take into account the entire characteristics of expected combination of fuels to be fired, for the complete load range of operation and the expected numbers of Steam Generator start-ups while designing the Chimney flue liner. The chimney flue liner cladding shall be made of 2 mm thick Titanium (Grade 2 as per ASME SB265) or C-276 alloy over 8 mm thick (minimum) mild steel base metal of flue liner. Cladding shall be done to achieve the required quality as per ASTM B 898-11. External surface of chimney flue liner projecting over the chimney roof shall be wrapped with 2 mm thick Titanium / C-276 sheet over insulation. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | The stack shall be designed as per the latest guidelines of EPRI Wet Stack Design Guide. The design of wet ducts and stacks system shall consider the Stack liquid discharge (SLD), Corrosion/chemical attack, Condensate collection system and its drainage etc. |
| **3.03.00** | **Gates & Dampers** |
| 3.03.01 | The arrangement of the flue gas system shall allow complete isolation of the absorber from the gas side, with the unit in operation. Guillotine gate type damper shall be provided by the Contractor before the suction of each Booster fan. A gas tight, motor operated Guillotine gate shall be provided by the Contractor at the outlet of each Booster fan. A gas tight, motor operated Guillotine gate shall be provided by the Contractor in the bypass duct (flue gas duct connecting the existing chimney). |
| 3.03.02 | All gates/dampers shall be designed to withstand the operating flue gas temperature without distortion. |
| 3.03.03 | There shall not be any backlash, play, etc. with linkage mechanism, actuator and final control element. |
| 3.03.04 | Thermal expansion of ducting shall not produce stress in louvers, linkage arrangement etc. |
| 3.03.05 | Outlet dampers of seal air fans shall be pneumatically operated, suitable for remote manual operation**.** |
| 3.03.06 | All pneumatically operated interlocked dampers actuators shall be provided with solenoid valves. |
| 3.03.07 | A quick acting biplane damper shall be provided by the Contractor in the bypass duct (flue gas duct connecting the existing chimney) for quick opening to allow bypass to come into operation in case of emergency. The damper shall be capable of quick opening during emergency conditions within a time of 10-20 secs. Bidder should indicate the required opening time for bypass damper for emergency operating condition. |
| 3.03.08 | All the gates shall be designed for tight shut off. The Guillotine gate type dampers mentioned at Clause No. 3.03.01 above shall have a guaranteed gas tightness efficiency (on flow) of not less than 99.95% along the duct as well as from the duct to atmosphere or from atmosphere to the duct, depending on the pressure in both the damper open and damper closed condition without the use of seal air fans of the damper. The bypass damper shall have a guaranteed gas tightness efficiency (on flow) of not less than 99.5% and 100% leak tight with seal air fans under operation. The gas tightness shall be demonstrated at shop for minimum one type of damper of each type and size. |
| 3.03.09 | The dampers shall be pneumatically operated and controlled from the control room. Provision shall be made for giving signal automatic bypass controls of the absorber in case of failure of the absorber spray system or the GGH. The dampers shall have provision for manual operation, through a hand wheel. The force required for manual operation of the gate shall not exceed 35 kg (max.) at the rim of the hand wheel. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

3.03.10 The isolating gates shall be provided with locking devices to permit locking in fully closed position.

3.03.11 **Pressurization Fans:**

a) All gates shall be provided with 2x100% pressurization fans to achieve 100% sealing efficiency.

b) The location and scheme for pressurization system shall be subject to Employer's approval.

3.03.12 All gates shall be designed to withstand the operating air and flue gas temperature without distortion.

3.03.13 All guillotine gates shall be located in horizontal duct to avoid fly ash build up when in closed position and shall be of top entry type.

**4.00.00 BOOSTER FAN:**

4.01.00 The Booster Fans shall be located downstream of the ID Fans (Induced Draft Fans) in the inlet duct to Absorber shall be capable of handling the pressure drop in the FGD system & ducting and wet stack of 150 m height also considering the exit loss from wet stack over the entire load range with any one or both Booster fans in operation in conjunction with one or both ID fan in operation while firing the specified range of fuels. Additionally a pressure loss of 100 mm wcl (excluding margin) shall be built up in booster fan design criteria as mentioned below to take care of pressure loss due to future installation of De-Nox system.

Booster Fans shall be sized such that they satisfy the criteria stipulated below.

4.01.01

| S.N. | Description | Booster Fan |
|---|---|---|
| 1 | Type of fans | Constant speed, axial type. |
| 2 | No. of fans per unit | Two |
| 3 | Fan sizing criteria with all the following conditions occurring together : | Booster Fan to be sized for one (1) Booster Fan stream in operation taking into account following factors occurring |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | | together: |
| | (i) Flue Gas Flow through fan | 920 $m^3$/sec for all 800 MW units<br>724 $m^3$/sec for 660 MW units of Mouda, Tanda , Nabinagar STPP & Barh-I<br>802 $m^3$/sec for 660 MW units of Meja<br>893 $m^3$/sec for 660 MW units of Solapur<br>297 $m^3$/sec for 250 MW units of Nabinagar TPP |
| | (ii) Power supply frequency | 47.5 Hz |
| | (iii) Pressure at Booster Fan suction | 0 mmWc |
| | (iv) Gas temperature (degree Celsius) | 150 |
| 4.02.00 | The fans shall also fulfill following sizing criteria in addition to those mentioned at clause 4.02.01 above | Each fan to be sized with following conditions occurring together. |
| | (i) No. of fans in operation | 2 |
| | (ii) Flue gas flow through each fan | 727 $m^3$/sec for all 800 MW units<br>600 $m^3$/sec for 660 MW units of Mouda, Tanda , Nabinagar & Barh-I<br>645 $m^3$/sec for 660 MW units |

TENDER NO PSER:SCT:NBN-C2067:20

| CLAUSE NO. | TECHNICAL REQUIREMENTS | | |
|---|---|---|---|
| | | | of Meja<br><br>678 $m^3$/sec for 660 MW units of Solapur<br><br>237 $m^3$/sec for 250 MW units of Nabinagar TPP |
| | (iii) | Margin over flow | 20% |
| | (iv) | Margin over pressure requirement | 44% over the calculated value |
| | (v) | Power supply frequency | 50 Hz |
| | (vi) | Pressure at Booster Fan suction | 0 mmWc |
| | (viii) | Gas temperature (degree Celsius) | 150 |
| | (viii) | Flue gas control | Blade pitch control |
| | **Note to 4.02.01 & 4.02.02**: Booster fan shall have a minimum stall margin of 10% over the Design duty points. | | |
| 4.02.01 | Both fans shall operate with highest possible efficiency which shall be nearly equal at the Guarantee point flow and test block points. | | |
| 4.03.00 | Fan components along with servo/blade pitch control mechanism shall be designed to withstand and continuously operate with the maximum air or flue gas temperature that these fans will be required to handle. Fan component shall also be designed to withstand the excursions in flue gas temperature up to 300 degree Celsius, which may persist for about 30 minute duration. Such temperature excursion will not inhibit the safe and smooth operation of fans or cause any damage or increased maintenance. | | |
| 4.04.00 | The construction of Booster fans shall also comply with following requirements | | |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | | |
|---|---|---|
| | **DESCRIPTION** | **Booster Fans** |
| | Type of fan blades | stream lined, aerofoil shaped section |
| | Blade material | Nodular Cast Iron or High Wear Resistant Steel with or without Hard coating as per the proven practice of the fan manufacturer |
| | Fan rotational speed | 600 rpm (max.) |
| | Air/Flue gas flow | blade pitch control |
| | Fan critical speed | not less than 125% of fan maximum operating speed |
| | Fan component design* | to withstand torsional stresses three (3) times the normal full load motor torque at all speeds |
| | Fan casing material thickness | Abrasion and wear resistant, high BHN steel having minimum 8.0mm thickness or 12mm mild steel with liner of thickness 10mm (min.) |
| | Fan Housing design | for shut off head of fan |

*Note :

(a) Contractor shall submit detailed calculations, for Employer's approval, to confirm compliance with above requirements for all fan components, specifically for fan shafts, impeller hubs and impeller as a whole. Areas of high stress concentration and residual stresses, like welded attachments shall be avoided on the fan rotor/shafts. Combined static, dynamic as well as residual stresses shall be demonstrated to be within allowable limits. These fan components shall last the life of the plant with such combined stresses present in them.

(b) Although employer envisages to install highly efficient electrostatic precipitator to control particulate emission, however. Bidder shall select the Booster fan components such as blades, hubs, casing etc. to encounter the high dust burden of the order of 250 mg/$Nm^3$. The minimum wear life of Booster fan components shall not be less than 25000 hours of operation from the date of commissioning.

4.05.00 **Fan Bearings**

(a) Bearing shall be provided with oil bath to prevent damage in case of complete loss of plant auxiliary power when the fans must coast down

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

without power.

(b) Size oil reservoir in bearings housing for maintaining lubrication for extended periods in case of oil circulation system is out of service.

(c) Cooling air circulation to be provided across main bearing

(d) Adequte numbers of duplex Pt-RTD (100 ohm at 0 degree Celsius) and temperature indicator shall be provided for each bearing. Local as well as remote monitoring features shall be provided.

(e) For mounting of vibration pads/pickups, flat surfaces shall be provided both in X and Y directions, by the Contractor on the bearing housing.

4.06.00 **Fan balancing**

(a) The fans shall be statically and dynamically balanced before shipment.

(b) Balancing of each fan shall be checked and adjusted at site, if necessary.

(c) Natural frequency of all fan components shall be established by vibration testing to ensure that no part of the wheel is adversely excited by any force generated at operating speeds.

(d) The fan blade shall be subjected to natural frequency test. The other components of fan wheels need not be subjected to natural frequency test if supplier can prove that these component are very rigid and have very high natural frequency compared to the operating frequency of respective fans giving justification.

4.07.00 Booster fans shall meet following operational requirements.

| | Description | Booster Fans |
|---|---|---|
| (a) | Mode of operation | i) two fans in parallel.<br>ii) one fan (one stream in operation) |
| (b) | Fan control system | i) capable of operating in automatic mode for all regimes of operation in a steady and stable manner<br>ii) The final control element shall not have any backlash, plays etc., and shall operate in the range of 20% to 80% depending upon generating loads upto Boiler MCR |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | | | |
|---|---|---|---|
| | (c) | Vibration | For mounting of vibration pads/pickups (in the Employer's scope) flat surfaces shall be provided, both in X & Y directions, by the Contractor on the bearing housing in such a way,so that welding/screwing of the pads shall be possible. |
| | (d) | Bearingmetal temperature monitoring | Shall be possible from remote as well as locally, using atleast 2 nos. of duplex platinum RTD's (100 ohms at0 deg. C) per bearing |

4.08.00 The fans shall be suitable for parallel operation and sharing the load capacity over the entire range of operation without hunting. Pulsation shall be avoided by suitable design of fans and

4.09.00 **Fan Casing :**

(a) The fan casing shall be split to provide easy removal of the fan hub/impeller for replacement and repairs.

(b) The sections shall have gasket joints to ensure airtight sealing.

(c) Access doors shall be provided in each suction chamber casing and diffuser.

4.10.00 **Drain Connection:**

Drain connections shall be provided at bottom most point of the fan housing to the nearest trench.

**5.00.00 ABSORBER**

The unit shall be provided with an independent/dedicated absorber.

5.01.00 The contractor may offer either a spray type absorber, with single or multiple levels of spray, or an absorber with gas bubbling through the slurry, as per Bidders/Colaborator's proven practice. Only proven system in successful operation in previous installations supplied by the contractor shall be offered.

**A Spray System (if offered)**

(i) The contractor shall provide spray system and minimum spray levels required to meet the stipulated guarantee and design requirement. The spray system (including slurry recirculation pump & nozzles) shall be sized to achieve a desired L/G ratio required to meet the guarantees $SO_2$ removal efficiency, with redundancies specified

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

under this clause.

(ii) In case the contractor offers an absorber with multiple levels of spray nozzles, each spray level shall be provided with independent 2x100% pumps. Alternatively, the contractor may offer a spare spray level with each spray level served by an independent 100% capacity pump. In case the contractor offers a single level of spray, one number of standby pump of the same capacity & head as the working slurry recirculation pumps shall be provided. The contractor shall provide spray system / spray levels only as per his proven practice, which should be in successful operation elsewhere.

(iii) The slurry recirculation pumps shall have a minimum margin of 10% on flow and 10% on frictional head, over the actual requirement for meeting the guarantee and design point conditions. All slurry recirculation pumps including motors shall be of the same size and type.

(iv) The slurry recirculation pumps shall have motor driven knife gate valve at pump suction and discharge side.

(v) The slurry recirculation pumps shall be wear-resistant and equipped with flushing devices to prevent sedimentation and shall be designed and installed in a manner to allow easy replacements, repair and maintenance. The slurry recirculation pumps shall be equipped with oil level indication, coupling guard and collecting equipment for leakage, made of resistant material. Single mechanical seals with automatic flushing with a connection for additional manual flushing shall be provided.

(iv) The slurry pumps shall also comply with the requirements stipulated in Clause 8.00.00 of this sub-section.

(v) Sufficient redundancy, as per the proven practice of the contractor, shall be provided in the spray nozzles. Minimum 10% spare nozzles shall be provided at each level.

**B Bubbling Type Absorber**

(i) In case the bidder offers an absorber with gas bubbling through the slurry, the complete gas distribution system to the slurry shall be in bidder's scope. No re-circulating pump and spray header and nozzles shall be required in such case. However, 2x 100% Cooling Pumps instead of Slurry Recirculation shall be provided. The spray headers & piping for cooling pump discharge shall be made of Alloy 59 or C276 and nozzles shall be made of Silicon Carbide or ceramic or equivalent having a minimum guaranteed life of 20,000 hrs. The Cooling Pumps shall be installed inside a building.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

The sparger and gas riser tubes shall be made proven material which shall have a minimum life of 5 years.

Minimum 10% redundancy, shall be provided in the Sparger Tubes.

**5.02.00 Absorber Recirculation Tank**

Sufficient number of agitators, as per the proven practice of the contractor, shall be provided for thorough mixing of the re-circulating slurry. In case the Contractor's Absorber includes side entry agitators, the contractor shall offer and demonstrate mixing arrangement such that n-1 number of agitators are sufficient to avoid the slurry settlement in the absorber tank in case of one agitator under breakdown (n-total no. of working agitators). In case vertical agitators in Absorber are offered, one complete mechanical assembly of agitator shall be supplied as warehouse spare for each Absorber.

**5.03.00 Absorber Oxidation Systems**

5.03.01 The contractor may offer either a grid type oxidation system or a sparge jet oxidation system or lance type or air rotary sparge system or jet air sparger system for oxidation of sulfite sludge to sulfates, or any other proven system as per the practice of the FGD vendor.

5.03.02 The oxygen required for oxidation shall be supplied by 2x100% oxidation air blowers for each absorber. The compressor/blower shall be sized to supply at least 2.5 times the stoichiometric air requirement for spray tower process & at least 4.0 times the stoichiometric air requirement for Bubbling Type process or the actual requirement, whichever is higher, under the following condition, all occurring simultaneously. The natural oxidation of sulfite by residual oxygen in flue gas shall not be considered for this purpose.

| **Load** | **Design point Flow** |
|---|---|
| Flow | Minimum 2.5 times for spray tower process & 4.0 for Bubbling Type process the stoichiometric requirement |
| Head | For spray tower process actual requirement considering choking/ blockage of minimum 10% of the oxidation nozzles / sprayers or minimum 8500 mmwc whichever is higher.<br><br>For Bubbling Type process actual requirement considering choking/ blockage of minimum 10% of the oxidation nozzles / sprayers or minimum 3500 mmwc |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | | |
|---|---|---|
| | | whichever is higher. |
| | Margin on Head | 10% under above conditions. |
| | Ambient Conditions | 45°C / 60% RH. |

5.03.03 Oxidation nozzles / spargers shall have a minimum redundancy of 10% or as per the contractor's proven practice whichever is maximum.

5.03.04 The oxidation system shall be complete with a quenching system to cool down heated oxidation air in order to prevent any scaling or buildup that could occur at the sparger tips due to localized evaporation of recycled slurry.

**5.04.00 Gypsum Bleed Pump**

Each absorber shall be provided with 2x100% Gypsum Bleed Pumps for supply of gypsum slurry to Gypsum Dewatering system. Each Gypsum bleed pump shall be sized to bleed-off the gypsum slurry from the absorber with slurry solid concentration not exceeding 30%, under the following conditions, all occurring simultaneously:

| | |
|---|---|
| Load | Design point |
| Flow | 100% of gypsum produced at Design point condition |
| Head | As per system requirement |
| Margins | Flow -- 15%<br>Head – 20% |

The pumps shall be designed to meet the stipulations of Clause No.9.00.00 of this Sub-Section.

Provision shall also be provide in the Gypsum Bleed Pumping system by provision of tap off, valves etc. for pumping the gypsum bleed to alternate source.

**5.05.00 Emergency Spray System**

An emergency cooling system for automatic spray of quenching water for a sufficient time (minimum 15 min) at the inlet to the absorber, in case the gas temperature exceeds the design temperature due to failure of upstream equipment's shall be provided to protect the FGD and all other sensitive downstream equipment against high flue gas temperatures. The water shall be supplied from an elevated tank (emergency water tank) installed near to the absorber. The tank volume and the

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | injection lances/nozzles shall be designed to protect the inlet duct and the lining of the absorber. The inlet duct shall be sloped towards the absorber. |
| **5.06.00** | **Design** |
| 5.06.01 | The design and arrangement of the absorber shall be field proven for successful long-term operation in conjunction with a coal fired power plant. |
| 5.06.02 | The design of flue gas ducts and inlet and outlet hoods of the FGD as well as guide vanes and baffle plates shall ensure a homogeneous flue gas flow with respect to the distributions of:<br>(i) temperature<br>(ii) velocity<br>(iii) dust content<br>(iv) slurry injection and distribution.<br><br>The above shall be proven by two phase Computational Fluid Dynamics simulations (liquid and gas). The scope of modelling shall include flue gas path inside the absorber vessel including inlet and outlet duct. Homogeneity shall be ensured, if the deviation from average is less than $\pm$10%. Further, in the Absorber outlet hood no internals such as guide vanes and baffle plates shall be allowed. |
| 5.06.03 | The fabrication of the absorber vessel shall follow common practice as there shall be no longitudinal seams located behind any attachment or obstruction which would prevent inspection of the welds. Nozzles, access ways, and their reinforcements shall not be located in or on any seam. Inaccessible gaps or hollow beams shall be avoided. |
| 5.06.04 | The absorber shell shall be designed for pressure loads, piping forces and moments, wind and seismic loads and all other loads imposed on the absorber. Bracing and reinforcement shall be adequate to prevent deflection and vibration. Internal supports for mist eliminator sections, etc. shall be designed to withstand the flooded weight of the supported section. The absorber and its structural supports shall be designed for the maximum operating loads including design positive & negative internal pressure, static head, external attachment loads (such as exerted by piping) wind load using the allowable stresses permitted by the applied standards. |
| 5.06.05 | It shall be possible to reach the $SO_2$ emission guarantees, at Guarantee point condition, with at least one spray level continuously out of service (in case the absorber is equipped with several spray levels) or one spare pump continuously out of service. |
| 5.06.06 | Three stage chevron type Mist Eliminators (ME) made of polysulfone or stainless steel shall be provided at the exit of the absorber. Provision shall be made for continuous washing of both ends of the first & second stage and the front section of the third stage of mist eliminators. Wash water arrangement shall also be provided at the back end of the second stage of mist eliminator. If the mist eliminator washing system is designed for cyclic washing of different sections, all the valves required for cycling shall be motorized or pneumatically operated. The automatic valve for the spray system shall be easily accessible on a platforms close to the mist eliminator. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | Entrained slurry shall be collected by mist eliminators downstream of the slurry spray system to avoid carry-over of slurry to the stack.<br><br>The ME system shall be equipped with washing and drain provisions, where drains are directed into the absorber. Washing provisions shall include external and internal piping systems with replaceable nozzles, water pressure booster pumps (if required) complete with all piping, valves, instrumentation and controls. The mist eliminator wash piping/header shall be constructed of rubber lined carbon steel or glass fiber reinforced plastics. Polypropylene or PVC is also acceptable for mist eliminator wash headers provided Contractor or its Collaborator has proven experience for the same. Ease of replace ability and placement of the mist eliminator on maintenance platforms is an important requirement. The ME shall be designed to allow for efficient cleaning in process. Test ports shall be provided downstream of the mist eliminator to enable performance testing.<br><br>The mist eliminator system shall be capable of withstanding high velocity spray water jets typically employed during manual cleanings. The ME shall be constructed in individual cells. The design shall safely avoid ME vibration and/or humming. The individual cells shall be sized so that no more than two maintenance personnel are needed to handle them manually when they are fully scaled or plugged, and the cells shall be capable of passing through the access doors for the mist elimination section. Easy access for placement and replacement of the mist eliminator shall be incorporated in the design of the mist eliminator arrangement and the absorber vessel.<br><br>Walkways shall be arranged and also measures shall be taken as appropriate to permit the internal components to be disassembled and reassembled during repairs without the necessity for time-consuming preparatory work. The headroom shall have a height of more than 2200 mm. The mist eliminator support beams shall be designed to act as maintenance walkways approximately 300 mm wide and shall allow for a minimum 500 Kg/m2 load. The support beam/walkways shall provide personnel access to all mist eliminator modules, wash headers and wash nozzles.<br><br>Adequate number of viewing ports with flushing devices connected to automatically operating washing system shall be delivered at following locations:<br><br>(i) upstream of 1st stage<br>(ii) between 1st and 2nd stage<br>(iii) downstream of 2nd stage.<br>(iv) downstream of 3rd stage<br><br>The regular flushing shall be done in a defined time sequence. |
| 5.06.07 | The absorber oxidation tank shall be provided with an over flow line (for spray tower process) complete with sealing pot, over flow and drain line. The absorber over flow shall be taken to a sump in the absorber region, from where the slurry shall be pumped back to the absorber by a sump pump. |
| 5.06.08 | Materials used shall be suitable for the chemistry of the absorber process and resist abrasion from any particulate contained in the incoming flue gas and from the |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | particulate of desulphurization process. |
| 5.06.09 | All equipment located in the gas path or connected to such equipment shall be designed to withstand the maximum inlet gas temperature fluctuations. There shall be no damage whatsoever to any equipment as a result of these fluctuations. |
| 5.06.10 | The raw gas inlet duct of the absorber shall be equipped with a flushing device of the side walls and the ground, which shall operate continuously as well as intermittently. |
| 5.06.11 | The absorber vessel shall be made of minimum 7 mm thick carbon steel.<br><br>The absorber oxidation tank, absorber tower & absorber outlet duct shall be provided with 2 mm (minimum) thickness lining / cladding / wall paper of Alloy C276 / Alloy 59 or better material. |
| 5.06.12 | The material of process equipments of flue gas desulphurization system shall be appropriate for the chloride content and pH level at which the process is to operate. |
| 5.06.13 | All internal members shall be lined with minimum 2 mm Alloy 59/ C276 . All metallic fasteners which are provided inside the absorber/absorber wet-dry interface ducting shall be of Alloy 59/ C276. |
| 5.06.14 | The absorber wet-dry interface shall be made of solid Alloy 59 or C276 of minimum 6 mm thickness. |
| 5.06.15 | The other bridges (supports) shall be lined with minimum 2 mm Alloy 59/ C276. |
| 5.06.16 | Lining material and technical application requirements shall be furnished by manufacturer experienced with similar FGD plants. Proof of such experience shall be provided by the Contractor. |
| 5.06.17 | The spray headers (if provided) and air supply headers shall be made of FRP or Carbon Steel with rubber lining (minimum 10 mm natural rubber lining), corrosions and erosion resistant in the inner and outer side (Silicon Carbide coating on metal/FRP surface exposed to slurry). Optionally ceramic coating is also acceptable provided bidder/Collaborator has proven experience for the same. The slurry spraying system shall be made of material resistant to erosion and corrosion. During the lifetime of the plant, only the nozzles shall be replaced. The distribution system of the slurry shall be hydraulically optimized. The spray nozzles shall be of silicon carbide or ceramic or equivalent having a minimum guaranteed life of 20,000 hrs. The design of the spray nozzles shall be such that rapid wear, encrustation and plugging are avoided. Nozzle pipes and slurry spray nozzles shall be with bolted flanged connections. Nozzle pipes shall be installed easily to be removed partially through absorber modules. |
| 5.06.18 | In case the absorber is equipped with several spray levels they shall be designed as follows: |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | (i) The last spray level upstream the mist eliminator shall be operated only in counter-flow.<br>(ii) Depositions at downstream spray level and mist eliminator by co-flow injection of slurry shall be avoided.<br>(iii) The spray lances shall be equipped with bars for installation of scaffolding without any offset. The spray levels shall be designed for a load of min. 500 kgf/$m^2$.<br>(iv) A flushing device of the spray levels with water shall be installed. Flushing shall take place if spray levels are out of operation. |
| 5.06.18 | The absorber shall be self-supported from the bottom to suit site conditions. Absorbers which are externally supported from the structure are also acceptable provided Bidder or its Technology Collaborator has proven experience of supplying such Absorbers which are operating for more than 5 years. The absorber shall have adequate stiffening arrangement on the external side. Internal stiffeners shall be used only where it is not possible to provide proper external stiffening with approval of employer. |
| 5.06.19 | It should be possible to build platforms inside the absorber for access to all parts of the absorber during maintenance. In case the contractor offers a multiple spray level design, minimum distance of 1.5 m shall be maintained between individual spray levels. Arrangement shall be properly designed to facilitate access for maintenance and replacement of spray nozzles. |
| 5.06.20 | The spray piping, mist eliminators and its supporting structure shall be designed to carry sufficient load during maintenance. |
| 5.06.21 | The bottom of the absorber sump shall be designed so that there will be **an** easy entrance for a man with a wheelbarrow. Therefore the arrangement and dimensions of the inspection door of the absorber at ground level shall be designed to allow for this. The bottom of the absorber sump shall be designed in such a way that complete drainage of the absorption liquid/slurry is possible and is accessible without damage of lining/rubber. |
| 5.06.22 | In case of Spray Tower System, Suction screens shall be installed inside the Absorber vessel to protect the Slurry recirculation pumps. In case Bubbling type, suction strainers shall be installed at the suction side of Gas Cooling Pumps. For the agitators a flushing system for start ups shall be provided. |
| 5.06.23 | It should be possible to discharge the absorber sump into the emergency drain tank within 2 hours. |
| 5.06.24 | At the head of the absorber two manholes shall be provided to reduce the draught of the stack during outage. |
| 5.06.24 | Equipment's required for internal & external inspection shall be furnished by the contractor in brand new condition. List of all such items shall be furnished along with the Bid. The formation of agglomeration, deposition & caking shall be avoided. For |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | areas, where this might occur, (e.g. mist eliminators, spray levels) the Contractor shall submit a cleaning procedure including the required safety measures as part of the inspection concept. |
| **6.00.00** | **LIMESTONE GRINDING AND SLURRY PREPARATION SYSTEM** |
| **6.01.00** | **Type** |
| | A common limestone and slurry preparation system is envisaged for each project. Contractor shall supply wet limestone grinding and slurry preparation system complete with all auxiliaries and slurry storage tank of proven design. |
| **6.02.00** | **Limestone Silo:** |
| 6.02.01 | The Contractor shall provide 2X100% Limestone storage silos each silo having minimum 24 hours storage capacity equivalent to the requirements of FGD system of all the units operating at Design point. The storage silo shall be complete with supporting steel structure, platforms, staircase, air canons power operated gates, gravimetric feeders, level switches, air relief devices, etc.. |
| 6.02.02 | The storage silos and hopper cones shall be fabricated of minimum 10 mm thick carbon steel with a SS lining of grade SS304 of minimum 4 mm thickness in the complete cones to ensure reliable discharge of material. The design of storage silos shall confirm to IS 9178 (Part 1 to 3). The storage silo shall be capable of feeding the limestone by means of gravimetric feeder to the wet ball mills. The top of the unloading hopper shall be equipped with a grate to protect the downstream equipment from gravel lumps or tramp waste. |
| 6.02.03 | Each Silo shall be provided with sufficient no. of level transmitters. |
| 6.02.04 | Each silo shall be provided with minimum 3nos. of air canons at necessary location, capable of removing the jamming/clogging/blockage in the silos. |
| 6.02.05 | For dust free operation each silo should be provided with a covering arrangement and a self cleaning bag filter system of suitable capacity containing blower, automatic/on-load cleaning system, etc. |
| 6.02.06 | For each silo facilities shall be provided for unloading the bunker, through feeder, to a truck at ground level, along with all necessary chutes and diversion chutes. |
| 6.02.07 | Lime stone silo with hopper may be fabricated at factory in segments, transported and welded at site. |
| **6.03.00** | **Bunker Shut-off Gates** |
| 6.03.01 | A bunker outlet chute shall be provided for feeding limestone from bunker to the feeder. The size of the opening chute shall be sufficient to ensure proper flow of the limestone. There shall be no reduction of section in the bunker outlet chute from |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | bunker to feeder. The inlet chute shall be provided with suitable poke doors/holes in order to remove jamming/blockage. A motorized bunker shut-off gate shall be provided at the inlet to each feeder. |
| 6.03.02 | All parts of the gate in contact with limestone shall be of stainless steel construction. |
| 6.03.03 | The shut-off gates and its actuator shall ensure 100% closing of the gate even with 'bunker full of limestone'. |
| 6.03.04 | Facility shall be provided to open/close the bunker outlet gate, through actuator, from remote as well as local. |
| 6.03.05 | In addition, a hand wheel with proper access shall also be provided for manual operation of the gate. The force at the rim of the hand wheel shall not exceed 35 kg with bunker full of coal. |
| 6.03.06 | For each bunker facilities shall be provided for unloading the bunker, through feeder, to a truck at ground level, along with all necessary chutes and diversion chutes. |
| **6.04.00** | **Gravimetric Feeders** |
| 6.04.01 | Gravimetric feeders shall be sized to meet 110% of the maximum mill capacity. |
| 6.04.02 | The limestone feeder belt shall be of seamless rubber construction. It should be possible to adjust the belt tension from outside without opening the feeder body. |
| 6.04.03 | All parts in contact with limestone except belt shall be of stainless steel construction. |
| 6.04.04 | The feeder shall have adequate instrumentation to detect `loss of flow'. |
| 6.04.05 | The feeder shall have a motor/pneumatic operated gate at the outlet. |
| **6.05.00** | **Wet Ball Mill** |
| 6.05.01 | There shall be 2X100% tube mills for grinding of limestone. Each mill shall be sized to meet 110% of the maximum limestone requirement of all the units in a project operating under the following conditions, all occurring together. |
| | (i) Load — Design point flow |
| | (ii) Flow — 110% of limestone requirement of two absorbers at Design point |
| | (iii) Input Limestone Size — 1" (max.) |
| | (iv) Output Fineness — Output Fineness 90% or higher (as per the requirement of absorber) through 325 mesh (for spray tower process) OR 90% or higher (as per |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | the requirement of the absorber) through 200 mesh (for bubbling process)<br>(v) Mill Wear Part Conditions — Near Guaranteed Wear Part Life.<br>(vi) Limestone bond index(kWh/sh.T) — 13 (min) |
| 6.05.02 | All integral auxiliaries of the mills like hydro-cyclones, separator tank & mill circuit pumps shall be sized to meet the above conditions. A 100% stand-by pump shall be provided for the mill circuit pump. |
| 6.05.03 | The mill hydro-cyclone set shall have sufficient redundancy. A minimum 10% spare hydro-cyclone shall be provided in each set of hydro-cyclone. Hydro-cyclones shall be of modular construction. It shall be possible to remove and replace individual hydro-cyclone with the set in service. Individual isolation valve shall be provided for each hydro-cyclone for this purpose. The hydro-cyclone shall be of proven design and shall be provided with replaceable rubber lining. The hydro-cyclone shall be provided with replaceable rubber lining of thickness 12 mm for the feed chamber and 12 mm for the overflow launder.. The liners shall have a minimum wear life of not less than 7000 hrs. |
| 6.05.04 | All parts of the mill including mill body, trunnion, hydro-cyclones, integral pipes, mill circuit pumps and other parts in contact with limestone slurry shall be provided with replaceable rubber wear liners. The wear liners or wear parts shall have a minimum guaranteed wear life of not less than 8000 hrs without reversal of the liners. The guaranteed capacity and fineness of the mill shall not be affected within the guaranteed life of the mil wear parts. |
| 6.05.05 | The material of the balls shall be chosen to ensure that the balls do not lose their original shape and to ensure minimum ball consumption. The contractor shall also guarantee ball consumption per ton of limestone throughput. The contractor shall furnish the minimum ball diameter below which the balls shall be replaced. |
| 6.05.06 | Facility shall be provided for on-load loading of steel balls to the mill. |
| 6.05.07 | The ball mill shall be driven by a motor through a peripheral gear/ central drive system. An auxiliary motor shall also be provided for inching of mills after trip and during maintenance. |
| 6.05.08 | The lube oil system shall have 100% stand-by arrangement for lube oil pumps and oil coolers of each circuit with independent pump / cooler. Wherever required duplex oil filters shall be provided. |
| 6.05.09 | The mill auxiliaries like separator tanks, mill circuit pump, hydro-cyclones and all connecting pipes handling limestone slurry shall have replaceable rubber linings. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**6.06.00 Limestone Slurry Preparation / Storage Tank**

6.06.01 The contractor shall provide two (2 nos.) slurry storage tank, common for all mills. Each tank shall be sized to meet 12 hours continuous limestone requirement of all the units operating at Design point. For tank volume calculation, solid concentration (by weight) in the slurry shall be assumed, not more than 20% or actual required whichever is lower.

6.06.02 The storage tanks shall be equipped with sufficient number of agitators, to avoid settling of limestone, as per the proven practice of the supplier. The agitators shall be designed to meet the requirements stipulated in Cl. No. 11.00.00 of this Sub-Section.

6.06.03 The limestone mill circulation tanks shall be installed indoor beneath the hydro cyclone stations. The slurry storage tank shall be located outdoor.

6.06.04 The slurry preparation tank shall be CS construction with replaceable chlorobutyl/bromobutyl rubber lining of minimum 5 mm thickness.

**6.07.00 Limestone Slurry Supply Pumps & Piping**

6.07.01 2x100% centrifugal type limestone slurry pump shall be provided for each unit. Each limestone slurry pump shall be sized to supply the limestone requirement of one (1 no.) unit, under the following conditions all occurring together.

| | | |
|---|---|---|
| (i) | Load | Design point |
| (ii) | Flow | 110% of one absorber requirement with the limestone requirement at Design point. |
| (iii) | Head | As per system requirement. |
| (iv) | Margins | Flow 10% (minimum)<br>Heads 15% (minimum) |
| (v) | Solids Concentration | Max. 30% by weight or actual as per suppliers practice, whichever is minimum. |

6.07.02 The limestone slurry pumps shall be designed to meet the requirements stipulated in Cl. No.8.00.00. of this Sub-Section.

6.07.03 The limestone slurry pipes shall be sized to minimize erosion and avoid settling of the limestone at part load operation. The slurry pipes shall be lined with replaceable wear resistant natural rubber lining of minimum 10 mm thickness. Additional thickness of 2 mm in rubber lining shall be provided at bends.

6.07.04 Automatic flushing equipment for all lime slurry pumps and pipes shall be supplied.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **7.00.00** | **GYPSUM DEWATERING SYSTEM** |
| 7.01.00 | A common gypsum dewatering system for all the units operating at Design point is envisaged. Contractor shall supply a two stage gypsum dewatering system, consisting of a primary stage of sets of hydro-cyclones and secondary stage of vacuum belt filters for dewatering of gypsum from absorber up to less than 10% moisture. All the equipments supplied shall be proven design with previous installations for similar capacities. |
| 7.02.00 | The Contractor shall provide 2x100% gypsum dewatering system with each stream sized to dewater 110% of the maximum gypsum produced by all the units operating at Design point. All other stipulations with respect to sizing and design of the dewatering system, auxiliaries and other systems shall be in line with this specification. |
| **7.03.00** | **Primary Dewatering Hydro-cyclones** |
| 7.03.01 | Each set of primary dewatering hydro-cyclone shall be sized to dewater the gypsum slurry produced by the unit operating at Design point with an additional 10% margin. The outlet water content in the gypsum shall be as per the requirement of the vacuum belt filters. |
| 7.03.02 | Each set of primary hydro-cyclone shall be provided with 10% spare hydro-cyclones. The capacity defined in the previous clause shall be met with spare hydro-cyclones out of service. |
| 7.03.03 | The primary hydro-cyclone shall be installed directly above the belt filters. The overflow of the hydro-cyclones shall be taken to Hydro-cyclone Waste Water tank via secondary hydro-cyclone feed tank and secondary waste water hydrocyclone as shown in the relevant tender drawing. |
| 7.03.04 | Hydro-cyclones shall be of modular construction. It shall be possible to remove and replace individual hydro-cyclone with the set in service. Individual isolation valve shall be provided for each hydro-cyclone for this purpose. |
| 7.03.05 | The hydro-cyclone shall be of proven design. The primary hydro-cyclone shall be made up of polyurethane or urethane materials. It shall be possible to remove and replace individual hydro-cyclone with the set in service. Individual isolation valve shall be provided for each hydro-cyclone for this purpose. The feed chamber shall be provided with a minimum rubber lining thickness of 12mm. The liners shall have a minimum wear life of not less than 7000 hrs. |
| **7.04.00** | **Vacuum Belt Filters** |
| 7.04.01 | Each vacuum belt filter shall be sized to meet the following requirements, all occurring together, with an inlet solid concentration of not more than 45% or outlet of hydro-cyclones whichever is minimum: |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | a. Capcity: 110% of gypsum produced by Absorbers of all the units operating at Design point.<br>b. Outlet Moisture: 10% max.<br>c. Gypsum Purity: 90% (minimum)<br>d. Chloride content: < 100 ppm |
| 7.04.02 | The vacuum belt filter shall be proven design in operation for similar capacities. The filter cloth shall be polyester or polypropylene as per the proven design of the supplier and shall be guaranteed for a minimum life of not less than 7000 hrs. |
| 7.04.03 | The complete frame of the filter and all parts in contact with gypsum shall be made of corrosion resistant material or shall be provided with corrosion resistant liners of proven design. |
| 7.04.04 | In case, the contractor offers a design with an underlying belt for carrying the filter cloth, the same shall be endless, factory vulcanized rubber belts. The belt shrouds and the sealing belts shall provide a leak tight arrangement to prevent overflow of gypsum slurry. The sealing belt shall have minimum life of not less than 7000 hrs. |
| 7.04.05 | The vacuum box shall ensure tight sealing with the belt/cloth and shall be of proven design. |
| 7.04.06 | The belt filter shall have an automatic cloth tracking mechanism and shall be provided with all required instrumentation as per the supplier's proven practice. The belt filter shall have an automatic cloth tensioning mechanism. |
| 7.04.07 | The filter shall be provided with minimum 2 stages of cake washing for removing impurities in the gypsum. For cake washing only clarified water shall be used. For this purpose, one (1) clarified water storage tank (minimum 1 hr storage) shall be provided along with 2x100 cake washing pumps for each Vacuum Belt Filter . One stage of cloth washing arrangement shall also be provided along with 2x100 cloth washing pumps for each Vacuum Belt Filter. |
| 7.04.08 | The filtrate from gypsum slurry and from cake washing shall be taken to a common or separate vacuum receiver tank(s) as per the proven practice of the supplier. Each belt filter shall have an independent vacuum pump. |
| 7.04.03 | Gypsum cake from each belt filter shall be discharged through a hopper onto belt conveyor being provided by the Employer. |
| 7.04.04 | A 2 m (min.) wide platform shall be provided around each belt filter for easy approach & maintenance. Handling facilities for replacement of heavy components |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | of the belt shall also be provided. |
| **7.05.00** | **Vacuum System** |
| 7.05.01 | The filtrate from each belt filter, cake washing & cloth washing shall be taken to a common or separate receiver tank(s) as per the supplier's proven practice. |
| 7.05.02 | Each belt filter shall be provided with an independent vacuum pump sized to meet the requirements of the belt filter operating at its maximum capacity. An additional margin of 10% (min.) over the above capacity shall be provided for each vacuum pump. |
| 7.05.03 | The vacuum pump shall be of low speed liquid ring type of proven design. The design of the vacuum pumps shall avoid cavitations under all operating conditions. The seals shall be of proven design. |
| 7.05.04 | Silencers shall be provided, if required, to limit the noise level to values stipulated elsewhere in this specification. |
| 7.05.05 | The vacuum receiver and pump internals shall be suitably lined to protect against the corrosive environment. The material selected for vacuum pumps & vacuum receivers shall be proven for similar application. |
| 7.05.06 | Each vacuum receiver tank(s) shall be provided with slide plate type pneumatic vacuum breaker. The plate shall be stainless steel with a min. thickness of 3 mm. |
| **7.06.00** | **Filtrate System** |
| 7.06.01 | Water from vacuum receiver tank(s) and the secondary waste water hydrocyclone underflow shall be taken to a common filtrate tank for recirculation to the absorber tanks. |
| 7.06.02 | 2x100% horizontal centrifugal pumps shall be provided for recirculation of filtrate water to absorber. 2x100% horizontal centrifugal pumps shall be provided for wash water requirements of belt filter. Alternatively, wash water pump may take suction from the vacuums receiver tanks. Each pump shall be provided with 100% standby in such a case. |
| 7.06.03 | The pump shall be capable of pumping of filtrate water with solid concentration of not less than 10% & particle lumps of 6-7mm. A 10% margin shall be provided in each of the pump. |
| **7.07.00** | **Waste Water System** |
| 7.07.01 | The overflow of the primary hydro-cyclones shall be taken to a secondary hydrocyclone feed tank for feeding the secondary waste water hydro-cyclones. |
| 7.07.02 | The secondary hydrocyclone feed tank shall be sized to provide a minimum storage |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | of 1 hr of primary hydro-cyclone overflow with all the units operating at Design Point and no outflow from the tank. |
| 7.07.03 | 2x100% horizontal centrifugal pumps shall be provided to feed the secondary hydro-cyclones. |
| 7.07.04 | Each set of hydro-cyclone shall be sized to process the maximum discharge from the secondary hydro-cyclone feed pumps. A minimum 10% spare hydro-cyclones shall be provided in each set. Secondary Hydro-cyclones shall be of modular construction and of proven design. The secondary hydro-cyclone shall be made up of polyurethane or urethane materials. It shall be possible to remove and replace individual hydro-cyclone with the set in service. Individual isolation valve shall be provided for each hydro-cyclone for this purpose. |
| 7.07.05 | The secondary waste water underflow shall be taken to the adequately sized filtrate tank, while the overflow shall be taken to a waste water Tank. |
| 7.07.06 | 1x100% Waste water tank shall be provided (in projects where separate Zero Liquid Discharge system for waste water treatment is not in the scope of the contractor) which shall be sized for 8 hrs storage of waste water with all the units operating at Design point and no out flow from the tank. The Waste water Tank shall be complete with Agitator, level transmitters etc. The waste water collection tank shall be of Steel construction with rubber lining. 2x100% horizontal centrifugal pumps shall be provided for pumping the waste water from waste water tank at required pressure to waste water terminal point as indicated in Sub-section IV, Part A, Section VI of the Technical Specification. The material of Casing and impeller shall be rubber lined Cast Iron (IS:210 Gr FG260). Shaft and Shaft Sleeves shall be Stainless Steel-410. |
| 7.07.07 | All piping, valves & instrumentation upto the employer's terminal point shall be in the contractor's scope. **Contractor shall provide the complete lime dosing system** (in projects where separate Zero Liquid Discharge system for waste water treatment is not in the scope of the contractor) to correct the pH of the waste water by lime (**83% purity**) dosing shall be provided and after mixing of the effluent (using re-circulation system of the pumping system), the effluent shall be discharged once the waste water has been neutralized to desired pH. A pH monitor shall be provided at the discharge of the pumps for measurement and control. Complete lime storage, feeding & dosing system shall be in contractor scope. The complete waste water neutralization system shall be automated and controlled from the control room. |
| 7.07.07 | Contractor shall provide 2x 100% Lime Neutralization tanks (in projects where separate Zero Liquid Discharge system for waste water treatment is not in the scope of the contractor) which shall be of minimum 8 hr capacity made of carbon steel with rubber lining along with 2x100% Lime storage silos. The tanks shall be provided with SS dissolving basket, Agitator of SS construction, drain, over flow and dosing connection, level transmitters, Agitators etc. The storage silos and hopper cones shall be fabricated of minimum 10 mm thick carbon steel with a SS lining of grade SS304 of minimum 4 mm thickness in the complete cones to ensure reliable discharge of material. The design of storage silos shall confirm to IS 9178 or any |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | other proven international standards. The storage silo shall be capable of feeding the lime by motorized rotary feeding system to the Lime Neutralization tank. |
| 7.07.09 | Contractor shall provide 2x 100% Lime Storage Silos (in projects where separate Zero Liquid Discharge system for waste water treatment is not in the scope of the contractor) for feeding lime to the Lime Neutralization tanks. The lime storage silo shall be of minimum 24 hr capacity equivalent to the requirements of FGD system of 2X800 MW at Design point and shall be complete with supporting steel structure, platforms, power operated outlet gates, level switches, air relief devices, etc.. For dust free operation each silo should be provided with a covering arrangement and a self cleaning bag filter system of suitable capacity containing blower, automatic/on-load cleaning system, etc. |
| 7.07.10 | Bucket conveyors shall be provided by the contractor to feed lime to each of the lime storage silos from ground level. The Bucket conveyors shall be sized to completely feed each lime silo within 2hrs. Adequate storage and feeding system required for feeding the lime to the Bucket conveyors is also in the Contractor's scope. |
| 7.07.10 | A storage room for storing minimum one (1) month requirement of lime for all the units shall also be provided by the contractor. |
| **7.08.00** | **Auxiliary Absorbent Tank** |
| 7.08.01 | The Contractor shall provide an auxiliary absorbent tank, for the unit, sized to contain the complete slurry of one absorber tank at its maximum level equipped with all necessary pumps, valves, piping and controls to transfer the tank's contents back to the absorber to refill the absorber sump It should be possible to discharge the each absorber into the emergency drain tank within 2 hours. |
| 7.08.02 | The contractor shall provide 2 x100% pump to pump back the slurry from the sump back to the absorber in a maximum time of 8 hours. |
| 7.08.03 | Agitation shall be provided to prevent settlement of slurry by side entry agitators with emergency flush start system. Sufficient number of agitators shall be provided in the tank by the contractor to prevent the solids from settling down. |
| 7.08.04 | The Auxiliary Absorbent tank shall be made of minimum 7 mm thick carbon steel with minimum 4 mm thick rubber lining of best quality bromine butyl rubber and shall also be equipped with all necessary pumps, valves, piping and controls to transfer the tank's contents back to the absorber. |
| 7.08.05 | The Auxiliary Absorbent tank shall be equipped with an opening to enable easy entry of a man with wheelbarrow. |
| 7.08.06 | Coarse-screen(s) of suitable material at suction-side of the pumps shall be provided. |
| **8.00.00** | **SLURRY PUMPS** |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 8.01.00 | This Clause covers the design, manufacture and erection of all slurry pumps for the FGD system including the Absorber slurry recirculation pumps, Gypsum bleed pumps, Limestone slurry feed pumps, Mill circuit pumps and any other pump handling slurries. |
| 8.02.00 | The Contractor shall offer only proven design in successful operation in similar application at previous installations. The design, manufacture, installation and testing of the pumps shall follow the latest applicable Indian / International (ASME / EN / Japanese) Standards. |
| 8.03.00 | The pumps shall be designed for continuous operation. The pump shall be single stage centrifugal type capable of delivering the rated flow at rated head with margins as specified in the respective clauses. The slurry concentration in the pump shall not exceed 30% by weight except for Mill circuit slurry pumps for which the slurry concentration in the pump shall not exceed 55% by weight. |
| 8.04.00 | All the slurry pumps shall be provided with motorized suction and discharge valves. In addition, flushing water lines with motorized valves shall be provided for each pump for automatic flushing of the pump after each shut down. The flushing water for the pumps shall be taken form the process water supply |
| 8.05.00 | The pump casing should be radially split to allow easy removal of impeller. |
| 8.06.00 | All the pump wear parts in contact with the slurry shall be provided with replaceable rubber/elastomer liners suitable for the fluid handled. The Bidder can also offer an hi chrome alloy line pump if the Bidder has previous experience of the same for similar applications. The material used by the contractor shall be proven in previous installations. |
| 8.07.00 | For absorber recirculation service a Silicon carbide impeller and SiC lining for casing can also be accepted if the manufacturer has supplied a similar pump for a previous installation for similar service. |
| 8.08.00 | The material and thickness of the liners shall ensure a minimum service life of 2 years before replacement. All the wear parts of the pump shall be guaranteed for a minimum wear life of not less than 14000 hrs. |
| 8.09.00 | The design of the shaft shall ensure that the operating speed is at least 20% above the critical speed of the shaft. |
| 9.10.00 | The pump shall be provided with seals of proven type and shall be designed for minimization of seal water consumption. The shaft shall be supported on heavy duty ball/roller bearings. |
| **9.00.00** | **VERTICAL SUMP PUMPS** |
| 9.01.00 | Contractor shall provide sumps of adequate capacity in the each absorber area, limestone grinding area and gypsum dewatering area for containing the over flow |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | from the respective systems. Contractor shall make arrangements for pumping the drainage water back to the respective system with vertical sump pumps. Agitators shall also be provided to avoid settling of solids in the sump. Adequate redundancy in line with the standard practice adopted by the bidder shall be provided. This Clause covers the design, manufacture and erection of all vertical sump pumps for the FGD system. |
| 9.02.00 | The contractor shall offer only proven design in successful operation in similar application at previous installations. The design, manufacture, installation and testing of the pumps shall follow the latest applicable Indian / International (ASME / EN / Japanese) Standards. |
| 9.03.00 | The pumps shall be designed for continuous operation. The pump shall be single stage centrifugal type with semi open or open impeller. The pump impeller shall be cantilever type and shall not be supported below the base plate for easy withdrawal. |
| 9.04.00 | The pump shall deliver the rated flow at rated head with margins as specified in the respective clauses. The pump shall be capable of pumping of filtrate water with solid concentration upto 10% & particle lumps of 6-7mm. Sump pumps handling slurry shall be designed with a maximum concentration of 30% solid by weight. |
| 9.05.00 | The material chosen for the pump components shall be suitable for the fluid handled and shall be proven in similar application. |
| 9.06.00 | The pumps shall not be supported below the base plate level for easy withdrawal without entering the sump. |
| **10.00.00** | **SLURRY & PROCESS WATER TANKS** |
| 10.01.00 | All the slurry tanks (Slurry Tanks, Filtrate Tank, Secondary hydro cyclone feed tank, vacuum receiver tank, Waste water Tank, Lime Neutralization tanks etc.) shall be designed, fabricated, erected and tested in accordance with the IS:803, latest edition. Additional Corrosion allowance of 3mm on the minimum tank shell thickness as calculated by IS:803, latest edition shall be provided by the Contractor. Tanks shall be made from IS:2062 quality mild steel plates of tested quality. The tanks shall be of welded construction. Interior surface of the tanks shall lined with replacable chlorobuty/bromobutyl rubber lining of minimum 5 mm thickness and the outside surface shall be coated with paint as approved by the Employer. The Tanks shall be provided with drain, manholes, over flow & inlet level control valves etc. Coarse-screen(s) at suction-side of these pumps shall be provided. |
| **11.00.00** | **AGITATORS** |
| 11.01.00 | Agitators shall be supplied in tanks and vessels to prevent caking and settlement of particles out of the slurry, e.g. in the absorber vessel, limestone mill recycle tanks, limestone slurry tank, Auxiliary Absorbent tank, and sumps etc. |
| 11.02.00 | All agitators shall be designed for continuous operation unless otherwise specified. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | Horizontal agitators shall be used for Absorber. Vertical agitators can also be used for Absorber, if it is only the standard & proven practice of the Contractor for the offered Absorber design. In other vessels and tanks vertical agitators are also acceptable if they are of proven make and the Bidders standard practice which can be proven by means of suitable references. The design of the agitators shall be of proven type. |
| 11.03.00 | Standard type agitators with suitable characteristics shall be used wherever practical. The agitators shall be complete with motor, gearbox, agitator shaft, coupling, safety guards, mechanical seal (for side entry agitators), impeller, support legs, agitator mounting flange including bolts nuts and gasket etc. |
| 11.04.00 | All agitator parts and accessories in contact with the stirred fluid shall be constructed of materials specifically designed for the conditions and nature of the stirred fluid and be resistant to erosion and corrosion. |
| 11.05.00 | The material for the shaft (which is continuously in contact with slurry) and agitator blades of the Absorber Agitators shall be made with Alloy 926 or better material. For Agitators in other tanks, agitator blades shall be made with Alloy 926 or better material & shaft can be rubber lined. This does not release the Contractor of the responsibility for selecting the correct materials. |
| 11.06.00 | Each agitator and its associated equipment shall be arranged in such **a** manner as to permit easy access for operation, maintenance and agitator removal without interrupting plant operation. It shall be possible to remove the sealing devices of the Agitators of the absorber vessel without having to drain completely the absorber. |
| 11.07.00 | To prevent mechanical blocking load start-up after standstill of pumps, piping and agitators for slurries shall be applied with C-hose connection. |
| 11.08.00 | Lifting lugs and eyes and other special tackle shall be provided as necessary to permit easy handling of the agitators and their components. |
| 11.09.00 | Static and dynamic (as far as applicable) balancing of all agitators shall be carried out after assembly. |
| 11.10.00 | All agitator parts and components shall be designed and calculated for fatigue life, considering maximum bending loads, induced by fluctuating hydraulic forces and torsional loads, based on the installed motor power. For side entry agitators the alternating bending moment resulting from impeller and shaft weight has to be considered additionally. |
| 11.11.00 | All exposed moving parts shall be covered by guards. |
| 11.12.00 | Side entry agitator shall be flange mounted. |
| 11.13.00 | The shape of the impeller blades of side entry agitators shall be designed to avoid wear on the impellers which will affect the agitator performance as specified for a minimum period of 2 years of continuous operation under design conditions for the range of coal & limestone specified in the specification. In order to avoid excessive wear impeller tip speeds must not exceed 12 m/s. |
| 11.14.00 | Belt drives (if applied) shall be properly designed to provide a minimum lifetime of 2 years under design conditions |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **12.00.00** | **SLURRY LINES AND VALVES** |
| 12.01.00 | Slurry pipes shall be designed to keep the velocity above the settling velocity under all operating conditions. The contractor may provide a recirculation line with motorized isolation valve for the above purpose. |
| 12.02.00 | All the pipes handling slurry shall be provided with replaceable rubber lining of proven quality. The Contractor can provide slurry pipes of size lower than 3" made up of FRP material (silicon carbide coating on slurry exposed surface) if it has previous experience of providing the same. |
| 12.03.00 | The isolation valves provided in all the slurry lines shall be of knife gate type/butterfly type unless specifically mentioned. Motorized actuators shall be provided for valves requiring frequent operation as indicated in the relevant scheme. |
| 12.04.00 | The valves shall be of proven type and the contractor shall submit a detailed valve schedule for employer's approval. Reference list for previous installations for similar application shall also be furnished to the employer. |
| 12.05.00 | Bidder shall provide all necessary arrangements for purging & flushing of all the process pipelines, equipments etc. |
| **13.00.00** | **PROCESS WATER STORAGE TANKS & PUMPS** |
| 13.01.00 | Two (2) Process water Storage tanks (each tank catering to the requirements of all the units operating at Design Point) along with two numbers of 2x100 % Booster water pumps, if required, (Each pump catering to the process water requirements of all the units operating at Design Point) along with all necessary piping, valves, control & instrumentation to feed the clarified water shall be provided by the Contractor. Process water Storage level shall be automatically controlled at operating level by controlling the water flow from the makeup water from terminal point. The process water storage tank shall be designed to store 15 minutes of total maximum water required for the entire FGD process (including absorber system and mist eliminator washing system, limestone grinding and slurry preparation system and gypsum dewatering system, etc.) for the units operating at Design point. All the process water storage tanks shall be designed, fabricated, erected and tested in accordance with the IS:803, latest edition. Additional Corrosion allowance of 1.50 mm on the minimum tank shell thickness as calculated by IS:803, latest edition shall be provided by the bidder. Tanks shall be made from IS:2062 quality mild steel plates of tested quality. The tank shall receive water supplied (as identified in Subsection titled "Terminal points" in Part-A of Technical Specification) by Employer. The Tanks shall be provided with drain, manholes, over flow & inlet level control valves etc. |
| 13.02.00 | 2x100% Process Water Pumps shall be provided for each unit connected to each of the Process water Storage tanks along with all necessary piping, valves, control & |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | instrumentation. Each pump catering to process water requirement of one unit. The capacity of the pumps shall be such that it shall meet the maximum process water requirement of each unit. A further 10% margin shall be provided over the above capacity for all the above pumps. |
| 13.03.00 | 2x100% Mist Eliminator Wash Water Pump for each unit connected to each of the Process water Storage tanks along with all necessary piping, valves, control & instrumentation shall be provided by the Contractor. Alternatively, Contractor can use process water pumps for mist eliminator washing if it is the standard & proven practice of the Contractor or its Technology Collaborator. Each pump shall cater to maximum mist washing requirement of one unit. The capacity of the pumps shall be such that the total capacity of working pumps is sufficient to meet the maximum wash water requirements of mist eliminators of the absorber. A further 10% margin shall be provided over the above capacity for all the above pumps. |
| 13.03.04 | Two (2) clarified water Storage tanks along with two numbers of 2x100 % clarified Booster water pumps from terminal point shall be provided by the Contractor. The two tanks shall be interconnected with an isolation valve. |
| 13.03.05 | 2x100% clarified water Pumps connected to each of the clarified water Storage tanks for each dewatering stream. Each pump catering to clarified water requirement of each dewatering stream. |
| 13.03.06 | The type of pumps shall be horizontal centrifugal type designed for continuous operation with semi open or closed impeller. Casing, Gland and Stuffing Box shall be of 2.5 Ni Cast Iron to IS:210 Grade FG 260 or equivalent. Impeller, Wearing rings (as applicable) shall be of Stainless Steel -316 grade and Shaft & Shaft sleeves shall be of SS-410 grade. Pump re-circulation line shall be provided for pumping system. Pumps shall be provided with accessories such as Y-type suction strainers, Coupling guard, drain plugs, vent valves etc. |
| 13.03.07 | All the Process water tanks (Process water Storage tanks, Clarified water tank, Emergency water storage tanks etc.) shall be designed, fabricated, erected and tested in accordance with the IS:803, latest edition. Additional Corrosion allowance of 3mm on the minimum tank shell thickness as calculated by IS:803, latest edition shall be provided by the Contractor. Tanks shall be made from IS:2062 quality mild steel plates of tested quality. The tanks shall be of welded construction. Interior surface of the tanks shall lined with replacable chlorobuty/bromobutyl rubber lining of minimum 4 mm thickness or with vinly ester based flake glass lining of minimum 3 mm thickness and the outside surface shall be coated with paint as approved by the Employer. The Tanks shall be provided with drain, manholes, over flow & inlet level control valves etc. |
| **14.00.00** | **APPROACH and Handling Facilities** |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 14.01.00 | Proper approach shall be provided for access to all equipments during normal operation and maintenance. Unless otherwise specified, platforms, staircase and ladders shall follow the stipulations specified elsewhere in this specification. |
| 14.02.00 | Equipments requiring monitoring during regular operation shall be approachable from the ground floor through staircase. Staircase with minimum width of 1200 mm shall be provided for approach to elevated structures at 5m height from the nearest platform. Below this height a vertical ladder with minimum clear width of 600 mm may also be acceptable. |
| 14.03.00 | Platform with a minimum clear width of 1000 mm shall be provided all around the lowest absorber spray levels and mist eleminators. Similar platforms shall be provided at subsequent elevations if they are more than 3000 mm apart from each other. An adequately sized manhole with platform (min. 2 sq. m) shall be provided above each spray level. Ladders/staircase shall be provided for the access to the platform. |
| 14.04.00 | The absorber slurry recirculation pumps, gypsum bleed pumps and limestone feed pumps shall be mounted on the ground level. Suitable approach and platforms shall be provided for all the valves required during regular operation. |
| 14.05.00 | A 1500 mm space shall be provided around all pumps, except absorber recirculation pumps, where a 2000 mm space shall be provided. |
| 14.06.00 | Platform with a minimum width of 1500 mm shall be provided all around the pulverizers and feeders. Approach along with suitable platforms shall be provided for ball loading hoppers. |
| 14.07.00 | A 1000 mm wide platform with suitable approach shall be provided around each hydro-cyclone. |
| 14.08.00 | A 2000 mm wide floor/platform shall be provided all around each belt filter. |
| 14.09.00 | Contractor shall provide motorized hoists and trolleys for all items requiring maintenance and weighing 500 kg or more. All auxiliary structures, monorails, runway beams for all lifting tackles, hoists etc., are included in Contractor's scope of supply. Access ladders with suitable platform shall also be provided for approach to all motorized hoists/trolleys mounted on their runway beams for the maintenance of hoists/trolleys. Items weighing more than 50 kg and required to be replaced for maintenance shall be provided with manual hoists/trolleys with runway beams/supporting structure etc. |
| 14.10.00 | The regular basement floor is not acceptable in FGD area. Further local Pits/trenches shall be avoided as far as possible. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | | | |
|---|---|---|---|
| 14.11.00 | Handling arrangement of milling system, Booster fans, Slurry recirculation pumps, oxidation blower, belt feeder system etc. complete with crane/monorail along with removal space for maintenance shall be provided by the Contractor. | | |
| 14.12.00 | Approach for removal of equipment for maintenance shall be provided. | | |
| 14.13.00 | All other safety requirements as per the Factories Act, National Electricity code shall be complied with while developing Layout. | | |
| 14.14.00 | Cable trenches/slits, if unavoidable, shall be provided with adequate cushioning of sand and the same shall be covered with PCC. | | |
| 14.15.00 | Each Equipment room shall be provided with alternate exits in case of fire/accidents as per requirements of Factories Act and Statutory bodies/insurance companies. | | |
| 14.16.00 | Minimum Headroom (free height) under all floors, ducts, walkways and stairs shall be 2.50 M. | | |
| 14.17.00 | Inter-connecting pipes/cables between various facilities of FGD plant shall be routed on the steel trestles to be provided by the Contractor. The clear head room for the same shall be minimum 8 M. | | |
| **15.00.00** | **ELEVATORS** | | |
| 15.01.00 | Elevators shall be designed based on following criteria : | | |
| | (i) | Type of service | One (1) no. Passenger cum goods elevator per Absorber & for Mill Building |
| | (ii) | Design/construction/installation codes | (a) Latest edition of IS:14665 (All parts) AND also meeting any additional requirements of IS:4666, IS:1860 and IS:3534.<br>(b) Any other equivalent code, subject to Employer's approval.Load carrying capacity |
| | (iii) | | 1000 kg (minimum). |
| | (iv) | Rated speed | 1.0 m/s. |
| | (v) | Total Travel | As per FGD supplier's recommendations subject to Employer's approval. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | (vi) Number of floors to be served | As per requirement and subject to Employer's approval |
| | (vii) Entrance | As per requirement and subject to Employer's approval |
| | (viii) Entrance and platform size | As per design/installation codes at (ii) above |
| | (ix) Drive/motor | As per Electrical Specifications. |
| | (x) Method of control | As per Electrical Specifications. |
| | (xi) Machine room and lift Shaft | Pressurized dust proof or Airconditioned machine room as per the requirement of lift manufacturers. |
| | (xii) Position of machine room | Directly above the lift shaft. |
| | (xiii) Power Supply | As detailed in Electrical Specification |
| 15.02.00 | Landing doors of the elevators shall have fire resistance of at least one hour. These doors shall also be smoke tight as far as possible. | |
| 15.03.00 | Construction of the elevators shall specifically meet all requirements of the codes indicated at Cl. 15.01.00 (ii) and shall have following additional features: | |
| | (i) Flooring of Cabin : | 6 mm thick Checkered Plate flooring. |
| | (ii) Design, Construction and finish of car & car door : | Car inside enclosure including inner side of door shall be of stainless steel plate of grade SS:304 of bright finish. |
| | (iii) Car entrance and landing doors : | As per BS:476 (Part 20 & 22) |
| | (iv) Door construction : | Hollow metal construction from 16 guage thick steel sheet spray painted. |
| | (v) Signals : | Car position informer in car both visual and audio, hall position indicator at all floors, telltale lights at all floors, battery operated alarm bell and emergency light with suitable battery, charger & controls. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | (vi) Type of Indicators : Soft touch keys and digital luminous display in car operating panel and on all floors landings. (All fixtures in stainless steel face plates). |
| 15.04.00 | Technical requirements of Electrical items shall be as per details given in Electrical Sub-Section, Part-B. |
| 15.05.00 | Provide sound reducing material below machines in machine room. |
| 15.06.00 | Provide special corrosion resistant treatment on all elevator components. The protective treatment shall be subject to Employer's approval. |
| 15.07.00 | Elevators shall have provisions to meet following operational requirements:<br>(i) Selective collective, automatic operation with or without operator through illuminated push button station located inside the lift car.<br>(ii) Power operated with automatic opening/closing car and landing doors.<br>(iii) Two push buttons, one for upward movement and the other for downward movement at each intermediate landing, and one push button at each terminal landing shall be provided in order to call the car.<br>(iv) Push buttons shall be fixed in the car for holding the doors open for any length of the time required. |
| 15.08.00 | Fireman's switch shall be provided for each elevator. |
| **16.00.00** | **DUCT WORK AND DAMPERS :** |
| 16.01.00 | **Duct Work** |
| 16.01.01 | **Sizing Criteria :**<br>1. Allowable velocities in the duct work.<br>Maximum gas velocity shall be 15 m/sec at Design point condition. |
| 16.01.02 | **Loads for Duct and Structure Design**<br>The duct design shall take into account following loads all occurring together:<br>1. Wind loads as specified.<br>2. Dead weight including weight of insulation, lining, wash water and the vertical live load. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

3. Ash load :

All ducts to be designed for one tenth of duct full of ash. The ash density for the purpose of loading shall be at least 1300 kg/$m^3$.

4. Expansion joint reaction.

5. Seismic Load

6. The following minimum load factors shall be applied to the design loads:

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| Temperature (Deg.C) | : | 27 | 38 | 93 | 149 | 205 | 260 | 316 | 321 |
| Load Factor | : | 1.00 | 1.02 | 1.12 | 1.19 | 1.25 | 1.29 | 1.34 | 1.42 |

16.01.03 **Duct Design Pressure**

All flue gas ducts shall also be designed for ± 660 mm w.g., or maximum conceivable pressure of the relevant fans, whichever is higher at 67% of yield strength of material

16.01.04 **Duct Slope**

All ducts shall have a sufficient slope with respect to horizontal so that any chance of accumulation of ash particles or water in the duct can be avoided under all normal/abnormal operating conditions. The inlet duct shall be sloped towards the absorber.

16.01.05 **Type of duct construction:**

The duct shall be of rectangular cross-section and shall be of all welded construction. For rectangular ducts following requirements shall be complied with:

a) Minimum 7 mm thick steel plates for gas ducts & Duct stiffening shall be by means of rolled sections of duct material.

b) A corrosion allowance of 1.5 mm shall be considered for stress calculation for the flue gas ducting.

c) Duct stiffening shall be by means of rolled sections. No internal stiffeners shall be used for ducts from Absorber outlet to chimney inlet.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

16.01.06 **Insulation & Lagging**

a) Thermal insulation shall be applied to all air/gas ducts to comply with the requirements of as specified at clause no 18.00.00 of this chapter.

b) Acoustic insulation shall be used, if required, in gas ducts to restrict the noise level to specified values.

16.01.07 **Specific Requirements**

a) The stiffeners provided on the ducts walls shall be of such a design and layout that no rainwater can accumulate on the duct surfaces.

b) The flanges at the bolted joints shall have adequate stiffeners to avoid damages to the flanges.

c) All necessary wall boxes and floor collars shall be provided where the ductwork pass through walls, floor and roof.

d) The floor collars shall be fitted with a high combing to prevent water and dust falling through the hole.

e) The ductwork shall be fitted with a steel hood to cover the opening.

f) Weatherproof flashing shall also be provided wherever necessary.

g) The configuration and design of ducts shall be coordinated with the pulveriser parts removal requirement.

h) Air and gas ducts shall not counter internal bracings, which cause excessive pressure drop.

i) Duct plates shall be designed for one-way beam action over stiffeners and considered fully continuous over all supports.

j) Bidder to ensure proper draining facilities for the complete system including proper drainage of acidic fluids from the ducts so as to avoid any accumulation of acidic fluids.

k) The deflection of the plate, assumed continuous, shall be less than one-half the plate thickness.

16.01.08 **Duct Work Structure**

a) Ductwork sections between expansion joints shall be investigated with regard to their ability to transmit loads to supports. Care shall be exercised to identify uplift condition.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

b) Internal stiffeners:

(i) Duct shape shall be maintained by providing internal stiffening elements at or near supports. However, these internal stiffeners shall be used, if and only if, it is not possible to provide external stiffeners.

(ii) Internal stiffening elements shall consist of trusses, preferably comprised of extra-strong steel pipes (min. dia. 76.2 mm) acting in conjunction with external stiffeners. Such internal stiffeners for the flue gas duty between boiler and ESP shall be provided with erosion protection shields.

(iii) The number of internal trusses shall be limited to the minimum required for structural integrity and shaped so as to offer least resistance to gas flow and to minimize the accumulation of fly ash in the bottom of duct.

(iv) Conceptual data of internal stiffeners of the ducting shall be furnished along with the offer.

(v) All the detailed design data shall be furnished to the Employer before the duct support column foundation data submission.

c) Corner angles shall be used on all inside corners of all ducts to provide adequate continuity.

d) Inside welds of corner angles to duct plate shall be continuous and seal welded. Where inside surface of ducts will be coated, welds shall be full throat.

e) Field welding and all connections of bracing (stiffening elements) to stiffeners shall be well designed in order to develop full strength of the members. The gusset plates shall be of 10 mm minimum thickness.

f) The duct, plates, trusses, stiffeners, bracings and ductwork shall be designed as structures in accordance with relevant Indian Standards.

g) All openings in ducts shall be reinforced for all design loads.

h) Ductwork supports may be hangers or sliding bearing, guides and anchorages. A coefficient of sliding friction of 10% can be used with self-lubricated plates such as "LUBRITE" or "MECHANITE", a coefficient of sliding friction of not less than 35% shall be used for steel-on-steel contact. The allowable bearing stress for self-lubricated plates shall be 70 Kg/sq.cm.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

16.01.09 **Fabrication Requirements**

a) Fabrication shall be as per IS specification for Design, fabrication and erection of 'Structural Steel for Building.

b) Welding shall be in accordance with Section IX of ASME code.

c) Ducts shall be strength welded and seal welded to produce a gas tight duct. Alignment holes shall be provided in mating flange sections.

d) Ducting shall be detailed and fabricated in a few pieces as practical, taking into account, shipping and erection considerations.

e) Materials improperly detailed or fabricated necessitating extra work during erection on field, shall be the responsibility of the Contractor.

**17.00.00 THERMAL INSULATION AND CLADDING**

17.01.00 Thermal Insulation along with aluminum cladding shall be provided for all the equipments/surfaces having skin temperature more than 60degree Celsius. The specification of the insulation including type, density, thickness, heat conductivity and finish shall be designed based on criteria specified below. The insulation thickness shall be designed based on following criteria.

| Criteria | | Design Conditions |
|---|---|---|
| (i) | Ambient Temperature | 45°C |
| (ii) | Surface wind velocity | 0.25 m/sec. |
| (iii) | Emissivity of Aluminium | 0.2 |
| (iv) | Cladding surface temperature | 60°C (max.) |
| (v) | Thermal conductivity of insulation material | Not less than the Maximum values as per IS:8183 |
| (vi) | Pipe/Equipment wall temperature design temperature | Maximum fluid |
| (vii) | Overall heat transfer coefficient and insulation thickness | To be calculated as per ASTM C 680-89 |

However, the minimum insulation thickness, however, shall not be less than 75 mm.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

17.02.00 Material and application of insulation material, protective cladding, wire mesh etc. shall be conforming to latest edition of following codes:

(a) IS:8183

(b) IS:3677

(c) IS:3144

(d) IS: 14164

(e) IS:280

(f) ASTM-B 209

17.03.00 Insulation material for all equipments, ducting, etc. shall conform to following requirements:

| Parameters | | Requirement | |
|---|---|---|---|
| (i) | Material | (a) | Lightly resin bonded mineral wool of best grade conforming to IS:8183. (Hand made mattresses is not acceptable). Material shall be rock wool only. Slag wool or slag wool inclusion shall not be accepted. |
| | | (b) | Lightly resin bonded glass wool mattress, having density 64 Kg/m³ (min.), self stitched in shop can also be accepted for temperature less than 400°C. |
| (ii) | Bulk density of lightly resin bonded mineral rock wool mattresses | | |
| | (a) For use upto 400°C | - | 100 Kg/m³ |
| | (b) For use above 400°C | - | 150 Kg/m³ |
| (iii) | **Physical requirements -** | | |
| | Following shall be met by testing as per relevant clauses of IS:3144. | | |
| | (a) Shot content | | 5% by weight (maxm.), size of any shot not to exceed 5 mm in diameter |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | | | |
|---|---|---|---|
| | (b) | Bulk density | To comply with 16.03.00(i) & (ii) above. |
| | (c) | Weight gain by moisture absorption | 2% (maxm.) |
| | (d) | Sulphur Content | Not exceeding 0.6% |
| | (e) | Alkalinity as percentage of $Na_2O$ | Not exceeding 0.6% |
| | (f) | Maximum oil content | Not exceeding 0.3% by weight |
| | (g) | Total carbon content | Not exceeding 0.3% by weight |
| | (h) | Settlement | Nil (When tested as per Cl. 21.1 & 21.2 of IS:3144) |
| | (i) | Handability | Fully handable, without any lump formation and disintegration of material |
| | (k) | Loss of weight after combustibility test | Not exceeding 5% by weight |

17.04.00 The Insulation mattress shall be rated incombustible when tested by the method prescribed in clause 15 of IS:3144 and shall meet the requirement of the Mercantile Marine department, Lloyd's Register of shipping, underwriter, fire hazards codes and other International standards.

17.05.00 In addition to requirements as mentioned above, insulation material (and protective covering) shall:

(a) Be fresh, incombustible, rust proof, non hygroscopic,

(b) Be capable of withstanding continuously and without deterioration the maximum temperature to which they will be subjected.

(c) Not react chemically, either to itself or with other components.

(d) Not sustain any fungi, or vermin and must not pose health hazards.

18.06.00 The Mineral wool shall:

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | (a) Pass standard combustibility test both immediately after application and after subjected to maximum operating temperature for not less than 100 hrs.<br><br>(b) Not suffer permanent deterioration as a result of contact with moisture due to condensation and shall be free from objectionable odor.<br><br>(c) Not cause corrosion of the surface being insulated or of cladding on it under normal site conditions.<br><br>(d) Not suffer any quality deterioration under specified service conditions (both cold/hot face temp.) of use. |
| 17.07.00 | The use of insulation of finishing materials containing asbestos in any form is not permitted. |
| 17.08.00 | Insulation mattress/section shall be supplied in thickness of 25,40,50 and 75 mm. Insulation of higher thickness shall be made up in multiple layers using mattress/slabs of thickness specified above. However, if the required thickness is such that by using above mattress/slabs the calculated thickness is not achieved, the mattress/slabs in increment of 5 mm shall be acceptable for outer layers. The min. thickness however, shall not be less than 25 mm and number of layers shall be minimum and innermost layer shall be thickest. |
| 17.09.00 | **Sheathing Material**<br><br>Sheathing material for all insulated surfaces, equipments, piping etc. confirming to ASTM B-209-1060 temper H-14 or IS:737 Gr 19000/H2, shall be provided. The thickness of aluminium sheathing to be used shall be 22 SWG (0.71mm). |
| 17.10.00 | Binding and lacing wires shall be 20 SWG Galvanised Steel wire |
| 17.11.00 | All Straps and bands shall be Galvanized Steel. Bands shall be 20 mm wide and 0.6 mm thick. For securing Aluminum sheathing material, stainless steel or anodized aluminum bends shall be used. |
| 17.11.01 | Screws shall be of galvanized steel, check headed, self tapping type. Above 400 degree Celsius temperature, screws shall be stainless steel. |
| 17.12.00 | Hexagonal wire mesh netting shall be 10-13 mm aperture and atleast 0.56mm diameter conforming to following Galvanized Steel wire. |
| 17.12.01 | Non metallic components like 3 mm thick mill board, aluminum pigment sealant, white glass cloth, insulating cement, neoprene washer shall be provided. |
| 17.13.00 | **Application of Insulation** |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

17.13.01 **General**

(a) All surfaces to be insulated shall be cleaned of all foreign materials such as dirt, grease, rust etc. and shall be dry before the application of insulation.

(b) Before applying the insulation the contractor shall check that all instrument tapping, clamps, lugs and other connections on the surface to be insulated have been properly installed as per the relevant erection drawing.

(c) All flanged joints shall be insulated only after the final tightening and testing.

(d) The insulation shall be applied to all surfaces when they are at ambient temp. Ample provision shall be made for the maximum possible thermal movement and the insulation shall be applied so as to avoid breaking/telescoping due to alternate periods of expansion and contraction.

(e) All cracks voids and depressions shall be filled with finishing cement, suitable for the equipment operating temp. so as to form a smooth base for the application of cladding.

17.13.02 All the refractory and insulation materials required for complete field application of insulation, cladding etc. covered under these documents and specifications shall be furnished with the equipment. They shall conform to the requirements of the various relevant ISI standards or other approved equivalents. All items such as insulating cement, sealing material, insulation material, screws, washers, etc., needed to complete the work in the course of the application of insulation and refractory shall be furnished. All insulating materials shall be chemically inert in both the dry and wet state and shall withstand the full working temperature conditions to which they are exposed without any deterioration. The gas ducts shall be insulated with mineral wool block or mineral wool blanket and all other equipment operating at elevated temp. not enclosed in the boiler casing shall be insulated with calcium silicate blocks, mineral wool blocks or mineral wool blanket insulation.

17.13.03 **Application on Piping**

(a) All vertical pipes shall be provided with the suitable insulation supports to prevent collapsing/crushing of insulation due to its self weight. Support rings shall be provided on all vertical piping with a difference in elevation of 4 meter or above, and there shall not be more than 3 m straight length between support rings.

(b) Longitudinal joints of insulation mattress sections of horizontal piping shall be on the bottom or at the sides of the pipe.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

(c) When more than one layer of insulation mattress/section is required on piping the circumferential joints on adjacent layers shall be staggered by at least 150 mm and longitudinal joints shall be staggered by at least 50 mm.

(d) The mattress type insulation shall be formed to fit the pipe and applied with the mattress edges drawn together at the longitudinal joints and secured by lacing wire. Pipe section insulation shall be fitted on pipe using binding wires.

(e) Where insulation is applied in two or more layers each layer of mattress shall be backed with hexagonal wire mesh. For the first layer of insulation and in case of single layer insulation, hexagonal wire mesh shall be provided on both the surface of the mattress. For pipe sections, the sections shall be held in place by binding wires without any wire mesh.

(f) The ends of all wire loops shall be firmly twisted together with pliers, bent over and carefully pressed into the surface of the insulation. Any gap in the insulation shall be filled with loose mineral wool or finishing cement.

(g) Insulation mattress/section ends shall be terminated at a sufficient distance from the flanges to facilitate removal of bolts.

(h) The insulation shall be held in place by fastening over with binding wire for insulation surface with diameter upto and including 550 mm and with metal bends for insulation surfaces with diameter over 550 mm. The fastening shall be done at intervals of 250 mm except where specified otherwise. The ends of the binding wires shall be hooked and embedded in the insulation. The straps shall be mechanically stretched and fastened with metallic clamping seals of the same materials as the strap.

(i) Insulation for application on bends and elbows shall be cut into mitred segments, sufficiently short to form a reasonably smooth internal surface. After the application of insulation material place, insulating cement shall be applied as required to obtain a smooth surface.

(j) Weather hoods shall be provided for insulated piping passing through floors/walls.

(k) All pipe attachments coming on horizontal pipes, inclined pipes and bends shall be insulated along with pipe such that there will be no insulation applied to hanger rod and the component connecting hanger rod to pipe attachment. All pipe attachments exposed to weather shall be provided with weather proof covering.

(l) Upstream of all drain lines and the lines connected to steam traps, shall be insulated upto and including first isolating valve for heat conservation. Rest

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

of such lines such as downstream of the drain valves, traps etc. and other lines such as safety valve discharges, vents, etc. shall be insulated for personnel protection.

17.13.04 **Application on Valves and Fittings**

(a) All valves fittings and specialties shall be insulated with the same type and thickness of insulation as specified for the connected piping with the special provisions and or exceptions as given below.

(b) All valves and flanges shall be provided with removable box type of insulation covered with box fabricated from aluminium sheets of thickness same as the connected pipe cladding. Adjoining pipe insulation shall be bevelled back to permit removal bolts and nuts or bands. The portion of the valve which can not be covered by box type insulation shall be filled by loose insulating material of packing density at least equal to that of the insulating material of adjoining pipe. The insulation for valves/flanges shall be applied after the finishing has been applied over the connected piping. The cladding shall be applied in such a manner that the bonnet flange can be exposed easily without disturbing the complete insulation and cladding.

(c) Flanges on lines having temperature upto and including 150 deg.C shall not be insulated.

(d) Union shall not be insulated.

(e) Expansion joints, metallic or rubber, shall not be insulated unless otherwise specifically indicated.

(f) Safety valves shall be insulated.

17.14.00 While applying mineral wool blanket insulation:

(a) Provide expended metal or hexagonal wire mesh on both sides for single layer mattress and on first layer in case of multilayer insulation. Subsequent layers of multilayer insulation to have only one side wire netting.

(b) The edges of adjacent blankets to be leased together, by appropriate lacing wire as per Clause 16.08.00.

(c) Any gap between joints between insulation layers shall be filled by loose mineral wool confirming to IS:3677.

(d) All insulation to be secured by 1.63 mm dia wire netting over blankets with ends of wire tightly twisted, and pressed in to insulation surface.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

(e) Impelling pins shall be placed on centers not exceeding 300 mm.

17.15.00 Flue Gas ducts with external stiffeners shall have first layer of insulation between the stiffeners and a second layer of insulation over stiffeners so that stiffeners are also insulated and a level surface is achieved. Other requirements are same as given in Clause 18.09.00.

17.16.00 **Application of Metal Cladding**

All insulated surfaces of the FGD shall be provided with metal cladding in accordance with the following requirements.

(a) All insulation procedure of metal cladding shall have prior approval of the Owner.

(b) All insulated surfaces of FGD shall be covered with aluminium cladding.

(c) Cladding for FGD components are to be finished with plain aluminium sheeting of thickness not less than the values specified. Wherever an inner casing plate is necessary to effect a gas tight enclosure, the plate shall be of mild steel of required thickness, but not less than four (4) mm suitably stiffened and supported.

(d) Cladding on straight surfaces shall be finished with aluminium sheeting of at least 20 SWG thicknesses suitably pressed along diagonals to form diamond shape or otherwise formed.

(e) Cladding for insulated circular surfaces will be constructed from aluminium sheets of thickness not less than 20 SWG.

(f) Weather proof flashings shall be installed where the panels intersect with columns and at other similar joints.

17.17.00 **Application**

All metal cladding shall be fabricated and installed to ensure a neat appearance and no open ended sections of cladding shall be left uncovered. The following provisions shall also be complied with:

(a) All closures, flashings and seals required shall be provided and installed.

(b) An asphalt and craft paper moisture barrier shall be provided to the aluminium cladding for all out door applications. Such moisture barriers shall be fixed to the inner surface of the cladding or shall be cemented to the outside surface of the insulation before application of cladding.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | (c) All the used in the out door cladding shall be provided with Neoprene washers.<br><br>(d) All openings and joints in outdoor cladding for piping connections, supports or access shall be suitably flashed and weather-proofed. Where such flashings or weather-proofing can not effectively control the entry of moisture, then such openings and joints shall be weather-proofed by application of aluminium pigmented sealer.<br><br>(e) Cladding on the top surfaces of the FGD, duct work and equipment shall be suitably reinforced to prevent damage by personnel walking thereon. |
| 17.18.00 | **Protection of Equipment during insulation application**<br><br>All equipment and structure shall be suitably protected from damage while applying insulation. After completion all equipment and structures shall be thoroughly cleaned of insulating materials which might have fallen on them. |
| **18.00.00** | **TYPE TEST** |
| 18.01.00 | Full scale type tests using actual equipment shall be conducted by the Contractor for the equipment mentioned in the subsequent clauses below: |
| 18.01.01 | Full range and full scale performance testing shall be conducted at shop on one number each of the following Fans as per BS 848, Part-1:<br><br>(a) Booster Fan<br><br>The performance testing at shop shall be conducted using actual fans |
| 18.01.02 | Leak tightness testing of dampers for each type and size of damper at shop to demonstrate the guaranteed gas tightness efficiency (on flow). The minimum guaranteed gas tightness efficiency of dampers shall not be less than that indicated in clause no. 3.03.08 of this Sub-Section. |
| 18.02.00 | The Bidder shall indicate the charges for each of these type tests separately in the relevant price schedule of Bid Proposal Sheet (BPS) and the same shall be considered for the evaluation of the Bids. The type test charges shall be paid only for the test(s) actually conducted successfully under this contract and upon certification by the Employer's Engineer. |
| 18.03.00 | The type tests shall be carried out in presence of the Employer's representative. Contractor shall inform the Employer about his readiness for conducting the type test and issue such notice to the Employer 30 days in advance, along with schedule of the type tests. The Contractor shall obtain the Employer's approval for the type test procedure before notifying the Employer about his readiness for conducting the type |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | test. The type test procedure shall clearly specify the test set-up, instruments to be used, procedure, acceptance norms, recording of different parameters, interval of recording, precautions to be taken etc. for the type test(s) to be carried out. |
| 18.04.00 | Irrespective of the requirement of conducting the type tests under this contract, The Contractor shall submit the reports of the type tests carried out for the equipments listed above in clause no. 18.01.00 and These reports should be for the tests conducted on the equipment for the model / type / size / rating to those proposed to be supplied under this contract and the test(s) should have been either be conducted at an test facility/shop/independent laboratory or should have been witnessed by a client. The Employer reserves the right to waive conducting of any or all of the specified type tests under this contract, in which case the type test charges shall not be payable for the type tests waived by the Employer. |
| 18.05.00 | All acceptance and routine tests as per the specification and relevant standards shall be carried out. Charges for these shall be deemed to be included in the equipment price. |

# SUB-SECTION-I-M2

# AIR CONDITIONING & VENTILATION SYSTEM

| | |
|---|---|
| **LOT-IA PROJECTS**<br>**FLUE GAS DESULPHURISATION (FGD) SYSTEM PACKAGE** | **TECHNICAL SPECIFICATION**<br>**SECTION-VI**<br>**BID DOCUMENT NO.: CS-0011-109(1A)-2** |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **1.00.00** | **GENERAL** |
| 1.01.00 | This section of specification covers details of system specifications, detailing the areas to be air conditioned, basis of design, brief description of the system, equipment and services to be furnished by bidder.<br>The Design, Engineering, Supply, Construction, Erection, and Testing & Commissioning of all the equipments & works listed here shall be on the basis of single point responsibility in bidder's scope of work for satisfactory completion of the system in all respect. |
| **2.00.00** | **AREAS TO BE AIR CONDITIONED** |
| 2.01.00 | The areas to be air-conditioned shall be as follows:<br>a) Air cooled condensing units (D-X type) type air conditioners with AHU of suitable capacity with 100 % redundancy ( as per actual heat load calculation ) shall be provided for each FGD Control room building and ZLD control room building (if provided).<br>b) Cassette and Hi-wall Air-conditioners for Other auxiliary control room /control room buildings not listed above but covered in the scope of Bidder. |
| **3.00.00** | **AREAS TO BE VENTILATED** |
| 3.01.00 | (i) Unitary Air Filtration (UAF) units of min. capacity 75,000 m3/hr or capacity calculated considering 8 air changes per hour whichever is higher, shall be provided for Non-Air Conditioned areas of FGD and ZLD (as provided) control building (e.g. Switch gear rooms, cable galleries, etc.)<br>(ii) Mechanical Ventilation (using Roof extractors/ Supply and/or Exhaust fans) shall be provided for various other areas/buildings in the scope of bidder as under:<br>a) Grinding system building<br>b) Gypsum dewatering building<br>c) Recirculation pump & Oxidation blower/compressor building.<br>(iii) Toilets etc in above building (i) & (ii). Any other area not listed above but covered in the scope of Bidder.<br>iv) For other miscellaneous areas/ buildings not listed above but covered in the scope of Bidder, mechanical type ventilation system using Supply and/or exhaust air fans/ roof exhausters shall be provided. |
| 3.02.00 | All non-air conditioned areas covered under this package shall be ventilated by a combination of supply/exhaust fans and fresh air in-take / back draft louvers as detailed below: |

| S.No | Area | Type of Ventilation system |
|---|---|---|
| (i) | General area like pump house, buildings etc | Combination of Supply air fan & Exhaust air fans |
| (ii) | MCCs and Switchgear room etc | Supply air fan & Back draft dampers |
| (iii) | Battery rooms & Oil rooms and fumes/odor generates | Combination of Supply air fan & Exhaust air fans. Motors shall be flame proof. |
| (iv) | Toilet/pantry etc | Propeller type exhaust air fan |

**4.00.00 EQUIPMENT DESCRIPTION – AIR CONDITIONING SYSTEM**

4.01.00 **Condensing Unit (Air-Cooled D-X type)**

Condensing unit

Type : Air cooled scroll type

Vibration isolators : Steel spring / Neoprene rubber cushy foot type with isolation efficiency not less than 85%.

Compressor

Type : The Compressor shall be scroll, serviceable, either hermetic type or semi-hermetic type with automatic capacity control (minimum 3 steps).

Type of drive : Motor driven, direct or through V-belt.

Refrigerant : The refrigerant shall be R-134a/ R-410A/R-407C or any other environment friendly refrigerant.

Accessories : High/Low pressure cutouts, oil pressure switches, relief valves, pressure gauges at each stage, lube oil and control oil pressure gauges, suction & discharge stop valves, Muffler, Crank case heaters, oil filters, magnetic oil separators, temperature indicators for lube oil/heaters, oil level indicators, safety thermostat for crank case heater, vibration isolators, etc.

Motor Rating : 10% more than the power required by the compressor at 50 deg C design ambient temperature.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | | | |
|---|---|---|---|
| | Capacity | : | Minimum capacity shall be suitable for the identified/selected at evaporating temperature and condensing temperature and shall be indicated. |

4.02.00 **Air Handling Unit (AHU)**

4.02.01 Each AHU shall consist of casing, fan impeller section, cooling coil section, damper section, steel frame with anti vibration mountings (AVMs) having minimum 85% vibration dampening efficiency and flame retardant, water proof neoprene impregnated flexible connection on fan discharge. Isolation dampers at the suction and discharge of each AHU shall be provided, in case return air duct is directly connected to AHU. However, in case AHU room is used for return air, isolation dampers are required to be provided only at AHU discharge of each AHU. Pre-filter at the suction and fine (micro-vee type) and absolute (HEPA type) filters (wherever applicable) at the discharge of each individual AHU, and heater section in the common discharge of AHUs shall be provided.

4.02.02 The casing of AHUs shall be of double skin construction. Double skin sandwich panels (inside and outside) shall be fabricated using minimum 0.63 mm (24g) galvanized steel sheet (thickness of galvanization as per manufacturer's standard) , with 25mm thick polyurethane foam insulation of minimum 38 Kg/Cum density in between. Suitable reinforcements shall be provided to give structural strength to prevent any deformation/buckling.

4.02.03 Sloping condensate drain pan shall be made of minimum 1.2 mm thick Stainless Sheet Steel. It shall be isolated from bottom floor panel through 25mm thick heavy duty treated for Fire (TF) quality expanded polystyrene or polyurethane foam. Drain pan shall extend beyond the coil.

4.02.04 Cooling coil (min. 4 row deep) shall be made of seamless copper tubes with aluminium fins firmly bonded to copper tubes and shall be provided with suitable drains and vents connections.

4.02.05 All filter plenum shall be provided with a walking platform inside the plenum chamber for filter cleaning purpose. Inspection door shall be provided at the plenum chamber and a removable type ladder shall be attached to plenum.

4.02.06 **Centrifugal fan for AHU**

| | | | |
|---|---|---|---|
| a) | Fan Type | : | Double Width Double Inlet (DWDI) Centrifugal Type |
| b) | Fan impeller | : | Backward curved blades |
| c) | Casing material | : | GI /Mild steel with minimum thickness of 3 mm. |
| d) | Impeller material | : | Carbon steel |
| e) | Shaft | : | EN 8 Steel |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | | | | |
|---|---|---|---|---|
| | f) | Fan bearings | : | Self aligning type, permanently lubricated, heavy duty with a design life of 10,000 operating hours. |
| | g) | Critical speed | : | First critical speed of rotating assembly shall be at least 25% above the operating speed. |
| | h) | Drive | : | Motor driven with removable belt guard. Motor driven with removable belt guard. Motor rating (at 50 deg.C ambient) shall be atleast fifteen percent (15%) above the maximum load demand of drives at the design duty point. |
| | i) | Fans | : | For AHUs of capacity 50,000 CMH and above, Bidder may offer two (2) Nos. centrifugal fans of equal capacity for each AHU provided all such AHUs are accommodated within the space identified by the Employer. |

4.02.07 **Mixing Box:**

Mixing box shall be complete with fresh and return air dampers. Mixing box shall be provided whenever the return air is ducted back to the AHU. Further, wherever return air is led back directly to AHU room, no mixing box is required.

4.02.08 **Pan Humidifier:**

Pan humidifier shall be made of 22 gauge SS 304 tank, duly insulated with 25 mm thick resin bonded fiber glass insulation (min. 24 Kg/m3 density) with 0.5 mm GSS cladding. The humidifier shall be complete with stainless steel immersion heaters, safety thermostat, float valve with stainless steel ball, sight glass, overflow and drain connections, steam outlet nozzle and float switch. Step controller shall be provided for switching on / off heater banks as per system requirement.

**4.03.00 HI-WALL SPLIT/CASSETTE AIR-CONDITIONERS**

4.03.01 Hi-wall Split/cassette air conditioners shall in general consist of the following:

i) Casing

ii) Hermetically sealed rotary/scroll Compressor

iii) Condenser and condenser cooling fan

iv) Evaporator along with fan

v) Cooling coil

vi) Filters

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | vii) Piping, valves, refrigerant strainer, etc.<br>viii) Controls, instruments, control panel/starter panels.<br>ix) Vibration isolator pads, etc as required.<br>x) Refrigerant as per manufacturer practice. |
| 4.03.02 | Indoor unit of Ceiling Mounted Cassette Type Unit (Multi Flow Type):<br>The housing of the unit shall be powder coated galvanized steel. All the indoor units regardless of their difference in capacity should have same decorative panel size for harmonious aesthetic point of view.<br>Unit shall have four way supply air grills on sides and return air grill in center.<br>Each unit shall have high lift drain pump and very low operating sound. |
| 4.04.00 | **SPLIT/PACKAGED AIR CONDITIONERS** |
| **4.04.01** | Split/packaged air conditioners shall in general consist of following:<br>I. Casing<br>II. Compressor<br>III. Condenser<br>IV. Evaporator and condenser cooling fan<br>V. Cooling Coil<br>VI. Filters<br>VII. Piping, Valves, refrigerant strainer etc.<br>VIII. Control, instruments, control panel/starter panels.<br>IX. Vibration isolator pads, ducting (if applicable) etc as required. |
| **5.00.00** | **EQUIPMENT DESCRIPTION - VENTILATION SYSTEM** |
| **5.01.00** | **Unitary Air Filtration** |
| 5.01.01 | Each modular unitary air filtration shall consist of Casing, Tanks, Fans, Distribution plates, Moisture eliminator and water repellant type nylon filter with frame and support, Header and standpipe with support, Spray and flooding type nozzle. Screen type suction strainer, Pumps, Necessary controls & Instrumentation, and all other required accessories. |
| 5.01.02 | The housing/ casing of air washer unit shall be double skin construction. Double skin panels shall be made of 22G galvanized sheet on outer side and 20G galvanized sheet inside with 25mm thick polyurethane foam insulation of minimum 38 kg/cub. Mtr. Density in between. Frame work for section shall be joined together with soft |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | rubber gasket in between to make the joints air tight. The entire fan section shall be mounted on rolled formed GSS channel frame work. |
| 5.01.03 | The unitary air filtration tank shall be fabricated from MS plate of minimum 6 mm thick and inside and outside surface of the tank shall be spray galvanized **(minimum 60 microns DFT).** Minimum depth of the tank shall be 600 mm. Tank construction shall be such that the suction screen can be replaced while the unit is operating. Tank shall be provided with overflow, drain with valve, float valve makeup connection with a gate valve backup, quick fill connection with globe valve etc. The overflow pipe shall be connected to drain pipe after isolating valve on drain pipe. |
| 5.01.04 | The distribution plate shall be fabricated out of 18G galvanized steel sheets & galvanized steel angle supports with minimum 50% free area. |
| 5.01.05 | Unitary air filtration shall be one-bank construction. All header and stand pipes shall be galvanised. Cat walks of suitable width shall be provided for maintenance of nozzle, filter etc. |
| 5.01.06 | The spray nozzles shall be of brass or bronze with chrome plating and shall be self cleaning type. The nozzle shall be designed to produce fine atomised spray and shall be properly spaced to give a uniform coverage of the air washer section. The pressure drop through the nozzle should be in the range of 1.4 to 2.4 Kg/cm2. |
| 5.01.07 | The eliminator plates shall be of 24G thick GS sheets class 275 or from 100% virgin PVC of minimum finished thickness of 2 mm. The eliminator section made of GSS shall have minimum six bends. The PVC eliminators shall be UV stabilised using Titanium di-oxide and shall withstand the weathering test as per IS:4892 for 500 hrs. Type test report of the compound testing carried out in any reputed laboratory shall be submitted for approval. All supports, tie rods and space bar shall be of either galvanised steel or PVC construction and shall be complete with suitable drip tray and drain pipe. |
| 5.01.08 | Air tight inspection doors of suitable size shall be provided for suction chamber. Spray chamber and fan suction for easy accessibility and maintenance and a water marine light be provided for each unitary air filtration. |
| 5.01.09 | Suitable number of brass screen shall be provided in the air washer tank to arrest the dirt entering the circulating water pump suction. Suitable GI grid shall be used inside the screen for reinforcement. |
| 5.01.10 | The specification for centrifugal fans shall generally be as indicated below. However, the fan shall be of DIDW type for UAF unit. |
| 5.01.11 | Saturation efficiency of Unitary Air Filtration units shall be minimum 60%. |
| **5.02.00** | **Centrifugal Fan** |
| 5.02.01 | The casing shall be of welded construction fabricated with heavy gauge galvanised sheet steel or MS sheet with spray galvanization (**minimum** 60 micron DFT). The minimum thickness of casing shall be 3 mm. It shall be rigidly reinforced and supported by structural angles. The seams shall be permanently sealed air-tight. Split casings shall be provided on larger sizes of fans. Casing drain with valves shall be provided wherever required.<br><br>The impeller shall have die-formed backward-curved blades tie welded to the rim and back plate to have a non overloading characteristic of the fan. Rim shall be spun to have a smooth contour. If required intermediate stiffening rings shall be |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | provided. Shaft sleeves shall be furnished wherever required. The impeller, pulley and shaft sleeves shall be secured to the shaft by key and/or nuts. |
| 5.02.02 | The bearing shall be self aligning, heavy duly ball, roller or sleeve bearing. They shall be adequately supported. They shall be easily accessible and lubricated properly from outside. |
| 5.02.03 | Inlet guard shall be spun to have a smooth contour. Inlet screen, if provided, shall be of galvanised wire mesh of 25 mm square. |
| 5.02.04 | Base plate with necessary number of spring type vibration isolators or ribbed neoprene rubber pad or cushy foot mounting shall be provided. The vibration isolators should have a minimum of 70% efficiency. |
| 5.02.05 | The first critical speed of the rotating assembly shall be at least 25% above the opening speed. |
| 5.02.06 | The fans shall be provided with V-belts and sheaves. All belts shall be sized for 150% rated HP. All V-belt shall be equipped with removable belt guards that do not impede the air flow to the fan inlet. There shall be a minimum of two belts per drive. Motor rating (at 50 deg.C ambient) shall be atleast fifteen percent (15%) above the maximum load demand of drives at the design duty point. |
| **5.03.0** | **Roof Ventilators (If applicable)** |
| 5.03.01 | The roof extractors shall be “COWL” type. |
| 5.03.02 | Impeller shall be of axial flow type, cast Aluminium in one piece and dynamically balanced. Casing shall be heavy gauge sheet steel construction of 3 mm thick for impeller upto 750 mm diameter and 5 mm for fans with impeller of diameter 750 and above. In casing, access door with locking arrangement be provided. |
| 5.03.03 | The cowl shall be designed for weather protection of the fan also inside of the roof on which the extractor is installed. Galvanised bird screen of 15 mm Square be provided with the cowl. All accessories, steel supports as required will be provided. |
| 5.03.04 | The speed of the fan be limited as per limitation given above for axial fans. |
| 5.03.05 | All accessories rain protection exhaust hood, transformation piece, vibration isolators, steel supports vibration isolators, bird screen, etc. as required shall be provided. |
| 5.03.06 | The vibration level for fans shall be as per ISO: 14694. |
| **5.04.00** | **Centrifugal Pumps** |
| | a) Type : Horizontal Centrifugal, Axially or radial split type casing pump or end suction, top discharge horizontal centrifugal pump |
| | b) Impeller : Closed type |
| | c) Material of Construction |
| | i) Casing : 2% Ni Cast Iron : IS:210 Gr. FG-260 |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | | | |
|---|---|---|---|
| | ii) Impeller | : | Bronze IS:318 Gr-2 |
| | iii) Wearing rings | : | Bronze |
| | iv) Shaft | : | SS 316 |
| | v) Shaft sleeve | : | SS 316 |
| | vi) Lantern ring | : | Brass / Bronze |
| | vii) Packing | : | Asbestos free |
| | viii) Base Plate | : | Carbon steel as per IS:2062 |
| | ix) Speed | : | Maximum 1500 rpm |
| | x) Other requirements | : | To refer to **Annexure-I** titled "Horizontal Pumps" of this sub section. |

**5.05.0 Axial Fans**

5.05.01 These fans shall have fixed / variable pitch cast aluminum blades of aerofoil design.

5.05.02 The fan casing shall be of heavy gauge sheet steel construction.

5.05.03 Necessary rain protection cowl, inlet and outlet cones, bird protection screen, adjustable damper, vibration isolators, back draft dampers etc. shall be provided.

5.05.04 The speed of the fan shall not exceed 960 rpm for fan with impeller diameter above 450 mm and 1400 rpm for fan with impeller diameter 450 mm or less. However for fans having static pressure of 30 mm WC or above the speed of the fan shall not exceed 1440 rpm for fan with impeller diameter of above 450 mm and 2800 rpm for fan with impeller diameter of 450 mm or less. The first critical speed of rotating assembly shall be atleast 25% above the operating speed.

5.05.05 All other accessories like supporting structure etc. as required shall be provided.

5.05.06 Fans of capacity 1000 $m^3$/hr & lower shall be of propeller exhaust type.

**6.00.00 BALANCE EQUIPMENT SPECIFICATION**

6.01.00 **Material of Construction for Piping & Fittings**

| | | | |
|---|---|---|---|
| a) | Piping for Chilled and Condenser water lines | : | Heavy grade-IS:1239 or Equivalent upto150 NB and IS:3589 or Equivalent for pipes beyond 200 NB with thickness as indicated in **Annexure-II** |
| b) | Refrigerant piping : | : | Seamless steel tubes conforming heavy grade IS:1239 or copper tubes as per IS:2501 (copper material as per IS:191 hard copper grade). |
| c) | Drain piping | : | Same as (a) above & galvanized as per IS:4736. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | d) Fittings : 1) The steel fittings shall conform to ASTM A234 Gr. WPB and dimensional standard to ANSI B 16.9/ANSI B16.11 / equivalent for sizes 65 NB and above.<br>2) For sizes 50 NB and below, the material shall conform to ASTM A-105.<br>3) All steel flanges shall be of slip on type and shall conform to ANSI B 16.5<br>4) For pipe sizes above 350 NB, fabricated fittings from sheets of adequate thickness may be used. The bend radius in case of mitre bends shall be minimum 1.5 times the nominal pipe diameter and angle between two adjacent sections shall not be more than 22.5 deg and shall be as per BS:2633/BS:534.<br>5) Fittings, flanges and pipe joints of refrigerant piping shall conform to ANSI B31.5 |
| 6.02.00 | **VALVES** |
| 6.02.01 | Valves shall have full sizes port and suitable for horizontal and as well as vertical installation. |
| 6.02.02 | Valves for regulating duty shall be of globe type suitable for controlling throughout its lift. |
| 6.02.03 | All safety /relief valves shall be so constructed that the failure of any part does not obstruct the free discharge. |
| 6.02.04 | Valves shall be furnished with back seating arrangement for repacking while working under full working pressure. |
| 6.02.05 | Manual gear operators be provided for valves of size 200 NB and above. |
| 6.02.06 | All valves shall be supplied with companion flanges, nut, bolts & washers, etc. |
| 6.02.07 | The refrigerant line valves shall have steel or brass body with TEFLON gland packing. The construction of disc shall be either globe or angle type. The valve seat shall have white metal lining or equivalent. |
| 6.02.08 | Gate valves shall be of Cast Iron body (confirming to IS:210 Gr FG 220/equivalent) for sizes 65 NB and above conforming to fIS :14846. Gun Metal construction for sizes less than 65NB shall be as per IS:778. Butterfly valves shall conform to latest revision of BS:5155 or equivalent standard of required class/rating. |
| 6.03.00 | **AIR FILTERS** |
| 6.03.01 | **Pre Filter**<br>1) Type : Flange / Cassette<br>2) Pre-filter shall contain washable non-woven synthetic fiber or High density Polyethylene (HDPE) media having 18G GSS / 16G Al alloy frame. The filter media shall be supported with HDPE mesh on air inlet side & Aluminium |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

expanded metal on exit side or G.I. wire mesh on both sides.

3) **Other requirements : (as applicable)**

a) Suitable aluminium spacers be provided for uniform air flow;

b) Casing shall be provided with neoprene sponge rubber sealing.

c) Capable of being cleaned by water flushing.

d) Density of filter medium shall increase in the direction of air flow in case of metallic filter.

e) Filter media shall be fire retardant and resistant to moisture, fungi, bacteria & frost.

4) **Efficiency :**

Average arrestance of 65 - 80 % when tested in accordance with BS:6540/ASHRAE – 52 – 76 / EN-779.

5) Minimum thickness : 50 mm

6) Face Velocity : Not more than 2.5 m/sec.

7) Pressure drop : Initial pressure drop - Not to exceed 5.0 mm WC at rated flow.

Final pressure drop - Upto 7.5 mm WC.

8) Location : a) At the suction of each AHUs

: b) At the suction of each Fresh air fan

6.03.02 **Fine Filters (Microvee type)**

1) Type : Flange / Cassette

2) Fine filter shall contain washable non-woven synthetic fibre or High density Polyethylene (HDPE) media having 18G GSS / 16G Al alloy frame. The filter media shall be supported with HDPE mesh on air inlet side & Aluminium expanded metal on exit side or G.I. wire mesh on both sides.

3) Other requirements :

a) A neoprene sponge rubber sealing shall be provided on either face of the filter frame.

b) Capable of being cleaned by air or water flushing.

c) Filter media shall be fire retardant and resistant to moisture, fungi, bacteria & frost.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | | | |
|---|---|---|---|
| | 4) Efficiency | : | Average arrestance > 90% when tested in accordance with BS:6540/ASHRAE–52-76 / EN-779. |
| | 5) Minimum thickness | : | 150 mm or 300 mm. |
| | 6) Face Velocity | : | Not more than 1.2 m/sec for 150 mm and not more than 2.4 m/sec. for 300 mm. |
| | 7) Pressure drop | : | Initial pressure drop - Not to exceed 10 mm WC at rated flow ; Final pressure drop-Up to 25 mm WC. |
| | 8) Location | : | i) At the discharge of each individual AHU.<br>ii) At the discharge of each Fresh air fan. |

6.04.00 **LOW PRESSURE AIR DISTRIBUTION SYSTEM**

6.04.01 Material of air distribution system shall be through galvanized steel sheet (Conforming to Class 275 of IS :277) or Aluminium alloy (grade 19000 / SIC or 3100 / NS3 of IS:737). GI Sheets should be galvanized and galvanizing shall be of 275 gms/sq.m. (total coating on both sides) both for site fabricated and factory fabricated ducts.

6.04.02 **Thickness of rectangular ducts shall be as follows:**

| Larger Dimension of duct (mm) | Thickness of GI sheet(mm) | Thickness of Aluminium sheet (mm) |
|---|---|---|
| up to 750 mm | 0.63 (24 G) | 0.80 |
| 751 to 1500 | 0.80 (22 G) | 1.00 |
| 1501 to 2250 | 1.00 (20 G) | 1.50 |
| 2251 & above | 1.25 (18 G) | 1.80 |

6.04.03 **Thickness of round ducts shall be as follows:**

| Diameter of Round duct (mm) | Thickness of GI sheet(mm) | Thickness of Aluminium sheet (mm) |
|---|---|---|
| 150 to 500 | 0.63 | 0.80 |
| 501 to 750 | 0.80 | 1.00 |
| 751 to 1000 | 0.80 | 1.00 |
| 1001 to 1250 | 1.00 | 1.50 |
| 1251 & above | 1.25 | 1.80 |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 6.04.04 | **Duct Fabrication and Supports:**<br><br>a) Duct fabrication shall be as per the latest relevant BIS/SMACNA standard.<br><br>b) Ducts for A/C system may be **site fabricated or factory fabricated**.<br><br>c) The ducts routed inside the buildings with larger side greater than 2250 mm shall be supported by 16mm MS rods and 50x50x3 mm MS double Angles while those below 2250 mm shall be supported by 10mm MS Rods and 40x40x3 MS angles. The duct supports shall be at a distance of not more than 2000 mm for A/C system. The MS rods for these ducts routed inside the building shall be hung from the existing floor beams/wall beams/roof beams/columns with provision of necessary auxiliary or special steel members or by hooks or can be provided by dash fasteners fixed to the ceiling slab. No supports shall be taken from horizontal/vertical bracings of the structures. All items of duct support including MS rods, MS angles and double angles, auxiliary or special steel members, hooks, dash fasteners coach screws and all other supporting material required shall be provided by the bidder. Where ever ducts are running outside the building and or at locations where it is not possible to support the ducts from ceiling/floor due to non-availability of the same, the base steel frame/truss work and other auxiliary steel members, hooks, rods, etc. for supporting the duct work shall also be provided by the Bidder.<br><br>d) Where the sheet metal duct connects to the intake or discharge of fan units a flexible connection of fire retarding, at least 150 mm width shall be provided of closely woven, rubber impregnated double layer asbestos/canvas or neoprene coated fibre glass.<br><br>e) All curves, bends, off-sets and other transformations shall be made for easy and noiseless flow of air. The throat of every branch duct shall be sized to have the same velocity as in the main duct to which the branch duct is connected.<br><br>f) Wherever duct passes through a wall, the opening between masonry and duct work shall be neatly caulked or sealed to prevent movement of air from one space to the adjoining space.<br><br>g) Wherever pipe hangers or rods pass through the ducts, light and streamline easement around the same shall be provided to maintain smooth flow of air.<br><br>h) Access doors shall be provided in the duct work or casing on the both sides of the equipment to be serviced. All access doors shall be of adequate size and shall be lined with substantial felt edging to prevent air leakage. Access doors shall be of built up construction, structurally strong and each shall have at least two hinges. Access doors shall have two rust proof window sash of approved type. All doors shall be set so as to flush with insulation or plaster finish on the duct. |
| 6.04.05 | Splitters and dampers shall be provided for equipment/area isolation and for proportional volume control of system. The same shall be minimum 16 gauge GS |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

sheet of quadrant type with suitable locking device, mounted outside of duct in accessible position.

6.04.06 **Factory fabricated ducts :**

i) All ducting shall be fabricated of LFQ (Lock Forming Quality) grade prime G.I.

ii) Unless otherwise specified here, the construction, erection, testing and performance of the ducting system shall conform to the SMACNA-1995 standards ("HVAC Duct Construction Standards-Metal and Flexible-Second Edition-1995" SMACNA)

iii) All ductwork including straight sections, tapers, elbows, branches, show pieces, collars, terminal boxes and other transformation pieces must be factory fabricated by utilizing the machines and processes as specified in SMACNA or by equivalent technology. In equivalent method, the fabrication shall be done by utilizing the following machines and process to provide the requisite quality of ducts and speed of supply:

a) Coil lines to ensure location of longitudinal seams at corners/folded edges only to obtain the required duct rigidity and low leakage characteristics. No longitudinal seams permitted along any face side of the duct.

b) All ducts, transformation pieces and fittings to be made on CNC profile cutters for required accuracy of dimensions, location and dimensions of notches at the folding lines.

c) All edges to be machine treated using lock formers, flangers and roll-bending for turning up edges.

d) Sealant dispensing equipment should be used for applying built-in sealant in Pittsburgh lock where sealing of longitudinal joints are specified. Sealing of longitudinal joint is compulsory for the ducts over 2" w.g. static pressure

iv) All transverse connectors shall be 4-bolt slip-on flange system with built-in sealant, if any. To avoid any leakage additional sealant shall be used.

v) Factory fabricated ducts shall have the thickness of the sheet as follows:

| Sl.No. | **Size of Duct** | **Sheet Thickness** |
|---|---|---|
| i) | upto 750 mm | 0.63 mm |
| ii) | 751 mm to 1500 mm | 0.80 mm |
| iii) | 1501 mm to 2250 mm | 1.00 mm |
| iv) | 2251 mm and above | 1.25 mm |

**6.05.00 Diffusers, Grills & Dampers :**

6.05.01 Supply air diffusers/grills with factory fitted volume control dampers be provided for all air-conditioned areas.

6.05.02 Return air diffusers of air-conditioned areas shall be without volume control dampers.

6.05.03 The diffusers/grills shall be of extruded Aluminum of minimum 1.2 mm thick with powder coating. The colour of power coating shall be as per the interior décor.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 6.05.04 | Supply air grills shall be of double deflection type and return air grills shall be of single deflection type. |
| 6.05.05 | All volume control (VC) damper shall be operated by a key from the front of the grills/diffusers and shall be of GI sheet. |
| 6.05.06 | The thickness of VC dampers shall be of minimum 20 gauge and thickness of louvers shall be of minimum 22 gauge. |
| 6.05.07 | Suitable vanes shall be provided in the duct collar to have uniform and proper air distribution. Bank of Baffles wherever required shall also be provided. |
| 6.05.08 | Fire dampers shall be motor operated type and shall have fire rating of minimum 90 minutes. |
| 6.05.09 | All plenum chambers of connections to fans, dampers etc shall be constructed in 18 gauge GS sheet and supported on MS angle frames. |
| 6.05.10 | All ducting surfaces coming in contact with corrosive fumes or gases shall be painted with three coats of epoxy paint over a coat of suitable primer. |
| **6.06.0** | **Thermal and Acoustic Insulation** |
| **6.06.01** | **A) <u>Application with Glass Wool / Rockwool</u>**<br>(i) All surfaces to be insulated both thermally and acoustically shall be thoroughly cleaned, dried and an adhesive (CPRX compound of Shalimar Tar Products / Loid bond 83 or Equivalent) be applied @ 1.5 Kg /Sqm on the surface.<br>(ii) Insulation material (either expanded polystyrene foam or Glass Wool/ Glass fiber / Rockwool) shall be struck to the surface. All the joints shall be sealed with bitumen.<br>(iii) Insulation mass to be covered with 500 gauge polythene sheet with 50 mm overlaps and sealing all joints on hot side or alternatively aluminum foil can be used which can come as lamination over insulation.<br>(iv) Insulation Finish of types specified under shall be provided thereafter..<br><br>**B) <u>Application with Nitrile Rubber</u>**<br>(i) All surfaces to be insulated shall be properly cleaned.<br>(ii) A suitable adhesive such as SR 998 or equivalent shall be applied over the surfaces to be insulated and insulation material surfaces.<br>(iii) Insulating material shall than be pasted onto the surfaces in a manner to avoid stretching and any air entrapment within.<br>(iv) Two layers of Glass Cloth with a suitable adhesive as SR 998 or equivalent shall be then applied over the insulating material to avoid surface weathering.<br>**C) <u>Application with Polyurethane Foam & Polyisocyanurate Foam</u>**<br>i) All surfaces to be insulated shall be cleaned. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

ii) A suitable adhesive such as CPRX or Loid Bond 83 or equivalent shall be applied over the surface to be insulated and insulation material surfaces.

iii) Insulating material with aluminum foil lamination shall then be pasted onto the surface in a manner to avoid stretching and any air entrapment within.

iv) Two layers of Glass Cloth with a suitable adhesive as Loid Bond 130 shall be then applied over the insulating material, to avoid surface weathering.

v) Insulation Finish of types specified under shall be provided thereafter.

**6.06.02 Type of Insulation & Finish**

| Sl. No. | Surface | Insulation Material | Insulation Form | Thick (mm) | Finish (mm) |
|---|---|---|---|---|---|
| 1. | Supply & return air duct of AC System | Resin bonded glass wool or | Roll /Slab | 50 | F-3 |

6.06.04 **The specification for various finishes shall be as follows**

| | |
|---|---|
| a) | **Finish F-1 ( with Resin Bonded Glass Wool/Resin Bonded Mineral Wool)** |
| | Step-1 Wrapping of Poly-Bonded Hessain (PBH – to act as vapour seal) on outer surface of insulation with 50 mm overlap stitching and sealing of overlap with synthetic adhesive like CPRX or Equivalent compound. |
| | Step-2 The surface then shall be wrapped with 19 mm mesh 24 SWG GI wire netting, butting all the joints and laced down with 22 SWG lacing wire. |
| | Step-3 Sand cement (4:1) plaster shall be applied in two layers totalling to 12.5 mm thick, the second layer being brought to a smooth finish. A water proofing compound shall be added to the cement before its application. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | | |
|---|---|---|
| | aa) | **Finish F-1(a) (With Polyurethane Foam & Polyisocyanurate Foam)**<br>Wrapping of two layers of 7 mil 10 x 10 mesh glass cloth dipped in suitable adhesive such as SR 998 or Loid Bond 130 equivalent |
| | b) | **Finish F-2**<br>Step-1 Insulation shall be covered with 500g polythene with 50mm overlap and sealing of overlap with synthetic adhesive like CPRX/ Loid Bond 83 or Equivalent compound. |
| | | Step-2 Same as Step-2 of Finish F-1 above. |
| | | Step-3 Same as Step-3 of Finish F-1 above. |
| | c) | **Finish F-3**<br>Step-1 Same as Step-1 of Finish F-2 above |
| | | Step-2 The polythene shall be covered with 26 gauge Aluminium sheet and locking of joints with self-locking screws at a pitch of minimum 100 mm. |
| | d) | **Finish F-4**<br>Step-1 Same as Step-1 of Finish F-1 above.<br>Step-2 Same as Step-2 of Finish F-1 above.<br>Step-3 Same as Step-3 of Finish F-1 above.<br>Step-4 Application of 3 mm thick coat of suitable water proofing compound and wrapped with fibre glass RP tissue followed by final coat of 3 mm thick water proofing compound over the RP tissue.<br>Step-5 After the above treatment, 22G Aluminium sheet cladding, properly stiched at all joints shall be provided over the external surface. |
| | dd) | **Finish F-4(a) (With FR Closed Cell Chemically Cross Linked Polyethylene)**<br>Application of aluminium sheet 22G cladding to be provided over the XLPE insulating material. Cladding sheet is held in position with SDST screws @ 150 mm C/c over tongue-in-groove joints applied with a felt for sealing joint against water ingress.<br>All sheet joints to be done in a manner to shed water. |

6.06.05 For all inspection covers and hatches on equipment, pump casing, valve bodies and flanges (100 mm and above), insulation shall be applied so as to facilitate removal without minimum damage to the insulation by encasing the insulation in 24 gauge GI box or 22 gauge Aluminium sheet metal boxes which are bolted together around the equipment. However continuity of the vapour seal between the static and removable portions of the insulation is to be maintained.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 6.06.06 | **ACOUSTIC INSULATION**<br>a) All ducts up to a distance of 5 meters from AHU shall be acoustically lined from inside with 25 mm thick resin bonded glass wool of 48 Kg/Cu.M. density and 30 gauge perforated aluminium sheet having 5 mm dia perforation at 8 to 10 mm centre-to-centre distance. Insulation shall be fixed on wooden frame of 600 x 600 mm dimension.<br>b) Fibre glass tissue sheet shall be applied over the outer surface of insulation before applying perforated aluminium sheet. Application of acoustic insulation shall be inline with the requirements specified above. |
| **7.00.00** | **PLANT CONTROL** |
| 7.01.00 | Brief scheme of controlling the operation is described below. Detailed description of the control system for safe and efficient operation of the plant shall be elaborated, got approved from employer. The descriptions in the sub-sections of the control & instrument sections shall also be referred to. |
| 7.02.00 | **Control Scheme for Air-Conditioning System** |
| 7.02.01 | Contractor shall provide microprocessor/PLC/GIU based control system for control and monitoring of air conditioning and ventilation system as per manufacturer's standard practice. Control and monitoring of air conditioning and ventilation system from FGD and ZLD (as provided) control system is also acceptable. |
| 7.03.00 | **Air Handling Unit**<br>a) Humidity sensor and gyserstat located in the return air duct shall actuate the PAN humidifier to obtain the desired degree of humidification.<br>b) Humidity and temp. sensor shall be provided and interlocked in steps with winter heater / re-heater / strip heaters for monsoon and winter re-heating or heating as the case may be.<br>c) Heater banks shall be interlocked with the running of AHU, temperature of return air, humidity of return air and safety thermostat (airstat - located in front of the each heater in the supply air duct)<br>d) AHU shall be started either locally or from the main control room of AC system by means of Remote / Manual selection facility.<br>e) The closure of fire dampers, automatic tripping of AHU fans and fresh air fans shall be interlocked with Fire Detection System. |
| 7.05.00 | **Cassette /Hi-wall Split Air Conditioners**<br>Control and interlocks for these type of units shall be as per manufacturer's standard practice. |
| 7.06.00 | **Miscellaneous Control Requirements**<br>a) The fans (both supply and exhaust fans) associated with mechanical ventilation system shall be operated locally. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | b) Relative humidity and temperature measurement of all control rooms and all major air-conditioned areas shall made be available in FGD and ZLD (as provided) control system |
| **8.00.00** | **PAINTING:** |
| 8.01.00 | All the Equipments shall be protected against external corrosion by providing suitable painting. |
| 8.02.00 | The surfaces of stainless steel, Galvanized steel, Gunmetal, brass, bronze and non-metallic components shall not be applied with any painting. The Contractor shall clean the external surfaces and internal surfaces before Erection by wire brushing and air blowing. The steel surface to be applied with painting shall be thoroughly cleaned before applying painting by brushing, shot blasting, etc. as per the agreed procedure. |
| 8.03.00 | For all the steel surfaces (external) exposed to atmosphere (outdoor installation), one(1) coat of red oxide primer of thickness 30 to 35 microns followed up with three (3) coats of synthetic enamel paint, with 25 microns as thickness of each coat, shall be applied. |
| 8.04.00 | For all the steel surfaces inside the building (indoor installation), One (1) Coat of red oxide primer of thickness 30 to 35 microns followed up with two (2) coats synthetic enamel paint, with 25 microns as thickness of each coat shall be applied. |
| 8.05.00 | For centrifugal fans - Casing shall have hot dip/ spray galvanization (**minimum** 60 micron DFT). |
| 8.06.00 | However, for all parts coming in contact with acid fumes (in Battery rooms), a coat of epoxy resin based zinc phosphate primer of minimum thickness 30 to 35 microns followed up with undercoat of epoxy resin based paint pigmented with Titanium dioxide of minimum thickness of 25 microns shall be applied and a top coat consisting of one coat of epoxy paint of approved shade and colour with glossy finish of minimum thickness of 25 microns. |
| **9.00.00** | **CODES & STANDARDS** |
| 9.01.00 | The design, manufacture and performance of equipment shall comply with all currently applicable statues, regulations and safety codes in the locality where the equipments are to be installed. Nothing in this specification shall be considered to relieve the bidder of this responsibility. |
| 9.02.00 | Unless otherwise specified, equipment shall conform to the latest applicable Indian or IEC standard. Equipment complying with other authoritative standards such as British, USA, ASHRAE etc. will also be considered if it ensures performance equivalent or superior to Indian Standard. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**Annexure –I**

## GENERAL SPECIFICATION FOR HORIZONTAL PUMPS

1) **SCOPE**

This specification covers the design, material, construction features, manufacture, inspection, testing the performance at the Vendor's/Sub-Vendor's Works and delivery to site of Horizontal Centrifugal Pumps.

2) **CODES AND STANDARDS**

The design, material, construction, manufacture inspection and performance testing of Horizontal Centrifugal Pumps shall comply with all currently applicable statutes, regulations and safety codes in the locality where the Equipment will be installed. Nothing in these specifications shall be construed to relieve the Vendor of this responsibility. The Equipment supplied shall comply with the latest applicable Indian Standards listed below. Other National Standards are acceptable, if they are established to be equal or superior to the Indian Standards.

3) List of Applicable Standards.

IS : 1520 : Horizontal Centrifugal Pumps for clear cold fresh water

IS : 5120 : Technical requirements of roto dynamic special purpose pumps

API : 610 : Centrifugal pumps for general refinery service.

IS : 5639 : Pumps Handling Chemicals & corrosion liquids

IS : 5659 : Pumps for process water

HIS : Hydraulic Institute Standards, USA

ASTM-1-165-65 Standards Methods for Liquid Penetration Inspection.

In case of any contradiction with aforesaid standards and the stipulations as per the technical specifications as specified hereinafter the stipulations of the technical specifications shall prevail.

4) **DESIGN REQUIREMENTS**

a) The Pump shall be capable of developing the required total head at rated capacity for continuous operation. Also the pumps shall be capable of being operated to give satisfactory performance at any point on the HQ characteristics curve. The operating range of the pump shall be 40% to 120% of the duty point unless otherwise mentioned elsewhere. The maximum efficiency of pump shall preferably be within ± 10% of the rated design flow as indicated in data sheets.

b) The total head capacity curve shall be continuously rising from the operating point towards shut-off without any zone of instability and with a minimum shut-off head of about 15% more than the design head.

c) Pumps of a particular category shall be identical and shall be suitable for parallel operation with equal load division. The head Vs capacity and BHP Vs capacity characteristics should match to ensure even load sharing and trouble free operation throughout the range. Components of identical pumps shall be interchangeable.

d) Pumps shall run smoothly without undue noise and vibration. Peak to peak vibration limits shall be restricted to the following values during operation:

| Speed | Antifriction Bearing | Sleeve Bearing |
|---|---|---|
| 1500 rpm and below | 75.0 micron | 75.0 micron |
| 3000 rpm | 50.0 micron | 65.0 micron |

The noise level shall not exceed 85 dBA overall sound pressure level reference 0.0002 microbar (the standard pressure reference for air sound measurement) at a distance of 1 M from the equipment surface.

e) The pumps shall be capable of starting with discharge valve fully open and close condition. Motors shall be selected to suit to the above requirements. Continuous Motor rating (at 50 deg.C ambient) shall be atleast ten percent (10%) above the maximum load demand of the pump in the entire operating range to take care of the system frequency variation and no case less than the maximum power requirement at any condition of the entire characteristic curve of the pump.

f) The kW rating of the drive unit shall be based on continuously driving the connected equipment for the conditions specified. However, in cases where parallel operation of the pumps are specified, the actual motor rating is to be selected by the Bidder considering overloading of the pumps in the event of tripping of operating pump(s).

g) Pumps shall be so designed that pump impellers and other accessories of the pumps are not damaged due to flow reversal.

h) The Contractor under this specification shall assume full responsibility in the operation of pump and motor as a unit.

5) **DESIGN CONSTRUCTION**

a) Design and construction of various components of the pumps shall conform to the following general specifications. For material of construction of the components, data sheets shall be referred to.

**Annexure –I**

b) **Pump Casing**

Pump casing shall have axially or radially split type construction as specified. The casing shall be designed to withstand the maximum shut-off pressure developed by the pump at the pumping temperature.

Pump casing shall be provided with a vent connection and piping with fittings & valves. Casing drain as required shall be provided complete with drain valves, piping and plugs. It shall be provided with a connection for suction and discharge pressure gauge as standard feature. It shall be structurally sound to provide housing for the pump assembly and shall be designed hydraulically to minimum radial load at part load operation.

c) **Impeller**

Impeller shall be closed, semi-closed or open type as specified elsewhere and designed in conformance with the detailed analysis of the liquid being handled.

The impeller shall be secured to the shaft, and shall be retained against circumferential movement by keying, pinning or lock rings. On pumps with overhung shaft, impellers shall be secured to the shaft by a lockout or cap screw which tightness in the direction of normal rotation.

d) **Impeller/Casing Wearing Rings**

Replaceable type wearing rings shall be provided at suitable locations of pumps. Suitable method of locking the wearing ring shall be used. Wearing rings shall be provided in pump casing and/or impeller as per manufacturer's standard practice.

e) **Shaft**

The critical speed shall be well away from the operating speed and in no case less than 130% of the rated speed.

The shaft shall be ground and polished to final dimensions and shall be adequately sized to withstand all stresses from rotor weight, hydraulic loads, vibration and torques coming in during operation.

f) **Shaft Sleeves**

Renewable type fine finished shaft sleeves shall be provided at the stuffing boxes/mechanical seals. Length of the shaft sleeves must extend beyond the outer faces of gland packing of seal end plates so as to distinguish between the leakage between shaft and shaft sleeve and that past the seals/gland.

Shaft sleeves shall be fastened to the shaft to prevent any leakage or loosening. Shaft and shaft sleeve assembly should ensure concentric rotation.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**Annexure –I**

g) **Bearings**

Heavy duty bearings, adequately designed for the type of service specified in the enclosed pump data sheet and for long, trouble free operation shall be furnished.

The bearings offered shall be capable of taking both the radial and axial thrust coming into play during operation. In case, sleeve bearings are offered additional thrust bearings shall be provided. Antifriction bearings of standard type, if provided, shall be selected for a minimum life 20,000 hrs. of continuous operation at maximum axial and radial loads and rated speed.

Proper lubricating arrangement for the bearings shall be provided. The design shall be such that the bearing lubricating element does not contaminate the liquid pumped. Where there is a possibility of liquid entering the bearings suitable arrangement in the form of deflectors or any other suitable arrangement must be provided ahead of bearings assembly.

Bearings shall be easily accessible without disturbing the pump assembly. A drain plug shall be provided at the bottom of each bearings housing.

h) **Stuffing Boxes**

Stuffing box design should permit replacement of packing without removing any part other than the gland.

Stuffing boxes of packed ring construction type shall be provided wherever specified. Packed ring stuffing boxes shall be properly lubricated and sealed as per service requirements and manufacturer's standards. If external gland sealing is required, it shall be done from the pump discharge. The Bidder shall provide the necessary piping valves, fittings etc. for the gland sealing connection.

i) **Mechanical Seals**

Wherever specified in pump data sheet, mechanical seals shall be provided. Unless otherwise recommended by the tenderer, mechanical seals shall be of single type with either sliding gasket or bellows between the axially moving face and shaft sleeves or any other suitable type. The sealing faces should be highly lapped surfaces of materials known for their low frictional coefficient and resistance to corrosion against the liquid being pumped.

j) The pump supplier shall coordinate with the seal maker in establishing the seal chamber of circulation rate for maintaining a stable film at the seal face. The seal piping system shall form an integral part of the pump assembly. For the seals under vacuum service, the seal design must ensure sealing against atmospheric pressure even when the pumps are not operating. Necessary provision for seal water supply along with complete piping fittings and valves as required shall form integral part of pump supply.

k) **Pump Shaft Motor Shaft Coupling**

The pump and motor shafts shall be connected with an adequately sized flexible coupling of proven design with a spacer to facilitate dismantling of the pump without disturbing the motor. Necessary coupling guards shall also be provided.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**Annexure –I**

l) **Base Plate**

A common base plate mounting both for the pump and motor shall be furnished. The base plate shall be fabricated steel and of rigid construction, suitably ribbed and reinforced. Base plate and pump supports shall be so constructed and the piping unit so mounted as to minimize misalignment caused by mechanical forces such as normal piping strain, internal differential thermal expansion and hydraulic piping thrust. Suitable drain troughs and drip lip shall be provided.

m) **Assembly and Dismantling**

Assembly and dismantling of each pump with drive motor shall be possible without disturbing the grouting base plate or alignment.

n) **Drive Motor (Prime Mover)**

The kW rating of the drive shall be based on continuously driving the connected equipment for the conditions specified. However, in cases where parallel operation of the pumps are specified, the actual motor rating is to be selected by the Bidder considering overloading of the pumps in the event of tripping of operating pump(s).

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

## ANNEXURE-II

**PIPING THICKNESS:** Pipes for sizes 200 NB & above shall confirm to IS: 3589 Grade 410. The thickness as mentioned below are the minimum specified nominal thickness as per IS: 3589. Tolerance as code shall be applicable.

| Nominal pipe Size (mm) | Outside Diameter (mm) | Wall Thickness (mm) |
|---|---|---|
| 200 NB | 219.1 | 4.5 |
| 250 NB | 273 | 5 |
| 300 NB | 323.9 | 5.6 |
| 350 NB | 355.6 | 5.6 |
| 400 NB | 406.4 | 6.3 |
| 450 NB | 457 | 6.3 |
| 500 NB | 508 | 6.3 |
| 600 NB | 610 | 6.3 |

# SUB-SECTION-I-M3

# COMPRESSED AIR SYSTEM

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | **COMPRESSED AIR SYSTEM** |
| **1.00.00** | **SYSTEM DESCRIPTION** |
| 1.01.00 | The compressed air system shall consist of Air compressors & their motor drives, Air Drying (ADPs) Plants, air receivers for each Air compressors, instrumentation and control, control panels, compressed air piping, Instrument Air Piping network, service air piping network and Unit Instrument Air receivers (One for each unit) |
| 1.02.00 | A dedicated air receiver shall be provided near ZLD Plant to meet the instrument /service air requirement of ZLD Plant if the location of ZLD Plant is far away from compressor house. |
| 1.03.00 | Air from air compressors shall be dried in respective Air Drying Plants in compressor house and delivered to the Air receivers. From the Compressed air piping header at the downstream of Air receivers, one common header to be provided to meet the service and instrument air requirement for FGD and ZLD Plant (as provided) |
| **2.00.00** | **SCREW AIR COMPRESSORS** |
| | The minimum requirements of design and construction features of various components of Compressed air system (screw type air compressor, air dryer, air receiver, etc.) are described below. |
| 2.01.00 | **CODES AND STANDARDS** |
| 2.01.01 | The design, manufacture, testing and performance of the various components of the Rotary Screw type Air Compressors shall comply with the requirements of relevant codes ( IS-5456, IS-10431 [part -1], ASME PTC-9, IS-6206, IS-5727 and CAGI). |
| 2.01.02 | Other International Standards like American/BS/DIN etc. equivalent or superior to above mentioned standards are acceptable. Where IS specification is not available, the equipment shall conform to one such International Standard, which shall be indicated in the proposal. |
| 2.01.03 | The materials of the various components shall conform to the applicable IS/BS/ASTM/DIN Standards. |
| 2.02.00 | **DESIGN AND CONSTRUCTION** |
| 2.02.01 | The compressor shall be oil free multistage, horizontal, water cooled, rotary screw type, heavy duty, rugged construction. Their speed shall be so selected as to result in low maintenance and trouble-free operation under specified conditions. |
| 2.02.02 | The rotor and shaft shall be of single piece construction, made of forged steel (AISI C1141 or equivalent). The stator (casing) shall be of Cast-Iron (IS-210 grade) Construction with integral jacket cooling. The rotors shall be dynamically balanced to reduce vibration. |
| 2.02.03 | The seal rings and retainers shall be of stainless steel construction and be free for radial self adjustment along the rotor shafts. |
| 2.02.04 | Bearings shall be high precision antifriction type IS- 25 Grade 84). The axial thrust load shall be minimized by dividing the axial load of compression on the main and auxiliary bearings through suitable balancing arrangement. |
| 2.02.05 | Lubrication system shall be as per manufacturer standard practices |
| 2.03.00 | **Gear Box** |
| 2.03.01 | Gears shall have a rating of AGMA-12 or equivalent. Speed increasing gears between the motor and compressor stages shall consist of a common helical gear driving the pinion of each stage. Helical timing gears shall be mounted on the rotor shafts to maintain accurate relative rotor position. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **3.00.00** | **PERFORMANCE REQUIREMENT** |
| 3.01.00 | Air Compressors (screw /Centrifugal type) shall be designed for continuous operation with high efficiency to satisfy the performance requirement as specified in the Data Specification Sheet. |
| 3.02.00 | The power rating of the driver shall be selected such that a minimum margin of **10%** is available over the power required to deliver rated capacity against rated pressure. |
| 3.03.00 | As more than one compressor with drive is specified, satisfactory operation in parallel shall be ensured without any uneven load sharing, undue vibration, keeping noise level within permissible limits for a number of compressors working simultaneously in the same room. |
| 3.04.00 | Compressor frame shall have minimum 10% extra capacity. Compressor shall have 25% minimum turndown capability (at 45 deg C & 75% RH). Compressor shall be provided with IGV at the suction flange. |
| **4.00.00** | **INTERCOOLER, AFTERCOOLER & OIL COOLERS (FOR SCREW)** |
| 4.01.00 | Intercoolers, After coolers and Oil coolers shall be of water cooled & shell-and-tube type with water on the tube side. Intercoolers & after coolers shall be designed in accordance with Section VIII, Division 1 of ASME Code or equivalent. |
| 4.02.00 | Outlet temperature of air from intercooler shall be suitable to suit the equipment and outlet temperature of air from the compressor house outlet header shall be limited to 45 deg.C. However, the instruments or the pneumatic devices requires air temperature less than 45 deg.C., the same shall be achieved at the outlet header. |
| 4.03.00 | Coolers shall be provided with removable tube bundle design in accordance with design code TEMA Class C and shall be constructed with removable shell cover. |
| 4.04.00 | Oil Coolers shall be equipped with vent & drain connections on oil and water sides. Oil temperature control valve with manual override feature or bypass construction shall be provided to maintain constant temperature. Vent & drain connections for intercoolers and aftercoolers shall be provided. |
| 4.05.00 | Design pressure shall be 8 Kg/cm2 (g) or based on shut-off head of cooling water pumps. |
| 4.06.00 | The coolers shall be designed for maximum heat load and atleast 10 percent design margin shall be provided in the number of tubes. |
| 4.07.00 | Adequately sized safety valves shall be provided for both intercoolers and after coolers. |
| 4.08.00 | Each intercooler and aftercooler shall be provided with moisture separator units with suitable baffling. Moisture separator units shall be equipped with a level gauge glass with isolating cock. |
| 4.09.00 | Electrically operated automatic drain trap stations with bypass and isolating valves shall be provided for moisture separators for automatically draining of condensed moisture. The drain trap may be of full bore ball valve operated by capacitance type level switch. Manual draining facility shall also be provided in the drain trap. |
| 4.10.00 | Cooler shells, channels and covers shall be of carbon steel (SA 285 Gr C / SA 516 Gr 70 / equivalent).Tube sheet shall be of Brass or SS and the tubes shall be of Admiralty brass or Aluminium brass or Copper or SS 304. |
| 4.11.00 | For the instrument air compressors offered with "Heat of compression" type air drying plants, the after coolers shall be provided at downstream of Air Drying Plant. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **5.00.00** | **AIR RECEIVERS** |
| 5.01.00 | The design pressure and temperature shall be minimum 10 Kg/cm$^2$ (g) and 50 deg.C respectively. Receivers shall be designed in accordance with Section VIII, Division 1 of ASME Code or equivalent. |
| 5.02.00 | Air receivers are to be provided with gasketted inspection manhole of minimum 500 mm diameter with cover plate, lifting handle, davit cap etc. |
| 5.03.00 | Receivers shall be of welded construction with minimum number of joints. Longitudinal seam in adjacent sections shall not be in same line. Welding shall be as per relevant codes. Filler material to have composition & structure as that of material welded. Welding electrodes to be approved by Employer. Electrodes to be dried before use. |
| 5.04.00 | Relief valves shall be provided to suit compressor capacity and set pressure of the same shall be atleast 10% above working pressure. The spring in relief valve shall not reset for any pressure more than 10% above or below the design set pressure. |
| 5.05.00 | Each receiver shall be provided with drain connection with electrically operated automatic drain trap arrangement with isolation and bypass valves. |
| 5.06.00 | The material of construction of shell, dished ends, flanges, etc of the air receivers shall be of carbon steel as per IS:2062 or equivalent. |
| **6.00.00** | **INTAKE AIR FILTER AND SILENCER** |
| 6.01.00 | Filters with multiple elements quick removal type for easy cleaning shall be provided at suction of each air compressor and also be of heavy-duty dry type. |
| 6.02.00 | The filters shall be complete with integral silencers. Separate silencers, if specified, shall be provided. The filtering elements shall be easily removable for cleaning. |
| 6.03.00 | The filters shall be designed for an efficiency of not less than 99% for particles 2 microns and larger. |
| **7.00.00** | **AIR DRYING PLANTS** |
| 7.01.00 | One number Air drying plant shall be provided for each air compressor. Drying shall be by adsorption process through a desiccant medium. |
| 7.02.00 | Air Drying (ADP) Plant may be of "Open Through type (Blower reactivated)" OR “Heat of (HOC) Compression type". |
| 7.03.00 | Regeneration of desiccant shall be achieved by "open through" or "Heat of compression" method without any air purge loss. |
| 7.04.00 | Hot unsaturated compressed air shall be used for regeneration of exhausted desiccant in case of "Heat of compression type ADP" and air from blower shall be used for regeneration after heating by electrical heater in case of "Open through type ADP". |
| 7.05.00 | Each ADP shall be provided with two adsorber towers each sized for design drying cycle of minimum 8 hours. After this period, the adsorber tower which was under drying mode shall be put under regeneration/reactivation mode while the other tower will take over the drying duty. The change of drying mode to reactivation mode or vice-versa shall be automatic with provision for manual operation also. The change over from one mode to another shall be through automatic solenoid operated valves. |
| 7.06.00 | In "Open Through" type ADP, for regeneration of desiccant, atmospheric air shall be filtered, heated through an electric heater and passed through the desiccant before exhausted to |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| | atmosphere. The reactivated desiccant shall be cooled through same atmospheric air without heater in operation. |
| | In case of HOC type drier, the reactivation shall be achieved by the heat of the compressed air itself. The hot unsaturated compressed air from the outlet of last stage of compressor shall be passed through the adsorber tower. The moist air shall be cooled in dehumidifier and passed through the second adsorber for final drying. |
| | The design reactivation cycle/period of the tower shall be less than 8 hours including cooling period for desiccant for both the types of ADP. |
| 7.07.00 | Each ADP shall be provided with two (2) numbers of 100 percent capacity pre-filters and two (2) numbers of 100 percent capacity after-filters at the upstream & downstream of towers. The filtering media shall be of ceramic candle type elements designed to withstand atleast 50% of static pressure as differential pressure. The pre-filters shall be provided with automatic electrically operated drain trap arrangement with isolation and bypass valves. |
| 7.08.00 | The electric heaters (if required) (2x100% capacity for each ADP) shall be provided with thermostatic control for heater and relief valve for safety and shall be flanged type to facilitate easy replacement of element. |
| 7.09.00 | Each electric motor driven blower (2x100% capacity for each ADP) shall be provided with individual dry type filters at inlet. |
| 7.10.00 | The adsorber tower shall be designed with sufficient cross sectional area resulting low air velocity and pressure drop. Minimum 20% of desiccant depth shall be provided as free board in adsorber vessels. Adsorber vessels to be provided with suitable number of inspection/sight windows of "Persplex" for observation of adsorbent condition. Desiccant filling and removal connections shall be provided for the adsorber vessels. |
| 7.11.00 | The coolers/heat exchangers/ dehumidifiers of ADP shall be designed & constructed as per the requirements specified for “Intercoolers, After coolers & Oil coolers" above. |
| 7.12.00 | All pressure vessels such as pre-filters, after-filters, adsorber vessels, heaters, heat exchangers/de-humidifiers / coolers etc associated with ADP shall be designed in accordance with Section VIII, Division 1, of ASME Code or equivalent. The pressure vessels shall be provided with air tight gasketted manholes/handholes and relief valves. |
| 7.13.00 | Quantity of desiccant to be calculated shall take into account residual moisture content at the end of regeneration cycle. |
| 714.00 | Adsorption capacity and density to be considered for silica gel shall not be more than 10% and 550 $kg/m^3$ respectively. In case of activated alumina the same shall be 8% (max) and 900 $kg/m^3$ (max.) respectively. |
| 7.15.00 | In case of Heat of compression type, adsorbers shall be sized so that even when the compressor is operating at part load, complete regeneration shall be achieved within the cycle time and quality of air (dew point) shall be maintained throughout the design cycle period. |
| 7.16.00 | Complete ADP equipment shall preferably be mounted on a skid. |
| 7.17.00 | Required sample connections in piping be provided for sampling of air at desired locations. |
| 78.18.00 | Non-lubricated two way / three way / four way valves ball valves with pneumatic actuators be provided. |
| 7.19.00 | The material of Construction for various components of ADP shall be as as per manufacturer’s proven standard. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 7.20.00 | HOC dryers of single rotating drum type design using packed dessicant with in-built regeneration and adsorption compartments are also acceptable in place of specified twin-tower type dryers, if the design ensures specified performance guarantee. In case, the Contractor offers such a type, the same shall be of proven design and shall meet the conditions stipulated under **"proven-ness criteria" in relevant sub-section of Part-A, of Technical Specification. The control & instrumentation requirements specified is applicable for such design also.** |
| **8.00.00** | **INTERCONNECTING PIPING, FITTING AND VALVES** |
| | The interconnecting piping & valves within compressor house for compressed air & cooling water etc shall be designed in line with the specification furnished in subsection titled "Low Pressure Piping" of Part-B of this Technical Specification. |
| **9.00.00** | **CONTROL PHILOSPHY** |
| **9.01.00** | **GENERAL** |
| 9.01.01 | The minimum requirements are specified herein and the same shall be elaborated by contractor. The Contractor shall include controls & instrumentation to facilitate safe, reliable and efficient operation for the system. The controls, protection, interlock and instrumentation system offered by the contractor shall be subjected to approval of the Employer during post award engineering stage. |
| 9.01.02 | Any of the compressor and Air drying Plant may be selectable for "shutdown", "working" or "standby" duty. |
| 9.01.03 | On tripping of working equipment, the standby equipment shall come into operation automatically in case of very low air pressure in the system. |
| 9.01.04 | All abnormal conditions used for tripping the compressor or any other equipment shall be provided with pre-trip audio-visual indication/annunciation in the control panel. |
| 9.01.05 | An electrically operated automatic valve shall be provided on cooling water supply line of each compressor & dryer (if applicable) which will automatically shut off the cooling water supply, in case any of the compressor/dryer is not running for more than set time duration. Suitable interlock shall also be provided for opening the valve before starting of any of the compressor. |
| 9.01.06 | The following indications shall be made available in the control panels for repeating the same in main plant Control System / Panels.<br>(a) Status of each compressor<br>(b) Instrument air pressure low/high<br>(c ) Service air pressure low/high<br>(d) Dew point of instrument air<br>(e) Status of each ADP |
| 9.01.07 | Lube oil pressure and temperature in the oil circuit of compressor shall be automatically controlled. |
| 9.01.08 | Unless otherwise mentioned in the relevant electrical sub-section, automatic motor overload control system shall be included to permit continuous operation of compressors at minimum ambient air without exceeding the name plate rating of the motor. |
| **9.02.00** | **Screw Compressor** |
| 9.02.01 | Each compressor shall be in the control panel to operate either in Base duty (Auto Load-Unload) or Standby duty (Auto On-Off) mode in case of Screw and unload/modulate/energy optimization (Auto Dual Mode) in case of centrifugal |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | | | |
|---|---|---|---|
| 9.02.02 | In "Base duty" mode, whenever air supply from compressors exceeds the demand, control system shall operate the load-unload circuit at a predetermined set pressure, throttle the inlet valve and open the blow off valve. The compressor shall run in unloaded condition. When system pressure drops due to more demand, the load-unload circuit shall operate again to bring the compressor to 100% load after closing the blow -off valve. | | |
| 9.02.03 | In "Stand-by" mode the compressor shall automatically assist base load compressors during periods of peak air demand. When air pressure in the system reaches a pre-set lower limit, compressor should start in unloaded condition and the compressor shall be fully loaded. When the pressure in the system rises to pre-set high value, the compressor shall be unloaded and shall run in idling mode for a specific period (set by a timer). The compressor may be loaded to full load in case of drop in system pressure or compressor may be stopped in case the system pressure does not drop and compressor continues to idle for more than a pre-set time. | | |
| 9.02.04 | The control system shall provide warning to the operator that a hot-start condition exists for the motor driver and adequate cool-down period has not occurred after the motor was shut down. | | |
| 9.02.05 | The alarms and shutdown scheme mentioned below are suggestive and shall be provided as per manufacturer's standard practice meeting the safe operational requirement of the equipment/system each compressor:- | | |
| | (a) | "Air temperature high" at inlet to last stage | Alarm & trip |
| | (b) | "Low lube oil pressure" | Alarm & trip |
| | (c) | "High Lube oil supply temperature" | Alarm & trip |
| | (d) | "High oil filter differential pressure" | Alarm |
| | (e) | "Low lube oil level in lube oil sump" | Alarm |
| | (f) | "High inlet air filter differential pressure" | Alarm & trip |
| | (g) | "Low cooling water flow to air compressor" | Alarm |
| **9.03.00** | **Air Drying Plant** | | |
| 9.03.01 | Sequential operation of the adsorber towers & air compressors shall be controlled automatically with a provision for manual take over. | | |
| 9.03.02 | Change over of tower from drying mode to regeneration mode shall happen automatically if the dew point is high at the outlet of ADP sensed by the dew point (using aluminium oxide probe) meter/sensor. Automatic operation during regeneration, starting and stopping of blowers, starting and stopping of heaters, etc shall be timer controlled. During the process, in case, operation is taken over manually from the panel through push button or selector switch, the sequential operation shall start with the manual initiation for each of the steps. | | |
| 9.02.03 | The control system shall provide the (as minimum) alarms, "High Reactivation air temperature", "Low Reactivation air temperature", "Low cooling water flow", "Low air pressure at the outlet of ADP" and "High dew point at the outlet of ADP". Adequate number of temperature elements etc. shall be provided for measurement and monitoring of the same. | | |
| 9.02.04 | For rotary drum type Air drying plant, control philosophy as per manufacture’s standard and proven practice is also acceptable. | | |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **10.00.00** | **PAINTING**<br>All the equipments shall be protected against external corrosion by providing suitable painting.<br>The surface of SS, galvanized steel, Gun metal, Brass, Bronze and non-metallic components shall not be applied with any painting.<br>The steel surface to be applied with painting shall be thoroughly cleaned before applying painting by brushing, shot blasting etc as per standard procedure. |

# SUB-SECTION-I-**M4**

# FIRE DETECTION & PROTECTION SYSTEM

| | |
|---|---|
| **LOT-IA PROJECTS**<br>**FLUE GAS DESULPHURISATION (FGD) SYSTEM PACKAGE** | **TECHNICAL SPECIFICATION**<br>**SECTION-VI**<br>**BID DOCUMENT NO.: CS-0011-109(1A)-2** |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**FIRE PROTECTION AND DETECTION SYSTEM**

**1.00.00 GENERAL DESCRIPTION**

1.01.00 A comprehensive Fire Detection and Protection System covering all the areas of the power plant including Employer's facilities/ system /buildings (if applicable) is included in the scope of the Contract.

1.02.00 The complete Fire Detection and Protection Systems shall be as per the guidelines/ codes/ standards / rules of TAC/ NFPA / IS: 3034 / OISD etc. and all the systems, equipments and installation shall be got approved from TAC accredited professional(s)-India.

**2.00.00 HYDRANT SYSTEM**

Hydrant system shall consist of piping, hydrant valves, landing valve, water monitors, hoses, branch pipes, nozzle, hose boxes, etc.

2.01.00 **Areas to be Covered**

Complete FGD area, ZLD area (as provided) and other auxiliary buildings / areas under the scope of the Bidder.

**3.00.00 HVW AND MVW SPRAY SYSTEM**

3.01.00 **General**

It shall consist of: Spray pumps, pressurization arrangements, water mains network, deluge valves, alarm valves, flow switches, isolation valves, Y-type strainers, spray nozzles/projectors, spray nozzles piping network, detection system, instrumentation, local control panels, cables etc.

3.02.00 **Areas to be covered by HVW Spray System**

i) All transformers For FGD and ZLD (as provided) System having oil capacity above 2000Ltrs & located with-in plant boundary.

3.03.00 **Areas to be covered under MVW Spray System**

i) All cable galleries/ cable vault/ cable spreader room in Bidder scope of work under FGD and ZLD (as provided) System.

**4.00.00 FIRE EXTINGUISHERS AND FIRE STATION EQUIPMENTS**

4.01.00 **Fire Extinguishers**

As indicated in Bidder's Scope, Part-A.

**5.00.00 FIRE DETECTION, ALARM AND CONTROL SYSTEM**

5.01.00 **Codes and Standards**

a. The design, manufacture, testing, performance, etc. of the various components of the analog addressable Fire Detection and Alarm System shall comply with all currently applicable statutes, regulations and safety codes in the locality where the equipment will be installed. Nothing in this specification shall be construed to relieve the contractor of this responsibility.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

b. Unless otherwise specified, the Fire Detection and Alarm System and the components shall conform to the latest applicable Indian or IEC Standards. Equipment complying with any other authoritative National Standards such as British, USA, VDE, etc. will also be considered, provided the parameters specified are equivalent or better than the corresponding IS.

c. The Contractor shall be solely responsible for obtaining the required approval and clearance for the different components and systems of the Fire Detection and Alarm System from the following authorities, as applicable:

i. Department of Atomic Energy (Certification of safety from Radioactivity).

ii. Central Building Research Institute, Roorkee.

iii. Central Mining Research Station, Dhanbad.

iv. Local Fire Authorities.

d. The equipment and the system shall be of types approved by any of the following bodies, as applicable:

1. Loss Prevention Council, (LPC), U.K.
2. National Fire Protection Association, (NFPA), USA
3. Under-writers laboratories, (UL), USA
4. Factory mutual(FM)

5.02.00 **Areas to be covered under Fire detection and alarm System**

a) **Multisensor type detection system (Above and below the false ceiling or below the false flooring as the case may be)**

i) All switchgear / MCC/battery rooms of FGD and ZLD (as provided) control room building, various auxiliary buildings (if applicable), etc.

ii) Cable galleries of FGD and ZLD (as provided) control room building protected by MVW spray system. Further, multisensory detectors shall also be provided inside all cubicles/panels of control room, control equipment room and UPS / Battery charger areas.

iii) Above and Below false ceiling areas of all air-conditioned rooms of FGD and ZLD (as provided) control room building, various control rooms of auxiliaries as defined in Sl. No. (i) above and return air ducts of inert gas protected areas.

b) **Linear heat sensing cable detection system**

Gypsum and lime conveyor of FGD system and Cable Galleries covered under MVW Spray System.

c) **Quartzoid bulb heat detection system**

Equipments protected by HVW spray system, conveyors protected by MVW spray system.

**5.03.00 General requirements for all types of Detectors**

5.03.01 Detectors shall be housed or mounted in suitable enclosure in such a way that their performance is in no way affected. Special maintenance procedures if any required for the satisfactory operation of the detectors shall be clearly stated in the bid.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 5.03.02 | Necessary mounting accessories shall be provided for all the detectors. |
| 5.03.03 | In case the detectors are offered with their output (on sensing a fire) in the form of an electrical contact, it shall be noted that the contact shall be 'NC' type such that under fire conditions, this contact will open to initiate the fire alarm system. |
| 5.03.04 | Detectors shall preferably be designed as plug-in units, which fit into various bases according to place and type of mounting. This would also enable interchangeability. |
| 5.03.05 | Detectors shall be provided with the necessary compression type cable terminating glands for the incoming cables of flameproof type or PVC/metallic flexible/rigid conduits. |
| 5.03.06 | Depending upon the environmental conditions in which detectors are installed, chlorinated rubber based or epoxy or equivalent paint shall be used for finishing the surface of the enclosure. |
| 5.03.07 | The coverage or the zone of protection afforded by the detector and recommended height of mounting shall be furnished by the Bidder. The bidder shall furnish the test certificate in support of this. |
| 5.03.08 | Any metal parts used for detector construction shall be inherently resistant to corrosion or shall be plated or otherwise suitably treated to afford protection against corrosion. The plating or treatment shall in no way affect the detector performance. |
| 5.03.09 | Any plastic material or any sealing compound used in the detector shall be such as it will not deform or fail under the maximum temperature to be expected. |
| 5.03.10 | No detector shall contain any moving parts subject to wear and tear and must be able to operate afresh after each alarm release, without its exchange or adjustment. |
| 5.03.11 | The detector shall be located where the largest combustion gas concentration can be expected. |
| 5.03.12 | Adequate compensation and considerations shall be made for effects for wind velocities such as air-conditioning system and exhaust fans where dilution of particles of combustion is greater. |
| 5.03.13 | The exact location of detectors shall be coordinated with other services like air-conditioning grills, light fittings, cable trays etc. to provide aesthetically pleasing appearance. The return air paths of air-conditioning shall be avoided for detector location. |
| 5.03.14 | The detectors shall not be affected by temperature, humidity; air flow or by drift failures and shall not give any false alarm due to above. |
| 5.03.15 | The detectors shall not be sensitive to vibrations. Any special mounting arrangements required to counteract vibration shall be included in the contractor scope. |
| 5.03.16 | The quantity of multi- sensor detectors in each zone shall be based on the coverage factor of 25-sq. meter per detector. However the actual quantity of detectors required, taking into consideration obstructions due to floor beams, ventilation, doors, windows etc., shall be worked out and supplied (based on the actual layout) and installed by the contractor. |
| 5.03.17 | The detectors shall not give false alarm due to high humidity, temperature, and velocity of air in the surroundings and static electricity conditions. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

5.03.18 Process actuated switch devices such as pressure switches, flow switches, level switches, etc. shall be provided with suitable individual addressable interface (local or remote) units or modules so that these devices are addressable from the panel.

5.05.00 **Linear Heat Sensor Cables**

| | |
|---|---|
| Application | Detection of Stationary fire |
| Type | Digital |
| Operating voltage | 24 V DC |
| Approval | FM/UL |
| Conductor material | Steel |
| Insulation | Heat sensitive polymer |
| Outer Sheath | Black or colored PVC or flouropolymer suitable for the application environment |

**Installation features for LHSC**

1. Mounting arrangement have been indicated in tender drawing.
2. The detection zone/loop divisions of LHSC system shall match with MVW spray zones. Conveyors where LHSC shall be installed shall be divided into no. of various zones whereas conveyor for which IR detector is installed shall be considered as one zone.
3. Linear heat sensing cable detector shall run in a zigzag fashion (with an included angle of 90 deg) on each top cable tray, bottom tray and every alternate intermediate trays of each section of cable tray without undue sagging and interfering the normal operations. All supporting materials for mounting of LHSC shall be provided by the bidder.

5.06.00 **Addressable Analog Intelligent Detectors**

In addition to the features specified under the item General requirements for all types of Detectors, the Addressable Analog Intelligent Detectors shall be provided with the following features:

a) Detectors not specifically listed for sensitivity testing from the control panel are not acceptable due to the expense involved with manual testing as required by NFPA 72E.

b) The detector shall be suitable for two-wire operation and two-way communication on the intelligent analog signaling circuit.

c) The detector shall display a steady LED when in the Alarm State. The LED shall flash when in stand by or normal mode.

d) Each detector in a loop shall have short circuit isolator suitable for style-7 wiring as per NFPA-72.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

e) Address and sensitivity assignments shall be set preferably electronically. However, dip switches / rotary switches for the same are acceptable. The detectors shall be assigned a sensitivity level based on environment, time of day or any programmable function as required by the system user, and shall respond at that level whether in the “on line” or “default” mode.

f) The fire alarm control panel shall permit detector sensitivity adjustment through field programming of the system.

g) The detectors furnished shall be listed for use in environments as covered by Factory Mutual and UL and shall be installed according to the requirements of NFPA 72E for open area coverage.

5.07.00 **Multi sensor Detectors**

5.07.01 Multi sensor detectors shall incorporate a heat detection element and a photoelectric detection element. Both the elements shall be incorporated in a single unit. Both the elements shall be operative at all times and the fire signal shall be available from any or both elements combined together.

5.07.02 The detectors shall be sensitive to very low smoke densities of the order of say 0.05 $g/m^3$. Also it shall be possible to adjust this sensitivity on a step less basis over a range so that the optimum sensitivity could be selected at site to suit the conditions of installations. The coverage area of the smoke detection under standard NFPA test conditions shall not be less than 80-90$m^2$.

5.07.03 The detectors shall be complete with a mounting base that includes a terminal box into which the detector can be plugged in. Terminals for looping of the cables shall be provided.

5.07.04 All detectors shall be provided with built-in response and indicating lamps which shall give local visual indication, when it has operated in dense smoke conditions. The failure of lamp shall not prevent the function of detector.

5.07.05 In areas such as false ceiling where detectors themselves are not easily accessible, the remote response indicators outside the enclosed areas shall be provided to indicate the fire condition.

5.07.06 It shall be possible to replace any type of detector head by a different type detector without requiring change in cabling/panel wiring and condition of the zone, originally covered by the detector.

5.08.00 **System Configuration**

5.08.01 The Addressable Fire Alarm panel shall be able to communicate with repeater annunciation panel located at different places. The detectors or other devices of any other unit/area shall be addressable only from the respective Addressable Fire Alarm Panel, so that each of the Addressable Fire Alarm Panel is under the control of designated operating personnel at that location.

5.08.02 At least one spare loop shall be provided in each of the addressable type fire alarm panel located in FGD and ZLD (as provided) control equipment room with complete loop card and all other accessories so that Employer can expand the system in future. Further, at least 10% of loop capacity be left free in each of the connected loop in all the panels, so that, additional devices may be connected to the system in any of the loop by Employer in future.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 5.08.03 | FGD and ZLD (as provided) Fire alarm system shall be provided with necessary interface hardware and software for communicating fire alarms from this fire alarm panel to the main plant fire alarm control panel through potential free contacts. |
| 5.09.00 | **Analog Addressable Fire Detection and Alarm System** |
| 5.09.01 | General Requirements |
| 5.09.02 | This specification in general covers the functional requirements, and general design aspects of Microprocessor based, Analog Addressable Fire Detection Alarm / Annunciation and Control System. |
| 5.09.03 | The following description intends to describe only the brief hardware and functional requirements, scope of hardware requirements etc. but the actual configuration of the system shall be in line with the prevalent normal practices in the industry and shall conform to latest product range of selected manufacturer.<br><br>The fire detection and control system offered shall be complete in all respects for the safe and reliable operation of the entire system. Any additional hardware/software than those mentioned herein required to make the system complete shall be included in the scope of the Bidder. |
| 5.09.04 | All the system and its equipment specifically detectors, interface modules, panels, power supply, battery chargers etc. shall be furnished from a single source and the same shall be new and latest state of the art products of manufacturer engaged in the manufacture of Integrated Microprocessor based Analog Addressable Fire Detection and Alarm System. |
| 5.09.05 | All equipments such as detectors, panels etc shall be approved and listed by UL/FM/LPCB/VDS. |
| 5.09.06 | All types of smoke detectors shall be of analogue addressable type. Conventional detectors with interface modules are not acceptable. Each zone of LHSC detector and each IR detector shall be provided with interface module. |
| 5.09.07 | All the fire detection systems, process actuated switch devices such as pressure/flow/temperature switches and relays of control functions shall be hooked up with the analogue addressable fire detection and alarm system. Required addressable interface units shall be provided for various switch devices by the bidder to make them addressable. |
| 5.09.08 | The wiring shall be of class-A as per NFPA-72. |
| 5.09.09 | Bidder shall provide isolators at the start & end of the loop. |
| 5.09.10 | The complete system shall include, but not be limited to the following :<br><br>a) Master system CPU.<br><br>b) Analog Addressable Fire Detection and Alarm System panels including alarm modules, system supervisory control modules, auxiliary output control modules etc.<br><br>c) Power supplies, batteries and battery chargers.<br><br>d) Analog addressable type smoke detectors. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

e) Non addressable type conventional detectors (Linear heat sensing cable detector/ infra red type heat detector) and switching devices each with its own addressable interface modules.

f) Software and hardware as required for complete operation of the system.

g) Complete Wiring/cabling including its conduits/trays/fixtures etc.

i) The fire alarm control panel shall function as a communication interface between central processing unit and sensors. This panel shall have facility to process the input signal and to control all the input data received from initiating and indicating devices.

j) Fire alarm control panel shall have filters to ignore false alarm and increase sensitivity to real fire from sensors. The sensitivity of each detector should be automatically raised if detectors are gradually polluted due to dust and dirt entering inside the detector. If detectors are more polluted the control panel shall give a warning. The trouble report shall indicate the location of device requiring service.

k) Fire alarm control panel shall have printer to print out the alarm/ trouble occurrences.

l) The CPU shall serve as the systems central processor. Software shall be designed especially for fire alarm annunciation system applications and shall monitor status of processing alarms according to priorities, controlling/processing communications and synchronizing all system activities.

n) The system shall be able to recognize and indicate an alarm condition in a degrade mode of operation, in the event of processor failure or the loss of system communications to the circuit interface panels.

o) All devices shall be individually identifiable for its type, its zone location, alarm set value, alarm and trouble indication by an unique alpha numerical label.

p) The software logic modules and system database shall be programmable using a MS - Windows compatible program (latest version) on PC at site and required hardware shall be included in scope of supply. The system software programme shall be password protected and shall include full upload and download capability and during program upload or download through the PC, the capability of alarm reporting shall be retained. The software shall be downloaded to a PC for editing. The software shall enable Employer to add the spare loop provided in the fire alarm panels or addition of additional devices/detectors in any of the fire alarm panel.

q) The system shall support the use of Color Graphic display terminal for the display of information in an appropriate format.

r) The system shall include software for system data base, historical event log, logic, and operating system. The system shall require no manual input to initialise in the event of a complete power down condition. It shall return to an on line state as an operating system performing all programmed functions upon power restoration.

s) Activation of any fire alarm initiating device shall display (LCD alpha numeric display) message in describing the device originating the alarm condition at the Central monitoring station, at alarm panel, simultaneously at the repeater annunciation panel and shall initiate the associated protection systems & other related control functions. Similarly activation of any supervisory circuit, (supervised

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

valve closure, air pressure abnormal, fire pump trouble, water pressure low, etc.) or receipt of trouble report (primary power loss, open or grounded initiating or signaling circuit wiring, battery disconnect etc) shall display at the fire alarm control panel the origin of supervisory condition or origin of trouble condition as the case may be. It shall also record the occurrence of the event, the time of occurrence and the device initiating the same.

t) System configuration shall be menu driven and capable of being operated by, a person with no previous computer programming experience.

5.10.00 **System Functional Requirements**

5.10.01 The fire alarm panel shall evaluate the signals received from the detectors and shall handle the following functions:

1. System self monitoring and fault signaling.
2. Transmission of alarm and fault signals to the respective fire alarm panels and as well as in the repeater panel in fire station. Further, the panel shall activate a hooter/sounds in each of the area locally provided with fire/smoke detection system. Further, the system shall enable operation of spray system from the panel through monitoring station when the system operation is selected under remote, manual mode.
3. Initiate control functions like stoppage of conveyor, closure of fire doors, shutdown of draft fans, air-conditioning and ventilation plant/ equipment, opening smoke extraction vents, switching on smoke extraction equipment, emergency lighting etc.
4. Triggering stationary extinguishing systems such as clean agent system.
5. Supervising of unauthorised removal of a detector head from its base and giving a fault alarm on the control panel.
6. Supervising and monitoring the detection cabling, to indicate fault conditions in case of open/short circuit in the wiring.
7. Supervising by a separate annunciation window, changeover from mains supply to battery supply. “Mains On” indication shall be continuously on, as long as the main supply is available.
8. Facilitating simulation of fire conditions to enable the testing of circuits (without creating actual fire) under the test mode from the fire Alarm panel.
9. The control unit shall contain all the systems main switches lamps and fuses. Switches and lamps shall be easily identified even in closed casings.
10. All the circuits from the detectors to the panels and the circuits from panels to the actuating/operating devices of the respective extinguishing system shall be of closed loop type and shall be supervised for open-circuiting and short-circuiting of cables. The cable fault shall be audio-visually annunciated on the panels. Separate hooters with different tones shall be provided for ‘fault’ alarms and ‘fire’ alarms.
11. Actuate solenoid valve in spray system in case of fire from respective fire alarm panel. For achieving this if any additional hardware is required like relays, power supply and cables, the same may be provided.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 5.10.02 | **Analog Addressable Fire Detection and Alarm System shall also meet the following functional requirements:**<br><br>i. Each of the system shall support analog addressable detectors of all types, non-addressable type detectors/devices along with its addressable interface units/modules, Video display units etc.<br><br>ii. Each of the devices and/or detectors shall be individually, uniquely and continuously addressable by the panel to which it is connected.<br><br>iii. Detectors shall be interrogated for sensitivity settings from the control panel, logged for sensitivity changes indicating the requirement for cleaning and tested by a single technician using the field test routine. Sensitivity of each of the detectors made available in the panel shall be adjustable from the panel.<br><br>iv. The system shall be capable of self-adjustment to compensate for the accumulation of contaminants that would change the detector sensitivity in either a more or less sensitive direction to prevent false indications or failure to alarm in the actual fire conditions. The system shall annunciate a trouble condition when any analog addressable smoke detector reaches 80% of its alarm threshold due to gradual contamination, signaling the need for service and eliminating unwanted alarm.<br><br>v. Continuous supervision/monitoring of all the circuits and its components shall be made available from the panel for open, short circuits and grounding.<br><br>vi. The system shall be able to recognize and indicate and alarm condition in a degraded mode of operation, in the event of processor failure or the loss of system communications to the circuit interface panels.<br><br>vii. The system shall be programmable at site and required hardware shall be included in the scope of supply. The system software Programs shall be password protected and shall include full upload and download capability. During program upload or download the system shall retain the capability for alarm reporting. The system shall download to a PC for program editing. The software shall eligible employer to add the spare loop provided in the fire alarm panel or addition of additional devices/detectors in and of loop in any of the fire alarm panel.<br><br>viii. The system shall support the use of color interactive History Reporting video display terminal for the display of information in an appropriate format.<br><br>ix. The system shall include software for system database, historical event log, logic and operating system. The system shall require no manual input to initialize in the event of a complete power down condition. It shall return to an on line state performing all programmed functions upon power restoration.<br><br>x. Software logic modules and system database shall be programmable using a windows compatible program on PC. It shall be possible to program or edit the system database off site after down loading from the panel.<br><br>xi. All detectors shall incorporate internal automatic temperature compensation to overcome the effects of either high or low ambient temperatures in the installed environment on the detector sensitivity. The detectors shall be tested at a specified frequency by raising the detector sensitivity level to the alarm threshold, to check the operation of the detector without system alarming |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

automatically by the control panel.

xii. In an alarm or trouble condition the following shall occur on the monitoring station:

1. Sound an audible.
2. Write details of the actuation to a system log file on the PC.
3. Print the details of the actuation to the system printer.
4. Activate the color graphic display system controls, providing functions such as zooming, scrolling of Alarms, troubles, etc.

xiii. System configuration shall be menu driven and capable of being operated by a person with no previous computer programming experience.

5.11.00 **Panel Display Requirements.**

System display shall consist of minimum 80 character back lighted alphanumeric LCD display readable at any angle. Thirty-two character customer defined custom messages shall describe the location of the active device. In addition to the above, the following features shall be available.

a. The system shall be capable of programming to allow troubles occurred and restored in the system to be automatically removed from the display queue, eliminating the necessity for individual acknowledging of these events. This feature shall not affect the historical logging of events as programmed.

b. As a minimum an LED display for “Alarm”, “Audible Silenced”, “Supervisory”, “Trouble”, “Security”, “Power On”, And “Partial System Disabled”.

c. Touch activated membrane switches for “Alarm Acknowledge”, “Audible Silence”, “Supervisory Acknowledge”, “Security Acknowledge”, “Reset”, “Display Hold”, And “Display Next”.

d. All membrane switches shall be tactile with audible feedback when pressed.

5.12.00 **System Software Requirements**

i) The software shall control the operation, function and display of the graphic system and provide for automatic boot up and run from the hard disk drive of the computer.

ii) All project specifics actuating device programming shall be capable of being carried out on site via password access.

iii) The system shall monitor all alarm, supervisory; trouble and security conditions detected by the fire alarm control panel and provide separate disk based files, for each condition. These logs may be enabled, disabled, or cleared with password access.

This log information is not to be lost upon power failure or fire alarm control panel reset. A utility file shall be provided to sort the log data by date or by device and display this information either on the screen or the system printer.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

iv) Selective memory storage up to 800 events, shall be stored in flash memory and displayed, printed or downloaded by classification for selective event reports.

a. Software shall allow selection of events to be logged, including; inputs as alarms, troubles, supervisors, securities, status changes and device verification; out puts, as audible control and output activation; action, as reset, set sensitivity, arm/disarm, override, password, set time and acknowledge.

b. Audible and visual indications shall be generated when memory is 80% and 90% full to allow downloading of data. The system shall be programmable circular logging, assuring that at least the last 400 events will always be stored in non-volatile memory.

v) Software has driven logic for adjusting the alarm threshold windows on detectors to compensate for accumulating contamination and keep detector response sensitivity constant. The software shall compensate for either over-sensitized or desensitized units, raising a system flag when a detector approaches the allowable limits of adjustment, indicating a requirement for cleaning.

a. Values shall be stored in non-volatile memory allowing activation of all tracking functions within 90 sec of system initiation from a "cold boot". During the boot sequence, alarms from detectors programmed with the feature shall be suppressed.

When the full data history is active all devices shall be checked and any active alarms displayed.

b. The control panel shall place each detector in the system in an alarm condition, transparent to the system user, every twenty-four hours as a dynamic check of the accuracy of the alarm threshold setting. Upon reception of the alarm report, the system detector shall be restored to its pretest state.

c. The system shall be capable of monitoring the stage of detectors and displaying a message when a detector is approaching the limits of adjustment as a result of contaminates. A second message shall be displayed when the detector reaches the limits of adjustment due to these contaminate.

d. The system shall be capable of recognizing that a detector has been cleaned, initiating a series of tests to determine if the cleaning was successful and display a detector cleaned message, readjusting that detectors normal sensitivity setting reference.

vi) When an alarm or trouble is registered at the fire alarm control panel the graphics system shall display the first screen image for the first actuated device. The system shall be capable of zooming in for further information if required. At all times when in the alarm or trouble mode the fire control panel status i.e. number of current alarms and or troubles is to be displayed on the graphics screen.

5.13.00 **Power Supply for Fire Alarm Panels & Repeater Alarm Panel**

5.13.01 One set of 24V DC redundant power supply system comprising of 2 x 100% chargers and 1 x 100% batteries shall be provided for fire alarm panel and repeater alarm panel. The

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

batteries for fire alarm system shall be sealed maintenance free lead acid type. The battery backup for each fire alarm panel and repeater alarm panel shall be 24 hours and 30 minutes (in alarm conditions). At least 25% of the devices shall be considered to be active in alarm conditions. Each of the redundant chargers shall be sized to meet connected load requirements and keep the connected batteries full charged (Float Mode). Furthermore, the charger shall be sized to enable the boost charge of a fully discharged battery in 10 hours while feeding the load.

5.13.02 The batteries shall be sized as per relevant IEEE standard. For battery sizing calculation, an aging factor of 0.8, a temperature correction factor (based on temperature of 4 deg. C), voltage drop of 2V in cables. Capacity factor, Float Correction Factor, as per Battery Supplier Standard, shall be taken into consideration, if applicable and ambient temperature shall be considered as the electrolytic temperature. The sizing of the battery shall be as approved by Employer during detailed engineering.

5.13.03 The battery chargers and batteries shall be placed at a suitable location inside the fire alarm panel with partitions.

5.13.04 The detailed specification related to power supply system of fire detection & protection system shall be as specified in other sections of the technical specification.

5.14.00 **Control & Instrumentation requirements**

5.14.01 Not Used.

5.14.02 Not Used.

5.14.03 The specification related to Basic design criteria, Measuring Instruments, Process connection & piping, Control panels, Type test requirements etc shall be as specified in other sections of the technical specification.

5.15.00 **Cabling for fire alarm system**

All instrumentation cables twisted & shielded, FRLS PVC insulated and sheathed data highway / fibre optical cables, short term fire proof cables including prefabricated cables (with plug-in connectors) etc shall be provided by Contractor.

The contractor shall follow the cable philosophy as below:

| Application | | Type of cable |
|---|---|---|
| **From** | **To** | |
| PLC cabinets | PC, Printers etc. | As Mfr.'s Standard. However, connection between PLC and the remote I/Os shall be through fibre optic cable by Bidder if length is>300 M & coaxial cable if length<300 M |
| Detectors (including detectors mounted inside panels) /Any loop device | Detector (including detectors mounted inside panels) / Isolator/ Interface unit | Shielded, Twisted, PVC Cu. FRLS cables type "S" Refer Note 2, 3, 4 and 5 below. |
| Detectors (including detectors mounted inside panels) / Isolator / Interface Unit | JB | Shielded, Twisted, PVC Cu. FRLS cables type "S" Refer Note 2, 3, 4 and 5 below. |

| | | |
|---|---|---|
| JB | Fire alarm Panel | Shielded, Twisted, PVC Cu. FRLS cables type "S" Refer Note 2, 3, 4 and 5 below. |

**Notes:**

1. 10% spare pair shall be provided for all cables having more than four pairs.
2. Type "S" cable shall be multicore control cable having overall shielding & specification similar to instrumentation cable except insulation thickness and voltage grade which shall be 1100 V. Type "S" cable shall also satisfy requirements of Article 760 of NFPA 70.
3. Over and above, contractor may note that short term fire proof cables shall be provided for coal handling plant and inert gas protected areas. Short term fire proof cables shall be Mineral insulated copper conductor and copper sheathed type satisfying requirements of Fire resistance, safety in the industrial application areas mentioned in the specification and also, shall be approved by UL standards and certified by LPCB. The contractor shall provide all the cables so as to complete the system
4. Cable size of 2 core 1.5 sq.mm shall be used for loop wiring in-case of both control cable and short term fire proof cable.
5. Cable size of 2 core 2.5 sq.mm shall be used to provide power supply to various devices in the loop in-case of both control cable and short term fire proof cable.
6. The detailed specification of instrumentation cables and optical fiber cable shall be as specified in other sections of the technical specification.
7. Detector cables outside the building shall be corrugated steel taped armoured laid through cable trays wherever available and for rest of the areas, cable shall be buried at 600 mm depth with sand filling and brick covering at the top.
8. Detector cable within the building shall be either unarmoured & laid through galvanized iron (GI) conduits or armoured cables, as per the standard and proven practice of the manufacturer.

5.16.00 **Detection System for Conveyors**

i) **Linear Heat Sensor Cables:**

a) The LHS cable detector for each conveyor to be provided for both forward and return conveyors and shall be mounted as per the standard practice of the manufacturer/ supplier. Suspension of LHSC through flexible chains is a preferred arrangement. Further, LHS cable shall also be provided for return side of conveyors inside the bunker house.

b) The detection zone/loop divisions of LHSC system shall match with the MVW spray system.

c) Upon detection of fire either by QB detector or LHSC detector, the spray system shall be initiated. It shall also initiate spray system for the two adjacent zones after a time delay settable at site.

d) The LHSC detector shall be provided with suitable interface unit, which shall generate/ make the signal compatible with fire alarm panel.

(e.) Type: Digital, Operating Voltage: 24V DC, Conductor Material: Steel, Approval: FM/UL

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| 5.17.00 | **Detection System of Cable Galleries** |
| | i) In cable galleries, MVW spray system shall be actuated either by detection of fire by Linear Heat sensing cable detectors or by fire signal from Multisensor detection system. Apart from the automatic operation of spray system in the detected zone, the adjacent two zones shall also be sprayed with water automatically after a set time delay simultaneously. |
| | ii) LHSC detector shall run in a zig-zag fashion (with an included angle of minimum $90^{o}$ atleast) in each of the top tray, bottom tray and in every alternate trays. The mounting arrangement of LHSC detector shall be as per manufacturer's standard practice. |
| | iii) The detection zone/ loop divisions shall match with MVW spray zones. |
| 5.18.00 | **Multisensor Detection System** |
| | i) Upon detection of fire, multisensor detector shall be annunciated in the respective panels and shall activate a local hooter/sounder in the areas where fire is activated and this fire signal shall be employed to initiate the fire extinguishing system of that area such as automatic MVW spray system of cable galleries, fire extinguishing system of Control rooms/Control Equipment Rooms. |
| | ii) Cross zoning of the signal from two adjacent multisensor detectors shall be employed to initiate the fire extinguishing system of inert gas protected areas and MVW spray system of cable galleries. |
| | iii) Multisensor detector shall be provided for return air ducts of main plant, which shall consist of intake probe, detector housing, and exhaust pipe etc. The detector shall be mounted outside the duct. |
| | iv) The design coverage area for detectors (to be considered) shall not exceed 25 Sq.M. for each detector. |
| **6.00.00** | **PIPING AND VALVES** |
| 6.01.00 | **General Data for Pipes etc.** |
| | i) Mild steel as per IS:1239 (Part-I) medium grade (upto 150 NB) & as per IS:3589 Gr 410 (above 200 NB) or Equivalent for pipes normally filled with water. |
| | ii) Mild steel as per IS:1239 (Part-I) medium grade (upto 150 NB) & as per IS:3589 Gr.410 (above 200 NB) or Equivalent and galvanised as per IS:4736 for pipes normally empty and periodically charged with water and foam system application. |
| | iii) Pipe protection shall be as follows :<br>To prevent soil corrosion buried pipes / pipes in trench shall be properly lagged with corrosion protective tapes of coal tar type as per IS:15337 or AWWA C 203. The total thickness of protective tapes to be applied on buried pipes / pipes in trench shall be 4.0mm. This can be achieved by using 4.0mm thick tape in single layer or 2.0mm thick tape in double layer. |
| | iv) Pipe thickness:<br>a) For Pipe sizes upto 150 NB and above: As per IS:1239 Part-I medium grade.<br>b) For Pipe sizes 200 NB and above refer Annexure-I. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

v) All valves shall be as per applicable IS/BS codes & approved by TAC for specific fire protection system and shall be provided with locking arrangement (with locks) in open or close condition. Further, all gate/butterfly valves of size 200 mm & above shall be provided with spur gear reduction unit.

vi) All the flanges and counter flanges shall conform to ANSI B 16.5 Cl 150.

vii) Strainer Body as per IS:2062 (tested).

viii) Pipe Fittings

1) The material shall conform to ASTM A 234 Gr WPB or ASTM A 105 or equivalent and dimensional standard conforming to ANSI B 16.11 (socket & threaded type), ANSI B 16.9 (for butt welded fittings) and ANSI B 16.5 (for flanges and flanged fittings) as the case may be. Further, galvanised malleable cast iron fittings as per IS:1879 in Cast iron fitting as per BS-1641 are also acceptable.

2) **Grooved couplings :** Vendor may also use mechanical grooved couplings type fittings in GI pipe lines for HVW / MVW spray system. All materials and products shall be either Underwriters Laboratories (UL) Listed or Factory Mutual (FM) Approved and installed in accordance with NFPA Standard 13 / equivalent Standard.

3) The fittings shall be galvanised as per IS : 4736 for galvanised pipe application. In case of branching connections from GI mains for spray piping network, socket may be welded for more than two pipe reduction instead of standard tees.

4) Fabricated fittings shall not acceptable up to pipe size to 300 NB. For sizes 350 NB and above, fittings may be fabricated as per BS:2633/BS:534.

ix) Welding of galvanised iron pipes/fittings would be permitted provided the same is carried out by means of special electrodes suitable for the above application and the same shall be approved by Employer. After, welding, welded portions shall be applied with three coats of zinc silicate treatment/rich paint over one coat of suitable primer. Further, the Contractor shall provide proper zinc paint at the point of welding.

**7.00.00 PAINTING**

7.01.00 All the Equipments shall be protected against external corrosion by providing suitablepainting.

7.02.00 The surfaces of stainless steel, Gunmetal, brass, bronze and non-metallic components shall not be applied with any painting.

7.04.00 **All Steel Surfaces (external) exposed to atmosphere (outdoor installation)**

(i) **Surface Preparation :** The steel surfaces to be applied with painting shall be thoroughly cleaned before painting by wire brushing, air blowing, etc.

(ii) **Painting:** One (1) Coat of red oxide primer of thickness 30 to 35 microns followed up with three (3) coats synthetic enamel paint, with 25 microns as thickness of each coat. For plant at coastal area, epoxy resin based zinc phosphate primer followed by epoxy resin based paint pigmented with titanium di-oxide shall be used in place of enamel paints.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

7.05.00 **All Steel Surfaces (external) inside the building (indoor installation)**

(i) **Surface Preparation :** The steel surfaces to be applied with painting shall be thoroughly cleaned before painting by wire brushing, air blowing, etc.

(ii) **Painting:** One (1) Coat of red oxide primer of thickness 30 to 35 microns followed up with two (2) coats synthetic enamel paint, with 25 microns as thickness of each coat. For plant at coastal area, epoxy resin based zinc phosphate primer followed by epoxy resin based paint pigmented with titanium di-oxide shall be used in place of enamel paints.

7.06.00 **Deluge Valves, Alarm Valves, Foam monitors, Water monitors, Foam Proportioning equipments, Foam makers, etc.**

Painting of all equipments /.components of FDPS package shall be as per manufacturer's standard practice or as detailed below whichever is superior in quality.

| Environment | Paint scheme | Total DFT |
|---|---|---|
| Normal / Mild Corrosive Environment | Primer- zinc filled epoxy<br>Finish – Aliphatic Polyurethane (shade RAL3000)(P.O Red) | Min 125 microns |
| Corrosive Environment (as in coastal areas) | Primer- zinc filled epoxy<br>Intermediate – Epoxy MIO<br>Finish – Aliphatic Polyurethane (shade RAL3000)(P.O Red) | Min 200 microns |

# SUB-SECTION-I-M5

# EQUIPMENT COOLING WATER SYSTEM

## EQUIPMENT COOLING WATER SYSTEM

1.00.00 **BRIEF DESCRIPTION OF SYSTEM**

1.01.00 The Equipment Cooling Water System shall be provided for Flue Gas Desulphurization system Auxiliaries as described.

1.02.00 The Equipment cooling water system shall be common for all the three units. The cooling system for Flue Gas Desulphurization system Auxiliaries shall be of closed circuit type with demineralised (DM) water in the primary circuit. CW blowdown water tapped from CW pump discharge header would be used in the secondary circuit for cooling the primary circuit DM water. Hence all materials of construction used in primary and secondary side of the equipment cooling water system should be suitable for the water quality. The scheme shall be as per relevant tender drawing listed elsewhere in the specification. The DM cooling water pumps shall be provided as indicated in the relevant tender drawing. However, bidder can use secondary circuit ACW water pumps as process water pumps or bidder may envisage separate booster pumps after PHE for FGD process water (as applicable) .

1.03.00 Quality of water

(a) Primary circuit - Demineralised (DM) water

(b) Secondary circuit - Condenser cooling water

1.04.00 The pH of DM water in the closed loop shall be continuously monitored and controlled at around 9.5. The control shall be achieved by dosing sodium hydroxide in DM water overhead tank. The dosing shall be done manually by operating dosing valve.

2.00.00 **SYSTEM DESIGN**

2.01.00 The ECW system design for Flue Gas Desulphurization system Auxiliaries shall be as follows:

A centralized/combined ECW system is envisaged for all FGD system auxiliaries . In the primary circuit , Demineralised cooling water (DMCW) pumps shall discharge cooling water through plate type heat exchangers (PHE) for cooling of the FGD system auxiliaries . The outlet header from plate heat exchangers shall be suitably branched off to supply cooling water to the to the individual Flue Gas Desulphurization system Auxiliaries coolers. No booster pumping system shall be provided in the primary system. Outlet from these auxiliary coolers shall be connected back into a common return header and led back to the suction of DMCW pumps to complete the closed loop primary cooling circuit.

2.02.00 The secondary circulating water system shall receive water through a tapping from CW blow down from the CW pumps discharge header. This water will be further

pressurised by a set of auxiliary cooling water booster pumps and fed through the plate type heat exchangers and the discharge secondary water from PHEs shall be used as process water for FGD system.

2.03.00 For the primary cooling circuit, an overhead tank of minimum (normal) capacity of 5 Cu.M shall be provided by the bidder. Outlet of this tank shall be connected to the closed circuit return header . The normal capacity of the tank shall be at 60% of the tank height.to serve

2.04.00 Frame of each plate type heat exchanger shall have about 25% extra capacity i.e. the frame shall be able to accommodate about 25% extra plates.

2.05.00 Self cleaning Filters

To prevent fouling on the secondary cooling waterside of the PHE, self-cleaning type filters, (2 X 100%) shall be provided by the bidder on the secondary cooling water inlet header to the PHE.

2.05.00 Make up to the closed loop primary circuit shall be taken from the DM water transfer pumps located near DM water storage tank and emergency make up from the discharge of condensate transfer pumps. The make-up would be given to overhead storage tank.

2.06.00 Required orifices shall be provided in the primary and secondary circuit of Equipment Cooling Water system for balancing of pressure.

3.00.00 **CONSTRUCTION FEATURES**

3.01.00 **Pumps and Heat (PHE) Exchangers**

3.01.01 The general design and construction features of various pumps of the Equipment Cooling Water System shall be as per the Annexure titled "**General Specification For Pumps**" enclosed with this sub-section.

3.01.02 Specific features of various pumps and plate type heat exchangers of ECW system shall be as follows :-

**A) Pumps (ECW System )**

i) Type : Horizontal Centrifugal type

ii) Casing : Axially split type.

iii) Impeller type : Closed

iv) Speed : 1500 rpm (max.)

v) Drive transmission : Direct

vi) Seal : Mechanical seal for primary water pumps and Self water/gland for secondary side

vii) Lubrication : Oil/Grease/Self liquid.

viii) Coupling : Spacer type.

ix) Drain plug, vent, priming connection, ; Required.

x) Coupling guard, lifting lugs : Required

xi) Operating range : 40% to 120% of rated flow

xii) Pump characteristic : Non-overloading type & stable

xiii) Parallel operation : Required.

xv) Material of Construction:

| | **Primary Side DM Cooling Water Pumps** | **Secondary side Auxiliary Cooling Water Pumps** |
|---|---|---|
| a) Casing | ASTM-A-351 CF8M | 2.5% Ni CI to IS 210 GR FG-260 |
| b) Impeller | ASTM-A-351 CF8M | Bronze to IS 318 Gr. I/II or SS – 316 / CF8M |
| c) Impeller Wearing Rings | SS-316 | High leaded bronze to IS-318 Gr.V / SS -316 in case of SS Impeller. |
| d) Casing wearing rings | --------As per manufacturer's Standard ----- | |
| e) Shaft | SS-316 | SS-316 |
| f) Shaft Sleeve | SS-410 | SS-410 |
| g) Gland | ---------- | 2.5% Ni CI to IS 210 GR FG-260 |
| h) Lantern Ring | SS-316 | Bronze |
| i) Gland packing | ---------- | Teflon Impregnated /Manufacturer's standard (Non-Asbestos type) |
| i) Mechanical Seal | Manufacturer's Std | ---------- |

| | | |
|---|---|---|
| j) Base plate | ---------- MS fabricated - IS:2062 ---------- | |
| k) Stuffing Box | ---------- | 2.5% Ni CI to IS 210 GR – FG-260 |
| l) All fasteners | Stainless steel | Stainless steel |

**B) Plate type Heat Exchangers - Design Parameters**

(i) Type : Plate type, single pass

(ii) Design pressure : Maximum expected pressure to which PHE may be subjected plus 5% additional margin. Maximum expected pressure shall be based on the shut-off head of pumps (either the secondary or primary side whichever is maximum) plus the suction pressure of the pumps.

**Material of Construction**

(i) Heat transfer plate : SS-AISI-316

(ii) Compression / Fixed plates : IS:2062

(iii) Movable pressure plate : IS-2062

(iv) Guide rail : IS-2062 with stainless steel cladding

(v) Support Beam/Column : IS 2062

(vi) Plate gasket : Nitrile Rubber

(vii) Nozzle : Carbon steel

(viii) Flanges : Carbon steel

(ix) Nozzle flange Gasket : 3 mm wire inserted Red Rubber.

(x) Nozzle flange Bolts/ Nuts : SA 193 B7/SA 194 2 H.

(xi) Name plate : AISI-316

(xii) Tightening Rods : IS-1367 or equivalent

**Other Features:**

(i) Double sealing arrangement should be provided at outer edge and around ports to avoid intermixing of fluids. The inter-space should be vented to atmosphere.

(ii) Plate thickness should be adequate to withstand all operating conditions but not less than 0.6 mm.

(iii) Frame of exchanger should be designed so that 25% additional plates can be added in future.

(iv) Flanges shall be per ANSI B 16.5 for equivalent.

(v) Thickness of pressure and frame plates as per ASME sec. VIII Div. I.

(vi) Minimum corrosion allowance for heat exchanger parts shall be 1.6 mm.

(vii) After pressing all the plates shall be tested by light box/vacuum/air chamber test as per manufacturers' standard practice.

(viii) The corrosion allowance for the heat exchanger plate such as pressure parts (support plates), nozzles, sliding channels and frame shall be 1.6mm (minimum).

3.02.00 **Piping, Valves /Tanks:**

Construction features of Piping, Valves and tanks shall be as per the sub-section titled "Low Pressure Piping" of this Technical specification

3.03.00 Self cleaning strainer**:**

(a) Body of filter shall conform to IS:210Gr. FG260 or ASTM-A-515 Gr. 75/IS: 2062 and internally painted with epoxy.

(b) Strainer element shall be constructed of perforated stainless steel plant linked with stainless steel (SS316) screen for fresh water and SS316L grade SS screen for sea water.

(c) The mesh size shall be selected on the basis of average clearance between the plates of the plate heat exchanger.

3.04.00 **Construction features of ECW overhead tank**

| **Sl. No.** | **Description** | | **Tech. Particulars** |
|---|---|---|---|
| I. | Quantity | : | One (1) |
| II. | Capacity | : | 5 Cu.M (Minimum.) |

| IV. | Design Pressure | : | Atmospheric |

| | | | | |
|---|---|---|---|---|
| | V. | Design Standard | : | ASME Boiler and Pressure Vessel code Section-VIII/IS:2825 (Class 3) |
| | VI. | Material of Construction | : | Plates to IS:2062/ ASTM A36.Minimum shell thickness shall be 6mm. |
| | VII. | ACCESSORIES | | |
| | | (a) Vent, overflow and drain | : | Required (Overflow drain to be taken upto '0' M plant drain) |
| | | (b) $CO_2$ absorber for vent | : | Required |
| | | (c) Seal for overflow | : | Required |
| | | (d) Manhole & approach ladder/platform/ | : | Required |
| 3.05.00 | **Construction features of Alkali dosing tank.** | | | |
| | Quantity per Unit | | : | One (1) |
| | Useful Capacity of Each Tank | | : | Suitable for the system (Minimum 500 lt) |
| | Size (Dia. x Height) | | : | Adequate |
| | Type | | : | Vertical cylinder, dished bottom |
| | Design Pressure | | : | Atmospheric |
| | Design Standard | | : | ASME Boiler & Pressure vessles Code Section-VIII. Div.I/ IS:2825 (Class-3) |
| | Material of Construction | | : | MS Plates to IS:2062/ ASTM A36. with rubber lining of 4.5 mm thick & Minimum shell thickness shall be 6mm. OR SS plates of minimum thickness of 3 mm . |
| | Dissolving Basket | | : | AISI-316, |
| | Agitator | | : | stainless steel 316SS construction along with drive motor of suitable rating and protection class. (With Slow speed reduction gear unit) |
| | Accessories | | | |
| | (a) | Vent, overflow and Drain | : | Required |

| | | | | |
|---|---|---|---|---|
| | (b) | Sample Connection | : | Required |
| 4.00.00 | **SIZING / DESIGN CRITERIA** | | | |
| 4.01.00 | **Pumps** | | | |
| | a) | Flow | : | <u>Secondary Water pumps:</u><br><br>Design flow – less than or equal to maximum flow available indicated in Annexure-II.<br><br><u>Primary Water pumps.</u><br><br>Design flow of all Flue Gas Desulphurization system Auxiliaries coolers.. |
| | b) | Head | : | As per system, requirement +10% margin on friction head. |
| | c) | Motor rating | : | Continuous motor rating (at 50 degree C ambient) for all pumps shall be at least ten percent (10%) above the maximum power requirement at any condition of the entire characteristic curve of the pump. |
| | d) | No. of Primary side pumps | : | As indicated in Part A of the specification. |
| | e) | No. of Secondary water pumps | : | As indicated in part A of the specification |
| | f) | Re-circulation control Valves, Piping & Pressure break down orifice. | : | Required |
| | g) | Additional design requirements | : | a) To be referred in the Annexure sub-section titled "General specification for horizontal pumps" enclosed with this section. |
| 4.02.00 | **Plate Type Heat Exchangers** | | | |
| | a) | Design Secondary water Inlet temperature | : | Not less than 36 deg. C |
| | b) | Secondary water outlet | : | Temperature as achieved subject to the maximum ACW flow indicated. |
| | d) | Overall fouling factor (minimum) (f) | : | $0.8 \times 10^{-4}$ Hr $M^2$ deg C/Kcal |

e) No. of heat exchangers/ unit : As indicated in part A of the specification

f) Overall Heat transfer coefficient [U(o)]: As per manufacturer's design

g) Dirty Heat transfer Coefficient [U(d)] : [1 / (1/U(o) +f) ]

h) Heat Transfer Area (Sqm) : $\frac{\text{Total Heat Load (in Kcal/hr)}}{\text{U(d) x LMTD}}$

i) Heat transfer area of PHE shall be selected such that each Sq.M of heat transfer plate shall transfer not more than 6500 Kcal/hr.

5.00.00 **INSTRUMENTATION**

5.01.00 All instruments, such as thermowell, temperature element alongwith temperature transmitter, flow element, pressure/DP and temperature gauge/transmitters/sensors/switches, DP switch, pH analyzer, Rotameter etc. alongwith associated devices should meet the requirement as specified in relevant sub-section of this Technical Specification and shall be sufficient to meet all interlock/protection & operation requirement.

5.02.00 Minimum instrumentation required for the Equipment Cooling water system shall be as per tender P & I Diagram wherever included in the specification.

6.00.00 **CONTROL / OPERATION PHILOSOPHY**

6.02.00 The pump suction valves, re-circulation valves and discharge valves shall be motor actuated type to enable remote operation.

6.03.00 Pump suction valves shall be provided with required limit switches for interlock & control.

6.04.00 The pumps shall be designed to operate under discharge valve open and as well as in close condition.

6.05.00 Wherever more than one sump/tank is provided, Suction header shall be interconnected such a way that any of the sump/tank may be selected from the panel for operation.

6.06.00 Any of the pump shall be selectable as standby duty. Standby pump shall come into operation on tripping of working pump or inadequate pressure in the discharge header.

6.07.00 Suction and Discharge valves of pumps shall be interlocked with start/stop of respective pumps.

6.08.00 Local emergency stop provision for each pump shall be provided.

| CLAUSE NO. | EQUIPMENT COOLING WATER SYSTEM |
|---|---|

| | |
|---|---|
| 6.09.00 | All the working pumps shall be interlocked with the suction level or suction pressure condition as the case may be. Pumps operation shall be interlocked with the high discharge condition so that the pump may not operate at shut-off pressure. |
| 6.10.00 | Automatic inlet valves at supply line to each of the tank/sump shall be provided so that the valves shall open and close at low-level and very high-level respectively. |
| 6.11.00 | A control valve shall be provided to maintain a constant pressure differential between the main supply and return headers of DM water. The valve will bypass flow to maintain a constant return header pressure to compensate for fluctuations in coolant flow to the process heat exchangers due to modulating control valves on the process coolers or if any cooler goes out of service in DM circuit. |
| 6.12.00 | Alarm to indicate high differential pressure across self-cleaning filter strainers, heat exchangers as the case may be. |
| 6.13.00 | Manually operating globe / regulating valves shall be provided in the water side of each of the cooler outlet for control of flow as specified in respective equipment specification. |
| 6.14.00 | Detailed Interlock & protection logic to be implemented in FGD control system shall be provided by the contractor and the same shall be as finalized during detailed engineering. |
| 7.00.00 | **PAINTING** |
| 7.01.00 | All the equipments such as pumps, tanks and plate type exchangers of this system shall be protected against external corrosion by providing suitable painting as mentioned below. For painting of valves and piping, relevant section shall be referred to. |
| 7.02.00 | The surfaces of stainless steel, Gunmetal, brass, bronze and non-metallic components shall not be applied with any painting. |
| 7.03.00 | The steel surface to be applied with painting shall be thoroughly cleaned before applying painting by brushing, shot-blasting etc as per the agreed procedure. |
| 7.04.00 | For all the steel surfaces exposed to (outdoor installation) atmosphere, a coat of chlorinated rubber based zinc phosphate primer of minimum thickness DFT of 50 microns followed up with undercoat of chlorinated rubber paint of minimum DFT of 50 microns shall be applied. Then, intermediate coat consisting of one coat of chlorinated rubber based paint pigmented with Titanium di-oxide with minimum DFT of 50 microns and topcoat consisting of two coats of chlorinated rubber paint of approved shade and color with glossy finish and DFT of 100 microns shall be provided. Total DFT of paint system shall not be less than 200 microns. |
| 7.05.00 | For all the steel surfaces inside the (indoor installation) building, a coat of red oxide primer of minimum thickness of 50 microns followed up with undercoat of synthetic enamel paint of minimum thickness of 50 microns shall be applied. The top coat shall consist of two coats each of minimum thickness of 50 microns of synthetic enamel paint and thus total thickness shall be minimum 200 microns. |

| CLAUSE NO. | EQUIPMENT COOLING WATER SYSTEM |
|---|---|
| 7.06.00 | Internal surfaces of ECW over tank shall be painted with One coat of unmodified epoxy resin alongwith polyamide hardener and minimum two (2) coats unmodified epoxy resin alongwith Aromatic adduct hardener and total thickness of primer and paint should not be less than 400 microns. |

**Annexure-I to ECW system Specification**

## GENERAL SPECIFICATION FOR HORIZONTAL PUMPS

(1) **SCOPE**

This specification covers the design, material, construction features, manufacture, inspection, testing the performance at the Vendor's/Sub-Vendor's Works and delivery to site of Horizontal Centrifugal Pumps.

(2) **CODES AND STANDARDS**

The design, material, construction, manufacture inspection and performance testing of Horizontal Centrifugal Pumps shall comply with all currently applicable statutes, regulations and safety codes in the locality where the Equipment will be installed. Nothing in these specifications shall be construed to relieve the Vendor of this responsibility. The Equipment supplied shall comply with the latest applicable Indian Standards listed below. Other National Standards are acceptable, if they are established to be equal or superior to the Indian Standards.

(3) **LIST OF APPLICABLE STANDARDS**

| | | |
|---|---|---|
| IS : 1520 | : | Horizontal Centrifugal Pumps for clear cold fresh water |
| IS : 5120 | : | Technical requirements of rotodynamic special purpose pumps |
| API : 610 | : | Centrifugal pumps for general refinery service. |
| IS : 5639 | : | Pumps Handling Chemicals & corrosion liquids |
| IS : 5659 | : | Pumps for process water |
| HIS | : | Hydraulic Institute Standards, USA |
| ASTM-1-165-65: | | Standards Methods for Liquid Penetration Inspection. |

In case of any contradiction with aforesaid standards and the stipulations as per the technical specifications as specified hereinafter the stipulations of the technical specifications shall prevail.

(4) **DESIGN REQUIREMENTS**

(a) The Pump shall be capable of developing the required total head at rated capacity for continuous operation. Also the pumps shall be capable of being operated to give satisfactory performance at any point on the HQ characteristics curve. The operating range of the pump shall be 40% to 120% of the duty point unless otherwise mentioned elsewhere. The maximum efficiency

of pump shall preferably be within ± 10% of the rated design flow as indicated in data sheets.

(b) The total head capacity curve shall be continuously rising from the operating point towards shut – off without any zone of instability with the highest head at shut-off condition. Shut-off head shall be more than the rated design head by 15 % or more for radial flow pump and 25 % more than the design head for mixed flow/turbine type pumps.

(c) Pumps of a particular category shall be identical and shall be suitable for parallel operation with equal load division. The head Vs capacity and BHP Vs capacity characteristics should match to ensure even load sharing and trouble free operation throughout the range. Components of identical pumps shall be interchangeable.

(d) Pumps shall run smoothly without undue noise and vibration. Peak to peak vibration limits shall be restricted to the following values during operation:

| **Speed** | **Antifriction Bearing** | **Sleeve Bearing** |
|---|---|---|
| 1500 rpm and below | 75.0 micron | 75.0 micron |
| 3000 rpm | 50.0 micron | 65.0 micron |

The noise level shall not exceed 85 dBA overall sound pressure level reference 0.0002 microbar (the standard pressure reference for air sound measurement) at a distance of 1 M from the equipment surface.

(e) The pumps shall be capable of starting with discharge valve fully open and close condition. Motors shall be selected to suit to the above requirements.

(f) Pumps shall be so designed that pump impellers and other accessories of the pumps are not damaged due to flow reversal.

(g) The Contractor under this specification shall assume full responsibility in the operation of pump and motor as a unit.

(5) **DESIGN CONSTRUCTION**

(a) Design and construction of various components of the pumps shall conform to the following general specifications. For material of construction of the components, data sheets shall be referred to.

(b) Pump Casing

Pump casing shall have axially or radially split type construction as specified. The casing shall be designed to withstand the maximum shut-off pressure developed by the pump at the pumping temperature.

Pump casing shall be provided with a vent connection and piping with fittings & valves. Casing drain as required shall be provided complete with drain valves,

piping and plugs. It shall be provided with a connection for suction and discharge pressure gauge as standard feature. It shall be structurally sound to provide housing for the pump assembly and shall be designed hydraulically to minimum radial load at part load operation.

(c) Impeller

Impeller shall be closed, semi-closed or open type as specified elsewhere and designed in conformance with the detailed analysis of the liquid being handled.

The impeller shall be secured to the shaft, and shall be retained against circumferential movement by keying, pinning or lock rings. On pumps with overhung shaft, impellers shall be secured to the shaft by a lockout or cap screw which tightness in the direction of normal rotation.

(d) Impeller/Casing Wearing Rings

Replaceable type wearing rings shall be provided at suitable locations of pumps as per manufacturer's standard practice. Suitable method of locking the wearing ring shall be used.

(e) Shaft

The critical speed shall be well away from the operating speed and in no case less than 130% of the rated speed.

The shaft shall be ground and polished to final dimensions and shall be adequately sized to withstand all stresses from rotor weight, hydraulic loads, vibration and torques coming in during operation.

(f) Shaft Sleeves

Renewable type fine finished shaft sleeves shall be provided at the stuffing boxes/mechanical seals. Length of the shaft sleeves must extend beyond the outer faces of gland packing of seal end plates so as to distinguish between the leakage between shaft and shaft sleeve and that past the seals/gland.

Shaft sleeves shall be fastened to the shaft to prevent any leakage or loosening. Shaft and shaft sleeve assembly should ensure concentric rotation.

(g) Bearings

Heavy duty bearings, adequately designed for the type of service specified in the enclosed pump data sheet and for long, trouble free operation shall be furnished.

The bearings offered shall be capable of taking both the radial and axial thrust coming into play during operation. In case, sleeve bearings are offered additional thrust bearings shall be provided. Antifriction bearings of standard

type, if provided, shall be selected for a minimum life 20,000 hrs. of continuous operation at maximum axial and radial loads and rated speed.

Proper lubricating arrangement for the bearings shall be provided. The design shall be such that the bearing lubricating element does not contaminate the liquid pumped. Where there is a possibility of liquid entering the bearings suitable arrangement in the form of deflectors or any other suitable arrangement must be provided ahead of bearings assembly.

Bearings shall be easily accessible without disturbing the pump assembly. A drain plug shall be provided at the bottom of each bearings housing.

(h) Stuffing Boxes

Stuffing boxes of packed ring construction type shall be provided wherever specified. Packed ring stuffing boxes shall be properly lubricated and sealed as per service requirements and manufacturer's standards. If external gland sealing is required, it shall be done from the pump discharge. The Bidder shall provide the necessary piping valves, fittings etc. for the gland sealing connection.

(i) Mechanical Seals

Wherever specified in pump data sheet, mechanical seals shall be provided. Unless otherwise recommended by the tenderer, mechanical seals shall be of single type with either sliding gasket or bellows between the axially moving face and shaft sleeves or any other suitable type. The sealing faces should be highly lapped surfaces of materials known for their low frictional coefficient and resistance to corrosion against the liquid being pumped.

(j) The pump supplier shall coordinate with the seal maker in establishing the seal chamber of circulation rate for maintaining a stable film at the seal face. The seal piping system shall form an integral part of the pump assembly. For the seals under vacuum service, the seal design must ensure sealing against atmospheric pressure even when the pumps are not operating. Necessary provision for seal water supply along with complete piping fittings and valves as required shall form integral part of pump supply.

(k) Pump Shaft Motor Shaft Coupling

The pump and motor shafts shall be connected with an adequately sized flexible coupling of proven design with a spacer to facilitate dismantling of the pump without disturbing the motor. Necessary coupling guards shall also be provided.

(l) Base Plate

A common base plate mounting both for the pump and motor shall be furnished. The base plate shall be fabricated steel and of rigid construction, suitably ribbed and reinforced. Base plate and pump supports shall be so

constructed and the piping unit so mounted as to minimize misalignment caused by mechanical forces such as normal piping strain, internal differential thermal expansion and hydraulic piping thrust. Suitable drain troughs and drip lip shall be provided.

(m) Assembly and Dismantling

Assembly and dismantling of each pump with drive motor shall be possible without disturbing the grouting base plate or alignment.

(n) Drive Motor (Prime Mover)

Continuous Motor rating (at 50 0 C ambient) shall be at least ten percent (10%) above the maximum load demand of the pump in the entire operating range to take care of the system frequency variation and in no case less than the maximum power requirement at any condition of the entire characteristic curve of the pump. The KW rating of the drive unit shall be based on continuously driving the connected equipment for the conditions specified. However, in cases where parallel operation of the pumps are specified, the actual motor rating is to be selected by the Bidder considering overloading of the pumps in the event of tripping of operating pump(s).

Annexure-II

Auxiliary (Secondary) water available

| Sl.No | Project | Maximum water available (cum/hr) |
|---|---|---|
| 1 | Kudgi (3 X 800 ) MW | 600 |
| 2 | Lara (2 x 800 ) MW | 400 |

This section of the specification provides the detailed technical requirements for the Limestone Handling System.

**2.0.0 CODES AND SPECIFICATIONS**

2.1.0 All plant, equipment, systems and works covered under this contract shall comply with the latest editions including amendments of applicable codes, standards, statutes, regulations and safety rules as on the date of submission of bid. Particular care shall be exercised in observing compliance to the rules and regulations governing the locality where the plant is to be installed. Contractor's obligations in this regard shall not be limited to only those codes and standards mentioned in this contract. Nothing in these specifications shall be construed to relieve the Contractor of his responsibility.

2.2.0 In the event of any conflict between the applicable codes and standards and the requirements of this contract, the more stringent of the two shall govern.

2.3.0 The specific codes / standards followed for the design of the system are as below and relevant codes are also indicated against each equipment:

| | |
|---|---|
| CEMA | Conveyor Belt Manufacturing Association |
| IS:11592 - 2000 | Code of practice for selection and design of belt conveyors |
| IS:1891 - 1994 | Conveyor and elevator textile beltings spec.Part.1 General |
| IS:14386 -1996 | Belt conveyors-Traveling Tripper- Motorised for belt widths 650mm to 1600 mm- Dimensions |
| IS:8531-1986 | Specification for Pulleys for Belt conveyors |
| IS:8598 - 1987 | Specification for Idlers and idlers set for belt conveyors |
| IS 9295 - 1983 | Steel tubes for Idlers for Belt conveyors |
| ISO 5049/1 or IS 800 | Code of construction of structural works. |
| IS 16143 (Par 2& 4)/ ASTM C50// ASTM D2013 | Lime stone Sampling System |
| IS:2062 - 2006 | Steel for general structural purposes. |
| IS:1239 2004 part 1 | Spec for mild steel tubes tubular and other wrought steel |
| IS:3589 : 2001 | Steel pipes for water and sewage (168.3 to 2504mm outside diameter) |
| IS: 325 | Three Phase induction motors |
| ASHRAE :2007 | HVAC applications |
| IS 3832 : 2005 | Manual hoist / CPB |

| | |
|---|---|
| IS 3938 : 1983 | Electric hoist |
| IS 3177 : 1999 | EOT Crane |
| IS 4894 : 1987 | Specification for centrifugal fan |
| IS 7155(part 5):1990 | Code of Recommended Practice for Conveyor safety |

The extraction capacity of dust extraction system shall be based on "American Conference of Governmental Industrial Hygienists"(ACGIH).

**3.0.0 SYSTEM DESCRIPTION**

The limestone handling system comprises the following:
Unloading, Crushing and Stacking.
Reclaiming and Limestone Bunker Feeding System

3.1.0 **Unloading**, **Crushing and Bunker Feeding System**

Indian Railway rakes consisting type of wagons as specified in RDSO G-33 (Rev-1) guidelines shall transport coal to the power plant. The coal received from wagons shall be unloaded in underground RCC hopper by means of-side discharge type wagon tippler. Side discharge type wagon tipplers are to be employed for unloading IR Coal rake. Side arm chargers are envisaged for placement of wagon on the tippler table & removal of empty wagon from tippler table after tippling. Clear access shall be provided for movement of pay loaders/ bulldozers on the hopper grating of wagon tippler. Gratings over wagon tippler hopper shall be placed and designed accordingly. Apron feeder along with dribble conveyor are employed under each wagon tippler for extracting coal from wagon tippler hoppers.

Indian Railway rakes consisting of Bottom discharge wagons shall also transport coal to the power plant. The coal received from wagons shall be unloaded in underground RCC Track hopper. Paddle feeders complete with all electrical, rails, supporting structures, end stops, cable reeling drums, trailing cables, and necessary arrangement for cabling on floor of track hoppers along with accessories, shall be installed at the bottom of the Track hoppers to scoop the coal from track hoppers and feed coal on to the underground conveyors.

Limestone received through Indian railway rakes will be unloaded in one of these three side discharge wagon tipplers or track hopper.

Alternatively, Two (2) numbers Box feeders/ Bulk material receiving unit/ Truck unloading system/ Surface feeder for unloading of limestone from trucks/ self-tippling trucks/ loader shovels, This unit shall feed limestone onto the conveyor before crusher house. The complete truck unloading system must not have any underground structures/facilities.

A mechanized system shall be provided for unloading of limestone from trucks. The unloaded limestone shall be conveyed up to the limestone conveying stream before the limestone crusher.

**3.2.0 Conveying**

Limestone shall be conveyed using same conveyors as for coal before being taken to dedicated limestone crusher house.

**"**As received" limestone shall be fed on the double stream conveyors from where the same shall be conveyed upto the crushers. The crushed limestone shall be conveyed by double stream conveyors up to the limestone storage shed. From the limestone storage shed paddle feeders will extract/ reclaim crushed limestone and feed the same onto double stream conveying system up to the limestone mill bunkers.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

3.3.0 **Crushing**

In limestone crusher house, limestone from each incoming Conveyor shall pass through two (2) numbers of (dedicated) Vibrating grizzly/ screening Feeders and two (2) numbers of (dedicated) crushers respectively which shall crush limestone to (-) 20mm size or to suit limestone pulverizer and system. Each stream shall have a set of Rod gates and Rack & Pinion Gates before Vibrating grizzly Feeders to permit maintenance of equipment, hoppers and chutes in one stream without affecting the operation of other stream. Limestone sampling unit shall be provided to sample the limestone from either stream.

A passenger cum goods elevator shall be provided in limestone crusher house.

3.4.0 **Limestone Storage and Bunker feeding system**

Crushed limestone shall be stored in covered ground storage sheds using mobile trippers. The capacity of the storage shed shall be equivalent to limestone consumption for at least 7 days.

Two (2) numbers Travelling trippers shall be provided one each on a conveyors. The Travelling trippers shall operate on rails for stacking the Limestone in the stock yard area. During reclaiming operation the reclaimed Limestone shall be conveyed to the conveyor by the Paddle feeders for Conveying to Limestone Bunkers.

From Reclaim hopper, crushed Limestone of (-) 20mm size would be fed to Limestone bunkers through a series of belt conveyors, passing through various Junction Towers and ploughs/ fixed trippers.

**3.5.0 SYSTEM DESCRIPTION: GYPSUM HANDLING PLANT**

Double conveyor stream shall be provided for conveying dewatered gypsum from gypsum vacuum belt filter to over ground storage under a shed near plant boundary. The storage shed shall be sized for 7 days of gypsum production with all the units in operation. Gypsum from storage shed shall be loaded to user's trucks using front end loader/ payloader.

**4.0.0 MAJOR EQUIPMENT OF LIMESTONE HANDLING SYSTEM AND GYPSUM HANDLING SYSTEM**

Specifications for Coal Handling system equipments shall be generally followed for Lime Handling System & Gypsum handling System unless specified otherwise.

**4.1.0 BELT CONVEYOR SYSTEM**

The belt conveyor system shall confirm to the latest edition of the following standards & codes :

"Belt Conveyors for Bulk Materials" published by Conveyor Equipment Manufacturers' Association.

| | | |
|---|---|---|
| IS:7155 | : | Codes of Practice for Conveyor Safety. |
| IS:1891 (Part-I) | : | General Purpose Belting |
| IS:8598 | : | Idlers and Idler Sets for Belt Conveyors |
| IS:4009 (Part-II) | : | Conical Head Grease Nipples |
| IS:8531 | : | Pulleys for Belt Conveyors. |

IS:2062 : Hot Rolled Low, Medium and High Tensile Structural Steel

IS:4682 : Codes of Practice for Lining of Vessels and Equipment for Chemical Processes.

IS:11592 : Code of practice for selection and design of Belt Conveyors.

CAN / CASA - M422 M87 : Canadian standard association.

4.1.1 **Belting:**

The belting shall be of either synthetic fabric such as Nylon-Nylon etc. with rubber covers of adequate flexibility to give a troughing angle of 35 deg.

For all the conveyors the number of plies, cover thickness, factor of safety etc. shall be as per the recommendation of belt manufacturer, but not inferior to the figures as tabulated in data sheet. ***Longitudinal joints in the plies of synthetic fabric belts is not permitted.***

4.1.2 **Idlers**

Carrying idlers shall be provided with three equal rolls with troughing angle of 35 deg. and 2 deg. forward tilt (except in case of reversible conveyors). The diameter of the idler roll shall not be less than 152 mm for both carrying side and return side. However for impact idlers roll the steel diameter shall not be less than 139 mm and rubber thickness shall be minimum 25 mm. Roller used in idlers shall be made from ERW steel tube. Wall thickness shall be minimum 4.0 mm without any negative tolerance. The rollers shall be mounted on EN-8 or equivalent material spindles by means of ball bearings of either deep groove type or seize resistant type (SKF/Equivalent), of 30 mm size for carrying idlers and 20 mm size for return idlers. The bearings shall be adequately sealed and lubricated for life. The rolls shall be supported from fabricated steel brackets. Fixing arrangement of rollers with brackets shall be drop-in type. For adjusting the alignment of the idlers, slotted holes shall be provided in idler supporting base plates. Direction of belt travel shall be clearly marked on the brackets of carrying idlers by embossing / punching. Idler rollers shall be waterproof, dust proof and weather proof against a high velocity water jet. All idlers shall be provided with minimum double labyrinth dust seal. All the conveyors shall be provided with one self cleaning type rubber disc return idler located near the head pulley for cleaning the return belt. Transition type troughing idlers shall be used adjacent to all pulleys to permit proper support of the loaded belt near the pulleys without excessive stretch of the belt edges. The transition idlers shall be provided with preferably adjustable concentrator (end) rolls and long center rolls to suit the troughed belt contour between the last regular troughing idler and the adjacent pulleys. The transition length and the number of the transition idlers shall be selected depending upon the tensions, type and size of belt, number of plies and other necessary governing factors.

**4.1.3 Belt Cleaners**

**(i) External Belt Cleaner**

Spring loaded scraper type cleaner with modular segmented and replaceable polyurethane scrapers blades complete with main cleaner, pre-cleaner (mounted separately) along with accessories and necessary fines (reject of scrapper) chutes shall be provided for all belt conveyors, tripper head pulley (not applicable for plough type feeding arrangement) and belt feeders at discharge pulleys. The modular units shall be easily replaceable. The scraper assembly shall be easily maintainable from outside without any interference with the chute arrangement and assembly.

**(ii) Internal Belt Cleaner**

V-plough type belt cleaner made of mild steel flats and hard rubber strips with automatic wear adjustment and necessary accessories shall be furnished for cleaning internal surface of the conveyor belt.

**4.1.4 Belt Take-up Arrangement**

Automatic take-up of gravity type shall be generally provided with necessary take-up arrangements complete with bend pulleys, take-up pulley, with its supporting / sliding assembly, wire ropes with turn buckle arrangement (to adjust the level) for suspending the separate take - up weight sliding assembly close to the ground, counter weights and other accessories. Suitable guards marked up scale attached to the frame to monitor belt stretch and access/maintenance platforms with handrails all around etc. shall be provided.

**4.1.5 Pulleys**

The nominal diameter and face width of the pulleys shall be as stated in IS: 8531. The snub pulleys on each conveyor shall be located to provide a belt wrap on the drive pulleys of not less than 210 deg. The pulleys shall be made from mild steel conforming to IS:2062 (Tested Quality). However, for conveyors with in line magnetic separators, the head end pulleys shall have shell and end disc made of non-magnetic stainless steel material. Suitable stiffening shall be provided at all weld location in the shell on all pulleys. All the pulleys shall be mounted on the forged steel shafts of EN-8 or equivalent material of adequate proportion by taper lock arrangement, running in heavy duty roller bearings with proper greasing arrangement. The plummer blocks for pulleys shall be of horizontally split type construction with minimum (4) nos. bolts holding the two split halves and with min (4) nos. foundation bolts. The plummer blocks shall be dust tight with double labyrinth seals. Conical head shape nipples conforming to IS:4009, suitable drain plug and eye bolt shall be provided. Side covers of plummer blocks shall be heavy duty metallic sheets.

**4.1.6 Drive Motors**

Rating of all drive motors of conveyors shall not be less than 120% of the power required at drive motor output shaft at specified design capacity. The motor rating shall be at 50 deg Cent. Ambient. Single LT drive motors shall be used for conveyor drive ratings up to 160 KW. For conveyor drive rating beyond 160 KW, single HT drive shall be used for conveyors.

**4.1.7 Conveyor Bridges**

All overground and overhead conveyors shall be located in suitably enclosed bridge structure. Structural steel bridges of adequate width and depth (2700 mm clear head room) shall be provided complete with conveyor bottom deck plates, seal plates, walkways of chequered plates with anti-skid arrangement(s), hand rails (on both sides of each conveyor belt except where equipment (like trippers etc.) traverse over conveyor supports. Side and central walkways for double streams conveyors shall be 800mm and 1100mm wide respectively. The side walkways for single conveyors shall be 800 mm on one side and 1100mm on the other side. All conveyors shall be provided with 12 G steel seal plates throughout the length of the conveyor gallery in such a way that complete gallery bottom surface area forms a single water proof floor and no water / limestone falls down from conveyor gallery incase of cleaning / washing. The conveyors shall be provided with continuous decking plate of minimum 3 mm thickness plain steel sheet. Provision shall be kept with platforms and ladders for crossing over the conveyors at approximately every 100m intervals of route length and minimum one per conveyor.

**4.1.8 Belt Vulcanizing Machine**

Belt Vulcanizing Equipment shall be suitable for hot vulcanizing of belt splice and shall be of

easy-to-handle type. Equipment should be suitable for vulcanizing of entire splice width in single setting. Equipment should be capable of applying uniform pressure over the splice by pneumatic or hydraulic means. Heating element should be preferably of flexible type.

**4.2.0 ELECTRO HYDRAULIC THRUSTER BRAKES**

The necessary Electro Hydraulic Thruster (AC) brakes / disc brakes, totally enclosed and fail safe, shall be provided as required for various equipment's. Braking torque shall be adjustable from 0 to 100% of rated braking torque. The thruster brake shall be actuated by compression springs. The electro hydraulic thruster shall be fitted with the brake. Limit switches shall be provided for brake applied/released positions. The windings shall be provided with class-B insulation suitable for 415V ± 10% at 50 Hz ± 5% and combined variation of ± 10%. Brake lining shall be asbestos with inter woven brass wires capable of withstanding 200°C temperature.

**Clamp**

Electro-hydraulic thruster rail clamp shall be actuated by compression springs, the spring shall apply the clamping force directly on the Rail clamp mechanism once power supply is cut-off. The force transmission mechanism from spring to rail clamp faces shall be very simple with minimum linkages. Manual rail clamp shall be provided with positive locking arrangement and shall apply clamping force directly on rails. The manual rail clamp shall be of proven design.

**4.3.0 MONORAILS AND HOISTS**

4.3.1 The Monorails & Hoists shall conform to the latest edition of the following standards & codes. Other internationally acceptable standards/codes, which ensure equal or higher performance than those specified, shall also be accepted.

| | | |
|---|---|---|
| IS:3938 | : | Specification for Electric Wire Rope Hoist |
| IS:3832 | : | Chain pulley blocks |
| IS:2429 | : | Round steel short link chain |
| IS:6216 | : | Short link chain grade 80 |
| IS:15560 | : | Points hooks with shank up to 160 Tonne - Specification |
| IS:210 | : | Cast Iron Castings |

4.3.2 For the Hoists with more than 2.0 tonne lifting capacity or more than 10.0 M lift, with the exception of hoists for GTU and bend pulleys motor operated hoist blocks for both long travel and lift shall be provided. Other hoist blocks shall be of hand operated type for both travel and lift. All monorails coming out of the buildings shall be provided with electric hoist blocks, irrespective of load and lift. Minimum 3 meter length of Cantilever from edge of building/cladding, shall be provided in monorails coming out of the building to lower the equipment to ground level clearing the building sidewalls / cladding and any other facilities beneath the floor upto ground level. Clear height shall be maintained when handling one equipment over other, in such case dismantling of any equipment shall not be permitted. The center line of monorail shall not deviate by more than 500 mm from the center of gravity of any equipment that is to be lifted.

4.3.3 The electric hoist shall be designed and constructed in accordance with the latest revision of IS:3938 and shall be suitable for duty class 2. For electric hoists, trolley movement and hoisting shall be effected by using two separate motors. Motors shall be as per technical

requirements discussed elsewhere. However the motors shall be suitable for 150 starts per hour at 40% CDF. Motor operated geared trolley shall have two (2) pairs of wheels, one pair of which shall be driven through motor. An electromechanical brake shall be provided for hoisting as well as cross travel. Brake lining shall be of asbestos

4.3.4 Wire rope shall be of pre-formed type, hemp cored, regular lay 6/36 construction with a breaking strength of 160 -175 kgf/ sq. mm. Minimum number of falls of rope shall be four (4). All running shafts and wheels shall be fitted with ball / roller bearings with a rated life not less than 20 years based on equivalent running time as per IS:3938.

4.3.5 All chain pulley blocks shall be designed to IS:3832, the operating hand chain shall conform to IS:2429 grade 30 pitched and polished and the load chain to IS:6216 grade 80. The chain pulley block shall be suitable for duty class 2. Hooks shall be as per IS: 15560 & with antifriction bearing.

4.3.6 The hoist mechanism shall consist of a grooved rope drum driven by electric motor through gears. Each end of the rope shall be anchored to the drum in such a way as the anchorage is readily available for maintenance. Each rope shall have two (2) full turns of the drum when the hook is at its lowest position and one (1) spare groove when the hook is at its highest position. The leading rope taken by the drum should not slope sideways when slack and it should not be caught between the gear wheel.

4.3.7 Inline magnetic separator shall have motorised hoist for handling / maintenance purpose. Each suspended magnet shall be provided with a dedicated motorised trolley.

**4.4.0 CHUTES, SKIRT BOARDS, FLAP GATES, ROD GATE AND RACK & PINION GATE**

**4.4.1 Chutes**

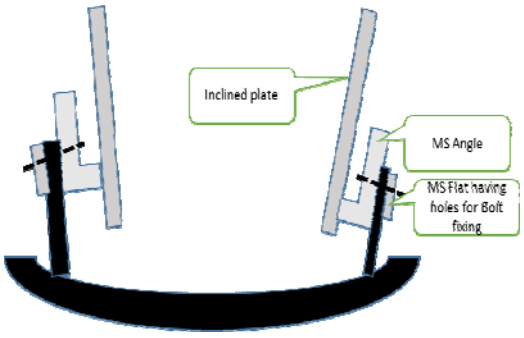
i. Direct impact of material on conveyor belt shall be avoided by providing an inclined surface at 60 degrees valley angle at the feeding point to guide the material in the direction of belt travel. Further, chute construction below flap gate shaft shall be such that there will not be any accumulation of limestone dust between chute and flap gate in that zone. Hoppers and Chutes shall be made of minimum 20 mm thick TISCRAL / SAILHARD / LSLAS07 or equivalent material. Long chutes guiding flow from considerable height shall be provided with impact plates wherever change in direction of flow takes place. Hinged inspection doors of leak proof construction shall be provided for access/ maintenance purpose at approachable heights for chutes and flap gates. All chutes should have one inspection door at every floor and for the ones in between the floors (more then 1.5 meter above the operating floor level) suitable access for trouble free maintenance shall be provided. For sealing of inspection doors labyrinth type arrangement to be provided. In addition to positive locking arrangement, mounting bolts, to tighten the door further against rubber shall also be provided. Bottom sides along with its adjacent sides shall be flanged and made from TISCRAL or equivalent material of 20 mm thickness. The non-striking surface i.e. the covers of the trough shall be of 10 mm thick mild steel and bolted to the flange provided on the trough. Further, the chute boxes not more than 1.5 m in length shall be joined through bolted flange connection to form the chute legs. Adequate care shall be taken to locate the flange joint away from floor level for easy maintenance. Complete chute work in the region of flap gates shall be fabricated from 20 thk TISCRAL or equivalent. In case of vertical chute (valley angle more than 80 degree) complete chute, work shall be of 20 mm thick TISCRAL or equivalent material.

ii. Hoods over the conveyor head pulleys shall be made of suitably stiffened minimum 4 mm M.S. Plates and shall be provided with hinged and gasketed inspection doors with suitable access to them. Further, serrated rubber seal shall also be provided at the very inlet of head chute to minimize dust nuisance.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

4.4. 2 **Skirt board**

Skirt board shall ensure centralised loading of conveyor belt to avoid limestone spillage. Suitable 'Skirt Plates' shall be provided for entire feeding chute and shall be extended minimum 3m ahead of front edge of chute and 500 mm beyond rear edge of chute. The width of the Skirt Boards shall be two-third the conveyor belt width. In the belts where limestone of appreciable lump size (250 mm) is being conveyed, the gap between the bottom of the skirt board and the belt shall be made to increase uniformly in the direction of belt travel. The height of the skirt boards shall be sufficient to contain the material volume as it is loaded on the belt and shall not be less than 750 mm for conveyors. The height of the skirt board for belt feeders/ reversible belt feeders (if any) shall be minimum 1000 mm. The skirt plates shall be fitted with replaceable belt piece having facility of adjusting the pressure on the belt conveyor.



4.4. 3 **Flap gate**

i. The motor operated 2 position flap gates shall be provided in transfer chutes as specified and shall be complete with electrically operated actuators. The gates shall be of robust construction and suitable for trouble free operation. The face of the flap gate shall be made out of 20 mm thick TISCRAL or equivalent material. The equipment shall be capable of being operated for at least 15 switchings per hour at rated load and thrust and shall be suitable for 10 Nos. consecutive switchings at rated load and thrust. The flap gate travel shall be in the range of 60 deg. to 70 deg. Suitable travel dependent limit switches controlling the travel of the flap gates on either direction shall be furnished. These shall be placed internal to the drive unit and shall be completely dust-proof. The limit switches shall be capable of adjustments to vary the total length of travel of the gates. Suitable thrust dependent limit switches shall be provided in the actuator, which shall trip off the actuator motor in case of excessive thrust due to jamming of the gates during its travel in either direction. The same shall also be integral to the drive unit and shall be dust proof. Approach/maintenance platforms complete with the chequered plate floor, hand rails, ladders etc. shall be provided for all flap gates. The platforms shall be extended for access to dust & debris chute inside buildings.

ii. Provision for alternative manual operation shall also be made using declutchable hand wheel of 500 mm diameter. Limit switch for safety of person operating the hand wheel shall be provided. Manual effort required to operate the flap gate shall not exceed 25 kg. All the actuators in the plant should be selected based on heaviest loading, but the rating shall not be less than 2500 kg with a lever arm of 1.0 m in any case. For standardization purposes, only one standard type of actuator for flap gates shall be provided.

iii. The material of shaft shall be EN-8 or equivalent. The diameter of the shaft shall be suitable for motor stalled condition and associated twisting. However, the diameter of the shaft shall not be less then 150 mm.

4.4.4 **Rod Gate**

Suitable manually operated rod gates shall be provided over rack and pinion gates for their easy operation and maintenance.

4.4.5 **Rack & Pinion Gate**

(i) The rack and pinion gate shall be guided properly and suitable rollers with bearings sealed for life and dust proof shall be provided. Rotary actuator operated rack and pinion gates shall be provided.

(ii) The rack and pinion gates shall be of mild steel construction with liner plate of 10 mm thick TISCRAL or equivalent material. The gates shall be operated by means of double rack and pinion. The material for rack & pinion wheel shall be cast steel and shaft shall be EN.-8. Provision for alternative manual operation (manual effort 25 kg) of motorized rack and pinion gates shall also be made. Limit switch for safety of person operating the hand wheel shall be provided.

**4.5.0 DRIVE EQUIPMENT**

**4.5.1 Gear Box**

The gearboxes shall be designed for 24 hours continuous duty. Gearboxes with cooling coils or external cooling are not acceptable. The gears used shall be helical conforming to IS:3681 (latest revision) or worm reduction units or spiral bevel speed reduction units conforming to suitable Indian Standards. The dimensions of the shaft end shall conform to IS:3688 or its latest revision. Above 40 kW drive rating, all gearboxes shall be helical or bevel helical type only. all gearboxes shall have suitable breather plugs, dipstick, drain plug etc.

**4.5.2 Flexible / Rigid Coupling**

The design of the coupling shall be such that it can take shock and misalignment without sacrificing its efficiency. Geared type flexible coupling shall be used on low speed side for all conveyors and other drive chains where gear box is provided. Other couplings in the drive chains shall be either rigid or flexible type, depending upon the requirement of equipment design.

**4.5.3 Fluid Couplings**

Fluid couplings shall be provided in all the drive machinery for belt conveyor systems and limestone crushers if the actual power requirement at motor output shaft is more than 40 kW. The fluid coupling for LT motors shall be of traction type and for HT motors, shall be of scoop tube type. Suitable electrically operated actuators shall be provided for scoop tube operation from local as well as remote. Manual operation may also be provided. Separate pump with motor or integral shaft driven oil pump shall be provided for circulating the fluid coupling oil through oil cooler. Forced cooling water supply to oil cooler shall be provided for which cooling water pumps to be provided for group of scoop couplings. **Alternatively, Air cooled type scoop coupling is also acceptable for all conveyors with HT motors for ( AHP, LHP, GHP) and crusher scoop couplings.** Suitable interlock using flow switches shall be provided in both oil as well as water lines to trip the drive motor in the event of flow in either lines falling below acceptable levels. Suitable pressure indicators and flow indicators shall be provided in the cooling water lines along with all-relevant valves, and accessories. Necessary isolation valves shall be provided in the oil / water line for

maintenance of any equipment in the line. Necessary interlock shall also be provided so that the HT motor cannot be started from remote / local unless position of scoop tube permits no load start of the motor. Tripping of downstream equipment while the system is under normal operation shall result in scoop tube re-positioning to permit no load run of the concerned HT motor. Temperature switch shall be provided in the oil circuit and shall trip the system in case of high oil temperature. The scoop tube operation must be such so to ensure draining of oil from the operating circuit by providing a double speed motor. The speed (for draining) shall be selected to match the coasting time of down stream equipment/conveyor.

**4.6.0 LIMESTONE HANDLING PLANT (LHP) BUILDINGS**

4.6.1 All LHP buildings shall have sufficient space to accommodate the entire equipment like head end, drive unit and tail end of various conveyors, chutes, control equipments, MCCs, batteries, supports for conveyor bridges, tensioning arrangements, approach/maintenance platforms with ladders, external / internal stairs, handrails, RCC floors, foundations etc. Moreover, ample space shall be provided for maintenance purposes. Outside stairs to junction towers shall be open type. However, a weather canopy shall be provided at the top.

4.6.2 Building floors shall be washed periodically with water for which necessary slope & drains shall be provided from each floor leading to minimum 4 nos down comers of minimum 273 mm OD each building. However for MCC, control buildings and pump houses, minimum 150 mm dia, 4 nos galvanized MS pipes conforming to IS: 1239 shall be provided. The system shall be designed considering water mixed with limestone. A drain pit shall be provided near each building to collect water/limestone mixture. Overflow from this pit shall be connected to nearest drain. 1 mtr x 1 mtr size dust/debris MS chutes from all the floors to ground floor shall be provided at all buildings/junction towers and limestone crusher house. The plate thickness shall not be less than 6mm. Openings in the floors of LHP buildings (i.e. JTs/CH etc.) shall be provided with curb of 100mm high to avoid water falling down to lower floors.

4.6.3 Floor at ground shall be provided in all junction towers, ground conveyors etc. Level of floor at ground shall be 500 mm above ground/grade level unless noted otherwise. For enclosed ground conveyor 750mm wide plinth protection along with drainage arrangement shall be provided along the conveyor on both sides. Suitable opening at every 50mtr interval shall be provided on either side in a staggered manner for exit / entry of personals. Necessary drains must be provided all along the floors of ground conveyor.

4.7.0 **TRAVELLING TRIPPER AND BUNKER SEALING ARRANGEMENT**

4.7.1 Mobile Trippers on bunker conveyors along with belt sealing arrangement shall be furnished and erected complete with rails, including necessary supporting structures, approach/ maintenance platforms with ladders and hand railings, trailing cables, all electricals including machine mounted local control panel & control panel on one end of Bunker. The Mobile tripper on bunker/yard conveyors shall be motor driven type. The tripper shall have provision for dropping limestone from conveyor onto both sides of tripper to the bunker/storage shed or back to the conveyor for the purpose of skipping intermediate bunkers (as applicable). The rating of tripper travel motor shall be adequate to move the tripper smoothly either in same or opposite direction to belt direction under fully loaded conditions. Adhesive weight requirement and tractive effort calculations shall be subject to approval of Employer. Coefficient of adhesion shall be considered as maximum 0.15. Minimum two drive axles shall be provided for tripper travel. Arrangement shall be provided at the starting point of the tripper to avoid folding of belt. In case of tripper running at a speed more than its rated speed due to chute jamming or other reason, conveyor shall trip and annunciation shall appear.

4.7.2 Supply of adequate length of rails to cover the runway length for the motor driven tripper shall be included. The supporting structures for the rails with necessary end stops shall also be supplied under this specification. Suitable belt hold down guide pulley shall be provided over the concave curve of belt over tripper. The travelling trippers shall be provided with fail

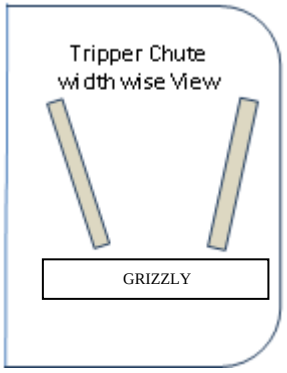
| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

safe A.C. thruster operated brake of totally enclosed type which shall engage as soon as tripper travel motor stops. A.C. thruster operated rail clamps along with manual Rail clamps on both side of the tripper shall also be provided. Independent motorized linear actuator shall be provided to operate each flap gate of the tripper chute.

4.7.3 The sealing belt shall be of suitable grade (minimum 2 plies) with 5 mm x 5 mm covers (fire resistant) in line with other conveyor belting. The belt shall rest on 20 x 50 mm MS plates spaced at 200 mm placed 50 mm below floor level, provided over the bunker slot on tripper floor for tripper conveyor. The width of the bunker seal belt shall be at least 100 mm more than the bunker slot opening.

4.7.4 The tripper shall run on rails (90 lbs/yard) with double flanged wheels. Rails for tripper travel shall be mounted on supporting structure of respective conveyors. Suitable system having encoders for monitoring position of tripper in DDCMIS shall be provided. In addition, travel end limit switches and end stops shall also be provided. Suitable access platform of chequered plate with ladders, handrailing and walkways on both sides shall be provided for access/maintenance of equipment on tripper. In addition, crossover platform shall be provided with tripper so that operator can cross the belt through the same. 3mm deck plate continuous shall be provided below carrying idlers on the trippers.

Tripper discharge chute shall be of tapered section as shown in the sketch below.



**4.8.0 PLOUGH SYSTEM (IF APPLICABLE)**

As an alternate to travelling tripper (Alternate option applicable only for limestone mill bunkers) plough type system may be provided by the bidder. The plough type system shall consist of the following.

i. The system shall feed limestone to one bunker at a time.

ii. The plough shall be retractable type.

iii. Shall meet the capacity of the conveyor (150 TPH).

iv. The scraper/plough would normally be kept up in idle position allowing material to pass through and interfere with next lowered scraper/plough. In case material needs to be discharged scraper/plough will be lowered and fixed to that position till material fill up the bunker. The scraper/plough should be motor/cylinder/coil operated for remote operation.

v. The system must contain containment skirt boards with dust seal along the discharge area.

vi. The system shall be capable of unloading minimum 99% amount of limestone passing under it.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

vii. However the system shall be complete from operation, maintenance and safety point of view.

**4.9.0 LIMESTONE CRUSHER AND VMS**

**4.9.1 General**

Hammer mill type crusher shall be provided for sizing the input limestone to a size which shall be suited for their limestone pulverizer and system. Crusher shall be supplied complete with accessories and subsystems.

**4.9.2 Codes and standards**

The design, manufacture, inspection and testing of Limestone Crushers shall comply with all the currently applicable statutes, regulations and safety codes in the locality where the equipment is to be installed. The Limestone Crushers shall conform to the latest edition of applicable standards and codes. Nothing in this specification shall be construed to relieve the contractor of the required statutory responsibility. In case of any conflict in the standard and this specification, the decision of the Employer shall be final and binding.

**4.9.3 Design requirements**

i. The crusher shall be of hammer mill type and shall be designed based on following clauses and the data sheet enclosed.
ii. The crusher design should be such that the crushing action is accompanied by the minimum of attrition.
iii. Uniform crushing impact shall be assured.
iv. The crusher shall be capable of delivering the normal rated output even when handling damp limestone having maximum moisture content. No clogging or building up of material on the crushing element shall develop.
v. Temperature sensing devices shall be installed on both bearings of each of the crusher to trip the crusher incase temperature goes beyond allowable limit.
vi. Zero speed limit switch shall be provided for protection against any un-crushable material. It shall sense the speed of rotor and shall trip the rotor when actual speed falls below the design speed.
vii. Crusher shall be provided with vibration monitoring (VMS) system. Specification of VMS shall be as specified elsewhere.

**4.9.4 Construction requirement**

**i) ROTOR**

The rotor shall consist of Forged steel shaft, with integral discs or key fitted discs on shaft. Hammers shall be held by spring dowel bushes & shall be arranged around the circumference of the rotor. The number of hammers and number of rows shall be selected as per requirements. The rotor shall be balanced statically.

**ii) GRINDING WALL**

The grinding walls shall be arranged symmetrically around either side of the rotor and carried by spindles supported in bearings attached to the casing. The wall shall consist of grinding wall supports and wear resistant grinding plates/Impact plates bolted on. For product size control, distance between the grinding plates and hammer shall be adjustable.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**iii) HAMMER**

The hammer shall be in two parts- head and arm. The hammer head shall be of wear resistant steel material. The hammer arm shall be of forged alloy steel. In the event of wear, only the hammer head shall be replaced. Arms shall be selected so that they have long life and do not require frequent replacement.

**iv) FRAME /HOUSING**

The housing shall be split type. Housing shall be fabricated from MS steel plates of weld able quality and shall be stiffened suitably. Maximum accessibility shall be provided for routine inspection and replacement of parts. For these purposes, the doors shall be of hinge connection with effective dust sealing arrangement. Hydraulically operated top cover of crushers shall be provided for quick inspection and replacement of hammers. The entire inside surface of crusher coming in contact with limestone shall be provided with abrasion resistant liners.

**v) DRIVE**

The hammer crusher will be driven through Electric motor, scoop type hydraulic coupling and gear box.

The material of construction for major components of crusher shall not be inferior to the quality and standards as mentioned in data sheet.

Design and construction features of hammer mill crushers offered by the bidder shall be similar to the crushers which are already working satisfactorily for same or higher capacity.

4.9.5 Vibration monitoring system should be offered for crushers as indicative below:

| Sl.No | Equipment | Type | No. | * No. of location per equip. | Equipment bearing type |
|---|---|---|---|---|---|
| 1. | Limestone Crusher | Radial ring | 4 | (2 Nos.)<br>1 at DE &<br>1 at NDE | As per manufacturer's design |

Vibration shall be measured at each location in Horizontal as well as vertical direction.

4.9.6 Specification of the Vibration Monitoring System

a) Number & type of vibration — One (1), Microprocessor based, monitoring system able to distinguish between high frequency vibration caused by bearing trouble and low frequency vibration caused by imbalance.

b) Number of channels — 16 (Rack mounted in cabinet)

c) Transducer
   a) Velocity pick-up or a peizo-electric accelerometer. Type shall be decided during detail engineering based on the details of equipment to be monitored.
   b) Light weight stud mounting.

| | | | |
|---|---|---|---|
| | | | c) Frequency response 1 Hz -10 kHz. |
| | d) | Connecting cable | Low noise fire proof coaxial cable to be laid in flexible conduit. |
| | e) | Monitors (to be located in FGD control room) | Dual channel monitor for each location alongwith :<br>a) Buffered signal output and software for vibration analysis through FGD control desk HMI.<br>b) Recorder signal output |
| | f) | Display | Analogue and digital |
| | g) | Alarm | 0-100% full scale adjustable. |
| | h) | Trip | 0-100% full scale adjustable. |
| | i) | Test | Functional checking from front inhibiting alarm & trip |
| | j) | Relays | 0.25 A at 220 Volts DC or 5 Amp at 240V AC. Independent potential free contacts for alarm & trip purpose. |
| | k) | Signal Conditioner | Individuel 4-20 mA DC analogue output. |
| | l) | Power Supply | 240 V ±10% AC, 50 Hz + 3%, -5% |

**4.10.0 VIBRATING FEEDER**

**GENERAL**

Vibrating feeder shall be provided below the crusher for limestone.

**4.10.01 CODES & STANDARD**

The design, manufacture, inspection and testing of Vibrating Feeder shall comply with all the currently applicable statutes, regulations and safety codes in the locality where the equipment is to be installed. The Vibrating Feeder shall conform to the latest edition of the following standards and codes. Other internationally acceptable standards/codes, which ensure equal or higher performance than those specified, shall also be accepted. Nothing in this specification shall be construed to relieve the contractor of the required statutory responsibility. In case of any conflict in the standard and this specification, the decision of the Project Manager shall be final and binding. IS:3823 - Dimensions for vibrating conveyors and feeders with rectangular or trapezoidal trough.

**4.10.02 DESIGN REQUIREMENTS**

The vibrating feeder shall be of electromechanical type and shall be provided to feed imestone to crusher. The drive unit shall be complete with mechanical type of vibrator. The vibrating feeder shall be suitable for lumps size of (-) 250 mm. The feeder shall be designed to feed limestone to the conveyor without material sticking to it. The flow of material shall cease as soon as vibration of the trough or pan ceases.

**4.10.03 CONSTRUCTION REQUIREMENTS**

The vibrating feeders shall be mounted on the floor or suspended from roof with the help of helical springs made of alloy steel. No rubber/synthetic material for the support shall be acceptable.

Vibrator bearings shall be grease lubricated, double spherical roller type suitable for vibrating equipment. The bearings shall be sized for minimum 8,000 hours of operation.

Vibrating feeders shall be provided with removable abrasion resistant liner plate.The Vibrating Feeder shall conform to the latest edition of standards and codes. Other internationally acceptable standards/codes, which ensure equal or higher performance than those specified, shall also be accepted:

IS:8723 - Dimensions for vibrating conveyors and feeders

**4.11.0 PADDLE FEEDER**

4.11.1 Paddle Feeders shall be supplied and erected complete with rails including necessary supporting structures, approach/maintenance platforms with hand railings and ladders, cable reeling drums with trailing cable, cable trays, all electricals including machine mounted local control panel.

4.11.2 **Codes and standards**

i. The design, manufacture, inspection and testing of Paddle Feeders shall comply with all the currently applicable statutes, regulations and safety codes in the locality where the equipment is to be installed. The Paddle Feeders shall conform to the latest edition of the Indian standards and codes. Other internationally acceptable standards/codes, which ensure equal or higher performance than those specified, shall also be accepted.

4.11.3 **Design requirement**

i. Travelling paddle feeders of self-contained, self-propelled design shall be furnished and erected to scoop out limestone from the hopper and each feeder shall be capable of travelling back and forth along the entire length of the hopper and transfer the limestone from the hopper uniformly onto the conveyors below. Each paddle feeder shall have capacity to scoop out limestone at the guaranteed capacity in both forward and reverse motions with no indication of wheel slipping (water tank full). Each paddle feeder shall be designed for guaranteed capacity while handling entire range of lump sizes.

ii. It shall operate on the principle of positive discharge and shall not depend on friction or moisture content.

iii. The Paddle wheel shall be driven by a step less hydraulic drive. Carriage travel shall be achieved through electric motor gearbox (2 speed) and flexible coupling or through hydraulic drive or electric geared motor (2 speed).

iv. All equipment shall be designed to withstand any rate of acceleration imparted by drives or any strain resulting from a sudden change in load. Further, the design of paddle feeder carriage should be such that it does not run off from its rails due to sudden change in load or other reasons.

v. The Contractor shall include in his proposal necessary electricals for paddle feeder and carriage such as motorized cable reeling drum with trailing cables, and end limit switches for protection against over travel of the feeder carriage. Two separate cable reeling drums one for Power cable and one for Control cable shall be provided for each machine. The cable reeling drum and trailing cable of each feeder shall be suitable for the entire length of the hopper upto maintenance bay. Mechanical track stops alongwith buffers on each end of rails and on paddle feeders shall also be provided. For specification of dust suppression equipment for paddle feeder, refer relevant Sub-section of this Specification.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

vi. For designing the paddle wheel as well as travel drive, Contractor shall consider the hopper fully loaded with limestone on either side of the paddle wheel to the maximum capacity. The hydraulic system normal average working pressure shall be selected considering the above loading condition. Further hydraulic system shall be designed to stall / trip beyond a certain pressure above the normal average working pressure. The minimum margin between the normal working pressure and the stall / trip pressure shall be 50%. The maximum working pressure for the hydraulic system in Hydraulic power pack shall not be more than 210 bar.

vii. Feeder carriage drive shall be suitably designed so that the forward & reverse movement of carriage can be achieved without stopping the scooping operation. Tank filled with water in DS system shall also be considered for travel drive. Capacity of tank mounted on tail end side shall be sufficient for half an hour operation.

viii. Rail structure shall be designed considering two-wheel support and accounting no frictional force from the other two wheels and considering hydraulic motor stall condition.

ix. For selection and specification of drive motors (other than the hydraulic motor), gearboxes, all types of couplings associated with paddle feeder and other equipment, relevant sections of this specification shall be referred to.

x. Contractor's design of paddle feeder should not incorporate a separate loading table (impact cradle) below the paddle feeders. However, the height of fall of limestone between paddle wheel and conveyor belt shall be kept minimum. Hydraulic components shall be provided with dust proof cover for protection against spillage of lime/ dust. Pressure /Temperature gauges shall be located at convenient locations for continuous observation by operator. Proper oil level gauge to be provided at hydraulic oil reservoir tank.

xi. Three (3) pairs of Control cables shall be provided in the control trailing cable of each machine for connecting Employers telephone and P.A. equipment to be provided on each machine.

xii. For Hydraulic system, in case the oil temperature is high then proper external cooling is to be provided , viz, heat exchanger, before the oil returns back to the oil tank.

4.11.4 **Construction requirement**

i. The paddle feeders shall run on rails mounted on the supporting structures of associated conveyors. Both paddle feeder and carriage drives shall be mounted on the feeder carriage.

ii. The paddle feeder wheel shall comprise of suitable numbers of vanes with cutting edges. The vanes shall be of high strength steel construction with removable TISCRAL / SAILHARD / LSLAS07 liner plates. Vanes shall be easily removable individually. Tip of the vane shall reach inner most point of hopper table.

iii. The feeder carriage shall be of steel construction and of robust design. Skirt plates shall be provided integral with the equipment for collecting the material drawn by the paddle feeder from the storage shed hopper and discharging on to the conveyor belt. Feeder skirts of paddle feeders shall be extended at least by 500 mm on either side of the paddle wheel to avoid spillage of limestone. Necessary baffle/retainer plates for suitably guiding the flow of limestone from storage shed hopper to the reclaim conveyor being fed by paddle feeders shall be provided. Hand railing shall be provided on the top deck of feeder carriage together with an access ladder.

iv. The feeder carriage shall be provided with suitable number of double flange wheels of steel construction, complete with sealed bearing unit. The drive mechanism shall be suitable for continuous reversible motion of the carriage. Start/stop switches shall be provided at the local control panel for the operation of paddle wheel and feeder carriage. The carriage shall automatically reverse its motion, when two paddle feeders operating on the same track come within a predetermined distance. Suitable anti-collision device (infrared and mechanically operated limit switch type) shall be provided. Provision shall be made to trip the limestone conveyor from respective paddle feeder and provision shall be made for tripping of paddle feeder from LHP main control room.

v. Rope actuated stop switches shall be provided along the travelling structure for emergency use.

vi. Suitable indication of paddle wheel 'rpm' shall be provided on the paddle feeder control panel and flow rate indicator of belt weigh scale shall also be duplicated on control panel of paddle feeder. Operating controls shall be mounted at a suitable height such that it can be operated from walkway. Encoder shall be provided on the paddle feeder to give 4-20 mA signal to the DDCMIS to the exact location of the machine.

vii. Suitable rail cleaners shall be provided at the leading as well as trailing side of the feeder carriage for both tracks.

viii. Suitable cable trays/troughs shall be provided along the travel of paddle feeder for supporting and guiding the trailing cables. In order to save flexible cables from damage due to tension/over-tension protection switches shall be provided. Isolating switch to isolate the power supply to the machines shall be provided in each power JB to be located at the center of travel length.

ix. Various equipment of Paddle Feeder assembly shall be easily accessible. It shall be possible to replace electrical, mechanical and hydraulic components of paddle feeder when positioned at hopper. Various drive equipment and hydraulic/other components shall be so arranged that limestone spillage from hopper mouth does not accumulate near/over them.

x. Provision shall be kept for automatic tripping of limestone conveyor in the event of paddle feeder getting dragged (i.e. travel speed in excess of rated speed). Paddle feeder once tripped due to jamming or operation of emergency push button shall not start unless the hydraulic pressure is back to "normal".

xi. Paddle feeders rails should be mounted on continuous running member. The splicing of rails shall necessarily be at vertical support location only. Splicing in between vertical support will not be accepted.

xii. The longitudinal distance between two vertical supports shall be 3000 mm (min.)

**4.12.0 LIMESTONE SAMPLING UNIT**

4.12.1 The limestone Sampling Unit shall conform to the latest edition of standards and codes. Other internationally acceptable standards/codes, which ensure equal or higher performance than those specified, shall also be accepted.

**ASTM-D-2234 : Standard Methods for collection of a Gross Sample of Coal.**

ASTM-D-2013 : Standard Method of Preparing Coal Samples for Analysis

ASTM-C-50: Standard practice for sampling, sample preparation, packaging and marking of limestone and limestone products.

4.12.2 The Limestone sampling units suitable to give "Samples" conforming to ASTM-D-2234 shall be selected by the Contractor for taking samples from any of the two streams running at guaranteed capacity. The different Equipment selected for Limestone sampling unit shall be such that there shall be no loss of fines and moisture from the samples. The normal input feed size shall be considered as (-) 250 mm for limestone sampling unit before limestone crusher. However occasionally (-) 400 mm lumps may also arrive. Limestone lump size after limestone crusher shall be as per crusher output size.

4.12.3 Primary samplers (separate for each conveyor) shall be rugged, able to withstand severe shock loads and operate trouble free. Belt feeders shall be provided for entire sampling path upto sample collector. For rejects path also, belt feeders shall be preferred. Screw conveyors for the same shall be accepted only where space constraints do not permit distribution of limestone rejects to receiving conveyor below. Sample crushers shall be provided for reducing the main input feed limestone to 95% minus 8 mesh size and 99 % minus 4 mesh size. Single stage crushing shall be provided. There should be no re-circulation of fines in the crushers. 'Lot size' shall be equivalent to limestone quantity handled in 8 hours operation assuming average conveyor loading at 75% of rated conveyor capacity.

4.12.4 Belt feeders shall be positively self cleaning and have dust tight construction. It shall be provided with flanged belt, rubber lagged head pulleys and inspection doors. No chain/belt drives shall be accepted. The crusher's base should be built of reinforced concrete and be sufficiently large in mass. The sample chutes shall have minimum valley angle of 60 degrees to horizontal and shall be of stainless steel plates. The chutes shall be suitable to handle wet sticky limestone as specified elsewhere. The welding of chutes shall be done externally only. The inside surface of the material near welds shall be smooth. Radius at corners not less than 1" shall be provided in chute work. All solid connected members shall be by means of bolting flanges with at least 6 mm thick standard grade neoprene gasket material between the metal flanges. No control gates to regulate the flow of material shall be incorporated in the chute work.

4.12.5 Bias connections shall be provided at suitable locations. The materials rejected from samplers shall be returned to main conveyor stream. Minimum 4 nos. sample collecting bins shall be provided with auto indexing. The bins shall be provided with air tight connection. The system shall be suitable for operation through DDCMIS.

**4.13.0 DUST CONTROL AND MISCELLANEOUS SYSTEM**

4.13.1 The dust control system to be furnished under this specification is required for control of fugitive dust emissions from dust generation points such as junction towers, truck un-loading points, crushers etc. Dust control is achieved by dust extraction system. Service water system, potable water system, cooling water system & sump pumps shall also be provided. *All pumps/ compressors envisaged to meet dust control and miscellaneous system requirements for LHP/GHP shall be provided with 100% standby.* Each pump houses shall have one no. dedicated over ground tank. Each tank shall be sized for ½ hour storage capacity considering maximum water drawn in order to meet the specified requirement. Tank shall be completely enclosed and provided with man hole and access ladder (internal and external). All areas around tanks shall be paved with concrete and shall have proper drain.

4.13.2 **Service Water and cooling Water System**

Service water and Cooling water distribution system (for scoop coupling) complete with water supply system, valves, quick couplings, hose pipes with nozzle, piping, pumps, drive motors with canopy, couplings with enclosure, electricals, including supporting structures,

handling for equipment's, civil and structural works and necessary accessories shall be provided throughout the limestone handling system.

4.13.3 The Dust Control & Miscellaneous Systems shall conform to the latest edition of the following standards and codes. Other internationally acceptable standards/codes, which ensure equal or higher performance than those specified, shall also be accepted

| | | |
|---|---|---|
| IS:778 | : | Gun Metal gate, globe & check valves for general purpose. |
| BS:5150 | : | Cast Iron Gate Valve for water works purposes |
| BS:5152 | : | Cast Iron Globe Valve for water works purposes |
| BS:5312 | : | Cast Iron Check Valve for water works purposes |
| S:1239 | : | Mild Steel tubes & fittings. |
| IS:2379 | : | Colour for the identification of pipe line. |
| IS:3589 | : | Electrically welded steel pipes for water, gas & sewage (200 to 2000 mm) |
| IS:5312 | : | Swing check type reflux (non return) valves. |
| IS:1520 | : | Horizontal centrifugal pump for clean, cold fresh water. |
| IS:5120 | : | Centrifugal pump for clean, cold & fresh water. |
| IS 2825 | : | Air Receivers. |
| ANSI B 31.1 | : | Code for pressure piping. |

Hydraulic institute Standards of U.S.A

4.13.4 Sump pumps alongwith level switches & piping upto nearest Employer's drain (max upto 50.0 mtrs. from outside the building) shall be provided at all locations wherever natural drainage is not possible. The capacity of each pump shall not be less than 50 $m^3$/hr. Minimum 10% margin on capacity and 20% margin on computed head shall be considered for selection of pumps. Size of the drain pit shall not be less than 2.0 meters x 2.0 meters x 1.8 meters deep. One no. of settling pit shall also be provided before sump pit so that water without heavy limestone particles goes into sump pump pit. High and low level switches shall be provided in the sump pump pit.

4.13.5 Service water connections are to be provided in conveyor galleries and tunnels at 50 meter intervals. Adequate number of these connections shall be provided in all junction towers with minimum one no. at each floor and with minimum two (2) nos. at each floor in limestone crusher house. Each connection shall be provided with one (1) no. 32 NB globe valve and quick coupling. One (1) no. hose pipe with nozzle shall be provided in each building.

4.13.6 Potable water connections are to be provided in all junction towers, limestone crusher house, all tripper floors, and all control rooms/MCC rooms and toilets etc. Water shall be drawn from the water storage tank by electric motor driven pumps and discharged via a pipe work system to the overhead drinking water storage PVC tanks of 250 litres capacities. The drinking water storage tanks shall have provision for maintenance & drain.

4.13.7 Hoists with monorail of adequate capacity shall be provided in the service water/dust suppression/potable water pump houses

4.13.8 The pumps shall be complete with drive motors, base plate and other accessories. Pump casing may be axially or radially split. Impeller shall be made in one piece and securely keyed to the shaft. Wearing surface shall be of hardened material and shall have a hardness difference of at least 50 BHN. The design of the shaft shall take into consideration the critical speed, which shall be at least 20% away from operating speed. Pump bearings shall be of antifriction type. Pump speed shall be less than 1500 rpm for pumps of capacity more than 10 $m^3$/hr. The power, head and flow characteristics of each pump shall be suitable for parallel operation. The Power characteristics of the pumps shall be of non overloading type. All rotating parts of the pumps shall be statically and dynamically balanced. Design duty point of pump shall match with the average value of maximum and minimum flow rates of the pump in the stable operation zone.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

| | |
|---|---|
| 4.13.13 | The sump pumps shall be of wet pit types, vertical shaft and impeller shall be specially designed to pass large solids or unscreened liquids. The construction and material shall be suitable for pumping limestone/dust contaminated water with a minimum of maintenance. All bearings of the pump shall be located above the water level. |
| 4.13.14 | In general pipe sizes 65 mm NB and larger are to be joined by butt welding and pipe work of size 50 mm NB and below by socket welding/screwed connections. Joints at valves or specialities shall be flanged for sizes 65 mm NB or large and screwed for sizes 50 mm NB and below. All galvanised piping shall be joined by screwed connections. Minimum pipe diameter selected for DS/SW/PW/Cooling Water System (along with branch pipes) shall be 32 NB. However, for dry fog DS system, the minimum pipe size shall be 20 NB. |
| 4.13.15 | Valves & Specialities shall be used to start, stop or regulate the flow. All valves/specialities below 50 mm size in service water/dust suppression/ potable water lines should be plug type. Gate/sluice valves shall be used for isolation of flow of pipe lines above 50NB and Globe valves shall be used for regulating the flow. All gate and globe valves of size 65 NB and large shall be bolted bonnet, outside screw, rising type with flanged ends. Valves of size 50 NB and smaller shall be with screwed ends. Non-return valves shall be swing check type. These valves will have a permanent 'arrow' inscription on its body to indicate direction of motion of the fluid. |
| 4.13.16 | Strainer shall be of duplex type designed with 3 way valves so that one filter can be cleaned while the other is in operation. Suitable vent and drain valves shall also be provided. Screen opening area shall be at least four times the pipe cross sectional area. Pressure drop in clean conditions shall not exceed 1.5 MWC at full flow. |
| 4.13.17 | The dust control and miscellaneous system to be supplied for limestone handling plant may be clubbed with the dust control and miscellaneous system for coal handling plant under this package. |
| **4.13.18** | **Dust extraction system for Limestone Handling area:**<br><br>Dust extraction system for limestone handling system shall be dry type comprising of dust collection hoods, ducting, fans, bag filter and dust collection hopper. The limestone dust collected in dust collection hopper shall be periodically emptied back to the conveyor leaving the building. |
| 4.13.19 | Limestone storage area dust extraction system:<br>a) For dust control in limestone storage shed during stacking and handling of limestone, roof extractors, ducting and collection hopper with bag filters shall be provided. The dust collected in the dust collection hoppers shall be periodically emptied back to the reclaim conveyor below the shed.<br><br>b) For the paddle feeder provided for the reclaim hopper below the limestone storage shed, the dust extraction system comprising of suction hood, ducting and trolley mounted dust collection hopper with bag filters shall be provided. The dust collection hopper shall be periodically emptied back to the reclaim conveyor. |
| **4.14.0** | **VENTILATION SYSTEMS** |
| 4.14.1 | **Mechanical Ventilation system**<br><br>The air quantity for mechanical ventilation system shall be estimated based on equipment and solar heat loads and the temperature rise inside the building. Necessary air filters shall be provided to supply only clean air into building. Exhaust air shall be discharged at a suitable height above building. The ventilation system generally consisting of adequate number of supply and exhaust air fans, air filters, ducting along with 3 phase AC motor |

drives, electricals, supporting structures, approach/maintenance platforms, civil and structural works and necessary accessories shall be furnished for ventilating the underground portion of junction towers, underground conveyor tunnels. Exhaust fans shall be provided for tripper floor, Toilets, Battery rooms. The exhaust fans for toilets and battery rooms will be propeller type and for tripper floors will be axial flow type complete with rain protection cowl and bird screen.

4.14.2 **Pressurised Ventilation System**

The pressurised ventilation system having adequate nos. of supply air fans with washable metallic pre filters, HDPE fine filters, and self closing flap (gravity louver shutter), ducting along with 3 phase AC motor drives, electricals, supporting structures, access / maintenance platforms shall be provided in all MCC/switchgear room areas of limestone handling plant to be furnished under this specification. The pressurized ventilation system shall be designed considering 15 air changes per hour to maintain these areas pressurised slightly above atmospheric pressure to prevent ingress of dust from outside

4.14.3 Air Conditioning System

Air conditioning system shall be furnished for control room area of main LHP control building (if applicable) and in electrical buildings. It shall be designed considering the equipment heat loads, solar heat loads, heat gain into the room, adequate no. of air changes etc. to maintain a uniform temperature and relative humidity within the air conditioned areas.
2x100% capacity air conditioning units with air cooled condensers shall be provided on the following basis.
a) For areas where air conditioning load is in the range of 5-15 TR, Non-ductable ceiling mounted (cassette type) or wall mounted (high wall type) split air-conditioners of suitable capacity along with adequate redundancy shall be provided.
b) Ductable split/packaged type A/Cs shall only be provided for control rooms where the load varies in the range 15- 25 TR.
c) Central air conditioning system shall be provided for control rooms where the load varies in the range 25-60 TR.

Window ACs shall be provided for RIO room (if applicable). Supply and return air distribution ducting complete with insulation, of resin bonded mineral wool equivalent of density at least 24 kg/m$^3$ and thermal conductivity of max. 0.49 mw/cm°C conforming to IS: 8183 including supporting structures, approach/ maintenance platforms, civil and structural works and necessary accessories shall be provided.

4.14.4 The Ventilation & A/C System shall conform to the latest edition of the following standards and codes. Other internationally acceptable standards/codes, which ensure equal or higher performance than those specified, shall also be accepted.

| | | |
|---|---|---|
| IS:3588 | : | Specification for electrical axial flow fans. |
| IS:2312 | : | Propeller type AC Ventilation fans |
| IS:3963 | : | Specification for roof-extractor units |
| IS:4894 | : | Centrifugal Fans |
| IS:655 | : | Specification for Metal Air Duct |
| ARI:210 | : | Standard for Unitary air conditioning equipment. |
| ARI:270 | : | Standard for application, installation and servicing of unitary equipment. |
| IS:8183 | : | Specification for bonded mineral wool. |
| IS:661 | : | Thermal insulation for cold surfaces. |
| IS:4671 | : | Expanded polystyrene for thermal insulation purpose. |
| IS:8148 | : | Packaged Air conditioners |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

4.14.5 **Axial Fans**

Design duty point of the fan shall match with the average value of maximum and minimum flow rates of the fan in the stable operation zone. The speed of the fan shall not exceed 960 rpm for fan with impeller diameter above 450 mm and 1440 rpm for fan with impeller diameter 450 mm and less. The first critical speed of rotating assembly shall be at least 25% above operating speed. Impellers shall be axial flow type and single piece cast aluminum with aerofoil blades construction and shall be mounted directly on the motor shaft. It shall be finished all over and balanced dynamically. Rain protection cowls will be designed to suit wall exhausters/supply fans for protecting fans/motors from rain. It will be provided with bird screen. Inlet cone or bell and outlet cone shall be provided as required. It should be made of G.I. or M.S.

4.14.6 **Centrifugal Fans**

The fan units shall be centrifugal type with radial bladed impeller. For design, purpose out door ambient temperature shall be taken as 50 deg.C. All fan mountings shall have adequate arrangement for vibration isolation. The reverse flow through non-working fan shall be prevented by dampers. The dampers shall be made out of 18 SWG MS sheets. Design duty point of the fans shall match with the average value of maximum and minimum flow rate of the fan in the stable operation zone. Split casing shall be provided on larger sizes of fans. Casing drain with valves shall be provided wherever required. The impeller shall have die formed curved blades fabricated out of MS heavy gauge welded to the rim and back plate to have a non overloading characteristics of the fan. Rim shall be spun to have a smooth contour. The impeller, pulley and shaft sleeves shall be secured to the shaft by key and/or nuts. The impeller along with driven pulley shall be dynamically balanced. Fan shaft shall be of EN-8 equivalent. The bearings shall be self-aligning heavy-duty ball or roller bearings. They shall be adequately supported. They shall be easily accessible and lubricated properly from outside

4.14.7 **Metallic Filters**

Metallic cleanable filters shall be provided as required. Max. air velocity considered shall be 2 m/sec. Metallic cleanable filters shall consist of V-fold galvanized wire mesh inter spaced with a flat layer of galvanized wire mesh. The density of the filter medium shall increase in the direction of airflow. Wire mesh edges shall be suitably hemmed to eliminate the danger of abrasion during handling. Filter medium shall be supported on either side by galvanized expanded metal casing. Filter frame shall be constructed from galvanized sheet of thickness not less than 18 gauge.

4.14.8 **HDPE Filters**

HDPE filters should have an efficiency of 90% down to 5 microns. Velocity across the filter shall be limited to 2.5 m/sec. HDPE filters shall be provided as required. To facilitate periodic cleaning of filters by water washing, tap or service water connection near the filters shall be provided.

4.14.9 **High efficiency filter (for A/C purpose)**

High efficiency filter (for A/C purpose). Filtration efficiency shall not be less than 99% down to 5 microns. Pr. drop across the filter under clean condition shall not be more than 10 mm w.c. The media of the filter shall be made from either special synthetic non-woven bond fiber design or made from micro fiber glass media. It shall be supported with GI wire mesh or aluminum mesh and shall be housed in an aluminum sheet frame. It shall be of washable type several times.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

4.14.10 **Packaged Air-Conditioning Unit**

PAC units shall be factory tested and assembled self contained units complete with refrigerant compressor, coils, fans, insulation and wiring. Various parts of PAC units wherever required shall be insulated with expanded polyethylene conforming to IS:4671. The PAC unit shall comprise of an evaporator (indoor air) blower section and an air cooled condenser (outdoor air) section. Heavy gauge steel cabinet finished with paint of approved colour, shall be used to house components of PAC. The evaporator and condenser coils shall be arranged for direct expansion cooling and shall be formed of aluminum fins mechanically bonded to seamless copper tubes and electrically tinned. The inter-connecting refrigerant circuits shall comprise of hermetically sealed scroll compressor and motor with all necessary isolation valves, with adjustable set point, sight glass, copper tubing and pipeline ancillaries. The condenser coils shall be air cooled by propeller type fans complete with safety guards. The condensing coils The evaporator air blower(s) shall be centrifugal forward curved type belt driven by individual motor(s) and suitable for the external static pressure. The fan assembly shall be isolated from the casing by anti-vibration mounts. The fan/motor drive shall be capable of capacity adjustment by pulley changes within +15% of design duty shall be suitably arranged to avoid radiant heat pick-up from solar sources. Condenser capacity control shall be provided by means of fans and 'head pressure' sensing. High efficiency filters shall be provided in the main supply air duct and in the fresh air connection to return air duct.

A separate cubicle shall be provided within the overall casing to house the thermostatic controls, which shall be electric/electronic solid state, prewired and tested. The refrigerant system shall be protected by pressure limiting devices, electric and thermal overloads and unloading facilities to provide the required control range tolerances. A low voltage room thermostat or RTD based temperature sensing device shall be provided for wall mounting. The casing shall be fitted with all necessary coil drains and service connections/ entries. PAC (duty/standby) units shall be selected manually and be ON/OFF switched. The units shall be fully packaged and incorporate integral room air sensing control thermostats and manufacturers work fitted safety interlocks. All controls shall be prewired to unit mounted control/power terminal boxes.

4.14.11 **Ventilation and Air Conditioning system ducting**

All GI sheet metal ductwork required for ventilation and air conditioning system shall be furnished by the supplier. All ducts and plenums unless otherwise noted shall be constructed out of standard quality galvanised steel sheet. All sheet metal ducts shall be fabricated and installed in conformity to the requirements of IS: 655. Steel supports for the ductwork shall be furnished as required. The thickness of ducting steel shall be 1 mm min. For ducting with large size exceeding 1000 mm it shall be 1.2 mm. The flexible connection between fan and ducting shall be on teflon impregnated canvas. The zinc coating on GI sheet shall be 275 gm/$m^2$

**4.15.0 BELT SCALE**

4.15.1 The Belt Scales shall conform to the latest edition of the following standards and codes. Other internationally acceptable standards/codes, which ensure equal or higher performance than those specified, shall also be accepted.

**NEMA**

**NEC** **For electronic circuit enclosures.**

IS:11547 Electronic weighing in motion system

4.15.2 The weigh scale shall be automatic and electronic type. It should be designed for continuous automatic weighing, metering and printing of limestone flow. Each belt weigh scale shall

| | |
|---|---|
| | comprise of a belt weigh scale platform with minimum 4 nos. weighing idlers. It shall have unitised construction for ease of installation and shall be fully floating type (without pivot points). Minimum 4 nos. hermetically sealed load cells of precision strain gauge type shall be applied in tension to support the weigh bridge. The load cells shall have 100% overload protection and shall be structurally safe upto to 250% of rated belt scale capacity. Belt scale shall be electronic microprocessor based with its program stored in non-volatile memory. It shall be provided with self diagnostic features for trouble shooting of the entire belt scale system. Fully automatic zero and span calibration facility shall be provided. The flow rate indicator shall have minimum 4 digits. The flow totalizer should have 8 digits display scale with reset facility. Complete belt scale system shall be suitable for 50°C ambient temperature and 100% relative humidity. It shall be suitable for out door installation in a dusty area. The electronic circuit enclosure, sensors housing shall be dust and watertight. The electronic printed circuits shall be encapsulated with epoxy or other suitable material for protection against dust and moisture. Minimum three years battery back up power failure protection shall be provided. |
| 4.15.3 | Belt scale shall be designed for a range of 20% to 120% of rated capacity with an accuracy of atleast (±) 0.25 percent throughout its range. Per two (2) belt weighers, the contractor shall furnish one (1) necessary test load chain sets required for calibration and periodic testing of the equipment. The test load chain shall be 'two idler spaces' longer than the weighing length of the weighers and shall be complete with chain reset equipment with weight adding reels of adequate size. The calibrated weight parameter length of the test chain shall be stamped at a suitable location on the body of the equipment. Alternatively, supply of test weights for calibration of belt scales is also acceptable. |
| **4.16.0** | **IN-LINE MAGNETIC SEPARATOR AND SUSPENDED MAGNET** |
| 4.16.1 | Inline Magnetic Separators shall be provided for continuous and automatic extraction and discharge of tramp magnetic pieces from limestone being discharged from conveyors as specified. The sets shall be complete in all respects with drives, magnets, inline belts, hoppers, chutes, tramp-iron boxes and all electrical ancillaries like control panels etc. Suspended Magnetic Separator shall be provided for picking up tramp magnetic pieces buried under limestone from moving Conveyor. |
| 4.16.2 | Magnet core material shall be pure annealed iron or equivalent high permeability magnetic material. The coil shall be of aluminum wire with class 'H' insulation, to limit the absolute temperature of the winding to 140 deg. centigrade. The oil used for cooling the ILMS and SM shall be silicon based. |
| 4.16.3 | The 'Force Index' i.e. the product of flux density in gauss and rate of change of flux density w.r.t. distance, at the bottom of falling material trajectory shall be 100,000 (gauss x gauss/inch) minimum in hot condition for mounting height of 450mm in the conveyors carrying uncrushed limestone & 400 mm in the conveyors carrying crushed limestone. However, the strength of the magnet shall not be less than 1000 gauss in hot running condition at distance of 450mm in the conveyors carrying uncrushed limestone & 400 mm in the conveyors carrying crushed limestone. The minimum strength of the magnet shall be 1000 gauss at the specified mounting height at the centre of Belt width. Contractor shall select magnet width to suit above. Characteristic curve of magnet with the value of flux density varying between 50 mm to face of conveyor belt shall be provided. The cross section of magnet shall be suitably designed to provide sufficient area for magnetising the coil effectively covering full cross section of the discharge material. The magnetic separator shall be located such that it picks-up tramp iron from limestone trajectory after it has been discharged from head pulley. |
| 4.16.4 | The tramp magnetic pieces buried under limestone picked up by the magnetic separator shall be discharged suitably to ensure that it falls into the tramp iron chute, which shall be provided upto ground level. All conveyors with magnetic separator at head end shall have non-magnetic SS pulleys. Head pulleys of all conveyors with in line magnetic separator at |

| | |
|---|---|
| | head end shall be provided with SS shell and end disc. However, hub and shaft shall be of same materials as in other pulleys (EN-8 or equivalent). The motor and the gear reduction unit for driving the in-line belt shall be adequately sized with minimum 20% margin to avoid any over loading during operation. Suitable zero speed switch shall be provided. No Chain/belt drives shall be accepted. The belt shall be designed to withstand high temperature at the bottom of the magnet and any serious damage due to the impact of the sharp edges of the tramp iron. The belt shall be provided with rubber cleats spaced suitably. The belt shall be of fire resistant grade. |
| 4.16.5 | The magnetic separator units shall be supported by suitable structural member from the top by taking support from the operating floor beams with turn buckle arrangement to facilitate the necessary adjustments during operation. Further, electric Hoists operated cross travel arrangement shall be provided to move magnetic separator away to facilitate maintenance of the conveyor discharge pulley/Belt. ON/OFF control push buttons with indicating lamps shall be provided at the local station. The materials of chutes and hoppers associated with magnetic separators above the drive floor shall be SS-304 in the magnetic zone. Other chutes shall be of 1 mtr. sq. dimension and shall be made of MS. Chutes shall have poking doors at all floors to clear jammed material. |
| 4.16.6 | Suitable arrangements shall be provided in the magnet for keeping the coil of the magnet dry from atmospheric condensation when the magnetic separator is not in use. Protection against high oil temperature in magnet shall be provided. |
| **4.17.0** | **METAL DETECTOR** |
| 4.17.1 | Metal detectors shall be provided at specified location to detect metallic objects in the limestone stream. Metal detectors shall have high reliability with enough sensitivity to detect 25mm aluminum sphere below the burden of limestone in case of synthetic belting. However, for steel cord belting the sensitivity shall be 35mm. It shall also detect other metals, like brass, copper, stainless steel, manganese steel, bars, scraps etc. The equipment shall have provision for automatic static calibration with adjustable sensitivity. |
| 4.17.2 | Metal detectors shall be completely solid state using latest state of art technology. It shall be suitable for 50°C ambient and RH of 100%. The search sensor shall be protected from rain and direct sunlight by means of a non metallic covering other than wood. Control unit shall have adjustable controls for sensitivity, ON/OFF push buttons, resettable operation counter, audio-visual alarms local remote selector switch and all other necessary controls for trouble free operation of metal detector. It shall be suitable for mounting on wall, column, structure etc. with IP-65 Degree of protection. It shall be constructed from FRP of thickness not less than 2mm. |
| 4.17.3 | The coils shall be protected against being struck by an oversized material. The coils should have adjustment for magnetite/iron in incoming limestone. It should ignore magnetite/iron and shall distinguish between metal pieces and magnetite/iron. In order to counteract interference from external sources such as motors, lightning and radio-transmitters, and to nullify the effect of climate changes/aging, dual receiver coils are to be used. In order to allow passing of steel cord belt and metal belt fasteners without giving alarm and at the same time detecting tramps, suitable arrangements shall be provided. In case a few non-magnetic idlers or non magnetic deck plates are required, the Contractor shall provide these. However, these shall be metallic. Wood is not to be used. LED display of COAST COUNT to indicate the number of pieces of tramp iron detected since last reset shall be provided so that the operator is alerted for the pieces of tramps, if any, between tramp marker and coil before restoring conveyor. TOTAL COUNT, which is not resettable, shall also be provided on the same LED display on demand. The location of tramp metal pieces shall be indicated by sand bag marker. |
| 4.17.4 | Fiber glass enclosure (with IP 65 degree of protection) shall be provided for all type of coils. Local control panel shall be provided with IP:65 degree of protection. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**4.18.00 BOX FEEDER OR BULK MATERIAL RECEIVING UNIT OR TRUCK UNLOADING SYSTEM OR SURFACE FEEDER:**

The Box Feeder should be a robust, proven, above the ground for unloading from trucks/ self-tipping trucks or from loader shovels. The unit should be designed for rapid intake and temporary live storage of material before transferring on to the crusher house. The intake and onward discharge capacity to be 200 TPH per Box Feeder.

**4.19.00 BUCKET ELEVATOR SYSTEM**

**4.19.01 General Requirement**

The type (Centrifugal/Continuous) of the Bucket Elevator shall be chosen by Bidder for the material and conditions specified. The Bucket Elevator shall be sized to handle the design capacity at the specified material bulk density & maximum material size. The equipment shall be complete with all necessary sub-systems and components and shall be designed and supplied in conformance with the attached datasheets, site conditions, specific Employer's requirements and applicable International, National, State and Local codes. The Equipment shall be complete in all aspects and all items required for erection/smooth operation shall be in Bidder's scope, unless otherwise noted in exclusions. Sizing of the equipment and components shall be the responsibility of the Bidder, based on the service conditions specified.

**4.19.02 Codes and Standards**

All design, fabrication, testing, supply and erection, if applicable, shall conform to the latest edition of all the relevant standards and regulations issued by the governing bodies.

Bidder shall follow the applicable INDIAN/INTERNATIONAL codes by the following organizations. EN European Norm

IEC International Electro technical Commission

ISO International Organization for Standardization

DIN German Institute for Standardization (To be used when no EN standards exist) Other internationally acceptable standards/codes, which ensure equal or higher performance than those specified, shall also be accepted. Nothing in this specification shall be construed to relieve the contractor of the required statutory responsibility. In case of any conflict in the standard and this specification, the decision of the Employer shall be final and binding.

**4.19.03 Design Requirement**

**4.19.04 Design Criteria**

The equipment shall be designed for continuous twenty-four hour service. The Equipment shall be designed for service in a heavy duty industrial application, handling abrasive materials in a dusty environment.

The Bucket Elevator should be sized to handle the design capacity as indicated on the Data Sheet with the minimum material bulk density and a maximum bucket filling of 75%.

**4.19.05 Casing**

Casing to be self-supported, dust-tight construction and capable of supporting head shaft, drive, and service platform.

Head section is to be split and equipped with handles or lifting lugs for easy removal. Access and inspection doors are to be provided.

Intermediate sections are to have a minimum plate thickness of 4 mm.

Boot section to be fabricated of minimum 6mm steel plate, with front and rear access panels.

A beam is to be provided in casing for servicing internal gravity take-up. The beam may be located either in the boot section or intermediate section as applicable.

**4.19.06** **Buckets**

Size, capacity and type of buckets and appropriate reinforcement necessary for the application shall be adequately sized. Provide pin holes in bottom of buckets for air relief, as necessary, when handling materials such as Lime stone or gypsum. Bucket width is to be a minimum of four times the maximum particle size.

**4.19.07** **Belting**

Belting shall be provided as specified else where in the specification..

**4.19.08** **Pulley**

Drive and guide pulleys shall be provided as specified else where in the specification and shall be at least the minimum recommended for belt conveyor pulleys.

**4.19.09** **Head Shaft and Bearings**

The bearings on head shaft to be antifriction type with one bearing fixed and the other expansion. All bearings are to have an $L_{10}$ life of 60000 hours.

**4.19.10** **Foot Shaft and Bearings**

The tail shaft is to be of hardened steel with tool steel sleeves operating in heat treated white iron bearings. All bearings are to have an $L_{10}$ life of 60000 hours.

**4.19.11** **Take-up**

Take-up shall be screw or internal gravity type with guide rails and weights included.

**4.19.12** **Drive**

Bucket elevator drive should be sized as follows:
Minimum power for drive, either:
100% bucket filling @ minimum material bulk density, or
75% bucket filling @ maximum material bulk density, whichever is greater.

**4.19.13** **Inspection and Access Doors**

Inspection doors and access doors shall be loose-hinged type with quick-opening jamb bar fasteners and gaskets enclosed and retained in the door. Access doors shall be 1.5m minimum.

**4.19.14** **Dust Vent**

A dust collecting vent in the head section and boot section shall be furnished with drilled flanges. Bidder quote is to include recommended vent volumes for the boot and head sections of the elevator. The Pick-Up velocity shall not be greater than 2.5m/sec.

**4.19.15** **Drive Equipment**
The Drive Equipment for Bucket Elevator shall be as specified else where in the specification.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**DATA SHEET for each of above system and equipment is as below :**

## DATA SHEET: BELT CONVEYOR

| | | | |
|---|---|---|---|
| 1.0.0 | **GENERAL** | | |
| 1.1.0 | Design Capacity | 110% of rated (guaranteed) capacity for all conveyors. | |
| 1.2.0 | Maximum slope | 16 deg | |
| 1.3.0 | Max. belt Sag between idlers | 2% | |
| 1.4.0 | Minimum Radius | | |
| | (i) Concave curve | 250 m (In case of travelling trippers, the requirement of minimum radius shall be decided based on the space availability) | |
| | (ii) Convex Curve | 50 m | |
| 1.5.0 | Limestone Parameters | As specified elsewhere | |
| 2.0.0 | **DESIGN & CONSTRUCTION** | | |
| 2.1.0 | **Belting** | | |
| 2.1.1 | Type | Synthetic Fabric of Nylon / Nylon | |
| 2.1.2 | Cover Grade | a) Flame test : Conforming to ISO:340<br>b) Drum Friction and Electrical Surface Resistance Test: Conforming to Canadian standard association CAN / CSA M-422- M87 Grade - C. | |
| 2.1.3 | Cover Thickness (without –ve tolerances). | Synthetic belting | Steel Cord |
| | (a) Face | 5.0 mm (min.) | 8.0 mm (min.) (Inclusive of steel or fabric breaker) |
| | (b) Bottom | 2.0 mm (min.) | 6.0 mm (min.) (Inclusive of steel or fabric breaker) |
| 2.1.4 | No. of plies | Minimum 3 | |
| 2.1.5 | Drive Arrangement | Snub drive | |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | **DATA SHEET : BELT CONVEYOR** | |
| 2.1.6 | Factor of Safety | - 10 (Minimum) for N-N belt.<br>- 7 (minimum) for Steel Cord Belt. |
| 2.1.7 | Normal Working tension at design capacity | Less than 80% of max. allowable working tension |
| 2.2.0 | **Idlers** | |
| 2.2.1 | Type | |
| | (a) Carrying | Three roll, 35 degree troughing,<br>2 degree forward tilt |
| | (b) Return | Single Roll, For conveyors upto 400 m c/c length. Two roll with 10 degree angle for conveyors more than 400 m c/c length |
| | (c) Loading point | Impact type |
| 2.2.2 | Spacing | |
| | (a) Carrying idlers | 1.2 m (0.6 m for convex curves). |
| | (b) Return idlers | 3.0 m (for convex curves not more than 1.5 m.) |
| | (c) Loading point | Minimum six (6) with 400 mm spacing. |
| | (d) Self-aligning troughing idlers | At 10 m distance from head & Tail pulleys with intermediate spacing 15m |
| | (e) Self - aligning return idlers | At 10 m distance from Head & Tail pulleys with intermediate spacing 20m. (Not required for conveyors more than 400m c/c long where 2 roll return idlers are provided). |
| 2.2.3 | Bearings | |
| | (a) Carrying | Ball Bearings of deep groove type or seize resistance type of min. 30 mm size, lubricated for life. |
| | (b) Return | Ball Bearings of deep groove type or seize resistance type of min. 20 mm size, lubricated for life. |
| 2.2.4 | Material | |
| | (a) Roller | ERW Steel tube min. wall thickness 4.0 mm |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | (b) Spindle | EN- 8 or equivalent. |
| 2.3.0 | Belt Cleaners | |
| 2.3.1 | External | Spring loaded scraper type cleaner with modular, segmented and replaceable PU blades with separate main-cleaner & pre-cleaner etc. |
| 2.3.2 | Internal | V-Plough type, mild steel flats with hard rubber strips. |
| 2.4.0 | Belt Take up | |
| 2.4.1 | Type | Automatic Gravity Type. |
| 2.4.2 | Location | In relation to the drive to keep belt tension at minimum. |
| 2.4.3 | Take-up travel | To suit all operating conditions or (2.5% for synthetic belt and 0.5% for steel/cord belt) of conveyor center to center length whichever is larger. Further the initial location of take-up shall be decided in such a way that it is possible to carryout min. two (2) nos. Vulcanizing Joints without adding any external belt. |
| 2.5.0 | Hold Back Device | Integral with gear Box |
| 2.6.0 | Pulleys | |
| 2.6.1 | General (for all types of Pulleys) | |
| | Pulley shaft diameter | Margin of minimum 20% shall be Considered on maximum tension at design capacity for arriving at the shaft dia. |
| 2.6.2 | Drive Pulleys | |
| | (1) Lagging | Hot lagged with vulcanized natural rubber |
| | (2) Lagging thickness | 12 mm thick grooved in diamond pattern with grooves 6 mm wide x 6 mm deep |
| | (3) Minimum angle of wrap | 210° degrees |
| | (4) Maximum Out of roundness | 0.5% of nominal diameter |
| 2.6.3 | Other pulleys | |
| | (1) Lagging | Hot lagged with vulcanized natural rubber |
| | (2) Lagging thickness | 12 mm thick plain |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| 2.6.4 | Rubber for lagging | |
| | (1) Type | Natural rubber blended with styrene Butadiene rubber. |
| | (2) Hardness | 55 to 65 durometer (Shore A) |
| | (3) Elongation | Over 300% |
| | (4) Strength | 160-245 kg/cm$^2$ |
| | (5) Abrasion loss | 250 mm3 (max.) as per DIN 53516 |
| | (6) Specific Gravity | Max. 1.5 |
| | (7) Adhesion Strength | 10 kg/cm (minimum) |
| 2.6.5 | Bearings for Pulleys | |
| | (1) Type | Heavy duty roller type |
| | (2) Casing | Horizontal Split Type |
| | (3) Sealing | Dust tight with double labyrinth seals. |
| | (4) Lubrication | Greasing arrangement with conical head shape nipples. |
| 2.6.6 | Pulley Material | Mild steel conforming IS:226 / IS : 2062 |
| 2.6.7 | Shaft Material | Forged Steel shaft EN-8 or equivalent material. |
| 2.7.0 | Belt Protection Equipment | |
| 2.7.1 | Emergency Stop Switch System | |
| | (1) Type | Pull chord type (manually reset) |
| | (2) Location | Both sides of conveyor for entire length |
| | (3) Spacing | Approx 30 m |
| 2.7.2 | Belt Sway Switches | |
| | (1) Type | Limit switches snap action. |
| | (2) Spacing | One pair at 50m interval (Minimum two (2) pairs) |
| 2.7.3 | Zero Speed Switches | |
| | (1) Type, Location | Proximity switch, mounted on Bend pulley of GTU. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| 2.8.0 | Drive Motors | |
| 2.8.1 | Type | Three Phase Squirrel Cage Induction Motors |
| 2.8.2 | Mounting (for conveyors) | Base mounted |
| 2.8.3 | Continuous motor rating (Name plate rating) at 50$^{O}$C Ambient | 120% of actual power requirement at motor output shaft at design capacity. |
| 2.9.0 | Conveyor Bridges | |
| 2.9.1 | Walkways | |
| | (a) Construction | Chequered plate with antiskid arrangement.<br><br>Chequered plate steps shall be provided where conveyor slope exceeds 10 degrees. (Totally sealed so that no water falls down while washing.) |
| | (b) Central walkway width | 1100 mm |
| | (c) Side walkway width | 800 mm (for single conveyors, the width of side walkways shall be 800 mm on one side and 1100 mm on the other) |
| 2.9.2 | Side Windows | |
| | (a) Spacing (Center to center) | 25.0 m on each side (in staggered fashion) |
| | (b) Size | 1.2 m x 1.5 m |
| | (c) Window material | Refer Civil Section |
| 2.10.0 | Trestles | |
| 2.10.1 | Spacing of monkey ladders on trestles | |
| | (a) Where height of conveyor gallery (walkway level) is 10 m or more. | : On every trestle |
| | (b) Where height of conveyor gallery (Walkway level) is less than 10m. | : On alternate trestle |

## DATA SHEET: BRAKES AND CLAMPS

| | | |
|---|---|---|
| 1.0.0 | **GENERAL** | |
| 1.1.0 | Brakes | (i) For decelerating of conveyors & rotating equipment's.<br>(ii) Brakes are mandatory for H.T. drives involving scoop type coupling. |
| 1.2.0 | Rail Clamps | For various mobile equipment travelling on rails. |
| 2.0.0 | **DESIGN & CONSTRUCTION REQUIREMENT** | |
| 2.1.0 | **Brakes** | |
| 2.1.1 | Type | Electro Hydraulic Thruster brakes A.C. operated or Disc brakes. |
| 2.1.2 | Braking Torque | Adjustable from 0 to 100% of rated braking torque. |
| 2.1.3 | Brake Shoes | Operated directly by spring |
| 2.1.4 | Shoe lining | Asbestos with interwoven brass wires. |
| 2.1.5 | Max. Temperature for shoe lining | 200 degree C. |
| 2.1.6 | Thrustor | Class-B insulation, IP-65 protection. |
| 2.2.0 | **Clamps** | |
| 2.2.1 | Rail Clamp support | Independent from the rails. |
| 2.2.2 | Limit Switches | "ENGAGED" & "DISENGAGED" signals. |
| 2.2.3 | Clearance between Rail clamp face & Rail surface | Minimum 50 mm |
| 2.2.4 | Material for Rail clamp Mechanism | Forged steel |
| 2.2.5 | Thruster | Class-B insulation, IP-65 Protection |
| 2.2.6 | Type | Electro hydraulic thruster, manual |

| 2.0.0 | **DESIGN & CONSTRUCTION** | |
| 2.1.0 | **Chutes & Hoppers** | |
| 2.1.1 | Minimum Valley Angle | 60 degrees |
| 2.1.2 | Material : | |
| | (a) Chute work | |
| | (b) Sliding zones & adjacent sides | 20 mm thk. TISCRAL / equivalent |
| | (c) No striking/ Non sliding zones | 10 mm thk MS |
| | (d) Chute with valley angle 80 degree and above | All four sides of 20 mm thk. TISCRAL/equivalent material |
| | (e) In the zone of magnetic field of ILMS (chute above floor over which ILMS is suspended) | SS-304 10 mm thk. |
| | (f) In the zone of flap gates | 20 thk TISCRAL/ equivalent material |
| | (g) Discharge Hoods over head pulleys | 4 mm thk M.S. with rubber curtain |
| 2.1.4 | Inspection Doors | Hinged & leak proof construction (min. size 350 x 450 mm) |
| 2.1.5 | Chute Construction | |
| | (a) Corners | One face of removable bolted flange connection |
| | (b) Joints Bolted | Flange joints of dust tight construction |
| | (c) Bolt size | Min. M-16 |
| | (d) Bolts spacing | Not more than 125 mm C/C |
| | (e) Fixing Arrangement | Bolts with plain spring washers |
| 2.2.0 | **Skirt Boards** | |
| 2.2.1 | Length | Entire feeding chute shall be extended minimum 3 m ahead of front edge of chute & 500 mm beyond rear edge of chute. |
| 2.2.2 | Height | Not less than 750 mm |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| 2.2.3 | Width | 2/3 of belt width |
| | Side plate | Min. 10 thk TISCRAL/equivalent |
| | Top cover | 6 mm thk M.S. |
| 2.3.0 | **Flap Gate** | |
| 2.3.1 | Type | Linear actuator operated, 2 position |
| 2.3.2 | Travel | 60 to 70 deg. (with limit switches on both sides). |
| 2.3.3 | Automatic operation | |
| | (i) Drive | Dust tight motor driven with suitable linkages |
| | (ii) Minimum Actuator Rating | 2500 kg with 1 m lever arm |
| | (iii) No. of Operation / Hr | 15 (with 10 consecutive switchings) |
| | (iv) Protection | Travel and Thrust dependent limit Switches. |
| 2.4.4 | Manual Operation | |
| | (a) Maximum effort | Convenient for single operator by declutchable hand wheel regardless of electrical power. |
| | (b) Minimum Hand wheel Diameter | 500 mm |
| 2.4.5 | Flap gate shaft | |
| | (i) Diameter minimum | 150 mm |
| | (ii) Material | EN-8 |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**DATA SHEET: DRIVE EQUIPMENT**

| | | | |
|---|---|---|---|
| 1.0.0 | **GENERAL** | | |
| 1.1.0 | Continuous Motor Rating (Name Plate Rating) at 50 Degree Centigrade Ambient temp. for Electric Motors | | |
| | a) | For conveyors of belt conveyor systems | *****120% of actual power at drive motor output shaft at specified design capacity |
| | b) | Mobile trippers travel drive, mono-rail hoists (travel and hoisting), various pumps of DS systems, service water systems, cooling water system, potable water system and Ventilation Fans | *****110% of actual power requirement at drive motor output shaft at guaranteed (rated) capacity. |
| | *****The actual power at drive motor output shaft shall be calculated after considering all the losses of down the line equipment's of the drive train. | | |
| 2.0.0 | **DESIGN & CONSTRUCTION REQUIREMENT** | | |
| 2.1.0 | Gear Box | | TYPE |
| 2.1.1 | (a) | Below 40 kW | Helical, worm, bevel as per requirement without cooling coil |
| | (b) | Equal to and Above 40 kW | Helical / bevel helical without cooling coil |
| 2.1.2 | Service Factor | | As per accepted engineering practice / manufacturer's recommendations . |
| 2.1.3 | Ambient temperature for Thermal rating | | 50° C Minimum |
| 2.1.4 | Mounting | | On Machined/Ground Surfaces |
| 2.1.5 | Output Rating | | |
| | | | a) For belt conveyor systems @ Service factor X {1.2 times the actual power requirement at drive pulley shaft at design capacity} |
| | | | b) For other equipment @ Service factor X {1.2 times the actual power requirement of the driven equipment } |
| | @ Service factor shall include all the components considered by the supplier and should be clearly indicated in manufacturer's gear box selection catalogues. | | |
| 2.1.6 | Duty | | 24 Hrs. Continuous |
| 2.1.7 | Rating | | Not less than motor name plate |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | | rating |
| 2.1.8 | Thermal Rating | Corresponding to 50 Deg ambient Temp and in any case shall not be less than motor rating. |
| 2.2.0 | Flexible Couplings | |
| 2.2.1 | Type | Geared coupling. |
| 2.2.2 | Rating | Not less than motor rating. |
| 2.3.0 | Fluid Couplings | For all motors having rating more than 40 kW. |
| 2.3.1 | Type | |
| | (a) L.T. Motors | Traction type |
| | (b) H.T. motors | Scoop tube type. |
| 2.3.2 | Rating | Not less than motor nameplate rating |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | **DATA SHEET: LHP BUILDING** | |
| 1.0.0 | **GENERAL** | |
| 1.1.0 | Under ground Junction tower (JT) | RCC |
| 1.2.0 | Over ground Junction tower | Steel Construction |
| 1.3.0 | Control/MCC rooms | RCC |
| 2.0.0 | **DESIGN & CONSTRUCTION REQUIREMENT** | |
| 2.1.0 | Junction tower & Crusher House | |
| 2.1.1 | Space requirement | To accommodate all equipments drive units, head/ tail ends of conveyors transfer chutes etc. and to provide adequate space for maintenance. |
| 2.1.2 | Floors | RCC construction with facility to wash the floors. Min. slope of 1:80 for floors in JTs shall be provided towards drain pipes. |
| 2.1.3 | Walls/Enclosure | Permanently colour coated cladding |
| 2.1.4 | Stairs | Steel construction with minimum 1000 mm width. |
| 2.1.5 | Doors & Windows | Steel construction |
| 2.1.6 | Monorails | Capacity as per equipment installed |
| 2.1.7 | Drainage | From each floor to drain pit suitable to handle limestone slurry. |
| 2.1.9 | Vertical bracing | Only along four sides. |
| 2.1.10 | Maintenance platform with handrails. | Chequered plate floors Min.1500 mm wide |
| 2.1.11 | Flooring | 50 mm thick metallic hardener like ironite floor finish. |
| 2.1.12 | Level of ground floor | 500 mm above ground level. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | **DATA SHEET: TRAVELLING TRIPPER** | |
| 1.0.0 | **GENERAL** | |
| 1.1.0 | Mobile Tripper | Motor driven type rail mounted. |
| 1.2.0 | Bunker Sealing Arrangement | Sealing belt type. |
| 2.0.0 | **DESIGN & CONSTRUCTION** | |
| 2.1.0 | Mobile Tripper | |
| 2.1.1 | Mounting | Rail mounted on rails (90 lbs/yard) with double flanged wheels. |
| 2.1.2 | Drive | Motor driven with suitable gearbox. Suitable for minimum 60 starts/hours. |
| 2.1.3 | Pulleys | |
| | (a) Head & Bend Pulleys | As specified elsewhere |
| 2.1.4 | Brakes | AC operated electro hydraulic thruster type on either side of tripper. |
| 2.1.5 | Clamps | Manual Rail clamps on either side of tripper. |
| 2.1.6 | Walkways | Both sides of tripper, 800 mm wide each |
| 2.2.0 | Bunker Sealing Arrangement | |
| 2.2.1 | Sealing Belt | |
| | (a) No. of plies | Minimum two |
| | (b) Top/Bottom cover Thickness | 5 mm/5 mm (Fire Resistant) |
| | (c) Width | At least 100 mm more than bunker slot. |
| 2.2.2 | Guide Rollers | As per requirements. |
| 2.2.3 | Bunker Slot | |
| | (a) Width | As per tender drawing |
| | (b) Cross bars over the slot opening | 12 mm x 50mm MS grating |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | **DATA SHEET: DUST CONTROL & MISCELLANEOUS SYSTEM** | |
| 1.0.0 | **GENERAL** | |
| 1.1.0 | Dust Control | Dust extraction system |
| 1.2.0 | Miscellaneous systems | Service water system, Potable water system, Cooling water system, sump pump and DE system pumps |
| 2.0.0 | **DESIGN REQUIREMENT** | |
| 2.1.2 | Pumps | 2x100% for water |
| 2.6.0 | **Service Water System** | |
| 2.6.1 | Water connections | |
| | (a) Conveyor Galleries | every 50 m |
| | (b) Junction towers | Min. 1 no. at every floor |
| 2.6.2 | Connection details | 32 NB plug valve |
| 2.6.3 | Hose pipes with hose reel | One in each building of 25 mtr. Length with nozzle |
| 2.7.0 | **Potable Water System** | |
| 2.7.1 | Pumps | 2 X 100% electric motor driven |
| 2.7.2 | Water connections | |
| | a) Junction towers | Minimum one (1) no. at each floor |
| | (b) Tripper floor | Minimum one (1) no. at every tripper bay. |
| 3.0.0 | **CONSTRUCTION REQUIREMENTS** | |
| 3.1.0 | **Water Supply Pumps for SW/PW/CW/DE** | |
| 3.1.1 | Casing | Axial or radially split with drain & vent connection |
| 3.1.2 | Impeller | One piece, keyed to shaft along with locking device |
| 3.1.3 | Shaft | Critical speed atleast 20% away from operating speed |
| 3.1.4 | Shaft sleeves | At bearings & stuffing boxes. |
| 3.1.5 | Bearings | Antifriction type |
| 3.1.6 | Wearing rings | Renewable type (preferable) |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| 3.1.7 | Pump speed | Below 1500 rpm for capacity more than 10 $m^3$/hr. |
| 3.1.8 | Head flow characteristics | Suitable for parallel operation. |
| 3.1.9 | Materials | |
| | (a) Casing | Cast Iron to IS:210, FG 260 |
| | (b) Impeller | Bronze conforming to Gr.I of IS:318 |
| | (c) Impeller Wearing ring | Bronze conforming to Gr.I of IS:318 |
| | (d) Casing Wearing ring | Bronze conforming to Gr.I of IS:318 |
| | (e) Shaft | Medium carbon steel |
| | (f) Shaft sleeve | Stainless steel conforming to AISI-416 hardened. |
| | (g) Gland packing | Impregnated teflon |
| 3.2.0 | **Sump Pumps** | |
| 3.2.1 | Type | Wet pit type vertical shaft |
| 3.2.2 | Duty | Capacity to handle large solids or unscreened liquid. |
| 3.2.3 | Materials | |
| | (a) Casing and rotor housing | Ni-Cast Iron (350 BHN) |
| | (b) Rotor | Ni-Cast Iron (350 BHN) |
| | (c) Shaft | Medium carbon steel |
| | (d) Gland | Bronze |
| | (e) Wearing rings | Stainless steel |
| | (f) Shaft enclosing tube | Carbon steel |
| 3.3.0 | **Pipings & Fittings** | |
| 3.3.1 | Joints | |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | (i) Pipe to pipe | |
| | Pipe size ≤ 50 NB | Socket welding/screwed |
| | Pipe size ≥ 65 NB | Butt welding |
| | (ii) Pipe to valves | |
| | Pipe size ≤ 50 NB | Screwed |
| | Pipe size ≥ 65 NB | Flanged |
| 3.3.2 | Isolation of flow | Plug / Gate / Sluice valves |
| 3.3.3 | Regulation of flow | Globe Valve |
| 3.3.4 | Valves | |
| | (i) Size ≥ 65 NB | Bolted bonnet outside screw rising type. |
| | (iii) Size ≤ 50 NB | Union bonnet with screwed ends for Globe valve & screwed ends for plug valve |
| 3.3.5 | Materials for Pipework | |
| | (a) For sizes 200 NB and Larger | ERW carbon steel pipes to API-5L-Gr.B/IS:3589 with minimum thickness 6.35 mm |
| | (b) For sizes 150 NB to 65 NB | ERW carbon steel black pipes to IS:1239 (Part-Heavy class). |
| | (c) For sizes below 65 NB | ERW carbon steel galvanized pipes to IS:1239 (Part-I) Heavy class. |
| 3.3.6 | Materials for Valves & Specialities | |
| | (a) Cast Iron Valves | 65 NB and above |
| | (i) Body and bonnet | Cast Iron to IS:210, Gr.FG-200 |
| | (ii) Disc for non- return | Cast Iron to IS:210, Gr.FG-200 valves |
| | (iii) Seating surfaces and rings | 13% chromium steel |
| | (iv) Hinge pin for non return valves | Stainless steel type AISI-316 |
| | (v) Stem for gate and globe valves | 13% chromium steel |
| | (vi) Back seat bush | 13% chromium steel |
| | (a) **Gun metal valves (50 NB & below and upto a working pressure of** | |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|

| | | |
|---|---|---|
| | **10 kg/cm2 (g))** | |
| (i) | Body | Gun metal to IS:318, Gr-2. |
| (ii) | Trim | Gun metal to IS:318, Gr-2. |
| (b) | **Duplex Strainer** | |
| (i) | Body | MS fabricated |
| (ii) | Strainer | Stainless steel type element AISI-316 |
| (c) | **Pressure Gauge/Switch (to be provided with isolating valves, gauge cock, snubber and syphon)** | |
| (i) | Dial size | 150 mm |
| (ii) | Accuracy | (+/-) 1% of range span |
| (iii) | Bourdon | AISI 316 SS |
| (iv) | Block | AISI 316 SS |
| (v) | Movement | AISI 316 SS |
| (vi) | Case and Bezel | Die cast Alum. Weather proof case stove enameled block with screwed type inner bezel of ABS plastic and glycerin filled. |
| (vii) | No. of contacts | 2 NO + 2 NC |
| (viii) | Type of contact | Adjustable throughout the range. |
| (ix) | Degree of protection | IP. 65 |
| (d) | **Solenoid valve (to be provided with isolating valve)** | |
| (i) | Type | 2/2 way Diaphragm type pilot operated |
| (ii) | Diaphragm | molded synthetic rubber |
| (iii) | Body | Forged brass / SS |
| (iv) | Pressure | 0.5 to 10 kg/cm² (g) |
| (v) | Protection Class | IP 65 |
| (e) | **Flow Switch (to be provided with isolating valves)** | |
| (i) | Body | Forged steel |

| | | | |
|---|---|---|---|
| | (ii) | Extension Rod/wire | SS-304 |
| | (iii) | Sleeve and Sleeve pipe | SS-304 |
| | (iv) | Cover | Die cast aluminum |
| | (v) | Max. working pressure | 10 kg/cm² (g) |
| | (vi) | Repeatability | ± 0.5% |
| | (vii) | No. of contacts | 2 NO + 2 NC |
| | (viii) | Type of contact | Adjustable throughout the range. |
| | (ix) | Protection class | IP – 65 |
| | (f) | **Level Switch** | |
| | (i) | Type | Displacer operated magnetic type |
| | (ii) | Displacer | SS – 316 |
| | (iii) | Wire rope | SS – 316 |
| | (iv) | Spring Housing Spring and sleeve pipe | SS – 316 |
| | (iv) | Cover | Cast Aluminum |
| | (v) | No. of Contacts | 2 NO + 2 NC |
| | (vi) | Type of Contact | Adjustable throughout the range. |
| | (viii) | Protection class | IP – 65 |
| | (g) | **Level gauges** | |
| | (i) | Type | Float type mechanical gauge with arrow scale |
| | (ii) | Accuracy | (+/-)1% of full scale range |
| | (iii) | Material of construction | |
| | (aa) | Float & Guide wire | 316 SS |
| | (bb) | Elbows | Suitable grade of SS |
| | (cc) | Housing | Mild Steel |
| | (dd) | Cable fastener | SS 304 |
| | (h) | **Dry Fog Dust Suppression Nozzles** | |
| | (i) | Type | Fogging, non-clogging type |

| | | |
|---|---|---|
| (ii) | Material | Stainless Steel |
| (iii) | Nozzle housing | To ensure protection of nozzle against damage. |

**(i) Y Strainer**

| | | |
|---|---|---|
| (a) | Body | SS 304 |
| (b) | Plug | SS 304 |
| (c) | Filter Element | SS 316, 60 mesh |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | **DATA SHEET: VENTILATION SYSTEM** | |
| 1.0.0 | **GENERAL** | |
| 1.1.0 | Mech. Ventilation System | To provide ventilation using fans for specified areas. |
| 1.1.1 | No. of air changes per hour | |
| | (a) For over ground building | Not less than 10 supply air changes |
| | (b) For under ground building | Not less than 15 supply air changes and 7 exhaust air changes |
| 1.1.2 | **Equipment** | |
| | (1) Underground tunnel | Centrifugal fans/Axial fans |
| | (2) All other places | Axial fans, roof ventilators |
| 1.3.0 | **Air-conditioning system** | |
| 1.3.1 | Temperature to be maintained | 24 ± 1 deg. C |
| 1.3.2 | Humidity to be maintained | 60 ± 5% relative humidity |
| 1.3.3 | Fresh Air intake | Minimum 1.5 air changes per hour. |
| 1.3.4 | Equipment | 2 x 100 % roof mounted package AC units along with ducting etc. and 2X100% window AC |
| 1.4.0 | **Outside Ambient Conditions** | As per weather data given in project synopsis |
| 2.0.0 | **DESIGN & CONSTRUCTION** | |
| 2.1.0 | **Axial Fans** | |
| 2.1.1 | Capacity | 10% more of actual requirement |
| 2.1.2 | Head | 20% more of actual requirement |
| 2.1.3 | Speed | |
| | (a) Impeller dia above 450 mm | Max. 960 rpm |
| | (b) Impeller dia less than or equal to 450 mm | Max. 1440 rpm |
| | (c) Critical speed | 25% above operating speed. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| 2.2.0 | **Centrifugal Fans** | |
| 2.2.1 | Capacity | 10% more of actual requirement |
| 2.2.2 | Head | 20% more than actual requirement |
| 2.2.3 | Speed | Max. 1500 rpm |
| 2.2.4 | Outdoor temperature | 50 deg.C. |
| 2.2.5 | Rating | Continuous |
| 2.3.0 | **Packaged Air-Conditioning Unit** | |
| 2.3.1 | Type | Roof top mounting |
| 2.3.2 | Service/application | Continuous, round the clock |
| 2.3.3 | Capacity | |
| | (i) TR | Suitable |
| | (ii) CFM | Suitable |
| 2.3.4 | Type of compressor | Hermetically sealed scroll compressor |
| 2.3.5 | Condenser | Air cooled type |
| 2.3.6 | Fan | Forward curved centrifugal fan |
| 2.3.7 | Filter | High efficiency filter |
| 2.3.8 | Cooling Coil | |
| | (a) Type | Direct Expansion |
| | (b) Material | Copper |
| | (c) Fins | Aluminum mechanically bonded. |
| 2.3.9 | Refrigerant Piping | Copper |
| 2.3.10 | Insulation for PAC parts | Expanded polyethylene of density at least 15 kg/m$^3$. |
| 2.4.0 | **Filters** | |
| 2.4.1. | Metallic Filters | |
| | (1) Max. air velocity | 2 m/s. |
| 2.4.2 | HDPE filters | |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | | |
|---|---|---|---|
| | (1) | Efficiency | 90% down to 5 microns |
| | (2) | Max. velocity | 2.5 m/s |
| | (3) | Testing | As per BS 2831 / Sqv. |
| 2.4.3 | High Efficiency Filter | | |
| | (1) | Efficiency | 99% down to 5 microns. |
| | (2) | Pr. drop across | 10 mm W.C. |
| | (3) | Testing | As per BS 2831 / Sqv. |
| **2.5.0** | Insulation for A/C Ducting Resin Bonded Mineral wool as per IS:8183 | | |
| 2.5.1 | Density | | 24 kg/m$^3$ |
| 2.5.2 | Thermal conductivity | | 0.49 mw/cm deg.C |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|

## DATA SHEET : BELT SCALE

| | | | |
|---|---|---|---|
| 1.0.0 | **GENERAL** | | |
| 1.1.0 | Ambient Temperature | | 50°C |
| 1.2.0 | Relative Humidity | | 100% |
| 2.0.0 | **DESIGN & CONSTRUCTION** | | |
| 2.1.0 | Type | | Electronic load cell type |
| 2.2.0 | Operation | | Microprocessor based fully automatic |
| 2.3.0 | No. of floating idlers | | Minimum four (4) |
| 2.4.0 | Load Cells | | |
| 2.4.1 | Type | | Strain gauge type hermetically sealed |
| 2.4.2 | Minimum Nos. | | Four (4) |
| 2.4.3 | Overload protection | | 100 % of rated belt scale capacity |
| 2.4.4 | Structural capacity | | 250 % of rated belt scale capacity |
| 2.5.0 | Flow Rate Indicator | | Electronic Digital Display Minimum 4 digits |
| 2.6.0 | Flow totalizer | | 8 digit display with reset facility. |
| 2.7.0 | Accuracy | | For entire range of 20% to 120% of rated capacity<br>Minimum $\pm$ 0.25% |
| 2.8.0 | Calibration | | |
| 2.8.1 | Automatic | | Zero & span calibration |
| 2.8.2 | Manual | | With test load chain |
| | (a) | Test load chain length | Two idler spaces more than weighing lengths |
| | (b) | Chain reel equipment | Complete with weight adding facility. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | **DATA SHEET: ILMS/SM** | |
| 1.0.0 | **GENERAL** | |
| 1.1.0 | Type | In line or suspended magnet type as specified. |
| 2.0.0 | **DESIGN & CONSTRUCTION** | |
| 2.1.0 | In-line Magnetic Separator / Suspended Magnet | |
| 2.1.1 | (a) Location of ILMS | Over discharge pulley. |
| | (b) Location of SM | Over Conveyor (as per tender drawing) |
| 2.1.2 | Force index (As defined earlier) | Minimum 100,000 |
| 2.1.3 | Strength of magnet at the specified mounting height | 1000 gauss. |
| 2.1.4 | Mounting height | Mounting height of In Line Magnetic Separator and Suspended Magnet shall be 450mm in the conveyors carrying uncrushed limestone & 400 mm in the conveyors carrying crushed limestone (between top of conveyor belt & surface of magnetic separator) |
| 2.1.5 | Magnetic Separator Belt | |
| | (i) Drive Unit | Adequately sized with 20% margin. |
| | (ii) Belting | Suitable to withstand high temp. & impact of tramp iron. (FR Grade) |
| | (iii) Discharge | Into Tramp iron chute. |
| 2.2.0 | Tramp Iron Items | |
| | (i) MS cube of 20 mm size | |
| | (ii) Brake shoe of Railway Wagon (Cast Iron 15 kg.) | |
| | (iii) MS plate of 250 x 250 x 100 mm size. | |
| | (iv) Shovel Teeth and spikes. | |
| | Material | Carbon Steel |
| | Size | Typical |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | (v) MS round bar of 50 kg with L/D ratio not exceeding 5. | |
| 2.3.0 | Control | |
| | Inline Magnetic Separator / Suspended Magnet | Local and remote |
| 2.4.0 | Electric Supply 415V, 3 phase, 50 Hz input | Silicon Rectifier units |
| 2.5.0 | Location of silicon rectifier unit | Nearby control/MCC room |
| 2.6.0 | Handling Arrangement for inline Magnetic separator/Suspended magnet | |
| | (a) Height adjustment | With turn buckle arrangement |
| | (b) Cross-travel | Electric Hoist operated cross travel facility. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | **DATA SHEET: METAL DETECTOR** | |
| 1.0.0 | **GENERAL** | |
| 1.1.0 | **Type** | Coil type |
| 2.0.0 | **DESIGN & CONSTRUCTION** | |
| 2.1.0 | Sensitivity | - 35 mm Aluminum sphere below limestone for steel cord belting.<br>- 25 mm aluminum sphere below limestone for synthetic belting |
| 2.2.0 | Enclosure | Fiber glass |
| 2.3.0 | Control | Through local control panel. |
| 2.4.0 | Calibration | Provision for automatic static calibration with adjustable sensitivity. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS | |
|---|---|---|
| | **DATA SHEET: LIMESTONE SAMPLING UNIT** | |
| 1.0.0 | **GENERAL** | |
| 1.1.0 | Type | Automatic |
| 2.0.0 | **DESIGN & CONSTRUCTION** | |
| 2.1.0 | Codes & Standard | ASTM C-50 |
| 2.2.0 | Uncrushed feed limestone size | (-) 250 mm |
| 2.3.0 | Crushed feed limestone size | (-) 20 mm |
| 3.0.0 | **CHUTES** | |
| 3.3.1 | Min. angle | 60 deg |
| 3.3.2 | Cross section | Square/rectangular with rounded corners. |
| 3.3.3 | Joints | Bolted flanges with 6 mm thick standard grade neoprene gasket. |
| 4.0.0 | **CRUSHER** | |
| 4.4.1 | Uncrushed (as received) feed limestone size | (-)250 mm |
| 4.4.2 | Crushed (as fired) feed limestone size | (-) 20 mm |
| 4.4.3 | Output size | ASTM C-50 |
| 4.4.3 | Stages of size reduction | Single stage crushing |
| 5.0.0 | **BELT FEEDER** | |
| 5.5.1 | Belt | Flanged type, FR grade |
| 5.5.2 | Pulleys | Rubber lagged head pulley |
| 5.5.3 | Drive | Electric Motor |

**DATA SHEET – LIMESTONE CRUSHER**

| | | |
|---|---|---|
| 1.0.0 | **GENERAL** | |
| 1.1.0 | Type | Hammer Mill type crusher |
| 1.3.0 | Material to handle | Limestone |
| 1.4.0 | Feed Size | (-) 250 mm, occasionally 1-2% of 400mm size |
| 1.5.0 | Product size | To suit limestone pulverizer and system , minimum 90% |
| 1.6.0 | Input limestone parameters | As specified elsewhere |
| 1.7.0 | Limestone feeding arrangement | Through vibrating screen feeder (However the crusher hall be designed/sized considering zero passage of limestone through screen). |
| 2.0.0 | **DESIGN AND CONSTRUCTION** | |
| 2.1.0 | Drive arrangement | Electric motor, scoop type hydraulic coupling, gearbox. |
| 2.2.0 | Rotor Balancing | Static |
| 2.3.0 | Type of sealing | Labyrinth, dust tight arrangement |
| 2.4.0 | Type of bearings | Spherical roller |
| 2.5.0 | Lubrication | Manual through grease gun<br><br>OR<br><br>with recommended grade of oil in which case the Plummer block shall be designed with oil filling, oil draining and visual oil checking facilities |
| 2.6.0 | Tramp collection | Required |
| 2.7.0 | Output size adjustment facility | Required |
| 2.8.0 | Top cover of crushers | Hydraulically operated |
| 3.0.0 | **MATERIAL OF CONSTRUCTION** | |
| 3.1.0 | Rotor Shaft | Forged steel |
| 3.2.0 | Hammer heads | Wear resistant cast alloy steel |
| 3.3.0 | Hammer arm | Forged alloy steel |
| 3.4.0 | Housing/frame | Steel as per IS:2062 |
| 3.5.0 | Breaking blocks | Cast steel/MS fabricated |
| 3.6.0 | Liners | |
| | (a) Material | Suitable for duty requirement |
| | (b) thickness | As required |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **3.0.00** | **OPERATION AND CONTROLS** |
| 3.2.00 | 3.01.00 This section is intended to cover control/instrumentation and operational philosophy as specified hereinafter complete in all respects, required for Lime stone ~~and Gypsum~~ handling facilities under subject package. |
| 3.3.00 | **General Requirements**<br><br>The instruments and controls to be furnished and erected under this specification are as required for safe and satisfactory operation of the Lime Handling System, as outlined under mechanical section and as specified elsewhere in the specification. For the equipment and materials procured by the Contractor from his sub-vendors, the Contractor shall study the specification, safety requirements, interface drawings for such equipment and material in detail and shall coordinate his work with his sub vendors and FGD DDCMIS system and supply instrumentation and control to suit the actual Lime stone and Gypsum Handling equipment. |
| 3.3.1 | **Standards / Codes**<br><br>All construction, installation, workmanship, design & equipment shall conform to acts, rules & regulations of the jurisdiction within which the project is to be located, and to the current edition of the following or equivalent standards or codes, in so far as they apply :<br><br>American Iron & Steel Institute (AISI)<br><br>American Society for Mech. Engineers (ASME)<br><br>American Society for Testing & Materials (ASTM)<br><br>American Wire Gauge (AWG)<br><br>Institute of Electrical & Electronic Engrs. (IEEE)<br><br>Instrument society of America (ISA)<br><br>National Electrical Code (NEC)<br><br>National Electrical Manufacturers Association (NEMA)<br><br>United States of America standards (USAS)<br><br>Bureau of Indian Standards (BIS)<br><br>Conveyor Equipment Manufacturers Association (CEMA) |
| 3.03.00 | This Sub-section shall be read in conjunction with Electrical Sub-sections. |
| **3.04.00** | **General Construction and Design** |
| **3.04.01** | **General Construction**<br><br>Control desks/panels and annunciation system shall be as per the requirement of electrical Section. Annunciations, indications, electrical meters and instrumentation shall be provided as specified. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| **3.04.02** | **Design**<br><br>The complete lime handling plant shall be controlled from FGD DDCMIS system as detailed elsewhere. Also refer other clauses of this chapter.<br><br>The Contractor shall provide a comprehensive control indication and annunciation scheme. Contractor shall furnish block diagram and write-up on the scheme proposed. The final scheme will be approved by the Employer. In general, interlocking shall be achieved through feed-back signals from field equipment. Comprehensive Annunciation and Indication scheme shall be provided such that, it will be possible for the operator to locate and identify the fault from the face of DDCMIS/LVS/Control-Panel/ TFT itself. The scheme shall include the basic remote control instrumentation, indication and annunciation requirements as per various technical specification requirements.<br><br>However, the Contractor may offer any alternative proposal which he considers to be equal, superior to the scheme as described in subsequent clauses below for achieving reliable and trouble free operation of the plant, for consideration of the employer. |
| **4.00.00** | **OPERATION AND CONTROL PHILOSOPHY**<br>The lime handling system shall be controlled from the following control points. |
| 4.01.00 | **Coal Handling Plant Main Control Room**<br><br>Overall, operation of the following equipment of Lime Handling Plant shall be controlled from the main FGD control room through FGD DDCMIS being provided by the Contractor.<br><br>(a.) Conveyors, feeders, flap gates, R & P gates, crushers, hydraulic scoop couplings.<br><br>(b.) Complete Dust Suppression system, service water system, cooling water system & potable water system.<br><br>(c.) Ventilation system (group/individual control as required).<br><br>(d.) In line Magnetic separators and Suspended Magnet (ON/OFF control with indication).<br><br>(e.) Metal Detectors (ON/OFF control with indication).<br><br>(f.) Lime Sampling Units.<br><br>(g.) Belt weigher (ON/OFF control with indication)<br><br>(h.) Mobile trippers over bunkers/ storage shed (tripper position indications).<br><br>(j) Paddle feeder (running status with stop facilities). |
| 4.02.00 | **Local Control Panels**<br><br>**Local control stations for following equipment's shall be provided**<br><br>(a) Paddle feeders along with its dust extraction system<br><br>(b) Mobile trippers over bunkers/ storage shed<br><br>(c) Belt Weighers<br><br>(d) Metal detectors |

(e) Electric hoist - wall mounted control box with pendent push button controls.

(f) In line magnetic separators

(g) Suspended Magnet

(h) Sump Pump

(i) Hydraulic scoop coupling.

(j) Lime Sampling Sytem:- Complete PLC along with interface with FGD DDCMIS

All the above local control panels shall be accessible and located near their respective equipment and shall be complete with all the required controls, interlocks, annunciation's etc. However, for items (j.), above, controls shall be through contractor's PLC. Further, necessary controls, indications and annunciations for all the above equipment shall also be provided at main FGD Control Room as described under relevant clause.

4.03.01 **System Operation**

4.03.01 Lime conveying facilities under subject package shall be operated in association with a coal handling plant being provided by contractor separately.

The lime handling plant being provided by bidder envisages control of complete lime handling system including facilities under subject package by DDCMIS.

Envisaged Operation philosophy of the plant, in general, shall be as elaborated below:

(a.) Lime flow path selection shall be done from CRT/Keyboard to select any one of the following conveying paths.

a. Track hopper to Limestone storage shed

b. Wagon Tippler to Limestone storage shed

c. Limestone storage shed to Limestone bunker

d. Combination of above

The lime handling system operator will select any one of the above paths from OWS located on the main control desk. The flow stream path is then selected by positioning different flap gates/ movable discharge pulley at desired positions by means of keyboard available at the central control desk. Once the system is in the operation, the gates/ movable discharge pulley can not be moved from their positions and path. Flap gates which do not come in the stream in which coal flow is taking place, can be operated at any time. However, for the flap gates in Limestone bunker area conveyors, it shall be possible to change flap gate position while the conveyor is in operation and feeding coal using interlock bypass facility, provided that sequential permissive are available.

The Control system will be designed for "Auto" & "Manual" operation of the conveyors in the selected path. Auto/Manual Selection shall be done from keyboard.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**Auto Mode** : In the “Auto” mode, the conveyors and related equipment will start sequentially when the “System Start” is activated. During stopping, when the “System Stop” is activated, all conveyors will also stop sequentially (in the reverse sequence) allowing time delays for clearing the belts.

**Manual Mode** : In Manual Mode, the operator will start the conveyor system, in the same sequence as in Auto mode from keyboard. The operator will also stop the conveyor system, by pressing "System stop" or individual “Stop” push buttons/command from keyboard in the reverse sequence.

During “Sequence Start” in both Auto and Manual modes, first the required number of hooters (3 phase induction motor type) will be energized simultaneously for a preset time of 1 minute or so (adjustable at site) as per the program. After the preset time, the hooters will stop and a preset time of two minutes (adjustable at site) as per program will be allowed for the movement of the personnel and for the permissive of the conveyor system operation. This condition will be indicated on the panel by glowing of lamp “Lime Handling Sequence Start”. The starting permissive will be available for a period of 5 minutes (Pre-programmed and adjustable in the field). In the event the last conveyor / equipment is not started within this preset time of 5 minutes, the start command for equipment not started will be withdrawn. The system cannot be started again unless the “Sequence Start” push button is again pressed and the hooters sound again, as described before. Those conveyors and equipment, which have already started, will continue to run.

The status indication in the graphic display against all conveyors and equipment in the selected path/stream will start slow flickering. However, all status indications against all flap gates / movable discharge pulley in the selected path will glow steadily. Therefore, from the selected flow stream path of the flap gates / movable discharge pulley, the operator will come to know the conveyors and equipment to be started for the selected path/stream. After a conveyor/equipment is started, the status indications against that conveyor / equipment will change to steady glow indicating that it is running. **Separate color scheme shall be provided to all common conveyors and equipment, to distinguish handling of Lime and Coal while conveying**

Graphic display status indicators associated with a particular motor/equipment shall flicker fast in case of fault / trip.

In addition, emergency stop push button on the control desk for immediate shut down of complete plant shall be provided.

For changeover of feed from one row of Bunkers to another row of Bunkers without stopping of the LHP, provision shall be made for interlock bypass on the control desk for flap gates of all conveyors in Boiler area for a preset period. If the changeover, in above specified time, is not completed then the entire LHP shall stop.

(i) Lamp test facility will be provided for the annunciation and mimic lamps.

4.06.00 **Conveyor System**

(a) Normally the movement of the paddle feeders feeding Lime from the Limestone shed to the conveyor shall be controlled from the paddle feeder itself based on instructions from main control room.

(b) The paddle feeder carriages shall move continuously to and fro along their tracks. Suitable limit switches and anti-collision devices (both mechanical limit switch operated and infra- red type) shall be provided to enable them to change direction of movement as soon as they come within a specified distance at the end of travel in one direction.

(c) The operation and stoppage of the paddle feeders shall be signaled in the main control room of the Lime handling plant. It shall be possible to stop the paddle feeder from main control room. It shall be possible to stop the conveyor taking feed from paddle feeder from respective paddle feeder.

(d) Each conveyor shall be protected against damage to the edge of the belt due to excessive sideways movement by providing an adequate number of belt sway switches. In addition, each conveyor shall be provided with one (1) No. speed detection device (zero speed switch). The zero speed switches shall be designed to sense belt speed. In case of speed of belt goes below 85% of rated speed, it shall trip the conveyor.

(e) All the conveyors shall be protected from reverse running due to power failure by providing mechanical or electrical locking system.

(f) The starting sequence of the conveyors shall follow a direction opposite to that of flow of material i.e. :

(1.) In case of direct conveying of lime to limestone bunkers, start from lime bunker conveyor and end up with reclaim conveyors below track hopper/Wagon Tippler .

(2.) In case of stacking of lime in stock yard, start from yard conveyor and end up with reclaim conveyors below track hopper/Wagon Tippler.

(3.) In case of reclamation of lime from stock yard, start from bunker conveyors and end up with yard conveyor alongwith Travelling tripper.

(4) The starting of mobile trippers shall be interlocked with operation of the bunker bay conveyors.

(g) Any individual equipment (belt conveyor etc.) should not be allowed to start unless the equipment immediately following the same in the direction of flow of material is already in operation.

(h) Stop/tripping of any equipment from running condition shall trip all preceding equipment in the system, except crushers but shall not effect succeeding ones which shall continue to operate.

(i) Adequate number of pull-cord switches shall be provided at suitable intervals along the length of each belt conveyor, which shall enable the respective conveyor to be stopped immediately. Each pull chord switch shall be identified by a specific number on HMI in the main control room. Each belt sway switch shall also be identified by a specific number on HMI in control room.

(j) Means shall be provided to pre-warn personnel working nearby when starting any conveyor and mobile tripper.

(k) Interlocking of various conveyors shall be achieved with Flap Gate, discharge pulleys, limit switches and zero speed switches.

(l) Suitable indication for paddle wheel rpm shall be provided on the local panels. Manual facility to control the cutting rate of paddle feeder shall also be provided.

(m) Motors shall start only when the brake/rail clamp if-provided, is in “not applied’ ‘condition. This signal shall be obtained from limit switch provided for that purpose.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

(n) Lime stone crusher shall be provided with speed and vibration monitoring instruments. crusher shall trip in case speed/ vibration is going beyond tolerable limits of design. Temperature sensing devices shall be installed on all bearings of each of the ring granulator to trip the ring granulator in case of temperature goes beyond limit. Audio-visual annunciation shall be provided in main control room and locally also.

(o) Once a conveyor trips, flap gate directing coal from this conveyor shall change over its position with a time delay and shall come back to the original position again. This is to prevent jamming of gate.

(p) Tripping of the respective conveyor shall be provided in case any of paddle feeders and mobile trippers starts running along with conveyor belt at speed higher than their rated speed by providing an over speed sensing device on the equipment.

(q) It shall be possible to trip bunker conveyor from mobile tripper Where ever scoop type coupling provided for HT motors, the coasting time of respective conveyor, thruster brake, actuator selection and the chute size shall be so selected such that there is no spillage of coal from any down stream conveyors during next start.

(r) Wherever the conveyor is provided with the movable discharge pulleys in place of flap gates, the starting of the conveyor will be interlocked with the position of the movable discharge pulley.

4.07.00 **Interlocking**

(a.) The following conveyors / equipment will come under interlock scheme :-

(1) All conveyors

(2) All flap gates

(3) Mobile Trippers

(4) Rack & Pinion Gates

(5) Metal detectors

(6) Magnetic Separators and suspended Magnet

(7) Crushers

(8) Paddle Feeders

(9) Belt scale

(b.) The following equipment will not come under interlock of the conveyor scheme.

(1.) All dust extraction systems & service water system.

(2.) Ventilation systems

(c.) All conveyors and equipment will have local push button stations each consisting of :

(1.) Pos - I, Pos - II & stop button for flap gate.

(2.) Emergency stop push button (Red) for other equipment

(d.) Belt scale shall be started when relevant conveyors are started

(e.) The dust extraction systems will be energized as soon as the conveyors are energized.

(f.) Lime handling plant shall be tripped in case of detection of fire.

(g.) Interlock for H.T. Motor :

H.T. motors used will continue to run on no load by disengaging the fluid coupling in case of failure of any process interlock. The H.T. motors will however be tripped in case of any motor fault like O/L, high motor winding temperature etc. In addition, in case of normal stop command, after running of the system, motors will stop.

**(h.)** The following are the various safety interlocks for the conveyors and other equipment. This list is indicative only and the Contractor shall develop a comprehensive interlocking scheme.

**Conveyors**

a) Pull - Chord switch - not operated

b) Belt sway switch - not operated

c) Under speed switch - closed at 90% speed of the conveyor within designed accelerating time.

d) Motor protection - not tripped

e) Local stop PB – reset

f) Chute Block switch - not operated.

g) Brakes for conveyor – not operated.

h) Trip circuits healthy.

i) Temp. of fluid coupling oil - not high

**Paddle Feeders**

a). Motor O/L - not tripped

b). Local E-Stop PB - reset

c). Stop PB in main FGD control room - reset

d). All Limit Switches – reset

e). Overspeed limit switch – not tripped

**Travelling Tripper :**

a) Stop PB in Local control station - reset

b) Motor O/L not tripped.

c) Over Travel Limit switches - not tripped.

**Magnetic Separators / Metal Detectors / Suspended Magnets**

a) O/L / fault relay - not tripped.

b) Stop PB (Local & Remote) reset.

c) Metal detector reset

d) Oil temperature - not high

**Flap Gates/ R & P Gates**

a) End of travel limit switches - reset.

b) Torque limit switches - reset.

c) Local stop - reset.

**Crusher**

a) Zero speed - not operated

b) Temp. of fluid coupling oil - not high.

c) Local stop push button reset.

d) Temperature of bearings – not high.

e) Cooling water flow switch – reset

Motor O/L – not tripped

Local E-Stop PB-reset

Stop PB in main FGD Control Room reset.

All limit switches - reset

All limit Switches – not tripped.

Apron feeder

Motor O/L – not tripped.

Local stop PB – reset

4.07.01 The lists of indications and audio-visual annunciation given in subsequent clauses are indicative only and the same shall be finalised during detail engineering.

4.07.02 Status indications in Large Video Screen

Following individual status indications shall be provided in LVS with individual ON/OFF/TRIP indications on CRT.

(a.) Conveyor 'ON'

(b.) Flap Gate Rack and Pinion.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

(c.) Belt scale flow rate indication and totalizer.

(d.) Belt sway switch operated for each conveyor (individual switch indication on CRT).

(e.) Pull cord switch operated for each conveyor (Individual switches indication on CRT).

(f.) Zero speed switch operated for each conveyor

(g.) Paddle Feeder ''ON

(h.) Travelling tripper position."

(i.) Crusher ON

(j.) MD/ ILMS/ SM/ LSU ON

(k.) DE/ SW/PW/CW/Vent ON (System wise)

(l.) Unit wise MW indication, total lime flow & Bunker level.

(m.) Further Mimic lamps for HT and LT SLDs shall be provided on the control desk.

4.08.00 **Annunciation System:**

DDCMIS/Control desk shall be provided with adequate number of facia type annunciation windows operating through DDCMIS for the following audio-visual fault annunciation purposes. Wherever group annunciation is provided, alarm status of individual equipment shall be provided on OWS.

(a) 3.3 kV Breaker Trip (Group wise for each board)

(b) 415 V MCC Breaker Trip (MCC wise)

(c) Bus under voltage for each LT MCC & HT switchgear buses.

(d) Following group wise annunciation shall be provided for transformers :

- (1.) Buchholz alarm
- (2.) Winding/oil temperature high alarm
- (3.) Oil level low alarm
- (4.) Buchholz trip
- (5.) Winding/oil temperature high trip

(e) A.C Control Supply failure.

(f) D.C. Control Supply failure.

(g) Annunciation supply failure.

(h) Both CPU fail

(i) Stand by CPU in service

(j) H.T. motor overload alarm (individual)

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

(k) HT motor bearing/ winding temp. high alarm (for each) and trip (for each)

(l) HT motor trip on electrical fault (for each)

(m) LT motor overload tripped (for each).

(n) Belt sway switch operated (for each)

(o) Pull cord switch operated (for each)

(p) Zero speed switch operated. (for each)

(q) Chute plugged (for each)

(r) Paddle feeder over speed tripped (group)

(s) Tripper over speed tripped (for each)

(t) Magnetic separator fault and cleaning belt trip.

(u) (i) Metal Detector fault (for each)

(ii) Metal detected / MD not reset (for each)

(v) Belt Scale fault (for each)

(w) Sampling system faults and trips (for each)

(x) Crusher low speed & crusher bearing temperature – high.

(y) Water level low in tanks (for each)

(z) Oil temperature of fluid coupling high

(aa) Dust Extraction/service water system faults and trips (system wise)

(bb) 20% spare window

For identification of the fault for a particular conveyor or equipment, status indication against that conveyor / equipment in the mimic will start fast flickering and the annunciation window will be blinking against that particular fault. In addition, a buzzer (alarm) will start sounding. After acknowledgement of the fault, the buzzer will stop, but the fast flickering on the mimic and the steady glow on the annunciation window will continue until the fault is cleared and the Reset push button is pressed. When the fault is cleared and the Reset push button is pressed, the status indication of that conveyor / equipment on the mimic will start slow blinking if it is on selected path otherwise it will go off and the steady glow in the annunciation window will go off. However, pressing of the Reset push button before clearance of the fault, will have no effect on the lamps.

At the time of a fault, the faulty conveyor / equipment, as well as the preceding conveyors / equipment in the interlock sequence, will stop except H.T. motors for which only scoop coupling will be disengaged and motor will continue to run for process fault. In case of motor fault, H.T. motor will trip but the succeeding conveyors / equipment will continue to run. The status indication against the preceding conveyors / equipment will start slow blinking while the faulty conveyor / equipment will be fast blinking.

Start command shall not be initiated unless reset button in pressed after clearance of fault.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

The sequence of operation of the annunciation system shall be as follows :-

| CONDITION | | | STATUS |
|---|---|---|---|
| Normal : | Ann. Window | : | Off. |
| | Status indication | : | Steady glow |
| | Buzzer | : | Off. |
| Fault : | Ann. Window | : | Blinking. |
| | Status indication | : | Fast blinking |
| | Buzzer | : | Sounding. |
| Press Accept. PB. | Ann. Window | : | Steady glow. |
| | Status indication | : | Fast blinking |
| | Buzzer | : | Off. |
| Press Reset PB (When | Ann. Window | : | Off. |
| fault is cleared): | Status indication | : | **i)** Steady blinking (if on selected path) |
| | | | **ii)** Off (if not on selected path) |
| | Buzzer. | : | Off. |

4.09.00 **Dust Extraction System**

Complete interlock, protection, annunciation for Dust Extraction System to be provided by the contractor and the same shall be approved by Employer during detail engineering.

4.10.00 **Metal detectors**

(a) It shall be possible to start the conveyors only after energizing the metal detector and 'Metal detector reset' condition. Once the metal is detected, the corresponding conveyor shall trip.

It shall be possible to restart the conveyors, after local resetting of metal detector and putting back the marker bag in position. Metal detector ON/OFF push buttons shall be provided in main control room also.

(b) In case of tripping of conveyor system, metal-detector shall get de-energized after a time lag.

(c) Following individual indications shall be provided on local control panel.

(1) Metal detector 'ON'

(2) Metal detected

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|
| (3) | Metal detector 'reset'. |
| (4) | Metal detector faulty. |
| 4.11.00 | **Sump Pumps**<br><br>(a) Sump Pumps shall start and stop by the level switches in the sump automatically. Further manual override start / stop push button shall be provided locally on ground level.<br><br>(b) Any of the pumps can be selected as auto-standby.<br><br>(c) If the sump level continues to be high even after the first pump is under operation second pump shall start automatically.<br><br>(d) The following indications for sump pumps shall be provided on local Control Panel.<br><br>(1.) Water level high<br><br>(2.) Motor ON/OFF/TRIP. |
| 4.12.00 | **Lime Sampling system**<br><br>(a) Lime Sampling Unit shall be controlled through PLC as per standard and proven practices of LSU equipment / LHP supplier, which will be located nearest MCC. Controls and interlocks for proper material flow shall be provided similar to conveyor system. Suitable Mimic shall be provided in the PLC.<br><br>(b) Lime Sampling Unit shall be controlled through main FGD DDCMIS. Controls and interlocks for proper material flow shall be provided similar to conveyor system. Mimic shall be provided in the Operator Work Station (OWS) at main FGD control room.<br><br>(c) Only one start/stop push button along with selector switches for various modes of operation of Lime sampling system shall be provided for automatic operation of complete lime sampling system. This control facility shall be provided at main FGD control desk as well as locally. In any case, local push button stations shall be provided for all individual equipment of lime sampling system near the equipment.<br><br>(d) All necessary automatic controls shall be provided for meeting the requirements of ASTM-D-2234 or ASTM-C-50.<br><br>(e) Following indications shall be provided on local control panel<br><br>(1.) System ON/OFF/TRIP<br><br>(2.) Primary cutter stuck up between parking positions.<br><br>(f) In case of primary cutter getting stuck between parking positions, preceding conveyor shall trip and annunciation shall appear at Main FGD Control room.<br><br>(f) There shall be protection in the primary coal sampler to trip the conveyor belt in case primary sampler falls on running conveyor due to coupling failure etc.<br><br>(g) Necessary interface signals e.g. LSU system status, cutter stuck etc shall be provided at main FGD control room. |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**4.13.00 Paddle Feeders**

Paddle feeders shall be controlled from the local control panel suitably mounted on the unit. Requirement of operation as described else where in the specification shall be complied with. Following indications shall also be provided on the local control panel:

(a.) Motor ON/OFF

(b.) Motor O/L protection operated

(c.) Brakes applied (if provided)

(d.) "Digital pressure indications of Hydraulic Power pack including those of hydraulic pump discharge, return (leakage) traverse pump discharge (forward and reverse) oil line."

(e.) Coal flow rate

Main Hydraulic pressure of paddle feeder wheel drive system to be reduced to minimum through its control circuit during each tripping of main drive motor.

4.14.00 **Travelling Trippers**

(a) Mobile tripper unit shall be locally controlled from the operating platform suitably located with the unit as per instructions given from main FGD control room.

(b) End travel limit switches shall also be provided.

(c) Travel drive motor shall start only when brake and rail clamps are in disengaged condition.

(d) It shall be possible to trip the bunker Conveyors from tripper.

(e) When the last bunker is full, it shall not be possible to change over the tripper flap gate from bunker feeding position to last bunker feeding position.

(f) As soon as the bunker conveyor trips, tripper flap gate shall change over its position after a time lag.

(g) Two nos. emergency stop button one on each side shall be provided on tripper to stop the machine at any position. The control unit on tripper shall be provided with start / stop push button and indication lamp for travel / gate. The tripper brakes and rail clamps shall be energised (and released) when the tripper motors are ON and the brakes will be applied when the travel motors are OFF. Two travel limit switches shall be provided at either end of tripper carriage for limiting the travel drive between two ends of the track. The first one shall be normal limit and the second one for over travel limit. In addition to above, position indication for bunker position of tripper will be provided in Main control room. Necessary position encoders/limit switches shall be provided.

(h) Following individual indications shall be provided on local control panel

(1.) Motor ON/OFF/TRIP

(2.) Brakes applied

(3.) Rail clamps applied

(4.) Flap gate position

(i) Indication of tripper flap gate positions shall be given in the main FGD control room.

(j) Chute blockage switch shall be provided at each leg of chute and shall trip the tripper conveyor in case of blockage.

4.15.00 **Flap Gates/ R&P Gates**

All Flap Gates/ R&P Gates shall be motorised with remote controlled from the main control desk. Their position shall be indicated on the mimic of main control room.

4.16.00 **Belt Weighers**

Each belt scale shall give output to DDCMIS for display of flow rate indicator and totalizer on TFT and print out at main FGD control room. Each belt scale shall also have rate flow indicator and totaliser mounted near the unit.

4.17.00 **Magnetic separator / Suspended Magnet**

It shall be possible to start the conveyor only after energising the magnet of ILMS or SM. Further, if conveyor system trips magnetic separators shall get de-energised after a time lag and suspended magnet will remain energised and can be de-energised locally. Also if drive motor of cleated belt of ILMS trips, magnetic separator shall not get de-energised, but conveyor system shall trip and audio-visual annunciation shall appear at main FGD control room.

Following individual indications shall be provided on local control panel

(a.) Magnetic separator ON.

(b.) Incoming supply ON

(c.) 'Under current relay' operated

(d.) Cleated belt motor ON/OFF/TRIP

(e.) Oil temperature high

4.18.00 **Service water, Cooling Water and potable water pumps**

(a) These pumps shall be started from main FGD control room

(b) Pump shall trip in case of low water level in tank.

(c)Following individual inputs shall also be provided to DDCMIS system for alarms/indications :

(1.) Motor ON/OFF/TRIP

(2.) Discharge water pressure low

(3.) Water level low in tank

(4) Water level high in tank

Contractor shall provide a comprehensive interlock and protection scheme and include a block logic diagram and write up on the scheme proposed. The final scheme shall be subject to approval of Employer. Sequential interlocking as applicable shall be provided. This shall be a part of main interlock scheme /writeup for the entire Lime Handling Plant.

**4.21.00** **Summary of control philosophy**

Contractor shall furnish summary of control philosophy indicating permissive, trip and interlock conditions for each drive/equipment. It shall clearly list all permissive conditions (conditions required to start the drive), all the trip/protection conditions and each auto start/open and auto stop/close condition for each drive/equipment.

The sequential start-up and shut-down steps for a group of drive/equipments shall also be described clearly.

The above summary conditions shall be comprehensive to include all process conditions and shall be elaborated in clear and unambiguous way, and shall include tag numbers of devices and equipments.

A centralized main FGD control room (DDCIMS based) shall be provided to control and monitor the operations of the Lime handling system and Gypsum handling plant.

4.22.00 **Logic Diagram**

The contractor shall furnish comprehensive logic diagram showing all interlock, protection, sequence and alarm requirements of complete system to the employer during detail engineering stage. In this logic diagram, tag number corresponding to I/O list and drive list shall be clearly indicated. The format of this logic diagram shall be informed by employer during detail engineering. The recommended logic and write-up shall match fully.

**1.00.00 CODES AND STANDARDS**

1.01.00 In addition to the codes and standards specifically mentioned in the relevant technical specifications for the equipment/plant/system, all equipment parts, systems and works covered under this specification shall comply with all currently applicable statutory regulations and safety codes of the Republic of India as well as of the locality where they will be installed, including the following:

(a.) Bureau of Indian Standards (BIS)
(b.) Indian Boiler Regulations (IBR)
(c.) Regulations of the Ministry of Environment & Forest (MoEF),
(d.) State Pollution Control Board.
(e.) Explosive Rules, 1983
(f.) Static and Mobile Pressure Vessels (Unified) Rules, 1981
(g.) Owner's Safety Policy
(h.) Any other statutory codes/standards/regulations, as may be applicable.

1.02.00 Unless covered otherwise by Indian codes & standards and in case nothing to the contrary is specifically mentioned elsewhere in the specifications, the latest editions, of the codes and standards given below shall also apply:

(a.) British Standards (BS)
(b.) Japanese Industrial Standards (JIS)
(c.) American National Standards Institute (ANSI)
(d.) American Society of Testing and Materials (ASTM)
(e.) American Society of Mechanical Engineers (ASME)
(f.) American Petroleum Institute (API)
(g.) Standards of the Hydraulic Institute, U.S.A.
(h.) International Organization for Standardization (ISO)
(i.) Tubular Exchanger Manufacturer's Association (TEMA)
(j.) American Welding Society (AWS)
(k.) Cooling Tower Institute (CTI)
(l.) National Electrical Manufacturers Association (NEMA)
(m.) National Fire Protection Association (NFPA)
(n.) International Electro-Technical Commission (IEC)
(o.) Expansion Joint Manufacturers Association (EJMA)
(p.) Heat Exchange Institute (HEI)
(q.) IEEE standard

1.03.00 Other International/ National standards such as DIN, VDI, BS, etc. shall also be accepted for only material codes and manufacturing standards, subject to the Owner's approval, for which the Bidder shall furnish, along with the offer, adequate information to justify that these standards are equivalent or superior to the standards mentioned above. In all such cases the Bidder shall furnish specifically the variations

| | |
|---|---|
| | and deviations from the standards mentioned elsewhere in the specification together with the complete word to word translation of the standard that is normally not published in English. |
| 1.04.00 | National /International standards such as JIS, DIN, VDI, ISO, SEL, SEW, VDE, IEC & VGB shall also be considered as far as applicable for Design, Manufacturing and Testing of the respective equipment. In addition, these standards shall be referred for the design of machine foundations, wherever specifically mentioned in the specifications. However, for those of the above equipment not covered by these National/International standards, established and proven standards of manufacturers shall also be considered. |
| 1.05.00 | In the event of any conflict between the codes and standards referred to in the above clauses and the requirement of this specification, the requirement of Technical Specification shall govern. |
| **2.00.00** | **CONDITIONS OF SERVICE**<br>A). | **3.00.00** | **DESIGN REQUIRMENTS** |
| **3.01.00** | **FGD Wastewater Treatment System**<br>**A. General System Description**<br>The wastewater stream will be made up of reject water from FGD, GGH washing etc. Pre-treatment shall be provided with two stage clarification i.e. primary clarifier (1x100%) & secondary lime soda softening clarifier (1x100%) to reduce the hardness and suspended solids. The Clarifier outlet will be fed to the mechanical vapor recompression (MVR), Brine Concentrator and Crystallizer system. The |

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

Evaporative concentration system consisting of 1x100% or 2x50% Evaporator/Brine concentrator train(s) to be provided to accept feed from Pre-treatment. The brine concentrator blowdown shall be fed to the crystallizer(1x100%). The Crystallizer will concentrate the brine to a solid sludge suitable for solid disposal. An indicative system process flow diagram is provided in the tender.

Brine Concentrator The design of the Brine Concentrators/Crystallizers (ZLD system) will be based on the FGD blowdown design feed chemistry. To avoid scale buildup in the Brine Concentrator, calcium sulfate (seed) will be continuously circulated over the wetted surfaces in the Brine Concentrator. The wastewater enters a feed tank to deaeration and decarbonation. The wastewater is pumped through a heat exchanger that raises its temperature close to the boiling point. The vapor, created inside the tubes, passes through mist eliminators and enters the Mechanical Vapor Compressor. Compressed vapor flows to the outside of the heat transfer tubes. Wastewater passes through a deaerator counter-current to low-pressure steam, which removes non-condensable gases such as oxygen and carbon dioxide. Heat from the vapor (steam) is transferred to the cooler brine falling inside the tubes, causing some of the brine to evaporate. As the vapor (steam) gives up heat, it condenses as distillate (condensate). Hot feed combines with the concentrated brine in the sump. The concentrated brine is constantly circulated from the sump to a floodbox at the top of a bundle of heat transfer tubes. The distillate is pumped back through the heat exchanger, where it gives up heat to the incoming wastewater. Some of the brine evaporates as it flows in a falling film down the inside of the heat transfer tubes and back into the sump. A small amount of waste brine is blown down from the sump to control the brine concentration and for further treatment in the crystallizer to produce solids.

Crystallizer System

Wastewater is pumped to the crystallizer and joins the re-circulating brine. The brine slurry is pumped through a shell and tube heat exchanger (heater) to heat the brine a few degrees. Because the tubes are flooded, the brine is under pressure and will not boil. This prevents scaling in the tubes. The process vapor is directed to a knockout pot to prevent foam from being discharge to the atmosphere. The re-circulating brine enters the Crystallizer vapor body at an angle, where it swirls in a vortex. A small amount of the brine evaporates. Condensate of steam used initially shall be collected and returned for reuse. The vapor from evaporation passes

through a mist eliminator to remove entrained particles. As water is evaporated from the brine, crystals form. Most of the brine is re-circulated back to the heater. A small stream from the re-circulating loop is sent to a centrifuge or pressure filter to separate remaining water from the crystals. The solids go to disposal and the liquid is returned to the Crystallizer. A small purge may be required. Crystallizer shall be driven by the way of mechanical vapor compressor.

**B. General Design Criteria**

1) The FGD wastewater treatment system shall be designed to treat the FGD waste water of all units of Plant for 24 hours continuous operation per day and seven (7) days per week except during annual cleaning period.
2) The capacity of FGD WWT plant for ZLD for Barh-I (3x660 MW) and Nabinagar JV (4x250 MW) shall not be less than 30 $m^3$/hr and 20 $m^3$/hr respectively.
3) FGD Wastewater such as GGH washing water and filtrated water which is bled to control chloride concentration in FGD system shall be routed to Pre-clarifier(s). It shall be precipitated and overflow shall be transferred to FGD wastewater Tank.
4) FGD Wastewater tank shall be aerated by the aeration devices. The Contractor shall provide the aeration devices.
5) The FGD wastewater treatment system shall be composed of the following system to meet the specified discharge water quality as defined in the specification
    i) FGD wastewater storage system
    ii) Suspended Solid removal system
    iii) Pre-treatment system(including decalcification system)
    iv) Evaporative concentration system
    v) Chemical storage & dosing system
    vi) Sludge dewatering system
6) The FGD wastewater which is stored in wastewater tank shall be transferred to Pre-treatment by wastewater pump.
~~7)~~ To prevent scaling of the system and gypsum super saturation, the sludge recirculation shall be provided to required system. Wastewater from overflow tank shall be treated through the evaporative concentration process.
8) The removed impurities from the waste water will be bound in the form of solid cake, hence allowing the station to be complete ZLD.

9) Evaporated steam in evaporator shall be transferred to condenser and then stored in treated water tank. This stored water shall be reused for FGD make up water.
10) The Contractor shall provide wastewater treatment system to remove heavy metals such as mercury, selenium and T-N as well as sulfate, fluoride and chloride. The Contractor shall submit the technical documents with regard to treatment method for major pollutants in wastewater.
11) Flow meter with totalizer at the inlet and outlet of FGD wastewater treatment system shall be provided by the Contractor.
12) The Contractor shall design the FGD wastewater treatment system to minimize the sludge quantity. The sludge from clarifiers shall be transferred to thickeners and reuse gypsum storage tank. The overflow of thickeners shall be transferred to the FGD wastewater tank/pond, and the thickened sludge shall be transferred to the filter press for sludge dewatering and reuse.
13) The system design treatment rate shall be as specified.
14) The system shall be designed for influent water quality. Due to the fluctuating nature of the effluent wastewater chemistry, consideration must be given to ensure an operable system throughout a wide operating condition of flow and feed quality.
15) The Softening Reactor Tanks and Softening Clarifiers shall be designed for outdoor installation.
16) All Equipment shall be noted within proposal as indoor/outdoor equipment.
17) All wastewater treatment processes shall be designed to maintain treatability for design flow using only duty equipment. Operation of standby equipment shall not be acceptable for system functionality under normal working conditions.
18) Equipment shall be furnished as pre-assembled skids whenever possible.
19) Supplier must provide flow ranges and maximum design pressures at Equipment inlets and outlets.
20) The Contractor shall provide the safety shower and eye washer at the chemical feed equipment area.
21) All the design procedures, systems, and components proposed shall have already been adequately developed and have demonstrated good reliability under similar or more arduous conditions elsewhere.

**C. FGD Wastewater Storage System**

1) Wastewater from Pre-Clarifier shall be transferred to FGD wastewater tank/pond. FGD wastewater tanks(2x50%) shall designed to store FGD wastewater from all units of FGD system operated continuously for 24 hours and GGH washing water which is produced temporarily.
2) FGD waste water tank will be constructed of the concrete coated/lined with vinyl esteric resin mortar.
3) The aeration devices shall be provided and installed in FGD wastewater tank by the Contractor. The aeration devices shall be constructed of suitable corrosion resistant material. The material selection of the aeration devices shall be approved by owner.

**D. Pre-treatment System**

1) pH adjustment, reaction and coagulation tank
   a) pH adjustment, reaction and coagulation tank shall be square or rectangular type and installed on the concrete foundation. Tanks shall be equipped partition for smooth mixing of chemicals. Tanks shall be lined with min. 4.8 mm of rubber or equivalent material.
   b) The agitator for pH adjustment, reaction and coagulation tank shall be mounted on the top of those tanks and consists of shaft, propeller or paddles, lubricated bearings, constant speed and gear reducer. Inverter type of agitator shall be provided for reaction and coagulation tank in order to control rpm.
   c) The capacity of pH adjustment and reaction tank shall have a minimum 10 minute retention time in order to react with chemical. Coagulation tank shall have a minimum 20 minute retention time.
   d) All tanks and agitators shall meet the requirement as per specification.

**2) Pre-clarifier/Thickeners**

a) Clarifiers/thickeners shall be reinforced concrete coated/lined with vinyl esteric resin mortar.
b) Clarifiers and internals designed and supplied by Contractor shall include the following as a minimum:-
   i) Reaction cone.
   ii) Stilling chamber.
   iii) Launders.

iv) Tank anchor channel.

v) Drive mechanisms for sludge scraper rake and mixer.

vi) Sludge collecting arms.

vii) Access stairs.

viii) Walkway and drive platform.

ix) High/Low torque shutoff controls.

x) Overflow pipe.

c) FGD Softening Clarifier Sludge Pumps: Sludge pumps shall be located adjacent to the clarifiers, Sludge pumps shall transfer sludge from Clarifier to Sludge Storage sump/tank.

d) Interconnecting platforms, including stairs between softening reactors and softening clarifiers shall be provided.

e) The two-rake arm will move the settled solids to a central discharge point. The blade shall be bolted to the bottom chord of truss structure of rake arm. The rake and rake support parts submerged below the liquid level shall be carbon steel with rubber lining for protection against abrasion and corrosion.

f) The bleeding of clarifier sludge collector shall be consisting of manual and automatically system in accordance with time and flow rate. In addition, the facility shall be consisting of equipment for auto flushing and internal cleaning of settled sludge and sludge feed piping to prevent clogging.

g) The bottom shall have sufficient slope for solids collection. The settled sludge will form a blanket on the bottom of the clarifier/thickener and be pushed gently toward the central discharge outlet. The center scraper will clear the discharge trench and move the solid deposits toward the underflow discharge point.

h) The feed well in the clarifier/thickener center will quiet the incoming flow as it enters the sump. The feed well shall settle solids rapidly with minimum influence from turbulence.

i) The center-driving device shall have a sufficient torque to rotate the rake arm. The channel with handrail shall be installed in the top of the clarifier/thickener across the center-driving device.

j) The Contractor shall design the clarifier as followings:

- Retention time: 3 - 5 hours
- Surface loading: 15 - 20 $m^3/m^2$-day

- Efficient depth: 2 - 4 m
- Linear velocity of driver: 1 - 2 m/min

k) The Contractor shall design the thickener as followings:

- Retention time of solid: 1 - 2 days
- Surface loading: 16 - 30 $m^3$/ $m^2$-day
- Efficient depth: 3.0 - 3.7 m
- Solid content of thickened sludge: 4% or more

**E. Evaporative Concentration**

1) The Contractor shall be responsible for detailed system design, material selection, equipment fabrication and supply. Contractor is to provide a complete description of all items to be included within proposal and shall clearly identify all items required to be supplied by contractor to complete the system within their proposal. The softened wastewater shall flow to the evaporation phase of the plant. Contractor shall provide two independent trains (2x50%) to maintain for redundancy of critical operations; however both trains shall be capable of being run simultaneously.
2) Evaporative concentration shall be designed to start/stop every day.
3) Evaporative concentration, Brine concentrator consisting of **Falling film type in first** and **Crystallizer in second**, shall be designed. The compressors shall be MVR (Mechanical Vapour Re-compressor).
4) The capacity of condenser shall be 110% to process wastewater
5) Evaporator, **sludge** centrate tank, agitator, centrifuge and pumps to meet wastewater shall consist of materials for resistance corrosion.
6) Pressure vessel in evaporative concentration shall be designed as per ASME Sec.VIII or equivalent code listed above.
7) If required, the Contractor shall provide chemical storage and injection system to maintain quality of cooling water which will be used in evaporative concentration process.
8) Evaporative concentration shall be designed to reduce and avoid a scale while it is operating, and it shall be consist of accessories to wash each part. Also, brush for washing condenser shall be provided by Contractor.
9) Evaporative concentration process shall have related equipment to drain and flush the wastewater and condensate when the process is stopped or in

emergency. Also chemical storing and injection equipment are required to remove scales in evaporative concentration process equipment.

10) Drain water and washing water from Evaporative concentration shall be transferred to FGD waste water storage by sump pump.
11) Evaporative concentration washing water shall be the treated water from treated water tank of FGD WWT system.
12) All evaporative concentration pumps shall be provided with installed stand-by pump in case of 1x100% Evaporative concentration system & with a store(warehouse) spare pump in case of 2x50% Evaporative concentration system.
13) All vessel connection in evaporative concentration shall be as per the Manufacturer's proven practice.
14) Hoists shall be provided for all vessels in evaporative concentration system as per the Manufacturer's proven practice.
15) Vessel support shall be designed same as materials for vessel. Different material cannot be welded to vessel.
16) The Contractor shall provide pressure transmitter and level transmitter with root valve for each sealed vessel. Drain pipe of vessels shall be equipped with float trap, Y strainer, bypass valve & shut-off valve and connected to drainage point.
17) The hoists for O&M in the FGD wastewater treatment system shall be provided by Contractor.
18) All support platforms and access stair required for any contractor provided piping/equipment shall be provided by contractor.

**F. Centrifuge**

1) Centrifuge shall be designed to minimize the sludge moisture content, and its type shall be approved by owner.
2) Centrifuge to dehydrate solids form evaporative concentration shall be consist of Centrifuge 2x50%
3) Sludge filter press shall be manually and automatically operated.
4) All accessories of centrifuge, filter press shall be provided by the Contractor.

**G. Chemical Feed Equipment**

1) The Contractor shall provide the all required chemical feed equipment for FGD waste water treatment system. Chemical Feed Equipment shall include the

chemical storage tank, chemical dissolving tank, chemical injection tank & pumps etc. It shall be equipped with agitator, heater, fume scrubber, if required.

2) The Contractor shall design chemical tanks as followings:
   a) Chemical storage tanks : 15 days
   b) Chemical dissolving tank : 3 days
   c) Chemical dosing/injection tank : 24 hours
3) Necessary chemical shall be provided by unloading pump, depending on the water level of the chemical tank and injection tank. Also, Contractor shall provide the piping associated with Unloading pump, injection tank and connection flange to connect the chemical transport vehicles to supply the chemicals easily and quickly.
4) If chemical shall be necessary to dissolve, the chemical tanks shall be consist of dissolving and injection tank. The chemical dissolving and injection tanks shall be provided with agitator. The chemical dissolving tank will be filled with demineralized water and chemical.
5) If polymer shall be used, the Contractor shall provide the necessary tank, pumps, piping along with auto dissolving equipment.
6) Coagulant shall use the liquefied PAC.
7) All chemical tanks shall be provided with level gauge.
8) Chemical dosing/injection system equipment shall provide and maintain constant concentration, capacity and shall meet the following.
   a) The equipment and auxiliaries shall be capable on condition of constant operation and intermittent operation of WWT system.
   b) Local control panel shall be equipped with all control circuit and device to start and stop. It shall control equipment related chemical injection at local control panel. Also, operation and monitoring of FGD waste water treatment system injection equipment should be possible at main control room.
9) Chemical storage tank shall be constructed of suitable corrosion resistance material.
   a) The caustic storage tank shall be made STS304 or equivalent, and the other chemical tanks shall be made of PE/FRP or equivalent.
   b) Acid storage/injection tank shall be provided with fume scrubber. Acid storage/injection tank shall be constructed of FRP or equivalent.

10) Caustic tank shall be provided with electric heater. Caustic piping shall be provided with electric heat tracing.
11) Each tank shall be equipped with auxiliary equipment including manhole, drainage system and overflow drainage system stairs, access way, handrails and hoists etc, for operation, monitoring and maintenance.
12) Two (2x100%) chemical feed pumps per each tank shall be provided by the Contractor. The flooded suction positive displacement, diaphragm type pumps with accumulator or equivalent shall be provided for each chemical tank. The chemical feed pumps shall be made of suitable materials for feeding chemicals.
13) Chemical injection pump shall be provided as skid mounted including motor, reducer, injection rate control device, protection devices, etc on the common base plate.
14) Material of chemical unloading and injection pump shall be constructed of suitable corrosion resistance material. The material of the chemical transport and injection pump shall be approved by owner.
15) Chemical injection pump outlet shall be equipped with equipment to prevent siphon.
16) If the chemical is hazardous material, Contractor shall provide all necessary equipment and accessories.
17) Each pump shall have the following features:
    a) Pumps shall be mounted and attached to a stainless steel, coated carbon steel or fiberglass fabricated base plates with surfaces machined flat and parallel to receive feet of mounted equipment. Rolled or bent plate base plates and pump/motor support pedestals are not acceptable. Base plates shall be designed rigid and suitable for field grouting under the entire plate
    b) Pumps and entire skid shall be capable of wash-down.
    c) The design flow rate of each chemical shall be approximately 70 percent of the maximum capacity (at the maximum specified pressure) of each metering and spare pump supplied under this Purchase Order.
    d) All pumps shall be capable of fully automatic or manual control.
    e) Provide pressure gauges at the discharge of all pumps.
    f) Pumps shall have inlet and outlet isolation ball valves, suction strainers, unions, and calibration columns.

g) Provide capability to water flush the system beginning at the pump suction strainer/skid inlet manifold.

18) Diaphragm style pumps shall have the following features:

a) Controlled volume, automatic electronic variable stroke adjustment, diaphragm metering pump.

b) 2Micrometer stroke adjustment designed to permit variance from zero to full capacity during pump operation. Pumps shall be capable of manual micro meter stroke adjustment if the electronic stroke controller fails.

c) Design target flow rate must be achieved within a range of 70-90 strokes per minute.

d) Each pump shall be designed for a minimum turndown ration of 10:1.

e) For high viscosity fluids or fluids with high vapour pressures, strokes per minute shall not exceed 70.

f) Pump shall have integral suction and discharge ball check valves and oil-lubricated drive.

g) Pump relief valve shall have one of the following options: integral to pump, relief to pump suction, return to on-skid solution tank, return to bulk storage tank, return to chemical tote.

h) A pulse dampener shall be furnished on the discharge of the pumps. If pulse dampener is not required due to design of pump and allowed by Purchaser approval, Supplier shall so indicate on Bid.

i) Materials shall be suitable for the intended service and approved by Purchaser (Sulfuric acid pumps shall be Alloy 20 wetted materials with Teflon diaphragm, Antifoam and Anti-scalant shall be 316 SS wetted materials).

19) Chemical feed strainers

a) Flanged 150-lb strainers shall be furnished in each pump suction line and shall be the same size as suction piping. If strainers are Y-type, socket weld is acceptable in place of flange.

b) Sulfuric acid pumps shall have no strainers.

c) Strainers shall be of the same materials of construction as associated pump wetted materials.

d) Strainers shall be provided with blowdown valves.

20) Calibration columns

a) Furnish one transparent, plastic graduated calibration column in the suction line for each set of pumps. Columns shall be of butyrate or other chemical resistant, rigid, transparent plastic tubing rated for intended service.

b) Columns shall have threaded bottom fitting and top shall be vented back to tank or tote.

c) Each column shall be sized so that a 2 minute pump flow at the pump design flow rate shall be performed within the graduated part of the column.

d) Columns shall be provided with isolation valves.

21) Chemical feed valves

a) Materials of construction shall be the same as piping materials of construction for transfer fluid.

b) Isolation ball valves shall be provided in suction and discharge line from each pump.

c) Check valves shall be provided in each pump discharge.

d) If required, field adjustable backpressure regulating valves shall be provided on each pump discharge.

e) Relief valves shall be provided as required. The relief valve set point shall be manually adjustable.

22) Chemical feed pump suction piping, tubing and fittings

a) Materials and pressure ratings, as required.

b) Tubing shall be fully annealed and suitable for bending.

c) All connections shall terminate in a true horizontal or vertical plane.

d) Size: ½-inch OD minimum.

e) Provide ability to flush piping through the pump.

f) Each skid shall have as a minimum one quick connect suction line. Quick connect shall be same size as the suction piping. Fittings shall be of the same materials as the suction piping.

g) Unions and isolation valves shall be provided on each pump to allow easy removal of the pump.

h) Provide dual set point pressure switch (pressure switch diaphragm for sulfuric acid shall be Viton only).

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

i) When specified as fed from a permanent storage tote, Supplier shall supply 6 feet of chemically compatible hose with camlock type fittings to connect tote to pump inlet manifold for each skid supplied.

H. Waste water tank

1) Unless otherwise specified, all waste water tank shall be constructed of the concrete or steel. Inner surface of the pond (side and bottom) shall be lined with vinyl esteric resin mortar minimum 6 mm thickness, tank shall be lined with minimum 4.8mm of rubber or equivalent.

2) Contractor shall install the treatment tank which can store the condensation water generated from the evaporative concentration.

3) After final treatment water condensation water of evaporative concentration shall be collected in treatment tank, to be pumped back to the FGD service storage tank.

4) Contractor shall install the access ladder and handrail for maintenance of wastewater pond/tank.

**3.02.00 Process Equipment and Accessories**

**3.02.01 Pumps and Piping**

**A. General**

1). The Contractor shall provide all necessary pumps required for the operation of the FGD system. Equipment supplied shall comply with currently approved applicable industry standards including those requirements of ANSI, ASME, ASTM, AFBMA, HI (Hydraulics Institute), and RMA (Rubber Manufacturers Association). Suction and discharge pressure instruments shall be supplied on all pumps.

2). The Contractor shall provide a complete, fully coordinated, pumping unit including pump, and as applicable, base plate, slide rails (with actuator), or other pump mounting provision, drive motor and mounting provision, gear reducers, couplings, sheaves/belts, seals and safety guards. The suction and discharge piping shall be equipped with erosion resistant piece, drain, vent, seal water, flush water and instrument connections.

3). Pumps shall be designed to receive and support all forces and moments associated with start-up, normal operation and temperature changes.

4). Unless otherwise specified, the Contractor shall provide the duplicate pumps (2x100%) or multiple standby pumps for the same service. Duplicate pumps for

the same service shall be designed to operate in parallel without undue noise and vibration or shaft breakage.

5). Contractor shall provide identical pumps for the same services preferably.

6). Impellers shall be individually statically balanced. In addition impellers shall be dynamically balanced, if the pump impeller is greater than 250 mm in diameter, or the speed is over 1800 rpm for any diameter. But, open impeller type pumps for slurry service are not dynamically balanced. If the Contractor wants to use pumps with speed greater than 1,800 rpm, then the Contractor's document must contain a detailed justification that will be subject to Owner’s approval.

7). Impellers shall not be either the maximum or minimum diameter for the pump casing size.

8). All pump casings shall be of such wall thickness as to be suitable for the maximum operating and hydro test pressures.

9). Pumps shall be provided with either packing, mechanical seals, or special arrangements designed to eliminate seal water consumption. Material selection for sealing components, sleeves and shafts shall be consistent with the corrosive and erosive nature of the service. Mechanical seal cover shall be duplex stainless steel or equivalent.

10). Bearings shall be designed to minimize deflection of the shaft and impeller. Bearings shall be provided with oil/dust tight seals.

11). Flange connections shall be dimensioned in accordance with ASME B16.5 except modifications as required for linings.

12). A method to quickly release the impeller from the shaft, without the use of come-along, shall be incorporated into the design.

13). The axial thrust of the pumps shall be so compensated that there will be no axial movement or float of the shaft at any flow from minimum capacity to maximum capacity under the specified conditions of operation.

14). Pumps with special construction features which facilitate service and maintenance will be given special consideration.

15). The final performance curve for all pumps shall rise steadily from the design point to pump shutoff.

16). The Contractor shall indicate the minimum flow at which each pump can operate continuously without suffering damage. The Contractor shall also indicate the continuous maximum allowable run out flow for each pump.

17). Wetted pump components such as casing internals, impeller and shaft sleeve shall be suitable for the fluid pumped, including its erosive and corrosive characteristics. The material chosen for pump shall be proven type in similar application. Reference list of previous installation for similar application shall also be furnished to the employer.

18). The large horizontal pumps with vertically split casings shall be designed to permit removal of the impellers, shafts, bearings, etc, without disassembling the suction or discharge piping other than for pump maintenance spool pieces.

19). The coupling and mechanical seal or stuffing box for packing shall be arranged so it is not necessary to remove the motor to service these items.

20). Couplings shall be spacer-type (stainless steel flexible double disk type or flexible gear type), where required, to allow dismantling of the pumps without disturbing the motors or the pump pedestals. Metal coupling guards shall be provided to cover couplings and exposed key ways.

21). The total number of different sized pumps and pump manufacturers shall be minimized.

22). When pumps of same capacities and same services are furnished, all components including spares and spare assemblies shall be completely interchangeable.

23). All Piping shall be suitable for the fluid therein, including its erosive and corrosive characteristics. The material chosen for piping shall be proven type in similar application. Reference list of previous installation for similar application shall also be furnished to the employer.

**B. Wastewater Pumps**

1) All components of the FGD wastewater pumps which come into contact with the wastewater shall be made of corrosive and abrasive resistant material with excellent durability for the intended service.

2) Parts subject to wear or requiring adjustment and inspection shall be accessible and capable of reasonably convenient removal.

3) The material of centrifugal pump included in Evaporative concentration system shall be complied with below requirement.

- Casing: ASTM A890 Gr. 5A or better
- Impeller: ASTM A890 Gr. 5A or better
- Shaft: SM45C or better (STS 316L and STS 304 will not be acceptable.)

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**C. Chemical Feed/injection Pumps**

1) Chemical injection pumps shall be the metering, positive displacement diaphragm type and shall be furnished complete with drive motors, gear reducers, stroke control devices, and guards, all mounted on a common base plate.
2) The pumps for acid shall be constructed of PE/PP/FRP or equal and the pumps for caustic shall be constructed of 316 stainless steel wetted parts or equal. The other pumps shall be made of suitable materials for handling chemicals.
3) All Chemical feed rates shall be automatically controlled based on process variables and/or other appropriate measurements in the ZLD controls system.
4) For each chemical feed system identified above, the Equipment shall include, but not be limited to, the following:
   a) Metering pumps, valves, calibration columns and suction strainers.
   b) Low level shutoff controls for each tote or storage tank and associated pumps.
   c) Associated instrumentation and controls specified below and required for a complete operational system.

**3.02.02 Agitators**

1) Agitators shall be provided for all sumps and tanks where slurry collects and for chemical tanks, or where mixing is required by the FGD system process. A sufficient number of agitators shall be deployed at each location.
2) Design of agitators shall be proven type.
3) Agitators shall ensure that all the suspended solid particles in the slurry shall be adequately dispersed throughout the tank. Each agitator shall be complete including, but not be limited to, shaft, shaft seals, impellers, mounting provision, speed reducer and motor.
4) Materials of construction of the agitator components shall withstand normal operating and upset conditions including slurry concentration, volume and pH variation. Shaft shall be of solid construction.
5) Agitator shaft bearings shall be designed and spaced properly for minimum deflection of the shaft.
6) The operating speed shall not be within 20 percent of any of the agitator's critical speeds.
7) Agitators shall be shipped either fully assembled or in the largest shippable subassemblies. The Contractor shall design and furnish hoisting provision at

each tank for replacing completely assembled agitator and/or its largest subassembly. Agitators shall be designed to enable servicing and replacement of packing without draining the tank contents.

8) Agitators shall be oil-lubricated with provision for filling and draining.

9) Side entering agitator gearing shall be of helical bevel type design. Worm gearing shall not be used. Agitator speed shall be adjustable by means of changing gears. Changing gears shall be accomplished without disassembling the agitator.

10) Agitators may be either constructed of the appropriate metallurgy or rubber lined for the service chemistry.

11) Side entering agitators shall come complete with support legs by the steel structure on foundation.

12) Also, the strength by the agitating motion and weight shall not have effect on the absorber shell.

13) Side entering agitators shall be of the non-leakage type. Seal water, if required, shall be fed continuously, whenever the tank is in service. Hoist and monorail shall be provided for maintenance.

14) All agitators shall be driven by electric motors. Belt drive shall not be employed for speed reduction.

15) The number of different agitators shall be minimized in order to minimize spare parts requirements.

16) The degree of agitation achieved shall be that required by the process. Agitators shall be sized that, in the event of agitator failure, upon restoration of the agitator. All material which has settled as a result of the agitator failure shall be completely resuspended within 8 hrs after the agitators were inoperable for up to 24 hrs.

17) Flow patterns from the impeller shall be capable of maintaining solids in suspension with and without recirculating flow from the tank. The flow pattern shall also be capable of resuspension solids within two hours after a short (two hours) shutdown, such as a power failure.

18) The impeller and shaft shall be easily removable from inside the tanks without disturbing the speed reducers or the motor.

19) lmpellers shall not be integrally welded to the shaft.

20) The agitators shall be designed and installed to minimize the vibration.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

**3.02.03** **Tanks**

1) The Contractor shall design and install the tanks complete with all the necessary connections and appurtenance, including manholes, hand holes and roof drain, as required for the tank service.
2) Tanks shall be provided with drain connections and associated valves to allow the tank to be easily drained to sump. Slurry tank bases shall be designed to minimize accumulation of solids and for ease of cleaning. All slurry tanks including filtrate tanks shall have agitators to provide adequate agitation of the slurry. Slurry tanks shall be provided with screen at the inlet nozzles.
3) Connections for lined pipe and plastic pipe shall be flanged.
4) Tanks in contact with slurry or reacted slurry shall be used appropriate corrosion resistant metal or linings such as flake glass or rubber, as specified herein. Mill slurry tanks must be constructed of rubber lined carbon steel. Each lining/coating procedures shall be submitted and subject to owner' approval.
5) All tank storage capacities except emergency storage tank shall be based on the minimum available storage capacity. The minimum available storage capacity is defined as volume from low level to high level (minimum 150 mm below the tank overflow level). When low level, the pump operation and/or solid suspension shall be good condition.
6) The Contractor shall furnish all necessary tanks, which shall have storage and surge capacity required for operation of the FGD system throughout the entire load range and present this information.
7) All tanks shall be designed to withstand the loads imposed by filling with the liquid to the maximum extent possible as well as the forces caused by wind and seismic loads.
8) Tanks and access hatches shall be designed in accordance with API Code 650. Remote level indicators or alarm shall be provided for all tanks. Tanks shall be provided with all necessary walkways and stairs with handrail required to provide access to areas requiring periodic maintenance or inspections. The Contractor shall provide rail guards at the periphery of the tank roof, and the spiral stair with handrail for the tank height of 3 m or more.
9) The Contractor shall ensure that the agitator support structure is arranged to enable agitator removal without destruction (field cutting or touching) of any support steel.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

10) For pressure vessels, the Contractor shall provide material specification, design parameters (ASME Section Vlll), manufacturing drawings and inspection reports.

11) Tanks shall have at least one, side hinged, bolted, circular shell manhole.

12) The drain size of slurry tanks shall be minimum 200 mm.

**3.02.04 Lifting Devices**

1) The Contractor shall furnish hoists with trolleys and other lifting appliances with associated support, crane rails, runways and lifting eyes required for the adequate maintenance of the equipment to be removed for routine maintenance and weighing in excess of 50 kg for Tanks,Equipment at FGD wastewater treatment system.

2) Trolley-hoists shall be electric type and shall be manufacturers' standard design in so far as practicable in meeting the requirements of this specification. The Contractor shall supply monorail beams as required to provide access to all equipment to be served by the hoists.

3) The trolley-hoists in their entirety shall comply with all current applicable local and government statutes, regulations, and safety codes relative to the design, construction, and operation of hoists in the locality where the hoists will be installed.

4) As a minimum two (2) trolley-hoists of each size shall be furnished for installation and use.

(Example: Seven(7) hoists are to be furnished. The sizing criteria call for six(6) 100 kg hoists and one(1) 150 kg hoist. To meet the above requirement, the Contractor will supply five(5) 100 kg hoists and two(2) 150 kg hoists. That is to say, one(1) hoist will be oversized to meet the requirement).

5) Monorails shall be arranged to permit movement of lifted equipment from the installation area directly to a truck, without transfer of hoists or re-rigging.

6) Trolley-hoist shall be floor controlled from a pushbutton station, suspended from a fixed point on the trolley. One button shall be provided for each direction of motion of the hoist-trolley, plus stop and start buttons. Where necessary, the Contractor shall provide a torque reel for vertical movement of the pushbutton station. Trolley-hoists shall receive a finish coat of epoxy yellow paint applied in accordance with the manufacturer's instructions. A capacity plate showing

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

rated capacity of the hoist shall be placed on hoists in such a manner as to be easily legible. Pushbuttons shall be protected with neoprene hoods.

7) Control panel enclosures and pushbutton station shall be suitable for operation in a corrosive environment, preferably NEW 4X or high impact fiberglass construction.

8) The Contractor may find that the layout and size of equipment lends itself to the use of a bridge crane in lieu of trolley-hoists. If bridge cranes are furnished they shall meet the requirements of this Paragraph. The Contractor shall provide detailed information in the proposal on any bridge cranes for owner's acceptance.

9) A hoist shall be provided at the mist eliminator level to assist in removal and replacement of mist eliminators. The hoist shall be positioned to minimize the distance the mist eliminators will have to be hand carried.

**3.02.05** **Falling film evaporator(FEE) and accessory equipment design:**

1. FFE trains shall include following as a minimum:
   a) Feed pump
   b) Feed tank
   c) Feed heat exchanger
   d) Deaerator
   e) Falling film evaporator
   f) Vapour compressor
   g) Evaporator recirculation pump
   h) Hydro cyclone and associated pump
   i) Hot distillate tank
   j) Distillate pump
2. Seeding system
3. All valves and instrumentation.

**A). Falling film evaporator(FEE)**

1. One (1) per evaporator train.
2. The FFE shall be constructed of:
   i). Brine wetted parts, material with a PREN of greater than 40.
   ii). Tubes, Titanium Gr. 2.
   iii). Upper tube sheet, Titanium Gr. 1 clad on 316 SST.
   iv). Shell, duplex SST.

v). The plate thickness shall be a minimum of 6.35 mm (0.25 in). Tube wall thickness shall be a minimum of 22 BWG (0.028 in).

3. The FFE shall be designed for outdoor service with the accessory equipment located indoors. All outdoor equipment including piping shall be supported on foundations.
4. All wetted materials of construction shall be selected for severe corrosion service and are to be as specified. Any changes in proposed equipment, materials selection or manufacturer/Contractor during design shall be approved by Purchaser prior to incorporation into the design.
5. The design of equipment, arrangement of components, and routing of piping shall consider operational and maintenance accessibility of components. Equipment, piping, valves, and instruments shall be arranged so that when installed, components requiring manipulation, observation, or maintenance will be readily accessible and safe to operating and maintenance personnel.
6. Contractor shall include provisions for automatic flushing of piping upon shutdown and as operationally required.
7. Chemical feeds shall be injected tangentially into tanks or using retractable injection quills into piping.
8. Contractor shall include provisions for automatic washing of mist eliminators and Vapour Compressor blades. Wash water shall be hot distillate.
9. Any vents from the evaporator shall be supplied with bird screens.
10. The FFE shall contain a vertical shell-and-tube heat exchanger (condenser) with brine cascading into an internal reservoir or sump. The Bidder's proposal shall fully describe the evaporator design features including the following components:
    a) Description of tube attachment to the tube sheet (both upper and lower tube sheet) and evaporator volume and design.
    b) Manways shall be located above tubesheet and at sump level. Minimum manway diameter is 30". Access via stairs shall be supplied to the evaporator sump manways. Access via ladder shall be supplied to the tubesheet manways.
    c) Mist eliminators may either be integral to the evaporator or located in ductwork adjacent to the evaporator. Mist eliminator design and material

including online provisions for cleaning and method of control. Access to mist eliminators shall be via stairs.

d) Location of all site ports.

**B). Evaporator Feed Tank**

1) The Evaporator Feed Tank volume shall residence time, at 100% level, of no less than 30 minutes.
2) Feed tank shall be constructed of fiberglass material (FRP) fabricated per the requirements of ASTM D3299 and D4097. Tank design shall incorporate a double surface veil comprised of 10 mil of nexus and 20 mil of c-glass.
3) Tank mixers shall be furnished to provide continuous agitation.
4) Support for the agitator shall be integral to the tank structure. All wetted materials for the mixer shall be suitable for the service. Access to the agitator shall be provided with platforms at top of tank. Minimum access of 3'6" shall be provided on 2 of 4 sides around the agitator for maintenance personnel.
5) All chemicals injected into the system shall be provided with retractable injection quills of suitable materials and injected into the tank below all ranges of operating liquid level.

**C). Evaporator Feed Pumps**

1) Contractor shall provide Evaporator Feed Pumps for FFE. Two (2) x 100% Evaporator Feed Pump shall be installed; one operating and one spare in case of 1x100% Evaporative concentration system. One (1) x 100% Evaporator Feed Pump shall be installed per FFE train with a store stand-by Evaporator Feed Pump in case of 2x50% Evaporative concentration system.
2) Feed Pump materials shall be ASTM A890 Gr. 5A or better impeller and casing.
3) Pump shall use a double mechanical seal.

**D). Feed/Distillate Heat Exchangers:**

1) One (1) per evaporator train.
2) The heat exchanger's purpose is to recover sensible heat from the distillate to preheat the feed water. Heat exchanger shall be plate-and-frame type sized to include 20 percent additional plates with no modifications. Gaskets shall be clip-in type.
3) Heat exchanger shall be constructed of Titanium Gr. 1 plates with Carbon Steel end plates and support bars.

4) Contractor shall furnish the following instrumentation:

   a. Differential pressure across the cold (feed) side of each heat exchanger.

   b. RTD's with thermowells on each stream in and out of the heat exchanger

5) The heat exchanger shall be provided with a permanently installed local cleaning system with quick connect hoses for periodic cleaning of the heat exchangers. Cleaning system shall, at a minimum, include an on-skid pump, heater, 500 lt. tank and agitator.

6) The heat exchanger shall be provided with suitable high point vents and low point drains.

**E). Deaerator:**

1) One (1) per evaporator.

2) The deaerator shall be constructed of 2507 duplex SST material with glass reinforced polyethylene random packing.

3) The deaerator shall be provided to remove non-condensable gasses from the heated feed water. Stripping steam from the distillate tank shall be used as the carrier for removal of non-condensable gasses.

4) The deaerator shall use a disc and donut configuration and shall be provided with an inlet nozzle designed to evenly distribute feed water over the packing. The deaerator vent or vent piping shall be supplied with bird screens.

5) A pressure transmitter shall be installed above the packing for vapour pressure monitoring and feed rate control of stripping steam from the distillate tank to the deaerator.

**F). Vapour Compressor:**

1) One (1) per evaporator.

2) The compressor casing shall be 316 SST and the impeller duplex SST.

3) Compressor, sealing methods, lubrication, and instrumentation shall be designed to be suitable for steam applications. The compressor bearing lubrication system shall be designed to provide continuous bearing lubrication during all modes of operation. Compressor shall be air cooled. If water cooled, the system shall be designed for a closed loop system with integral cooling.

4) The compressor and ancillary system shall be provided preferably on a common baseplate to facilitate installation and alignment. Vibration transmitters and monitoring equipment are required. To the maximum extent practical the vibration monitoring equipment and lubrication systems shall be mounted on the common baseplate. Motor shall be shipped loose for site assembly.
5) A compressor enclosure shall be supplied to meet contract noise limits.
6) Additional required equipment
   i). Shaft driven lube oil pump
   ii). Electrically driven Lube oil pump.
   iii). Lube Oil cooler
   iv). Electric Lube Oil heater
7) After the manufacture, following tests for Vapour Compressors shall be demonstrated at membrane manufacturer's works in the presence of Employer's representative and contractor:
   i) Performance Test with job motor
   ii) For detailed Quality Assurance tests, QA chapter shall be referred to.
   iii) One Compressor shall be tested at shop with job motor and guaranteed power consumption shall be determined based on shop test results of tested compressor multiplied by number of working compressors.
   iv) The responsibility for conducting the test will be with the Contractor and Contractor shall make all the arrangements for carrying out tests at compressor manufacturer's works. In case such test facilities are not available at manufacturer's works, the test may be carried out at any other test facility with the approval of Employer. All cost associated with testing at contractor's works or at any other test facility shall be borne by the contractor & shall be included in the contract price. Bidder shall submit the test procedure for Employer's approval.

**G). Evaporator Recirculation Pumps:**

1) Evaporator recirculation pump shall be furnished for evaporator train and designed for continuous service with minimal maintenance requirements. Two (2)x100% Evaporator recirculation Pump shall be installed; one operating and one spare in case of 1x100% Evaporative concentration

system. One (1) x 100% Evaporator recirculation Pump shall be installed per FFE train with a store stand-by Evaporator recirculation Pump in case of 2x50% Evaporative concentration system.

2) The pump casing and impeller shall be ASTM 890 Gr. 5A.
3) Recirculation pump mechanical seal shall be continuously purged to cool the seal and to minimize the amount of solids at the seal faces. Seal water shall be of service quality.

**H). Distillate Tank:**

One (1) distillate tank which shall be provided per evaporator train sized to provide not less than 10 minutes retention at the maximum treatment rate. Any vents from the distillate tank shall be supplied with bird screens.

The tank shall be fabricated from 316L SST.

**I). Distillate Pumps:**

1) Two (2) x 100% Distillate Pump shall be installed; one operating and one spare in case of 1x100% Evaporative concentration system. One (1) x 100% Distillate Pump shall be installed per FFE train with a store stand-by Distillate Pump in case of 2x50% Evaporative concentration system..
2) The distillate pump casing and impeller shall be 316L SST
3) One (1) x 100% centrifugal distillate pump.
4) Distillate pump shall transfer distillate from the distillate tank to the heat exchanger for sensible heat recovery.

**J). Seeding System:**

1) One (1) seeding system.
2) The seeding system shall be of proven type and the contractor shall submit the detail scheme for employer's approval. Reference list of previous installations for similar application shall also be furnished to the employer.
3) Seed tank (which is also the evaporator blowdown tank) and pump shall be supplied to provide calcium sulfate feed slurry to the evaporator recirculation pump suctions of the FFE.
4) Tank shall be of 316L SST construction.
5) Tank shall be furnished with an agitator to blend dry calcium sulphate with feed water at time of seeding.
   i) Agitator shall be propeller type.

| CLAUSE NO. | TECHNICAL REQUIREMENTS |
|---|---|

ii) Materials of construction shall be suitable for intended purpose, identified by Contractor within the Proposal and approved by Purchaser.

6) Tank volume shall be at 10m3 minimum.

7) Access via stairs shall be provided to the top of the seed tank to facilitate maintenance of tank agitator and filling of tank with dry calcium sulfate.

**K). Evaporator Blowdown Pump:**
